

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

P R E F A C E .

THIS volume of the *ANNUAL CYCLOPÆDIA*, for the year 1868, presents the complete restoration, as members of the Union, of all the Southern States except three, and the final disappearance of all difficulties between the citizens of those States and the Federal Government. The execution of the reconstruction acts of Congress was commenced near the close of the previous year, elections were held and delegates chosen to conventions in the several States; these conventions assembled; constitutions were drafted, discussed, amended and submitted to the people, and adopted. New and important principles, working a radical change in the society of the Southern States, were thus declared and enforced. The military rulers, quietly surrendering their authority to the civil officers, withdrew, and the several States thus reorganized again appeared by their representatives in the chambers of Congress and took an active part in its proceedings. In these pages will be found the details of all the steps taken to reach this end, such as the registration acts, and the qualifications required of voters in order to make the discrimination demanded by Congress; the orders of the military commanders, the proceedings of the conventions, the features of the new constitutions, and their adoption; the reorganization of the State governments; the removal of incumbents, and the inauguration of new executive officers; the assembling of the Legislatures; the coöperation of the colored men in all these proceedings; the strifes of factions, and the gradual restoration of order, with the final and complete amnesty proclaimed by the President.

The details of the internal affairs of the United States comprise the revenue and expenditure of the Government, the change in the nature and extent of its public debt, the fluctuations of its currency, and the receipts from its system of taxation, with its operation upon the industrial interests and prosperity of the people; the extent of the banking system; the fruits of agriculture and the activity of commerce; the proceedings in the Southern States to complete the reorganization of their social affairs; the various political conventions of

the year, both national and State; the results of the elections; the acts of State Legislatures; the rapid improvement of educational and charitable institutions under the care of the State governments; the debts and resources of the several States, and all those facts which show their surprising development.

In Europe and Asia movements commenced to throw off the burden of some of the old governments and secure a greater degree of freedom to the people. On the former continent these movements were comparatively peaceful, while on the latter they were attended with violent and bloody disturbances. The details of these events, together with the peaceful progress of affairs in other countries of the world, as well as the extent and influence of the public press in many parts of Europe, are fully narrated.

The progress of mechanical industry among civilized nations, especially as shown by such stupendous public works as the Suez Canal, the Pacific Railroad, the Mont Cenis and Hoosac Tunnels, and the sewage embankment of the Thames, is illustrated and fully shown.

Not less interest than usual has existed in the diplomatic relations of the Federal Government with foreign nations, especially in the negotiations relative to the Alabama claims, the purchase of territory from Russia and other countries, and the difficulties with Paraguay.

The developments in the various branches of Astronomical, Chemical, and other sciences, with the new applications to useful purposes, are extensively described.

The alarming and destructive earthquakes which have terrified the inhabitants of several countries are fully noticed, as also the scourge among the cattle of this country, and the measures taken to combat it.

Geographical discoveries have continued in all quarters of the globe, and the discoveries made have been fully related.

The record of Literature is as extensive as usual, and the titles of all the more important works have been arranged under the various classes to which they belong.

The interesting history of the religious denominations of the country, with an account of their conventions, branches, membership, views on social affairs, and the progress of their opinions, is presented from official sources.

A brief tribute has been given to the memory of deceased persons of note in every department of society.

All important documents, messages, orders, treaties, and letters from official persons, have been inserted entire.

THE ANNUAL CYCLOPÆDIA.

A

ABYSSINIA, a kingdom or empire in Eastern Africa. Abyssinia proper has an area estimated at 158,392 English square miles, and a population of from three to four millions; but the whole of the Ethiopian plateau, which sometimes is also designated by the name of Abyssinia, has, according to the Roman Catholic Bishop Massaja, and most of the recent writers on Abyssinia, a population of about 12,000,000 of people, 9,000,000 of whom are Sidama and Galha. Abyssinia proper consists of a high mountainous table-land, the eastern boundary of which may be considered roughly as following the fortieth degree of east longitude. Between this mountainous region and the sea there is a tract of arid, low lying, waterless country, inhabited by the savage Danakil tribes; this region at Massowah is only a few miles broad, but it widens out to two hundred or three hundred miles at Tajurrah. In climate, inhabitants, soil, cultivation, etc., these two regions are totally opposite, the highlands being salubrious, temperate, generally well watered and traversed by paths in every direction; while the low country is arid, waterless, with few exceptions trackless and uncultivated. This inhospitable region effectually cuts off the highlands from all communication with the sea except at three points, Massowah and its neighborhood on the north, Amphilla Bay, about one hundred miles to the southeast, and Tajurrah on the south. From these three points the roads into the interior are of a very different character, for at Massowah they very soon climb the eastern boundary of the highlands and continue along the elevated land, whilst from Tajurrah they have to traverse two hundred or three hundred miles, and from Amphilla Bay from fifty to one hundred miles of the low lying country before they reach the highlands. The western and southern boundaries of Abyssinia are very undefined, but they may be taken roughly as conterminous with the

edge of the highlands, and having the White and Blue Nile on the west and the Red Sea rather south by east. The following are some of the principal towns:

Gondar, in *Amhara*—the capital of the kingdom.—This town is stated by Heuglin, in 1862, to have contained from six thousand to seven thousand inhabitants, but it is said to have been within the last two or three years totally destroyed by the Emperor Theodore.

Debra Tabor, in *Amhara*.—Formerly a small village. It is now a place of considerable size, and was the residence of the Emperor Theodore. Near Debra Tabor is Gaffat, where the European workmen of the Emperor resided, and which was considered as his arsenal.

Adowa, the capital of *Tigré*.—This is the second city in the kingdom. It is stated by MM. Ferret and Galinier to have contained in 1840 not more than 4,000 inhabitants. Heuglin, in 1862, put the population at 6,000. The miserable nature of Abyssinian towns may be judged of by the description given by Mansfield Parkyns, in 1848, of this, the second city of the empire. He says: "I own I rather expected to see columns or obelisks, if not an acropolis, on some of the neighboring hills. Judge, then, of my astonishment when, on arriving at this great city, the capital of one of the most powerful kingdoms of Ethiopia, I found nothing but a large straggling village of huts, some flat roofed, but mostly thatched with straw, and the walls of all of them built of rough stones, laid together with mud, in the rudest possible manner. Being wet, moreover, with the rain, the place presented the most miserably dirty appearance."

Mr. Dufton, who visited Adowa, puts its population at 10,000.

Antalo—the capital of *Enderta*, and one of the principal towns of *Tigré*.—It is said by Ferret and Galinier to contain from two hundred to three hundred houses.

Ankobar—the capital of Shoa.

Angolala.—This is a place of considerable size in Shoa. It is said to contain from three thousand to four thousand inhabitants.

Aliya Amba.—This is a large market town in Shoa, and is said by D'Héricourt to contain from two thousand to three thousand inhabitants.

Political anarchy, which for centuries has been the normal condition of Abyssinia, prevailed throughout the country at the beginning of the year 1868. The larger portion of the country did not recognize the authority of Theodore, and many of the chiefs were in a state of war either against Theodore or against each other. The following was reported in January, 1868, to be the position of the more prominent chiefs:

Theodore, reported as holding only a small portion of Begamider and the two Ambas of Debra Tabor and Magdala; the latter on the border of the Wollo-Galla country.—*Menilek*, King of Shoa. It was reported that a treaty had been made between him and the Wagshum Gobazie, on condition that, if they should overcome Theodore, Magdala was to be made over to Menilek. The latter addressed a letter, with friendly overtures, to Queen Victoria, which was forwarded to the Queen by Colonel Merewether in July, 1866.—*Tirsoo Gobazie*, at this time exercised absolute sway over the provinces of Wolkait and Samien, while several minor chiefs between Mantamma and Massowah recognized his supremacy. Some time before he had applied to the Egyptians for aid against Theodore, and it was reported he still maintained friendly relations with the Viceroy.—*Kassai or Kassa*. This man was said to have joined the Wagshum Gobazie in his first rebellion against Theodore, and subsequently to have turned against Gobazie and set up to be a king on his own account, wresting from his former master the larger portion if not the whole of Tigré. His last feat was the sacking of Adowa, the capital. The relations between him and the Wagshum were any thing but friendly, and his overtures to the English were undoubtedly with a view to strengthen his position against his formidable antagonist.—*Gebra Mehdin or Gabra Mathan*. He seems to be the same individual who prevented Dr. Beke from proceeding inland from Halai. At that time he was governor on the part of the Wagshum of the adjoining Akula-Kossay (or Okulekusai)—the district in which Halai is situated, and he appeared to hold the same appointment still; but, as the tribes were determined to get rid of him, he sought the intervention of the British, who told him that, being in direct communication with his master, they declined having any thing to do with him.

Wagshum Gobazie (the hereditary Shum or Prince of Waag, a district of Lasta). This was one of Theodore's most formidable antagonists, and the most successful of the insurgent chiefs. Until a short time before he appears to have

exercised jurisdiction over the larger portion of Tigré, and several chiefs in northern Abyssinia acknowledged his supremacy. For some months past he had maintained a large army near Magdala, and had frequently boasted that he would attack the royal camp. Lieutenant Prideaux, one of the captives, in a letter, dated 18th October, 1867, reported that the Wagshum had marched into the Wollo-Galla country against the Queen Waizero Masteeat. From the letter of the London *Times's* correspondent, writing from Senafé on the 15th December, it appeared that the British were in direct communication with Gobazie.

The difficulty between England and King Theodore of Abyssinia, during the past three years, directed the special attention of the civilized world, and, in particular, the attention of scholars, to the affairs of this country. The origin of this difficulty has already been briefly referred to in the *ANNUAL CYCLOPEDIA* for 1866. As, in the latter part of 1867, an important war grew out of the diplomatic disagreement, a fuller *résumé* of the chief facts in the progress of the difficulty will be found both interesting and useful. We begin this *résumé* with the year 1848, when Lord Palmerston appointed Mr. Walter Plowden consul for Abyssinia, "for the protection of British trade." Consul Plowden, November 2, 1859, concluded a treaty of friendship and commerce with Ras Ali, King Theodore's predecessor. In 1854, Ras Ali was defeated by Kasai, who then got himself crowned under the title of Theodorus, King of Kings, of Ethiopia. On June 25, 1855, Consul Plowden wrote to Lord Clarendon, describing King Theodore as a kind of warrior-saint, who had risen to reform Abyssinia. The King, however, declined to permit the British consul to reside in Abyssinia, on the ground that the consular power interfered with his own. Mr. Plowden stated to him that Massowah would be given up to him if he permitted the consulate to be established. Theodore proposed to send an ambassador to Queen Victoria, and wished to know whether he would be received. The conduct of Mr. Plowden was approved, November 27, 1855, by Lord Clarendon, who intimated the readiness of the British Government to receive an Abyssinian embassy, on condition that the King renounced all idea of conquest in Egypt, and at Massowah. On February 2, 1861, Captain Cameron was appointed consul in room of Mr. Plowden, who had been killed about 1856, in Abyssinia, by a rebel chief. To revenge Plowden's death, King Theodore killed the rebel chief with his own hand in battle, and executed 1,500 of his followers. He did this, he said, to win her Majesty's friendship. On February 20, 1862, Earl Russell wrote to King Theodore, thanking him for his kindness to Mr. Plowden, informing him of the appointment of Captain Cameron, but saying nothing about the reception of the ambassador. Consul

Cameron, on October 31, 1868, reported that he had been received with all honor by Theodore. Mr. Cameron committed the blunder of refusing to accept the King's presents, although he knew the refusal was of the nature of an insult. "His Majesty," wrote the consul, "made no reply for half an hour." On his return from Abyssinia, January, 1868, Consul Cameron was intrusted with a letter from King Theodore to Queen Victoria, asking for

a safe passage for his ambassadors. The King stated that he wished an answer by Mr. Cameron, who would conduct his embassy to England. This letter, received by Earl Russell, February 12, 1868, was never answered. In place of returning to Massowah with the King's letter to Queen Victoria, and to his consulate, Consul Cameron, March 31, 1868, proceeded to some of the Turkish tribes on the frontier, who were Theodore's bitter

enemies. He is accused of having spoken very unadvisedly of the King of Abyssinia when on this journey. On April 22, 1868, Earl Russell wrote to Consul Cameron, disapproving his meddling in the affairs of Abyssinia, and telling him he ought to have returned to Massowah when ordered to do so. Another and sharper rebuke was sent to Consul Cameron

by Earl Russell, on September 8, 1868, and he was told to return to Massowah. Toward the close of the year 1868, Mr. Cameron returned to Gondar to the King of Abyssinia, without any answer to the letter written by the latter to the Queen. On Mr. Rassam's arrival in 1864,*

* On Mr. Rassam, see ANNUAL CYCLOPEDIA for 1867, p. 2.

the King gave the following as his reasons for imprisoning Mr. Cameron: "Captain Cameron I imprisoned because he went to Kassala to my enemies, the Turks, and I had given him a letter for the Queen, and he came without bringing me an answer. Messrs. Flad, Stern, Rosenthal, Makerer, and Kerons I had chained because they have abused me; and the rest of them I imprisoned because I found them together with the others. They have done nothing. I even don't know them." Mr. Cameron had quarrelled with his secretary, M. Bardel, a Frenchman, who entered the King's service, and tried to stir up enmity against England. He went to the Emperor Napoleon with a letter at the same time as the letter to the Queen was sent off, and the Emperor at once returned an answer. Mr. Cameron also sent back from the country of the Turks, to Abyssinia, an interpreter, Samuel, who had been given him by the King, and this man had repeated Cameron's expressions. When Mr. Cameron made his excuses to the King for going to the Turkish tribes, the King very justly replied, "It was not your business to interfere. Who told you to do so? Neither I myself nor your Queen gave you order to go down to Kassala." In January, 1864, Earl Russell's letters to Mr. Cameron arrived, and were taken to the King, who, after learning that there was nothing in them in answer to his letter, sent Mr. Cameron, as a prisoner, to Magdala. He appears to have suspected that treachery was at work. On January 1, 1866, Mr. Hormuzd Rassam, a Turk, but an English subject, formerly Deputy-Governor of Aden, was sent up with a very small retinue with a letter from her Majesty, requesting the release of Mr. Consul Cameron, and the other Europeans. Colonel Merewether, the resident at Aden, afterward spoke of Mr. Rassam's mission "as a great mistake," from its want of dignity. Mr. Rassam was received with every mark of favor by the King, and was always well treated by him. Colonel Merewether reported that "a regular constituted embassy from England could not have been treated with greater honor and attention." It seems that the letter from the Queen which Mr. Rassam delivered to King Theodore had been mistranslated, so as to make it read that any gift Theodore expressed a wish for through Mr. Rassam she would send to him. At the same time the King seems to have got into his possession a letter which Captain Cameron had given to one of the native chiefs, requesting that he might be protected if the Queen's troops came to the country to take revenge for his imprisonment. Under various prettexts Theodore detained Mr. Rassam and the other Europeans, while Mr. Flad was sent home with a letter, requesting that the Queen's "kasa," or presents, for the release of the prisoners should consist of artisans, "to give light to our eyes." On July 10, 1865, Mr. Flad arrived in England with the letters, and

made full report of all the difficulties, and the causes which had led to the complications. He gave it as his opinion that it was desirable "to finish with this man in peace." On August 13, 1866, Colonel Merewether, on the understanding that force was not to be thought of, reported to Lord Stanley that Theodore's requests should be frankly and most liberally met. He said: "It has been mentioned that it would be best to try and enter into some engagement with the King, that, before the people now going to work for him should enter his country, the Europeans there should have left it. I look upon it as most dangerous to the success of the whole scheme, should this be attempted." In August and September, 1866, the ministry, acting through Lord Stanley, expended over three thousand pounds upon presents for King Theodore, and engaged artisans to go to Abyssinia. On September 1, 1866, Mr. Flad wrote to King Theodore that he had been received by the Queen personally, that the artisans and presents were coming, and that he had promised, in the King's name, that after he had received those presents the captives would be liberated. On October 4, 1866, the ministry determined to adopt the policy which Colonel Merewether reported would be fatal to the whole scheme, viz., not to send the artisans and presents until the captives were sent to Massowah. Lord Stanley wrote to King Theodore, in the Queen's name, in this sense, although Mr. Flad, had previously reported that the presents were to be sent. In January, 1867, Mr. Flad, being unable to return to Abyssinia, sent a copy of the Queen's letter, which apparently had also been mistranslated. On its arrival Theodore wrote to Mr. Rassam: "As Solomon fell at the feet of Hiram so I, beneath God, fall at the feet of the Queen and her Government and her friends. I wish you to get them (the skilful artisans), *via* Matemma, in order that they may teach me wisdom, and show me clever arts. When this is done, I shall make you glad, and send you away by the power of God." On January 8, 1867, Mr. Rassam wrote in reply: "I have already written regarding Mr. Flad, and the articles which my Queen had ordered for your Majesty as a token of her friendship, and they are to be sent at once to Matemma." The artisans and articles were, nevertheless, detained at Massowah, and not sent to Theodore; the captives were in consequence not liberated, and thus the war between England and Abyssinia was brought on.

The first troops which were to form part of the expedition against King Theodore landed in the latter months of 1867.* In the first days of January, the chief commander, Sir Robert Napier, arrived from India, and in the course of January the remainder of the troops followed. The progress of the expedition, during the first weeks, was slow and devoid

* See ANNUAL CYCLOPEDIA for 1867.

of interest. No enemy was encountered; the only difficulties to struggle against were a great mortality among the horses and mules, and a great scarcity of water. Both ceased when the expedition advanced farther into the interior. At the beginning of March, only one-half of the distance from the coast to Magdala had been marched through. The advance, under Colonel Phayre, were misled by a native guide, into a road leading to Messino, where inaccessible rocks put such obstacles to their march, that they preferred to return. The arrival of General Napier, with the vanguard, inspired new life into the expedition. For the march through the second half of the distance between Magdala and the coast, only as many weeks were needed as months had been consumed on the first half of the road. This result was greatly due to Consul Munzinger, a German-Swiss by birth, who has long resided in the country, is married to a native, and has a thorough knowledge of the whole country. Munzinger had preceded the army, and succeeded in concluding, in the name of England, a treaty with Gobazie, of Waag, the most powerful enemy of Theodore. Gobazie was at that time with his army between Magdala and Debra Tabor, and when Munzinger left him, to return to the British camp, Gobazie sent along with him a number of natives, to open roads for the British army. Henceforth the advance was rapid. General Napier, on March 28th, left the common road, ascended the highland of Wadda, and then, marching along the Djidda, reached a road which Theodore, with a great expense of time and labor, had made for his artillery. All this time Theodore had not yet made any serious attempt to check the English army. But now General Napier was informed, by a letter from Mr. Rassam, that a rapid advance of the Abyssinian troops, perhaps a surprise, was meditated. General Napier immediately crossed the river, and took up his headquarters between Djidda and the Bashilo, upon the elevated plain of Talanta. The troops marched upon the road of Theodore, which is thirty feet wide, but so steep that many beasts of burden tumbled down and perished. After a reconnoissance toward Magdala, General Napier, on April 8th, advanced to the Bashilo River. From a second reconnoissance toward Magdala, it was learned that the fortress was armed with 28 guns, and appeared to be unconquerable. But General Napier made all the preparations for an immediate attack. Previously Theodore was summoned to surrender unconditionally. To this demand no reply was made, and the British troops continued their advance. When the first brigade crossed the Bashilo, they saw the enemy in front of Magdala, occupying strong positions. Theodore did not wait until he was attacked, but on April 10th (Good Friday) opened the battle himself by a furious onset on the first brigade. He was repulsed with a loss of about 500 dead and 1,500 wounded, and would

have fared still worse had not darkness put an end to the pursuit. The English, according to an official report, had no dead, and only sixteen wounded, among whom was Captain Roberts. On the two following days Theodore, who had retired into the fortress, sent all the Europeans who were in his power, both captives and artisans, into the British camp; but Napier, not satisfied with this, insisted on unconditional surrender. When this was refused, and the truce which had been granted expired on the 18th of April, the British troops advanced toward the fortress. Theodore's prospects had been greatly injured by the discouragement which had spread in his army, in consequence of which thousands of his men had left him. One of the strongest positions around Magdala, the citadel of Islamgie, fell into the hands of the British by the treason of one of the Abyssinian chiefs. On the 14th, after a bombardment of three hours, an assault of the fortress of Magdala itself was made. Theodore made a brave resistance, but he could not arrest the onset of the English, who penetrated into the fortress. The Abyssinians laid down their arms. Theodore was found dead, having fallen, as the English were told, by his own hand. The English loss was small, from ten to fifteen wounded. The loss of the Abyssinians was sixty-eight dead and two thousand wounded. Two sons of Theodore were among the captives. Into the hands of the conquerors fell four golden crowns, twenty thousand dollars, twenty-eight guns, ten thousand shields, ten thousand spears, and a large amount of silver vessels, jewels, etc. The following extracts from the official report of General Napier give some details of the capture of Magdala and the death of Theodore:

"At the request of Dejach Alema (the son-in-law of Theodore) I had promised to abstain from hostilities for twenty-four hours. After the lapse of forty-eight hours, Theodore had not surrendered himself. Reliable information reached me that his army was recovering from their defeat; that many soldiers who had been unable to return to Magdala on the night of the 10th had since rejoined their ranks; that fresh defensive arrangements were being made, and that Theodore and his chiefs even contemplated a night attack on the second brigade, encamped on the lower ground. I, therefore, prepared to attack the enemy's position. I had originally intended first to assault Fahla from the side which fronted our camp, and was screened from the fire of Islamgie and Selassie. But under the altered condition of the enemy, Theodore having by death, wounds, and desertion lost half of his army and his bravest chiefs, I determined to attack Islamgie by the King's road. All arrangements for this had been considered and the positions for the artillery reconnoitred and fixed upon, when information was brought to me that Theodore had left Magdala, and that many of the chiefs, with their followers, wished to surrender. I agreed

to accept their submission, and ordered Sir Charles Staveley to advance on Islamgie, relaxing no precautions that I had considered necessary for the attack. The scarcity of water rendered it impossible to retain any considerable body of cavalry before Magdala; my personal escort, under a native officer, only remained, and, with a few details of other corps, was sent under the command of Lieutenant Scott, aide-de-camp, to watch the west side of Magdala, where they took up a good position until the arrival of the cavalry, under Colonel Graves, who completed the investment up to the Kaffir Burr Gate, which was watched by the Gallas. The Bashilo was held by the headquarters detachment of the Scinde Horse, under Major Briggs, and detachments of the Third Dragoon Guards, Third and Twelfth cavalry, under Major Miller, to secure that point and provide against the escape of the enemy in that direction by the Minjerra ravine. A detachment of the Beloochees, under Lieutenant Beville, ascended by the spurs of Fahla, and occupied that important position, where they were reinforced from the second brigade by the headquarters wing of the Tenth native infantry, under Colonel Field. The artillery was placed in position, and the troops advanced, preceded by Captain Speedy, of the intelligence department, with a small escort of the Third Light cavalry, under Lieutenant-Colonel Loch, to communicate with the chiefs who wished to surrender, and to prevent any misunderstanding. No resistance was offered. Sir Charles Staveley effected an entrance to Islamgie and Selassie through a difficult crevice in the rocky escarp. It would be impossible to arrive at any correct estimate either of the numbers of the armed men who laid down their weapons or of the mass of people, men, women, and children, whom we found on Islamgie. It was necessary to collect and guard the arms that were surrendered. It was also necessary to send down all the disarmed soldiers and the miscellaneous multitude that followed them to the plain below before I could proceed actively against Magdala.

"Theodore himself, having abandoned his attempt to escape, was making preparations for defence, and offering us defiance in front of Magdala. By three o'clock the Abyssinians having nearly all cleared away from Islamgie, I ordered the attack of Magdala to be at once carried out. The entrance of Magdala is three hundred feet above the terrepain of Islamgie, and the ascent is by an extremely steep and rugged path. Viewing the very difficult nature of the approach, I made the attack as strong as possible, and massed the whole of my artillery fire to cover it, in order to overpower the enemy's resistance and prevent the heavy casualties which I should otherwise have incurred.

"The assaulting force consisted of the second brigade, led by the Thirty-third (Duke of Wellington's) regiment, accompanied by detach-

ments of the Royal Engineers and Madras and Bombay Sappers and Miners, with means of clearing away obstacles, the first brigade to be in close support. I concentrated the fire of the artillery on the gateway and the north end of the fort, which were crowded with the houses of the soldiers, avoiding as much as possible the higher part of the interior occupied by the Abyssinian prisoners and non-combatants. The enemy carefully concealed themselves from view, so that the place seemed almost deserted, although, when entered by our troops, it was found to be thronged with soldiers who had thrown away their arms, released prisoners, and the numerous voluntary and involuntary followers of Theodore's fortunes. The artificial defences consisted of stone walls, loop-holed and surmounted by strong and thick barricades of thorny stakes, with narrow stone gateways; the lower one built up in the interior, the higher one being seventy feet above the lower, and approached by a very steep narrow path winding among the soldiers' huts. The attack was ably conducted by Sir Charles Staveley, and gallantly carried out by the troops. Fortunately, the defences were very unscientifically constructed, and, though the attack was met by a sharp fire from the enemy, yet they could not direct it on the head of the storming party without exposing themselves to the rapid and fatal fire of the Snider rifle, and our loss was, in consequence, very small. The Royal Engineers and Sappers and leading sections of the Thirty-third regiment were long before they could force an entrance, and during that time nine officers and men of the Royal Engineers and Sappers received wounds or contusions. At length an entrance was found by means of the ladders, near the gate and by the leading men of the Thirty-third, who scaled a rock and turned the defences of the gateway. The enemy was driven to the second barricade, and when that was carried all resistance ceased.

"Among the dead near the outer gateway were found several of Theodore's most devoted chiefs. One of them, Dejach Enjeda, had urged Theodore to massacre all the prisoners, a course from which he was dissuaded by others. Close to the second gateway lay the body of Theodore. At the moment when the barricade was forced by the Thirty-third, Theodore fell, as I have since learned, by his own hand. His troops immediately fled, some by the Kaffir Burr Gate, which was found choked with arms that had been cast away in their flight. Of these fugitives the greater part fell into the hands of the Gallas, and the remainder, seeing the fate of their comrades and hearing the taunting invitations of the Gallas, returned to Magdala and surrendered.

"The command of Magdala was intrusted to Brigadier-General Wilby, who held it with the Thirty-third and part of the Forty-fifth regiments. So thickly was the fortress inhabited, and so great was the crowd of people, that it

was no easy matter to establish order. Guards were placed at the gates and such places as required protection. The family of Theodore were committed to the care of Mr. Rassam, who was requested to do all that was in his power for their comfort and protection. The Abyssinian prisoners were released from their chains, and the very numerous body of Abyssinians whose histories and condition it was impossible at the time to investigate were collected in an open space in the centre of the fortress, where they could be protected, and where they quickly threw up small huts for themselves and remained until their final departure.

"On the 15th, the Fourth (King's Own) regiment relieved the Thirty-third in Magdala, and the Forty-fifth were removed to Islamgie to reinforce the detachment of the Tenth native infantry, under Colonel Field, for the protection of the captured arms and ordnance and to furnish working-parties for their destruction. The inhabitants of Magdala were collected at Arogie, where great vigilance was necessary to protect them from the Gallas, who were lying in wait both day and night for opportunities of plundering and destroying them. Notwithstanding the friendly relations with the Queens of the Gallas, their people were so little under restraint that it was frequently necessary to fire upon them to drive them from molesting our water-parties and carrying off the mules. A party of them, in search of plunder, even dared to make their way into Magdala, where they were captured by the guard of the Thirty-third regiment.

"On the 15th and 16th the disarmed soldiers and people of Magdala made their exodus from Arogie. Every consideration was shown them, and they were allowed to take all their property. The Arogie defile was guarded by infantry, and their procession, after crossing the Bashilo, was guarded by cavalry patrols until they reached Waddeba.

"On the morning of the 17th orders were issued to clear every one out of Magdala by four p. m. At that hour, the whole of the captured ordnance having been destroyed, the gates of Magdala were blown up, and the whole of the buildings were committed to the flames. The wounded Abyssinians who had no friends to take charge of them were conveyed into our hospitals. The elephants and heavier ordnance having been sent in advance on the 15th, on the 18th of April the force recrossed the Bashilo, on its return to the coast."

The object of the expedition having been attained, General Napier deemed it necessary that some provision should be made for the large numbers whose interests and safety had centred in Theodore's existence, and who remained disarmed and unprotected, and exposed to merciless plunder and slaughter at the hands of the wild tribes, which circumstances had for the moment converted into allies of England. The disposal of the fortress of Magdala first demanded attention. This strong position,

situated geographically in the country of the Wollo-Gallas, from whom it was finally wrested by Theodore about ten years ago, had imposed, in his hands, an effectual check upon the encroachments of the Gallas on Christian Abyssinia. General Napier desired, in the interests of Christianity, to place the stronghold in the possession of Wagshum Gobazie, the *de facto* ruler and principal chief of this portion of Abyssinia. But when he sent for his lieutenant, the Dajaz Mashashah, the latter excused himself, in his master's name, from accepting the charge, alleging as his reason that it would require so large a garrison to hold it, that it would be a source of weakness rather than of strength. Wagshum Gobazie himself, notwithstanding his repeated invitations to the English, through Brigadier-General Merewether, to come quickly to his aid, had removed himself and his army to a distant quarter in pursuit of objects of his own, and it was impossible for General Napier to await a reply to the letter which was addressed to him on the subject of Magdala. General Napier therefore destroyed the gates of the fort, burnt every thing on the mountain that was combustible, and abandoned it. Several claimants for its possession had, in the mean time, addressed General Napier regarding it. One of these was the Chief of Dacont, a small territory lying adjacent to Magdala. Werkait, one of the two rival Queens of the Gallas, had also put forward her claims, as likewise had Masteeat, the other and more powerful of the Galla Queens. Shortly after the arrival of Werkait's letter, soliciting that the fortress might be delivered to her, the queen herself arrived. She remarked to General Napier: "We fought with Theodore as long as we could, and when his power was too strong for us to resist any longer, my son submitted to him, on receiving a promise of good treatment, notwithstanding which he was inhumanly cut to pieces, and thrown over the precipice of Magdala; and now I come to see the grave of my enemy Theodore, and the place where my son fell." It was deemed inexpedient to comply with this wish. As news arrived of the approach of Queen Masteeat, Queen Werkait took a hasty departure, apprehensive lest she should be intercepted by her more powerful rival. Queen Masteeat had responded very effectually to the request of the English to close all avenues by which the late king could have escaped, and thus she came to General Napier in the character of an established ally. To her request for the possession of Magdala, it was replied that, Gobazie's lieutenant having declined to receive it, the place would be abandoned, after dismantling it and burning all of it that could be so destroyed, as a mark of the anger of the British at the ill-treatment of our countrymen, as well as of our abhorrence of the cruelties which Theodore had committed there.

General Napier with his staff, and Theodore's

son under the charge of Captain Speedy, arrived in England in the last days of June, and met with an enthusiastic ovation. He had conferred upon him the title of Lord Napier of Magdala. The son of Theodore, who was, soon after his arrival, presented to the Queen, will be educated in England. His mother had died in the English camp, on May 15th. The released Abyssinian captives, namely, twenty gentlemen, eight ladies, twenty-two children, and twenty-one followers, arrived in England a few weeks before Lord Napier.

The first effect of the death of Theodore, and the withdrawal of the English troops, upon the condition of Abyssinia, was a relapse into anarchy. Theodore had been the first ruler for many centuries who had acquired the power to make his authority felt all over the country, and to begin the consolidation of Abyssinia into one compact empire.

A letter from Massowah, dated September 17th, to the Paris *Moniteur*, gives the following review of Abyssinian politics at that time: "One of the three great provinces of Abyssinia, Amhara, is under the absolute sovereignty of Gobazie, who has taken advantage of the English expedition against Theodore, to extend his possessions.

"Magdala, after having been burnt by the English, has been occupied by Mastecat, one of the queens of the Wollo-Gallas, a Mohammedan tribe. The escarpments of this fortress being natural, they could not be destroyed. Immediately after the city was taken possession of by Mastecat, a rival, in the person of Queen Werkait, set up claims, in which she was supported by the King of Shoa. Werkait is one of the two queens ruling over the Wollo-Gallas, in the name of their sons, who are cousins. The frontier of the Wollo-Gallas tribe is Bashilo.

"The country to the north of Bashilo, Lasta, and Jidjou, were governed during the English expedition by the maternal uncle of Gobazie; but Tapis Ali has commenced to urge the rights which he pretends to have, through his mother, upon Lasta, and through his father upon Jidjou. This chief is popular in both these countries, but he is not in a position to resist the forces of Gobazie. On the other hand, the son of Theodore, Mechacha, who is in revolt against Gobazie, has returned to Kwara, his father's country. Gobazie has not yet succeeded in suppressing this revolt, and his power has been seriously compromised in the south-east and north-west, but it is secure throughout the whole of central Abyssinia.

"Gobazie has rebuilt Gondar, the ancient capital, and has proclaimed himself Emperor under the name of Hazie Tecla Giorgis. He has recently addressed a letter to Kassa, King of Tigré, and sent him at the same time a present of several horses. This latter, who now resides at Adowah, received and responded to these overtures in a friendly manner. These relations have given rise to different interpretations. According to some, Gobazie has simply

required of Kassa to make submission to him; according to others, he has demanded of the King, that he send an envoy with money to Cairo in order to obtain a bishop, and Kassa has refused to comply. Whichever may be true, the rainy season would not permit hostilities at present. Amhara, where grain is abundant, offers to Gobazie resources which he would not find in the Tigré; besides which, it appears preferable for both rivals to remain allies for some time yet in order that they might be better able to resist the rebels.

"In case war should break out in the future, more or less distant, it would take place under very nearly the following conditions: Gobazie, whose army is devoted to him and accustomed to fighting, has a strong cavalry force, but his troops are badly armed. The effective troops of Kassa are very numerous. He has a good supply of cannon and muskets, and he has the advantage of being near the sea. But in spite of his generous character and his proud courage, he is not yet completely master of his people. The province of Tigré has not only been ravaged for several years past by grasshoppers, but is, besides, devastated by partisans who, in virtue of certain ancient customs, levy ruinous contributions in grain upon the inhabitants, leaving many of them, frequently, without seed to sow."

ADLER, GEORGE J., Ph. D., a German scholar and philologist, born in Germany, in 1821; died at the Bloomingdale Insane Asylum, August 24, 1868. He came to the United States at the age of twelve years, after an excellent elementary course in the gymnasium of his native town, and eventually entered the University of New York, where he graduated with high honors in 1844. In 1846 he was appointed Professor of German in his Alma Mater, and continued in that position till 1854. Having a decided taste for philological studies, he very early commenced the preliminary studies for his elaborate German-English and English-German Dictionary, the first edition of which was published in 1848, when he was but twenty-seven years of age. He subsequently made considerable additions to it, and followed with a German grammar, reader, and other text-books. His dictionary, undoubtedly the best work of its kind extant, soon won him a reputation, to which his later works materially added. His works were in great demand in Europe, and several of them, his edition of Goethe's "Iphigenie," in particular, were translated into French and Spanish. He also wrote much for the periodical press. In 1860 his mind became affected, probably from excessive study, and he was sent to the Bloomingdale Asylum. His mania was of a religious character, but he had lucid intervals, in which he wrote magazine articles, or prepared works for the press, with all his former ability. In the last of these, he prepared for *Putnam's Magazine* an interesting review of Lessing's "Nathan the Wise."

AFRICA. The year 1868 is memorable in the history of Africa for the English-Abyssinian war. (See *ABYSSINIA*.)

It is now generally conceded that the Suez Canal, the greatest engineering work of history, will be a success. Vessels of light draught already pass it, but it will yet require a very large expenditure of money before the work is thoroughly completed so that a ship drawing twenty-five feet of water can pass from the Mediterranean to the Red Sea. When completed, the work cannot fail to have a powerful influence upon developing the resources of Egypt and promoting civilization in Eastern Africa. (See *EGYPT*.)

The states of Northern Africa, especially Algeria and Morocco, again suffered from a frightful famine. About Algeria, a letter from the Rev. J. B. Ginsburg, dated Algiers, July 10, 1868, gives the following information:

"The famine brought on by drought and the plague of locusts and cholera has exhausted the native resources, gradually assuming most distressing proportions, and literally decimating the native population. They die, not from any disease, but from starvation. They first fed on the grass of the field and the leaves of trees; the filth collected in dust-carts was a luxury. They then dug out and ate animals which had died from starvation. In travelling, I saw these creatures, shrunk to skin and bone, surrounding the dwarf palms and thistles, which they thought delicious fare. Voracious jackals are deprived of any chance animal lying dead in the country. Men attack carts laden with manure, and pull out the cabbage-stalks and turnip-tops. Women grub in the horse-litter for the undigested grains of corn and barley, and wash and eat them with avidity. Children throw themselves upon the sweepings of the house, and dispute with the dogs the bones and other pitiful refuse found upon the heaps of rubbish, smash and gnaw them. This appalling distress at last impelled the famished beings to acts of violence and unheard-of villainies and cannibalism. They attacked men and beasts, and even killed their own children, salted, and ate them. In spite of hundreds of thousands of francs sent over from France, the famished Bedouins perish in incredible numbers. Bodies are still found side by side in the ditches, on the high-roads, or in the brooks, devoured by hyenas or jackals."

In Morocco the situation was reported to be even more than in Algeria. According to an account in the Paris *Constitutionnel*, numbers of persons were constantly dying of hunger. The roads were covered every morning with the dying and the dead. The rich were powerless to save these poor creatures; and the number of those who perished, either of hunger or the epidemic, was estimated at one-fourth of the entire population. "It is not, as will be seen," says the *Constitutionnel*, "Algeria alone which has just passed through a deplorable crisis. In Tunis, as in Morocco, the

populations, ravaged with cholera, ruined by invasions of locusts such as were never before seen in the memory of man, and suffering two years of drought, were, in the summer of 1868, plunged into the deepest suffering. Fortunately, in Algeria a good harvest repaired, so far as it was possible, the losses experienced by those tribes in the earlier months of the year, and it was hoped that the wants of the coming winter might be met by the provisions made for giving employment, by the exercise of charity, and various kinds of assistance judiciously rendered."

The insecurity of foreign residents in Tunis led to strong remonstrances on the part of France and other powers; for a time, the French consul broke off diplomatic relations with the Tunisian government, but in May a new convention was concluded, satisfying the demands of France.

An important change took place in the government of the island of Madagascar. The Queen Rasoahima, who, though not a persecutor of Christianity, was opposed to its progress, died, and her successor showed herself at once a zealous patron of the Christian missions. In consequence of this change of policy, a strong feeling in favor of Christianity has set in among all classes of the population, and a speedy Christianization of the whole country is looked for. Madagascar has now treaties with many of the Christian countries. That with the United States was promulgated by President Johnson in October, 1868. (See *MADAGASCAR*.)

To put an end to the war between the Orange Free State and the Basutos, Governor Wodehouse, of the Cape colony, at the beginning of the year, declared the Basutos to be taken under the British protectorate. In defiance of this notice, President Brand, of the Orange Free State, continued the war, and met with marked success. The Basuto strongholds Tandjesberg and Treine were captured. At the former, Bushuli, the brother of Mosheh (chief of the Basutos), was killed. On February 22d, the Free State burghers captured, with the loss of only three men, the native stronghold Kilme, with 1,500 horses, 8,000 sheep and goats, and 11,000 head of cattle. In March Governor Wodehouse issued a proclamation, declaring the Basutos British subjects, and the country inhabited by them British territory. The commander of the English frontier police in Basuto-land, Sir Walter Currie, wrote to Commandant Joubert (of the Orange Free State), requesting him to abstain from any acts of aggression against the Basutos, and informing him that if any such were attempted he should feel bound to aid the Basutos in resisting them. To this the commandant replied that he had no instructions to acknowledge Sir Walter's authority, and requested that he would restrain the Basutos, and clear them out of the conquered territory. An offer of the governor of the Free State of three hundred farms in the Basuto territory,

to be held under British title, was submitted by the president to the *Volksraad* of the Free State, and rejected by them. The *Volksraad* decided to send a deputation to the British Government to represent their case; and they requested Governor Wodehouse to stay all proceedings till the result should be known. The governor said he would consent if the president would give guarantees for the preservation of peace in the mean time. The president's reply did not lead to a perfect understanding, but subsequently the Free State relinquished the hostile position it had assumed in reference to the British protection of Basutoland, and a deputation waited upon Governor Wodehouse to inquire if there was any possibility of the Free State joining the Federal Union with the South-African colonies, and annexing it to the British crown, to which the governor returned a very guarded reply.

The President of the Transvaal Republic, Prætorius, has annexed, by proclamation, a territory about three times the size of the present republic. It has become known that, in the northern districts of this republic, debased Europeans, taking advantage of the distance of the district from the centres of population and power, have revived the slave-trade in its worst form. A strong movement for putting down this new slave-trade has begun in the towns. The discovery of rich gold-fields in the republic and in the neighboring districts has, of late, called special attention to this republic (*see TRANSVAAL REPUBLIC*).

The expedition which the Portuguese, in Mozambique, undertook into the exterior, had a fatal issue, the larger portion of the expedition being massacred by the natives.

The following table exhibits the area and population of the principal divisions of Africa.*

Countries.	Square miles.	Inhabitants.
Morocco.....	269,593	2,750,000
Algeria.....	268,817	2,921,946
Tunis.....	45,710	950,000
Tripoli (inclusive of Barca and Fezzan).....	344,423	750,000
Egyptian Territory.....	659,061	7,465,000
Sahara.....	2,436,473	4,000,000
Mohammedan empires of the Middle Soudan.....	631,017	38,800,000
The Western Soudan, inclusive of Liberia, Dahomey, French, British, Portuguese, and Dutch possessions.....	818,536	38,500,000
Eastern Africa (including Abyssinia).....	1,594,550	39,700,000
South Africa (inclusive of the Orange Free State, the Transvaal Republic, and the Basuto Territory).....	1,965,974	16,000,000
Equatorial Territory.....	1,723,264	43,000,000
Islands in the Atlantic Ocean.....	2,731	115,063
Islands in the Indian Ocean (inclusive of Madagascar)....	237,904	5,599,300
Total.....	11,556,663†	190,950,609

* The above figures are taken from Behm's *Geographisches Jahrbuch*, vol. i. (Gotha, 1868), which is generally acknowledged as a standard authority on geographical subjects.

† As several inland lakes are not included in the above list of countries, this total is somewhat larger than the aggregate of the above figures.

Among the most important of the native states belong, besides Morocco, Tunis, Tripoli, and Egypt, the area and population of which have been given in the above list, the following: Liberia, 9,567 square miles, 717,500 inhabitants; Abyssinia, 158,892 square miles, 3,000,000 inhabitants; the Orange Free State, 48,049 square miles, 50,000 inhabitants; the Transvaal Republic, 77,964 square miles, 120,000 inhabitants; Madagascar, 232,315 square miles, 5,000,000 inhabitants.

Christianity is steadily advancing in Africa. It is the ruling religion in the large possessions and dependencies of England, France, Spain, Portugal, Netherlands, in Abyssinia, Liberia, the Orange Free State, and the Transvaal Republic. To these states Madagascar will soon be added, as the new Queen favors Christianity, and the Christianization of the country makes rapid progress. The population which is in connection with or under the influence of the Protestant Church is estimated as follows: British possessions, 500,000; Algeria, 10,000; Egypt, 10,000; Liberia, 40,000; Madagascar, 50,000; Orange Free State, 15,000; Transvaal Republic, 30,000; Kaffraria, and Basuto Territory, 80,000; total 685,000. The Roman Catholic population is estimated at 1,106,200: embracing 140,000 in the British possessions; 183,000 in the French; 439,000 in the Portuguese; 12,000 in the Spanish; 100,000 in Angola, Benguela, and Mozambique; 190,000 in Algeria; 50,000 in Egypt; 80,000 in Abyssinia; 200 in Morocco; 10,000 in Tunis and Tripoli; and 2,000 in Madagascar. About 3,000,000 in Abyssinia, and 200,000 in Egypt, are connected with Eastern Churches; making the total Christian population of Africa about 5,000,000.

AGRICULTURE. In the article AGRICULTURE, in the ANNUAL CYCLOPEDIA for the year 1867, it was found impossible to obtain accurate statistics of the crops of that year, owing to an unusual delay in making the returns to the Agricultural Department of the Government. They were not, in fact, collated and published in full till about the first of June, 1868. The estimates given were, however, a very close approximation to the actual figures, as a comparison of the following tables with the estimates of that volume will demonstrate. For further comparison, and as indicating the advance in the quantity of agricultural products, we give the aggregates of 1850 and of 1860 also:

ARTICLES.	1850.	1860.	1867.
Corn.....bushels.	593,071,104	839,793,740	768,390,000
Wheat.....do....	100,435,944	173,104,994	217,875,400
Rye.....do.....	14,188,813	21,101,380	23,490,000
Oats.....do.....	143,584,199	173,643,135	276,098,000
Barley.....do....	5,167,015	15,835,396	26,727,000
Buckwheat.....do..	8,956,912	17,571,818	21,359,000
Potatoes.....do....	65,797,896	111,143,897	67,783,000
Tobacco.....pounds.	199,758,655	494,309,461	323,734,000
Hay.....tons.....	13,839,643	19,063,896	26,277,000
Cotton.....bales...	2,445,798	5,337,053	2,300,000
Wool.....pounds...	52,516,959	60,264,913	112,000,000

Following the same order in regard to crops, we give our usual brief notes of the crops of 1868:

The **MAIZE**, or **INDIAN CORN**, crop, though much better than that of 1867, and of larger amount than the crop of 1859-'60 (specified above), is yet a decrease in proportion to the increase of population. The Pacific States and Territories are unsuited to the production of Indian corn, and the amount raised there is very slight. Leaving these States and Territories out of the account, the corn crop of 1868 was, in round numbers, 905,178,000 bushels. Its quality was generally very good, though in Iowa, Southern Illinois, and some other low lands, there was more smut than usual.

The **WHEAT** crop is slightly larger than last year, though it will not probably exceed 225,000,000 bushels. The promise of the early summer was not realized at the harvest. The acreage devoted to wheat was considerably greater than the previous year, but it is a fact which ought to excite alarm, that the yield to the acre in the older wheat-fields is rapidly decreasing. Land which, twenty years ago, yielded twenty-eight to thirty bushels to the acre, and ten years ago from eighteen to twenty-two bushels, now produces only from nine to twelve bushels, and wheat is ceasing to be a paying crop. The whole wheat-growing region east of the Mississippi has, within ten years past, barely held its own—Wisconsin, Illinois, Michigan, Indiana, and Ohio, but just making up the deficiency in New York, Pennsylvania, Maryland, Virginia, Kentucky, and the other States of the Atlantic slope. The production of even the most fertile of these States, to the acre, is decreasing year by year, and their aggregates are only kept up or increased by the enlarged area devoted to this crop. On the other hand, the territory lying between the Mississippi River and the Pacific Ocean, which, in 1859, produced but 25,000,000 bushels, harvested, in 1868, above 65,000,000 bushels, more than one-fourth of the whole being yielded by California. The yield to the acre in that State is between thirty and forty bushels. The cause of this decreased production in the States east of the Mississippi is the abstraction, by continued cropping, of those constituents of the soil which go to the making of the wheat culm and berry. If these can be restored to the soil in full, the old yield per acre ought to be regained.

RYE, never a large crop, differs but little in amount from last year, with possibly a small gain from the greater plumpness of the berry. It may safely be put down at 24,000,000 bushels.

OATS are a very important crop. The yield was light in most of the Atlantic States; not a full average in Michigan, Wisconsin, and Iowa, but west of the Mississippi above the average. In California, oats are extensively mowed for hay before the grain is ripe, the ordinary grasses not enduring the long dry

season. The crop was not far from 272,000,000 bushels.

BARLEY is one of the smaller cereal crops, except on the Pacific, where it takes the place to a great extent of Indian corn. In the Atlantic and central States it is mainly grown for malt. The crop east of the Mississippi was smaller than last year; west of that river, and especially on the Pacific coast, it was somewhat larger. It did not probably exceed 25,000,000 bushels.

BUCKWHEAT was deficient in several of the States where it is grown. In Connecticut, New Jersey, Minnesota, and California it was quite up to the average. The yield in the aggregate was nearly 21,000,000 bushels.

The **POTATO** crop has favorably disappointed the farmers. It was thought early in the season that it would prove seriously deficient in Indiana, Illinois, Michigan, New York, and Pennsylvania, and that these great deficiencies would reduce the aggregate below that of last year, though Southern New England, New Jersey, Delaware, the Gulf States, and California reported a more than average crop. The aggregate production, however, proves to be about 11 per cent. in advance of last year, and though it does not approach to the enormous crop of 1859, it will probably not fall below 75,000,000 bushels. The sweet-potato crop is also larger than last year.

TOBACCO is an uncertain crop, though, when successful, a profitable one. The returns are incomplete, even from the States where it is most largely grown, but, so far as can be determined, indicate a crop of about 332,000,000 of pounds.

The **HAY** crop was almost uniformly good, Florida and Kansas being the only marked exceptions, and in neither State is the hay crop of prime importance. The returns indicate a yield of about 32,500,000 tons.

COTTON, concerning which there were serious apprehensions during the summer from the depredations of the army worm, proves to have somewhat exceeded the aggregate of last year, though upon fewer acres. The following is the estimate of the Commissioner of Agriculture in December, which, as he himself acknowledges, was undoubtedly below the truth. Later reports bring up the aggregate to fully 2,500,000 bales of 400 lbs. each.

	Bales.
North Carolina.....	140,000
South Carolina.....	180,000
Georgia.....	290,000
Florida.....	85,000
Alabama.....	285,000
Mississippi.....	400,000
Louisiana.....	250,000
Texas.....	280,000
Arkansas.....	265,000
Tennessee.....	200,000
Other States.....	75,000
Total.....	2,380,000

The **WOOL** crop is somewhat smaller than in 1867. This was due to the protracted depres-

sion in woollen manufactures, which has caused many wool-growers to sell both lambs and ewes to the butchers, as the most profitable method of disposing of them. The markets have been throughout the year glutted with carcasses of mutton; and the number of sheep, which had increased with great rapidity during the past seven or eight years, must have diminished during the year 1868. The wool-clip is stated at 104,000,000 pounds.

Of other crops less universally cultivated, **SORGHUM** seems to have been about the same in quality as last year; the **SUGAR** from the **CANE**, which is made in only five States to any extent, viz., Georgia, Florida, Louisiana, Texas, and Arkansas, was a much larger crop than in any previous year since 1860, in Louisiana the production being more than twice that of 1867, and in the other States from 15 to 30 per cent. more. The production of **SUGAR** from the **SUGAR BEET**, though it has not yet attained to any considerable prominence, is increasing, not only in Illinois, but also in California, where it bids fair to become an important branch of agricultural labor, and in several other States.

The **HOP** crop, in 1868, has been for the most part a failure; the blight and aphid have both seriously injured the crop, and the importation has been so large as to depress the price to about the cost of production. The hop-growers of the Wisconsin hop district, who in 1867 found hop-growing so profitable, were in 1868 completely in despair; many of them have abandoned their hop-yards or destroyed the vines.

FLAX has received in several States a new impulse from the new machinery for dressing and breaking it. In Michigan, Minnesota, Nebraska, and California, as well as in several of the Eastern States, a much greater breadth of land has been devoted to this crop than for many years past. The leguminous plants, **BEANS** and **PEAS**, have yielded a better crop than usual, though the demand is not so great for them as it was during the war.

Of **FRUITS**, the apple crop in Maine, New Hampshire, Massachusetts, North Carolina, Georgia, most of the Gulf States, Minnesota, Kansas, and California, was above the average, in all the other States far below. In Pennsylvania, Delaware, Maryland, Indiana, and Illinois, it was an entire failure, and in several other States where it was usually one of the most staple crops the product was not one-half that of the previous year. The **PEAR** crop was also deficient in most of the States, North Carolina, Georgia, Louisiana, Texas, Arkansas, and California being the only exceptions.

The **PEACH** crop was deficient, except in Michigan, Illinois, Missouri, and the Gulf States.

The yield of **GRAPES** on the Atlantic seaboard was very small, and they were of indifferent quality. In the interior, and especially in the Seneca Lake district, New York, in

the vicinity of Lakes Erie and Ontario, in Missouri, and in California, they were abundant and of excellent quality. The culture of the grape, both for the fruit and for wine, has attained such magnitude in our country that it must be regarded as one of the most important of the minor crops. Its annual product in fruit and wine is not less than ten millions of dollars, and it is increasing in a very rapid ratio. In the Southern States, grape-culture has excited less attention, especially with reference to the manufacture of wine. The varieties of the grape most in favor at the North have not generally proved as successful at the South; and though the Catawba, Norton's Virginia, and the Herbemont, were all grapes of Southern origin, neither the Southern Atlantic nor the Gulf States have given any great attention to their development. A native grape of very marked character, and though possessing some faults, yet apparently well adapted to the production of some classes of wines, has recently attained considerable notoriety, though it has long been cultivated rather negligently, in the South. It is called the *Scuppernon*, and there seem to be three subvarieties of it, the white, the black, and the purple, all possessing similar characteristics, but differing in the degree of acidity, and in some of their qualities for the production of wine. This grape, which can only be cultivated successfully in the long and warm summers of the South, will doubtless greatly improve by careful cultivation. It has a positive character, is very hardy and full of vitality, and is said not to be subject to mildew or blight, to yield plentifully, and to be incapable of propagation except from seeds or layers. It is said also to be the only grape which is free from the attacks of the grape-vine borer (*Ageria polistiformis*), which gnaws the roots of the grape-vine, and does great mischief in Ohio and Missouri.

The number of bushels, acreage, and value of farm products for the year 1867, and also the average yield per acre of farm products in each State, the same year, was as follows. The value of these statistics in indicating the degeneration of the soil for staple crops, and the importance of the agricultural interest, cannot be overestimated:

Table showing estimated quantities, acreage, and aggregate value of the principal crops of the farms in 1867.

PRODUCTS.	No. of bushels.	No. of acres.	Value.
Indian corn	708,280,000	33,530,349	\$610,948,290
Wheat	312,441,400	15,331,561	431,796,460
Rye	23,184,000	1,639,176	33,499,700
Oats	376,636,000	10,746,418	172,473,970
Barley	25,737,000	1,131,317	23,350,180
Buckwheat	31,339,000	1,337,530	23,469,630
Potatoes	97,736,000	1,193,193	59,376,590
Total	1,437,512,400	66,983,639	\$1,373,314,130
Tobacco.....pounds.	313,794,000	494,333	41,369,431
Hay.....tons.	98,377,000	90,080,554	373,864,670
Cotton.....bales..	2,450,000	7,000,000	230,000,000
Total		94,343,596	\$3,007,463,331

The stock-raisers of the country have met with heavy losses during the past year from the splenic or Texan fever, pleuro-pneumonia, and other diseases among horned cattle, for a full account of which see "CATTLE, RECENT EPIDEMIC DISEASES OF," in this volume; the mortality among swine, from *Hog Cholera*, has also been very great, amounting, according to the statement of the Commissioner of Agriculture, to not less than \$15,000,000. There have been also complaints of heavy losses in the flocks of sheep in Illinois, Texas, and some other States from grub, scab, and foot-rot. In Texas and Georgia an epidemic which seems to partake of the character of cerebro-spinal meningitis, has prevailed with very fatal results among the horses.

The new textile fibre, *Ramie*, is attracting much attention, and is likely to be very thoroughly tested during the coming year. Senator Sprague, of Rhode Island, one of the largest manufacturers of cotton and woollen goods in the United States, has become so fully satisfied of its good qualities, that he has purchased a large estate in Florida to be devoted exclusively to its cultivation. It is said to be very hardy, not liable to be attacked by any of the known insect depredators, to produce a fibre intermediate in character between silk and linen, and to yield somewhat more than three times as large a quantity to the acre as cotton, and in the extreme South to produce three or four crops a year. It is cultivated much in the

same way as sugar-cane. How much of all this is true will probably be known a year hence.

The immense waste of sewage matters, especially in our great cities, and the startling decrease in the fertility of our cultivated lands, after a few years of liberal crops, despite the attempts to renew their productiveness by artificial or carefully-husbanded natural manures, have properly excited the solicitude of large-minded and intelligent agriculturists. The most promising plan for restoring in part to the soil the elements of fertility, which have been drawn from it by the consumption of food, would seem to be the adoption of some method of deodorizing and disinfecting human excrementitious matters, and using them as fertilizers. This is very perfectly and readily accomplished, wherever they can be used, by Rev. Henry Moule's earth-closets. The disinfectant and deodorizer which he uses is simply dried earth, which possesses great power of absorption, and prevents any unpleasant odor. It can be used by his system repeatedly for this purpose by simple drying, and then becomes a more active and perfect fertilizer than the best guano. The fertility of the cultivated lands of China and Japan, which have been for three or four thousand years under cultivation, has been maintained by the use of these manures. Many of the failures of our great staple crops, from rust and blight, from midge and Hessian fly, from army and boll worm, from caterpillars

and grasshoppers, are due primarily to the waning fertility of the soil, and the fact that these depredators find in the great decrease of the grasses and weeds, which are their natural aliment, the necessity of preying upon the more precious crops, and that these in their turn cannot derive from the impoverished soil the means of replacing the tissues which the ravenous insects have devoured. This leads us to speak of the terrible plague of insects injurious to vegetation experienced during the past year. To a considerable extent these were new enemies. The army-worm and the boll-worm preyed upon the cotton as they had done before; the midge and the Hessian fly committed ravages among the cereal grains; the aphid or plant-louse family, universal pests, destroying with equal zest the life-juices of the hop, the rose, the potato, and the grape; and the grasshoppers were almost universally prevalent and destructive to grass, to herbage and foliage, not only on the plains of Kansas, Nebraska, and Iowa, but in the hills and valleys of the Eastern States. These were old foes. But the newer comers were the ten-lined spearman, or potato-bug, which has for some years committed such havoc upon the potato crop; the great variety of beetles large and small, which have attacked the roots of grasses and other plants; the larvæ of innumerable moth and butterfly tribes, from the odious measuring-worm, the *Proctos* (those yellow worms with black dots which are found in colonies of from 15 to 100 on the under side of the grape leaves); the eight-barred *Alypia*, whose light-blue color banded with black renders him less disgusting than his depredations warrant; to the giant larvæ of the sphinx tribes, huge loathsome creatures of various shades, from light-green to velvety brown, and, prettier but equally destructive, the larvæ of the beautiful wood-nymphs. When we add to these the whole race of hairy caterpillars, and the crickets which devour so voraciously every green thing, we have an army of enemies, which will almost drive the horticulturist, the grape-grower, and the farmer, to despair.

How shall we rid ourselves of these pests? The birds, especially the sparrows, the swallows, the wrens, and the robins are good friends in this extremity, and if they claim a few strawberries, cherries, or grapes as toll, they have richly earned them by their activity and zeal. But the insect tribes were too abundant in the summer of 1868 to be completely kept under by any family of birds. The song-sparrows, the most active of these destroyers of noxious insects and worms, so glutted themselves that after a time they lost their appetite and became discouraged. Birds, too, do not readily find or seize those larvæ which colonize the under side of the leaves of the grape, the pelargonium, and other large-leaved plants. For these, other measures of destruction or prevention are needful. So far as the eggs, from which these depredators are hatched, are deposited in the

ground, or on the roots of plants, trees, and shrubs, the free use of the Phoenix disinfectant or some other powder, containing a considerable quantity of the carbolate of lime in fine powder, seems to be the most effectual remedy. But the greater part are hatched from eggs deposited on the plants themselves. For these, syringing or sprinkling with sulphur is the only effectual remedy. There are many washes or solutions recommended as certain to destroy these insect pests; some of them are doubtless effective, but they kill the plant as well as the insects. A solution of tobacco-soap, a filthy, disgusting compound, is largely advertised, but is not always efficacious; the suds from whale-oil soap, which is also strongly recommended, frequently fails; that of creylic soap is better, and is perhaps preferable to any thing else, but there is danger to the plants if it is applied in too great strength. Numberless nostrums have been advertised as sure to accomplish the object, but those which are best owe their value to the presence of either creylic or carbolic acid in some form of combination.

For the destruction of the "ten-lined spearman" or potato-bug (which, though belonging to the family of the *Cantharids*, like the potato blister-fly, *Cantharis vittata*, was well known in the Eastern States, is now named by entomologists *Doryphora decim lineata*, from its peculiar markings), various means have been recommended, but none of them thoroughly effective. The use of slaked lime in powder, sprinkled over the vines, of sawdust saturated with coal-oil, of brine (which must be much diluted or it will kill the plants as well as the bugs), of powdered hellebore (somewhat dangerous, being an active poison), and of soot, have all been recommended. We believe the suds from creylic soap as good as any of them. Another method of exterminating the bugs is to take a double scoop-net, made something like an eel-pot, and passing it swiftly and vigorously over the potato vines, sweep them into it, and then, when once caught, drop them into boiling water. This is effectual, but it is tedious work.

The year was more prolific than most of those which preceded it, in the publication of really able and valuable books on agriculture and horticulture. The following were the most important: "The Agricultural" and the "Horticultural Annual" for 1868; "The book of Evergreens," by J. Hoopes; "Cotton Culture," by Lyman; "Darwin's Variations of Animals and Plants," 2 vols.; "Gardening for Profit," by Peter Henderson; Harris's "Insects injurious to Vegetation," a new edition; "How Crops Grow," by Professor S. W. Johnson; "The Percheron Horse," Harris's "Rural Annual," 2 vols.; "The Tim Bunker Papers"; "The Crack Shot," by Barber; Du Breuil's "Vineyard Culture," edited by Dr. Warder; "Farm Talk," by Brackett; Geyelin's "Poultry Breeding;" Waring's "Elements of Agriculture."

ALABAMA. At the close of the previous year, on December 28th, Major-General John Pope having been relieved by President Johnson from the command of the Third Military District, comprising the States of Alabama, Georgia, and Florida, Major-General Meade was assigned to the same, and a change of the district commander of Alabama soon followed, by assigning Brigadier-General Julius Hayden to the position held by Major-General Wagner Swayne.

Early in the month of January, Major E. W. Crittenden, post commandant at Montgomery, issued a general order, forbidding military organizations of any character, except troops of the United States. He further directed that all such organizations, in existence, should be immediately disbanded; and that all mayors, sheriffs, or other civil authorities, should report at once every violation of this order.

One of the earliest acts of General Meade was to reinstate the clerk of the District Court, Charles R. Hubbard, who had been removed by General Swayne.

The relations existing at this time between the civil and military authorities of the district are explained in an order issued by General Meade, on January 15th, which was as follows:

General Orders, No. 10.

HEADQUARTERS THIRD MILITARY DISTRICT, }
ATLANTA, GA., January 15, 1868. }

The frequency of reported outrages, and the accompanying expression of opinion of subordinate officers, that no justice is to be expected from the civil authorities, require notice and action on the part of the major-general commanding.

1. The commanding general desires it to be understood that the trial and punishment of criminals is to be left to the civil authorities, so long as the said authorities are energetic, active, and do justice to the rights of person and property without distinction of race or color. Whenever the major-general commanding is satisfied, from evidence produced, that the civil authorities fail to do their duty, then prompt action will be taken by him, both for the punishment of criminals, and the removal from office of derelict civil officers.

2. The military are to coöperate with, and aid the civil authorities in the detection, capture, and custody of criminals, and they are further authorized, in cases where they have reason to believe that the civil authorities are not disposed to do their duty, to retain criminals in custody until the fact becomes evident, whether the civil authorities will or will not perform their duty—immediately reporting their action on all such cases to these headquarters.

3. Writs of *habeas corpus*, issued against criminals in the custody of the military, will be obeyed so far as to produce the body of the prisoner in court, and the making of a respectful return, setting forth the grounds and authority by which the prisoner is held. Should the court fail to respect the authority under which the prisoner was held, the custody of the criminal will not be transferred to the court without a reference to these headquarters.

4. The major-general desires to impress on the officers under his command the exercise of a sound discretion and good judgment. It is his determination to afford the civil authorities every opportunity to discharge their duties untrammelled by any action on the part of the military, but such as they, the civil authorities, may invite and desire. He makes this public notice to the civil authorities that they may be

governed thereby—assuring them that they shall be respected in the exercise of their powers so long as impartial justice is meted out to all; but the commanding general is determined to exercise, to the fullest extent, the plenary powers with which he is intrusted, to secure protection of person and property in the district he commands.

By command of Major-General MEADE. ●
R. C. DRAUM, Assistant Adjutant-General.

There was much excitement, and strong partisan feeling, throughout the State, relative to the adoption or rejection of the new constitution proposed by the convention, held in 1867, under the Reconstruction Act of Congress. Meetings were held and addresses delivered, for and against it. The Conservative State committee called upon the people to form clubs, and thus concentrate their opposition to the measure. A conference, in opposition to the constitution, was held at Montgomery, and attended by influential delegates from all parts of the State. It issued an address to the people, setting forth the reasons for their opposition. They said the Constitution was framed by delegates representing merely the blacks and non-residents, and not the white inhabitants; nearly forty thousand of whom were disfranchised by the article on franchise, passed by the convention that formed the instrument, in order to secure its success. They further declared that so sweeping was the disfranchisement, that its effect would be to place the State government in the hands of the blacks and their abettors. In addition, every person wishing to vote was required to take a test-oath. In the opinion of the conference, this oath or affirmation, of itself, was rigid enough to disfranchise several thousands of conscientious voters. The address further stated as follows:

By the law of Congress as it now stands, a majority of the registered voters of the State must vote in the election, or the constitution is not adopted. There are about 167,000 registered voters in the State, so that it will require 84,000 votes to adopt the constitution.

We could not, under the unfair influences arrayed against us, reasonably hope to secure more than 84,000 votes against the constitution, and unless we do we would not accomplish more by voting than we would by refusing to vote. Then, the most certain way of defeating the constitution, as the law now stands, is to refrain from voting.

But, in the event the law is changed by Congress, and it is enacted that the majority of the votes cast shall decide upon the adoption or rejection of the constitution, the Congress will then have been forced to a departure from the law which it has ordained, and the rule which it has presented for itself and the people of the State, in determining whether this constitution should be the constitution of Alabama, and will be compelled to exhibit to the world the fact that the constitution they impose is not the constitution of the people of Alabama, but the constitution of a minority of the whole people, and that, a negro minority.

Could the constitution be defeated by voting against it under the assumed change in the law of Congress, with the unpropitious and hostile influences opposed to us? We are constrained to the opinion that it could be:

1. Because the negroes, as a body, will vote for its

adoption. To this there might be exceptions, but this would be the rule.

2. The machinery for conducting the registries, and the elections, is in the hands of those who favor the adoption of the constitution, and there are no sufficient means of purging the polls, or preventing or detecting frauds in the registration or in the management of the election.

The following resolutions were unanimously adopted by the conference :

Resolved, 1. That we recommend to the people of Alabama, opposed to the constitution proposed by the convention, lately in session at Montgomery, to abstain from voting at all the elections to be held on the fourth and fifth of February, either upon the question of ratifying or rejecting that constitution, or for candidates for offices under it.

2. That we also recommend to the opponents of said constitution, that they form and maintain effective political organizations among themselves in every portion of the State, until they are delivered from the perils which are impending.

The thirtieth day of January was recommended to the people of the State as a day of fasting and prayer to Almighty God, to deliver the people of Alabama "from the horrors of negro domination."

A petition also was prepared by the people opposed to granting suffrage to the blacks, and presented to the lower House of Congress, in which they complained of the grievances under which they considered that the people of Alabama were suffering. They professed the humblest submission and obedience to the laws, and portrayed the poverty prevailing on account of the unsettled condition of the State, owing to the political animosities and strife existing. In conclusion, they said :

We are beset by secret oath-bound political societies ; our character and conduct are systematically misrepresented and magnified to you and in the newspapers of the North ; the intelligent and impartial administration of just laws is obstructed ; industry and enterprise are paralyzed by the fears of the white men and the expectations of the black that Alabama will soon be delivered over to the rule of the latter ; and many of our best people are, for these reasons, leaving the homes they love for other and strange lands. Continue over us, if you will do so, your own rule by the sword. Send down among us honorable and upright men of your own people, of the race to which you and we belong, and ungracious, contrary to wise policy and the institutions of the country, and tyrannous as it will be, no hand will be raised among us to resist by force their authority. But do not, we implore you, abdicate your rule over us, by transferring us to the blighting, brutalizing, and unnatural dominion of an alien and inferior race, a race which has never exhibited sufficient administrative ability for the good government of, even the tribes into which it is broken up in its native seats ; and which in all ages has itself furnished slaves for all the other races of the earth.

For the purpose of modifying order No. 49, issued during the previous year, Major-General Meade issued an order, dated February 2, 1868, in which he prohibits the insertion of official documents in all newspapers attempting to obstruct, in any manner, the civil officers in the discharge of their duties. He further said :

Opposition to reconstruction, when conducted in a legitimate manner, is not to be considered an offence ;

but will be so considered when accompanied by violent and incendiary articles threatening the preservation of the peace, or by attempts to obstruct civil officers, as indicated in paragraph 1 of this order. Should any civil officer violate the provisions of this order, the case will be promptly reported to these headquarters.

On the 4th of February, the vote for and against the constitution, prepared in 1867, took place and passed off quietly. The whites, with unusual unanimity, abstained from the polls, and also a large number of blacks. The friends of the constitution made a most strenuous effort to poll as large a vote as possible, still they were defeated by about 15,000 votes. The time for taking the votes was also extended to four days, by order of Major-General Meade. About 70,000 votes were polled for the constitution, while it required about 85,000 to insure its success. The friends of the constitution elected the Governor, W. H. Smith, the Lieutenant-Governor, the members of Congress, and a large majority of the members of the Legislature.

About this time a bill, providing for the admission of Alabama as a State in the Union, was introduced in the lower House of Congress and referred to the Committee on Reconstruction. The majority of that committee submitted, on March 11th, to the House of Representatives, a report in favor of the bill, which was to establish the constitution thus rejected at the polls, chiefly on the ground that a severe storm prevented the attendance of the voters in the Republican part of the State.

A minority report was also submitted against the bill. Mr. Thaddeus Stevens, of Pennsylvania, opposed the bill, on the ground that it would be wrong to force on the people of Alabama a constitution in face of such a vote. The bill was referred back to the committee, and a substitute reported and passed in the House, but not acted upon by the Senate.

On the 17th of February the recently-elected Legislature of Alabama met in the office of the *Sentinel* newspaper, at Montgomery. The Lieutenant-Governor, A. J. Applegate, called the Senate to order, and in his address to them said that he regretted the absence of Governor Smith. The fact that Congress had not voted on the bill to admit the State could make no difference, as there was no doubt that the Assembly was legally elected, and Congress would undoubtedly recognize whatever they might do. It was absolutely necessary for the Assembly to act in advance of Congress, because the life of the nation was in danger, and there was a pressing "necessity for two Senators from Alabama to sit upon the trial of that renegade and traitor, Andrew Johnson." The Assembly would be sustained by Congress and by General Meade. "General Meade has been in consultation with many of us for the last few days, and stands ready to sustain our action. If any other assistance were needed, Major-General Dustan, commanding the militia, can at an hour's notice surround our body with

several regiments of loyal troops. Let us have no fear, but face the danger like men who are ready to do their duty at all hazards. It is now my duty to say that the Senate of Alabama is organized and ready for duty."

After some unimportant business, the Senate adjourned.

The proceedings were annulled by the subsequent action of Congress in the admission of Alabama.

On the 28th of February, General Meade issued an order instructing all officers, whose duty it is made by law to provide for the relief of paupers, to extend relief to all persons entitled to claim and claiming the same as paupers, without any discrimination as to race or color. And that in all public institutions supported by legislative appropriation or taxation, for the benefit of the deaf and dumb, the blind, or insane, indigent colored persons should be received on the same conditions and enjoy all the benefits which white persons were entitled to receive and enjoy in such institutions.

About this time some difficulty arose between the military authorities and judiciary. The Hon. B. T. Pope, Judge of the Twelfth Judicial Court, was arrested and incarcerated, by First-Lieutenant Charles J. Johnson, commanding at Jacksonville, for violation of General Order No. 53, which instructed all judges to see that juries were empanelled "without discrimination." Judge Pope interpreted the order as meaning, "without discrimination as to color, but requiring the other qualifications required by statute." In this view he was sustained by Major-General Meade, who ordered his discharge from arrest, and censured the conduct of Lieutenant Johnson.

A military commission was convened on the 13th, at Selma, for the trial of several persons charged with riot and assault and battery. The indictment contained several charges and specifications. The court found all the prisoners, except two, guilty, and sentenced them to terms of imprisonment varying from one to five years, and a fine of five hundred dollars each. General Meade approved of the proceedings and findings, but mitigated the sentences. These trials caused more than ordinary excitement, from the fact that they came within the civil jurisdiction.

A State convention assembled at Montgomery on the 3d of June. After two days' deliberation it adopted a resolution in favor of sending delegates to the National Democratic Convention, to be held at New York, on the 4th of July, and passed the following resolutions:

Resolved, That, having entire confidence in the principles and the patriotism of the Democratic party, we hereby pledge ourselves to support the candidates of that party for President and Vice-President of the United States, to be nominated at the coming convention in the city of New York on the 4th of July next.

Resolved, That slavery having been prohibited in the State of Alabama by a convention of the people

thereof, held in September, 1865, we hereby again proclaim our faithful adherence to that ordinance, and we assure the people of the United States that there are no laws in force in this State, enacted by our authority, which make any distinction in the protection which they give the person and property of both races, and we hereby declare our solemn purpose that these laws shall be faithfully and impartially administered as soon as the military are withdrawn, and we are permitted to manage our own affairs.

Resolved, That the thanks of the Southern people, as well as all friends of free government, are eminently due to Andrew Johnson for the unflinching courage and unsurpassable ability with which he has acquitted himself of his official oath to preserve, protect, and defend the Constitution of the United States; that this convention pays to him its respects and admiration, both as a patriot and a man, being incorruptible in both capacities, as proven by the ordeal through which he has just triumphantly passed.

About this time a meeting was held at Montgomery in support of General Grant for the presidency, at which some soldiers attended, who gave expression to their feelings in opposition to General Grant, and were strongly censured in a military order issued by Major W. F. Hartz, commanding the sub-District of Montgomery.

In the early part of June, a bill, for the admission of North Carolina, South Carolina, Louisiana, Alabama, and Florida, passed both Houses of Congress over the President's veto, and these States thus became entitled to representation in Congress.

Immediately upon the passage of this bill, the Governor-elect, W. H. Smith, issued the following proclamation, convening the Legislature, in order to conform to the conditions of the act of Congress, and to ratify the proceedings of the constitutional convention:

MONTGOMERY, ALA., June 26, 1868.

Whereas, by the terms of an Act of the Congress of the United States, entitled an "Act to admit the States of North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida to representation in Congress," it is provided as follows:

"That, if the day fixed for the meeting of the Legislature of either of said States, by the constitution or ordinance thereof, shall have passed, or have so nearly arrived before the passage of this Act, that there shall not be time for the Legislature to assemble at the period fixed, such Legislature shall convene at the end of twenty days from the time this Act takes effect, unless the Governor shall sooner convene the same."

Now, therefore, I, William H. Smith, Governor-elect for the State of Alabama, by the power and authority in me vested by said Act of Congress, do hereby convene the Legislature of this State at the capitol, at the hour of 12 M., Monday, July 13, 1868.

W. H. SMITH, Governor-elect.

The Legislature accordingly assembled on July 13th. Of the 84 members comprising the House, 26 were blacks. Mr. J. Carraway (colored) was elected Speaker of the lower House. The following message from the Governor was read in the Senate:

EXECUTIVE DEPARTMENT, STATE OF ALABAMA, }
MONTGOMERY, July 13, 1868. }

Gentlemen of the Senate and House of Representatives:

I have received from Major-General Meade, commanding the Third Military District, an official order,

numbered 100, in regard to organizing the General Assembly of this State. A duly verified copy of the order is herewith communicated for your information.

W. H. SMITH, Prov'l Gov'r of Alabama.

General Orders, No. 100.

HEADQUARTERS THIRD MILITARY DISTRICT,
DEPARTMENT OF GEORGIA, FLORIDA, AND ALABAMA,
ATLANTA, GA., July 9, 1868.

Whereas, by virtue of the Act of Congress, which became a law June 25, 1868, and of the proclamation of the Governor-elect of the State of Alabama, issued in conformity therewith, the two Houses of the Legislature are directed to assemble at Montgomery on the 18th instant; and

Whereas, in view of the fact that until the State of Alabama has complied with the requirements of the acts of Congress entitling it to representation, all governmental officers in said State are provisional and subject to the direct authority of the district commander; and

Whereas, The usual hope of organizing legislative bodies is in this instance impracticable:

It is ordered—1. That the Hon. William H. Smith, Provisional Governor of the State of Alabama, proceed at 12 M., on the 18th instant, to effect such preliminary organization of both Houses of the Legislature as will enable the same to enter on the discharge of the duties assigned them by law. 2. That before each House shall be considered legally organized, the Provisional Governor will require that, in conformity with the reconstruction acts and act which became a law June 25, 1868, each House, before proceeding to any business beyond organization, shall take measures to purge itself of all members who may be disqualified from holding office under the provisions of Section 8, an amendment to the Constitution known as Article 14.

By order of Major-General MEADE.

R. C. DRUM, Assistant Adjutant-General.

The president then informed the Senate that they, having complied with the requirements of Congress, were vested with full authority to transact the civil business.

In the House and Senate a resolution was adopted ratifying the 14th Article of Amendments to the Constitution of the United States, and also another, ratifying the resolutions of the Thirty-eighth Congress abolishing slavery.

The Governor, W. H. Smith, in his message strongly recommended the removal of all disabilities from the people of Alabama, and opposed any disfranchisement except for crime. He urged the necessity of a sound and thorough common-school system of education, stating that 87,600 of the adult white population of Alabama, in 1860, could neither read nor write, and that the colored people were still more deficient. He recommended the development of the agricultural and industrial interests of Alabama. Not having reports from the institutions of the State, he could not state their condition, or the details of the financial affairs of the Treasury. "In conclusion, gentlemen," he said, "you will pardon me for again reminding you that you have assembled to legislate in the interest of the whole people. Knowing you as I do, and judging of your motives by what I know of my own, I am assured that you will perform your duty in no bitter or partisan spirit, and that your acts will one and all promote the prosperity and welfare of every citizen."

The direction of affairs in the State was now turned over to the new civil authorities by General Meade, in the following order, issued on July 14th:

Whereas, Official information has been received at these headquarters from the Governor-elect of the State of Alabama, that the Legislature of said State, elected under the provisions of General Order No. 101, series of 1867, from these headquarters, has assembled and complied with the requisitions of the Act of Congress, which became a law June 25, 1868, entitled an "Act to admit the States of North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida to representation in Congress;" and whereas, said act states that, on compliance with the conditions therein set forth by any State, the officers of said State, duly elected and qualified under the constitution thereof, shall be inaugurated without delay, it is therefore ordered:

1. That all civil officers holding office in the State, whether by military appointment or by failure to have successors qualified, shall promptly yield their offices and turn over to their properly elected and qualified successors all public property, archives, books, records, etc., belonging to the same.

2. Whenever the military commander of the sub-District of Alabama, is officially notified of the inauguration of the State government elect, military authority under the Acts of Congress, known as the Reconstruction Laws, will be at an end in said State; and it is the duty of the sub-District commander to transfer every thing appertaining to the government of said State to the proper civil officers, and to abstain in future, upon any pretext whatever, from any interference with or control over the civil authorities of the State, or the persons and property of the citizens thereof.

3. On the inauguration of the civil government, all prisoners held in custody or by bonds for offences against the civil law will be turned over to the proper civil authority. In the mean time writs of *habeas corpus* from United States Courts will be respectfully obeyed and the decisions conformed to. Writs from State courts will have respectful returns made, stating prisoners are held by authority of the United States, and can only be released by writs issued by United States Courts.

By order of Major-General MEADE.

R. C. DRUM, Assistant Adjutant-General.

The following is an extract from an order of General Meade's defining the military jurisdiction:

The several States comprising this military district, having by solemn acts of their Assemblies conformed to the requisitions of the acts of Congress which became a law June 25, 1868, and civil government having been inaugurated in each, the military power vested in the district commander by the Reconstruction Laws, by the provisions of these laws ceases to exist; and hereafter all orders issued from these headquarters, and bearing upon the rights of persons and property, will have in the several States of Georgia, Alabama, and Florida, only such force as may be given to them by the courts and Legislatures of the respective States.

The late Secretary of State, Micah Taul, and the Attorney-General, John W. A. Sandford, protested against this order on the ground that, if Alabama was entitled to representation in Congress, it was because she was a member of the Union. Among the reserved rights of States was the power in each State to ordain and establish a constitution for itself and laws for its domestic government. The people of the State of Alabama rejected the constitution

proposed, and General Meade, in his report to General Grant, stated that the proposed constitution failed to receive a majority of registered votes, and was, therefore, rejected under the terms of the very act which, it was claimed, gave the election vitality.

The Senate Committee on Fees and Salaries reported on the House bill in regard to the pay of members and officers as follows: chaplain, \$4; secretary, \$10; assistant secretary, \$8; clerk, \$8; page, \$4; doorkeeper, \$6; president, \$12; members, \$8; sergeants, \$6; mileage, 80 cents; which was passed, but vetoed by the Governor, as the pay of members was fixed by the law of 1861, and the constitution forbade an increase of pay during the sitting of the Legislature.

The Legislature also passed a bill, giving to itself the power of casting the electoral vote of the State for President of the United States, which was vetoed by Governor Smith. In his veto, dated August 12th, he said:

After the most mature reflection, I am forced to the conclusion that the bill is wrong in principle, and that it would be a dangerous precedent in a republican government. As my judgment does not approve the bill, it is my constitutional duty to return it to the Senate with my objections. It cannot but be regarded as remarkable that the first Legislature convened in Alabama shall, in face of the principles of its organization, which every republican professes to hold dear, deny not only to the colored but the white man the right, by his vote, to indicate his choice for President and Vice-President of the United States, and take the matter in its own hands. What excuse can there be for it? Is it mere party expediency? If so, then it is an abandonment of the principles and an acknowledgment that the material out of which the Republican party is composed cannot be trusted. In other words, it is to say that colored men will not do to be trusted. This action of the General Assembly will be regarded as still more remarkable when it is considered in connection with what seems to have been the almost unanimous opinion of the leading members of the Republican party of Alabama.

On the 11th, the Senate passed the following bill for the removal of disabilities, which was not adopted in the House:

Sec. 1. Be it enacted by the General Assembly of Alabama, That all the disabilities imposed by the second clause of the Third Section of Article Seven of the constitution of the State of Alabama, shall be and the same are hereby removed, as fully to all intents and purposes as though no such disabilities had been imposed, from all citizens who shall file an application with the Judge of Probate of the county in which such citizens may reside, in the following terms, to wit: I, ———, a citizen of ——— county, State of Alabama, do make this application for relief from the disabilities imposed upon me by the second clause of the Third Section of the Seventh Article of the constitution of the State of Alabama and to be restored to the rights of citizenship.

Sec. 2. Be it further enacted, That it shall be the duty of the Probate Judge to file all applications made in pursuance of the provisions of this act in his office, but he shall not be entitled to any fee or charge for receiving or filing such application.

Several unimportant measures were adopted, and on the 18th of August the Legislature adjourned until the 1st Monday in November. But it was again convened on September 16th,

by a proclamation of the Governor, chiefly to provide for the registration of voters at the presidential election. A committee of seven was appointed to consider that part of the Governor's message relating to registration. On the 21st September a joint resolution and memorial to the President of the United States passed the Legislature, calling upon him to detail a sufficient force of troops for the State, to secure protection, as the laws were neither respected nor obeyed, and violence had been committed, in many cases, upon human life. It stated that officers had been intimidated from the discharge of their duties, and many forced to resign.

No action was taken on the petition of the Legislature. On the 1st October, the registration bill passed both Houses, and subsequently received the Governor's assent. It empowered the Secretary of State to appoint one registrar in each county, who would have the power of appointing deputies. A bill providing for the election was passed. An amendment of the Senate made it a misdemeanor for any person to challenge a voter.

The political canvass for the presidential election was vigorously carried on by both parties throughout the State; clubs were organized, meetings held, and the greatest excitement and enthusiasm prevailed. The Legislature, which had adjourned after passing the registration law, met again on November 1.

The Governor's message chiefly dwelt upon the resources of the State, and the importance of encouraging Northern capital to develop them. It called attention to the outrages perpetrated by secret societies, particularly in Northern Alabama, and recommended a limited appropriation to the State agricultural fair to open at Montgomery on the 18th of the month.

The presidential election passed over more quietly than was anticipated from the strong feeling on both sides. The Democrats carried the State by a majority of about 40,000 votes; even a large number of blacks voted that ticket.

The financial condition of Alabama appears to be gradually improving. The indebtedness of the State consists of bonded, trust fund, and miscellaneous. The bonded indebtedness amounts to \$4,726,200; the trust fund and miscellaneous to \$3,051,746. Total, with temporary loans, \$7,904,116. The receipts for the year ending September 30, 1868, were \$1,577,144; of which there was collected from general taxes and licenses, \$726,327. The total assessment of real estate for the same period was about \$98,908,572, and of personal property, \$26,037,572.

The cotton returns for the year were also satisfactory. The three last years show that the supply is on the increase. The receipts at domestic and foreign ports were, for 1866, 429,102 bales; in 1867, 329,516 bales; in 1868, 400,000 bales. The tax on the cotton of Alabama, for the year 1868, at \$12.50 per bale, amounted to about \$5,000,000.

ALASKA. The treaty with Russia for the transfer of this territory to the United States, and the payment of \$7,200,000, in coin, were executed in full during 1867. The new north-western boundary of the United States, established by this treaty, may be described as commencing at a point between the Diomed Islands, nearly in the middle of Behring's Straits, about one degree south of the Arctic Circle, in latitude 66°; it reaches from thence on the meridional line of 168° 50' W., toward the North Pole of the earth; thence south to the shore of the Arctic Ocean, at about longitude 148° west, and latitude 69° 30', including Kotzebue Sound, Cape Lisburne, Icy Cape, Point Franklin, Point Barrow, Smith's Bay, and other points which are regarded as historical in Arctic exploration, within the territory of the United States. From the Diomed Islands in a southwesterly direction, it extends to latitude 50° in longitude about 168° east, being about 80° of longitude farther to the west than the Sandwich Islands.

So that, at the present time, the territory of the United States extends in an east and west direction from longitude 67° west (at Eastport, Me.), to longitude 168° east, in the North Pacific Ocean (beyond the most westerly island of the Aleutian group), equal to 125° of longitude, which, on a parallel of 45° north, would be equal to about 5,303 geographical or 6,187 statute miles.

The population of Alaska is reported by the military commander to be 8,000 whites and 15,000 Indians. By an act of Congress the country is made a revenue district of the United States, and Sitka established as the port of entry. The military force of the United States in the territory consists of two full regiments of infantry and nine companies of cavalry.

The representatives of the Federal Government, when they went to Sitka to receive a transfer of the territory, were accompanied by scientific explorers, of whom Professor Davidson has made some interesting statements of his investigations to the Academy of Natural Science at San Francisco.

After describing the geographical features of the country visited by the Coast Survey party under his charge, the marks of glacial action, volcanoes, etc., he described the influence of the great current of warm water which crosses the Pacific Ocean from the coasts of Formosa (in latitude 22°, longitude 238° west) and the easternmost point of Japan, and strikes upon the coast of North America south of Sitka. It is this great, warm river of the ocean which gives the mild climate to Alaska, as the Atlantic Gulf stream makes Great Britain and Norway inhabitable.

This great, warm stream leaves the coast of Japan about latitude 35°, and passes eastward to the latitude of 48° and longitude 148°, where one branch turns sharply toward Sitka, and the greater volume of water passes southward along the coast of Queen Charlotte and Van-

couver islands, and the coasts of Washington, Oregon, and California.

The warm stratum of air above this vast mass of warm water is necessarily laden with aqueous vapor, and, coming in contact with the colder air from the continent, a condensation of vapor and precipitation of rain is the consequence. This humidity of the climate sustains the immense growth of timber with which the whole country along the seaboard abounds. The largest trees climb the steepest mountain-sides to elevations of two thousand five hundred to three thousand feet. The Sitka spruce was cut and measured four feet diameter and one hundred and eighty feet long, and others determined to be two hundred and fifty feet high and six feet diameter. The yellow cedar (*Cupressus sitchensis*) was found six feet in diameter and estimated to be one hundred and fifty feet high; it commences about latitude 54° 34' and extends throughout the archipelago from 54° 40' to 59° 15'—how much farther north was not examined.

This is the best wood on the coast for ship-building and cabinet-work. Specimens of this wood from a wrecked vessel of the Russian-American Company were shown. The vessel had been built thirty-two years, and lying a wreck for six years, yet the timbers and keelson were as sound as the day when the vessel was built, and the iron and copper bolts were unoxidized, and the wood around them well preserved. Under ground its preservative qualities are equally remarkable, as was illustrated by timber at Fort Simpson, that had been under ground twenty years, and taken out as sound as the day it was cut.

When it is known that the shore line of the islands, bays, inlets, and straits of the archipelago amount to seven thousand eight hundred and sixty statute miles, the inexhaustible supply of this part only of the territory may be readily comprehended. For comparison it was stated that the shore line of Washington Territory, from Columbia River to the northern boundary, including Washington Sound, Admiralty Inlet, Puget's Sound, and Hood's Canal, amounted to only two thousand and twenty-eight statute miles.

Temperature and rainfall, etc., at Sitka, from fourteen years' observation at the Imperial Observatory at New Archangel.

Temperature Fahrenheit.		Rain in inches.	Total.

88.1 for year.

* About the monthly average of Pennsylvania.

Yearly mean $43^{\circ}.9$, or 3° warmer than the middle of Norway, or six inches less than Astoria at the mouth of Columbia River. Greatest rainfall, ninety-six inches, in 1850; least, fifty-eight and six-tenths inches, in 1861. Greatest in one month, twenty-one and three-tenths, August, 1867; least, six and a half, in November, 1853. In the same month of August, 1867, the records of the Smithsonian Institution show that eighteen inches fell in Eastern Pennsylvania! The yearly average of days upon which rain, snow, and hail fell, or on which fog prevailed, for fourteen years, was two hundred and forty-five.

It is to be noted that the above results are from observations made hourly throughout the year.

The harbor of Sitka never freezes, and its ice is unfit for the San Francisco market, which derives its supply from Kodiak, in latitude $57^{\circ} 47'$, or 15° north of Boston.

At Kodiak, some years, thermometer never runs below zero. Lisiansky says that, in 1803, the thermometer did not fall below 38° until December 24th, when it reached 26° . The coldest day that year was January 22d, when the thermometer was above zero.

Ice forms from fifteen to twenty-four inches each year. Coldest temperatures noted are by the ice company's agents within the last fifteen years, when the thermometer has reached 18° below zero, but the men worked without extra clothing, as the air was perfectly calm. The ice is not thicker than that about Boston, although nine hundred geographical miles farther north!

Climate of Ounalaska from nine years' observation of Bishop Benjaminoff.

..... Winter $30^{\circ}.1$

Only $1^{\circ}.8$ below Sitka

$37^{\circ}.8$ for the year, or $5^{\circ}.1$ below that of Sitka.

The highest temperature recorded is $77^{\circ}.0$, and the lowest only $0^{\circ}.6$ below zero, but only upon ten occasions was it recorded less than 10° above zero.

Seventy American whalers yearly fish on this coast, to ten English and French. At present the principal fishing-ground is in the region of Behring's Straits, on account of the shallowness of the Behring Sea and Arctic Ocean, which have only thirty fathoms of water. On the great Fairweather ground, between Sitka and the entrance to Cook's Inlet, in 60° , the greater depth of water enabled the whale to "sound" without touching bottom, and to come up far away and in uncertain

directions from the boat; but in the shoaler water he invariably struck bottom, came up, straight from the point struck, with his head enveloped in a mud coat, and was easily taken. But the "Fairweather ground" is so covered with whale when the "whale feed" covers those waters in June and July, that the old navigators frequently mistook the spouting of the hundreds around them for the surf breaking upon sunken rocks.—(See *Dixon, Meares, Portlock, etc.*)

The great value of the territory consists in the immense banks of cod, the woods, the furs, and the deposits of coal, of which persons found and brought away specimens. This coal was found close to navigable waters, and by analysis proved superior to any bituminous on the Pacific; the exact locality of the vein or veins was not discovered on account of the lateness of the season, etc., but the geologist and mining engineer with the officials of the Government reported that all the accompanying geological conditions existed for good coal. The specimens were found for a distance of between five and seven miles.

ALLEN, WILLIAM, D. D., an eminent scholar, teacher, and author, President successively of Dartmouth University and Bowdoin College, born in Pittsfield, Mass., January 2, 1784; died in Northampton, Mass., July 16, 1868. He was the son of Rev. Thomas Allen, the first minister of Pittsfield, a patriot of the Revolution. His mother was a daughter of Rev. Jonathan Lee, of Salisbury, Conn., a descendant, in the fifth generation, from Governor Bradford of Plymouth. Entering Harvard College at the early age of fourteen, Mr. Allen graduated in the class of 1802, and commenced his theological studies with Rev. Dr. Pierce, of Brookline, the famous genealogist. In 1804 he was licensed to preach by the Berkshire Association. In 1805 he received the appointment of Regent or Proctor of Harvard College, succeeding Rev. William Ellery Channing in this position, and was also Assistant Librarian of the College. He resided, in these capacities, in Cambridge for six years, devoting himself sedulously to intellectual pursuits. During this period he prepared the first edition of his American Biographical Dictionary (published in 1809), which contained biographical sketches of about seven hundred eminent Americans. He also contributed, in 1807, to Drs. Bogue and Bennett's (English) History of the Dissenters, "Historical and Biographical Sketches, or an Account of Religion in America," a manuscript of 180 pages. In 1810 he delivered the Phi Beta Kappa oration at Harvard College, Washington Allston being poet the same year. In October, 1810, he was ordained as successor to his father to the pastorate of the Congregational Church in Pittsfield. In 1818 he preached the annual election sermon before the Legislature of Massachusetts. He was married the same year to Maria Malleville Wheelock, daughter of Hon. John Wheelock,

second President of Dartmouth College. In 1816 the Legislature of New Hampshire altered the charter of Dartmouth College and made it a university, of which Dr. Allen was in 1817 appointed President, as successor to his father-in-law. When the legislation of the State of New Hampshire in the famous "Dartmouth College Case" was annulled in 1819, by the Supreme Court of the United States, and the rights of the college were maintained, Dr. Allen was appointed President of Bowdoin College, in which office he served from 1820 till 1839, when he resigned and removed to Northampton. In 1831 he was subjected to serious embarrassment in his official relations in consequence of certain acts of the Maine Legislature, touching colleges, which virtually took from him the office of President for about two years; but the subsequent action of the Supreme Court restored him to his place, and he continued to discharge his duties with all fidelity, till impaired health rendered a change necessary.

During his residence at Northampton, a period of nearly thirty years, he was constantly engaged in literary pursuits, but for some years preached occasionally in that and the adjacent towns. In all the benevolent enterprises of the day he was actively interested, especially in the cause of foreign missions, being a corporate member of the American Board, and the senior member of that body at the time of his death. He was an earnest advocate of peace, and represented the American Peace Society at the International Peace Congress, which assembled at Paris in 1849. He defended the rights of the African race throughout the world. He believed in the utility of planting colonies of free colored emigrants in Africa, as a means of redressing the unutterable wrongs done to that quarter of the globe by Christian nations, while he favored the speediest possible emancipation of every slave on earth. He was a careful observer of public affairs and political parties. He sympathized warmly with every token of progress in the anti-slavery movement of the present century, his memory covering the whole period of its history. His labors as a student and author were such as few men have been able to perform, and were undoubtedly too great for his health. He was an elegant classical scholar, and well versed in physical science, his knowledge of mineralogy and botany in particular being very thorough. Few men were more completely masters of English politics, history, and literature, than he, while his familiarity with modern languages enabled him to comprehend and enjoy the politics and literature of the Continental nations. In 1832 he published a revised and enlarged edition of his American Biographical Dictionary, in which the number of biographical sketches exceeded eighteen hundred, and in 1857 he issued a third revision, including seven thousand names. The preparation of such a work, involving as it did an immense

correspondence, was itself the sufficient labor of a lifetime; but Dr. Allen's intellectual activity enabled him to accomplish a vast amount of additional labor. In 1828 he published an elaborate essay entitled "Junius Unmasked," in which he attempted to demonstrate that Lord Sackville was Junius. In 1845 appeared his "Memoirs of Rev. Eleazar Wheelock, D. D.," the first President of Dartmouth College; in 1848 his Historical Discourse at Dorchester, on the Fortieth Anniversary of the Second Church; in 1853 a "Memoir of John Codman, D. D.," in 1854 an "Address at the Close of the Second Century since the Settlement of Northampton;" in 1856, "Wunnipoo, a Tale of the Hoosatunnuk;" in 1860, "Christian Sonnets;" in 1866, "Poems of Nazareth and the Cross;" and in 1867, "Sacred Songs." In addition to these, he had compiled a collection of "Psalms and Hymns," many of the latter original, long in use in Massachusetts; contributed at various times to Webster's Dictionary more than ten thousand words not found in other dictionaries of the English language, and had published at various times thirty-five other sermons, addresses, essays, and extended poems, besides numerous contributions to the *Panoplist* and other periodicals. "He was," says an intimate friend, "a thorough gentleman of the old school, a devout Christian, an old-fashioned New-England theologian, an antislavery republican, a wide and faithful student of New-England history, and a good and warm-hearted laborer in every true word and work."

ALLIANCE, EVANGELICAL.* At the general meeting of the Evangelical Alliance, held at Amsterdam, in 1867, an invitation was presented on behalf of the American branch, to hold the next meeting in New York. The invitation was favorably received, and a desire was generally expressed to hold the next meeting after a shorter interval than usual. The British branch, in particular, urgently recommended the holding of the next meeting in the year 1869. At a meeting held in London on July 8th, a series of resolutions to that effect was adopted assigning, among others, the following considerations, as having influenced their opinion:

1. The Council have rejoiced much in the laudable readiness which has been of late manifested on both sides of the Atlantic to seize upon every occurrence in the ordinary course of Providence, that might be improved for the purpose, to elicit the kind and generous sentiments cherished by the people of the two countries toward each other; and they cannot but think that the Alliance will be wise to take advantage of this state of public feeling, and by holding their meeting sooner, perhaps, than was at first contemplated, contribute all the more certainly, under the divine blessing, to strengthen and render it permanent.

2. The Council cannot look without anxiety on the state of the European Continental nations, and the many causes which, unless restrained by the Almighty arm, may in an unexpected moment disturb the pres-

* For a brief history of the Evangelical Alliance, see the *ANNUAL CYCLOPEDIA* for 1867.

ent tranquillity, and endanger the peace of the world, and thus prevent the possibility of the intended conference being held.

3. The attitude of the Papal power toward nations which have recently asserted the right of self-government, and are in various ways breaking off its yoke, and have proclaimed religious liberty to their subjects, together with its vigorous activity in Protestant countries, and the growth and prevalence still further of various forms of intellectual infidelity and practical atheism in all nations, strongly impress the Council with the conviction that evangelical Christians must be more than ever united and active, nor be slow to fulfil the great duties to which the times so loudly call them.

4. And, finally, the Council would be ungrateful not to recognize the manifold and rich blessings by which all the General Conferences of the Alliance have been attended and followed, thus leading to and justifying the inference, both that they are signalized by the approbation of our Divine Redeemer, and that their recurrence, as often as Providence permits, is pleasing to Him and tends to advance His glory.

For these and similar reasons, the council of the English branch inquired whether the autumn of 1869 might not be looked to, on the supposition that circumstances in the United States and in Europe should favor it, as the probable time of holding the conference.

The American branch, in compliance with this request, resolved to hold the next General Conference of the Alliance in the city of New York, in the autumn of 1869.

AMERICA. The transfer of the extensive possessions of Russia in Northwestern America to the United States, which had been provided for by the treaty of the 29th of March, 1867, was in 1868 ratified by the Senate of the United States. Thus the area of the independent American States has been considerably enlarged. The purchase of the two Danish islands, St. Thomas and St. John, was ratified by an almost unanimous vote of the inhabitants, but no action was taken upon it by the Senate of the United States. In Cuba, a war for establishing the independence of the island broke out in September, and at the close of the year the insurgents still held control of the town of Bayamo, and a considerable portion of the Eastern District. In Nova Scotia, the popular dissatisfaction with the establishment of the Dominion of Canada was so great that annexation to the United States was generally declared to be preferable to a union with Canada.

The war of Brazil, the Argentine Republic, and Uruguay against Paraguay, continued throughout the year. The progress of the allies was slow, and at the close of the year President Lopez was still a formidable opponent. Imprudently, President Lopez got into a serious difficulty with the minister of the United States in Paraguay, Mr. Washburn; but when the successor of Mr. Washburn, General McMahon, called upon him, he guaranteed full atonement for any outrage that might have been committed upon the American flag. (*See PARAGUAY.*)

No acts of hostility took place between Spain and the allied Republics of Chili, Peru, Bolivia, and Ecuador, although a formal peace

had, at the close of the year, not been concluded. The provisional government of Spain showed, however, a desire to come to an understanding, and it was announced that, in accordance with the proposition made by the Government of the United States, a peace conference, attended by representatives of all the belligerent powers, would meet, in the course of the winter, in Washington.

The number of civil wars in Spanish America was as great as ever. The established governments were overthrown in San Domingo, Costa Rica, Venezuela, Peru, and Uruguay. In the last-named state, President Flores lost his life together with his office. Civil wars also raged in Mexico, Hayti, and in the United States of Colombia. In Ecuador, the President was censured by Congress, and resigned.

Bloody wars with the Indians had to be sustained by the governments of the United States, Mexico, the Argentine Republic, and Chili; and in neither of these states is there yet a prospect of lasting peace.

The establishment of a regular monthly steamship line between the United States and China and Japan, the rapid progress of the Pacific Railroad, which it is thought may be complete in the course of the year 1869 or 1870, the connection of the United States with Cuba, are prominent events in the commercial history of America. The importance of these agencies of modern civilization is everywhere recognized. All the independent governments of America have directed their attention to the encouragement of new steamboat and telegraph lines, and to the increase of railroads; and the time seems to be very near when the capitals of all the American States will be connected by telegraph. Immigration also is encouraged by all the American states, though many of the South American states cannot expect to obtain any considerable results so long as they are not willing to establish religious toleration.

In the United States considerable agitation was kept up by a diversity of opinion between the President and the majority of Congress, relative to the reconstruction of the Southern States, and the constitutionality of some of the acts passed by Congress on this subject. In the progress of this conflict, President Johnson was impeached, but acquitted. The presidential election resulted in the triumph of the Republican party, and the choice of General Grant for President. At the close of the year, all the Southern States except three—Virginia, Mississippi, and Texas—having complied with the conditions demanded by the congressional Acts of Reconstruction, were represented in the national Congress. In December, President Johnson issued a proclamation of universal amnesty. At the beginning of the year 1869, the internal condition of the country was more quiet than at any previous period since the beginning of the civil war in 1861. (*See UNITED STATES.*)

The following table shows the area and population of each of the independent American states, and of the possessions of the European powers in 1868.

STATES.	Area.	Population.
I. Independent American States.		
Argentine Republic.....	326,328	1,465,000
Bolivia.....	535,769	1,987,352
Brazil.....	3,231,047	11,780,000
Chili.....	132,624	2,084,960

Swedish Possessions.....	16	2,898
Total.....	4,547,701	7,274,706

ANDERSSON, CHARLES JOHN, an eminent African explorer and author, born in Sweden, about 1812; died in or near Ondonga, one of the towns of the Ovambo, in Herero-Land, Southwestern Africa, in January, 1868. From his childhood, Andersson was fond of adventure, and delighted in field-sports, hunting, and the study of natural history in the field. He had achieved considerable reputation in his own country as a naturalist, when, in 1849, he visited England, of which country his mother was a native, bringing with him a fine collection of living animals and birds, as well as many prepared specimens, illustrating very fully the *fauna* of Sweden. He had long cherished the hope of being able to visit Africa, and then to explore new regions, and make collections in natural history, which should be unrivalled in their extent and perfection; but the expenses incident to such an expedition had deterred him; and he now desired to dispose, if possible, of his collections on such terms as to be able to explore Iceland, and study the habits of its rare birds. While making arrangements for this purpose, he fell in with an Englishman, named Galton, who was about to go to South Africa, on a hunting expedition, and invited Andersson to accompany him, offering to bear all the expenses of the journey. Andersson eagerly embraced this offer, and, sailing from England, in the early spring of 1850, reached Cape Town on the 24th of June in that year. For the next

four years he was engaged, most of the time, in hunting, and exploring the region lying north of the Orange River, in South Africa, and made many valuable contributions to our knowledge of that country. For the first two years he was accompanied by his friend Galton, but for the last two his only companions were his servants and the savages. He visited Lake Ngami, which no European, except Livingstone, had then explored; reaching it by a new route, and ascending the Tioje, its principal northern affluent, for a considerable distance. In 1855, he returned to England, and published his "Lake Ngami; or, Discoveries in Southwestern Africa," which was eagerly sought after. But the love of adventure was a ruling passion with him, and he presently returned to South Africa, revisited Lake Ngami, in 1858; ascended the Tioje River to a higher point than before, and then, in company with an English elephant-hunter, Mr. Green, who still survives, made his way up the Okavango, the principal tributary of the Tioje, from the northwest, to about lat. 18° S., and long. 18° E. from Greenwich. Here they left the river, and moving first southwest, and then south-southeast, traversed the province of the Ovambo, one of the principal red tribes of Herero-Land. At this time no European, except the German missionary Hugo Hahn, had visited this country. The region visited by Andersson was only the north-eastern portion of the country; but he was very favorably impressed by it. While here he was severely injured by a wounded elephant, and at first reported dead. He recovered, however, and published an account of his discoveries, with the title "The Okavango River, a Narrative of Travel." He returned to Herero-Land again, we believe, in 1861, by way of Walfisch Bay, and ascended the Zwachaub, a considerable distance. After exploring, with Mr. Hahn, various portions of the country, he purchased from Tjikongo, the King of Herero-Land, a large tract of land near the capital, Ondonga, and commenced breeding cattle on a large scale. The Namaquas made a raid upon his herds and drove off a great number of cattle, and in his pursuit and battle with the marauders, to recover his stolen property, he was severely wounded, his thigh bone being shattered so badly as to make him a cripple for life. He was removed to Cape Town for surgical aid; but, after his partial recovery, returned to Ondonga, and undertook to furnish the materials for an "Illustrated Fauna of Southwestern Africa." He had made considerable progress on this at the time of his death.

ANGLICAN CHURCHES. The following table, from the *Church Almanac* for 1869, exhibits the number of clergymen, parishes, communicants, teachers and scholars of Sunday-schools, and the amount of church, missionary and charitable contributions for each diocese:

DIOCESES.	Clergy.	Parishes.	COMMUNICANTS.		SUNDAY-SCHOOLS.		Contributions for missionary and church purposes.

Baptisms—Infants.....	26,335
Adults.....	7,087
Not stated.....	1,800
Total.....	35,702
Confirmations.....	21,958
Communicants—Increase in 27 dioceses during past year.....	14,365
Present number.....	194,692
Marriages.....	9,945
Burials.....	15,346
Sunday-school teachers.....	21,711
Scholars.....	194,046
Contributions.....	\$4,457,838 28

The receipts of the *Board of Missions*, in its domestic department, during the years 1867 and 1868, were \$188,367: from legacies, \$9,005; in the foreign department, \$63,369; from legacies, \$3,558. The domestic department employs 162 missionaries. The statistics of the foreign department are as follows:

Stations, 28; missionaries, foreign, 17; native, 14; assistants, 42; teachers and catechists, 35; candidates for orders, 10; day-scholars, 1,300; Sunday-school scholars, 900; baptisms, 97; confirmations, 117; communicants, 628. The missions of the Board are in Liberia, China, Japan, and Hayti. The *American Church Missionary Society* reported, in 1868, an income of \$89,406, being an increase of \$7,081 from the previous year. This society employs 109 missionaries in the United States, and 1 in South America. The receipts of the *Evangelical Education Society* amounted to \$34,837, and had, at the end of the financial year (the second of its existence), 130 students dependent upon it for means to enable them to prepare for the ministry. The *Society for the Increase of the Ministry* had an income of about \$26,000; the *Evangelical Knowledge Society*, of \$44,635.

In Ireland there are two archbishops and ten bishops, divided among the two provinces as follows: *Armagh*.—Armagh, Derry, Down, Kilmore, Meath, Tuam. *Dublin*.—Dublin, Cashel, Cloyne, Killaloe, Limerick, Ossory.

Outside of the United Kingdom the following dioceses are in connection with the Church of England:

In Europe.—Gibraltar.

In Asia.—Calcutta (metropolitan), Bombay, Labuan and Sarawack, Madras, Colombo, Victoria; Jerusalem.

* Taken from the Convention Journal of 1867.
† Estimated.

In Africa.—Cape Town (metropolitan), Mauritius, Grahamstown, St. Helena, Orange River State, Central Africa, Natal, Sierra Leone, Niger region.

In Australia and Polynesia.—Sydney (metropolitan), Adelaide, Melbourne, New Castle, Perth, Brisbane; Goulburn, Tasmania, New Zealand (metropolitan), Christ Church, Nelson, Wellington, Waiaku, Dunedin, Melanesia, Honolulu, Grafton, and Armidale.

In America.—Montreal (metropolitan), Toronto, Newfoundland, Fredericton, Nova Scotia, Huron, Columbia, Quebec, Ontario, Rupert's Land, New Westminster, Jamaica, Barbadoes, Antigua, Nassau, Guiana.

The following table gives the names of the dioceses of the Church of England, the (total, not-Anglican) population of the territory over which the diocese extends, and the number of the clergy and parishes in each:

DIOCESSES.	Population of dioceses in 1861.	No. of clergy.	No. of parishes.

The Triennial General Convention of the Protestant Episcopal Church of the United States met in the city of New York, on the 7th of October. The new Diocese of Nebraska was admitted after considerable debate on the use of the word "council" instead of convention in the journal of its diocesan convention. The resolution of admission was, however, unconditional, making no reference to these terms. Four new dioceses were erected, one from the Diocese of Maryland (embracing the Eastern Shore of Maryland), two from the Diocese of New York (the one embracing Long Island, and the other the nineteen counties

of New York, north of the southerly boundaries of Columbia, Greene, and Delaware Counties), and one from the Diocese of Western New York. The election of the Rev. C. F. Robertson, as Bishop of the Diocese of Missouri, was confirmed, and two missionary bishops, the Rev. B. W. Morris for Oregon and Washington Territories, and the Rev. O. W. Whitaker for Nevada, were appointed. A canon was passed in regard to the formation of new dioceses, the main provisions of which are as follows: 1. Satisfactory evidence is to be submitted to the General Convention that adequate provision has been made for the support of the episcopate. 2. There must be within the limits of the new diocese at least six parishes and as many presbyters who have been canonically resident in the diocese at least one year. 3. There must be left in the old diocese at least twelve parishes and twelve presbyters. 4. There shall be but one bishop in any city. Dioceses existing within the bounds of any State were authorized to establish for themselves a federate council or convention, to decide and deliberate upon the common interests of the Church within the limits of their State, provided the powers they propose to exercise are approved by the General Convention before determinate action is taken. The canon on parochial boundaries was amended by adding to the second clause of the sixth section the following words: "But nothing in this clause shall be construed to prevent any clergyman of this Church from officiating in any parish church, or in any place of public worship used by any congregation of this Church, or elsewhere within the parochial cure of the minister of said congregation, with the consent of the clergyman in charge of such congregation, or, in his absence, of the churchwardens and vestrymen or trustees of such congregation, or a majority of them." The eleventh canon was repealed, and the following substituted in its place: "No minister in charge of any congregation of this Church, or in case of vacancy or absence, no churchwardens, vestrymen, or trustees of the congregation, shall permit any person to officiate therein without sufficient evidence of his being duly licensed or ordained to minister in this Church. Provided that nothing herein shall be so construed as to forbid communicants of the Church to act as lay readers." The clergymen of the Church of England in Canada were recognized as admissible to all the rights and privileges of their brethren of the Church in the United States. With reference to propositions for union with other branches of the Church, the House of Bishops were authorized to appoint a committee from among their own number, which shall be an organ of communication with the other branches of the Church, and with the different other Christian bodies who may desire information or conference on the subject; the said committee to be entitled "The commission of the Protestant Episcopal Church in the

United States of America on Church Unity." The House of Bishops subsequently appointed Bishops McIlvaine, Whittingham, Atkinson, Clark, and Coxe, the committee upon Church Unity. The joint committee on intercommunion with the Eastern Churches reported favorable progress for the project, and the committee were continued, with the power to correspond with the authorities of the Russian and other branches of the Oriental Church, for the acquisition of further authentic information, and to report the result to the next General Convention. A committee of bishops was appointed to confer with the Metropolitan and Patriarch of the Russian Church in regard to the Russo-Greek Diocese of Alaska and its proposed intercommunion with this Church, and also with the Anglican Bishop of Rupert's Land in regard to the transfer of the communicants of the Church of England in Alaska to the jurisdiction of this Church. The convention continues the recognition of the Protestant Church of Sweden. The following canon on divorce was adopted: "No minister of this Church shall solemnize matrimony in any case where there is a divorced wife or husband of either party still living; but this canon shall not be held to apply to the innocent party in a divorce for the cause of adultery, or to parties once divorced seeking to be united again." A new canon, similar to that for the trial of bishops, was adopted on the trial of ministers. Provision was made for the correction of typographical errors in the Prayer Book. A new canon on assistant bishops was adopted. They may be elected in case of disability of the bishop, and succeed him if they survive him, and may vote in his stead in the General Convention, but can have no additional vote if he is present. A commission of laymen, presbyters, and bishops was authorized to revise the version of the psalms and hymns, and report to the next General Convention. The preparation of Prayer Books in German, French, and Swedish was directed. Increased solicitude was expressed respecting the missionary work among the freedmen, and practical measures were recommended to advance it. The convention declined to act definitely on the subject of ritualism. The subject was referred to the House of Bishops, who were requested to set forth, for consideration and adoption by the next General Convention, such additional rubrics to the book of Common Prayer as in their judgment may be deemed necessary. It was resolved that, meanwhile, in all matters doubtful, reference should be made to the Ordinary, and no changes should be made against the counsel and judgment of the bishop.

The most important event in the history of the Church of England was the resolution of the House of Commons in favor of disestablishing the Anglican Church in Ireland and its appointment of a Liberal Ministry pledged to carry out this policy. The House of Com-

mons adopted, on April 28th, the resolution prepared by Mr. Gladstone, by a majority of sixty-five votes. The proposition was rejected by the House of Lords. The Bishops of the Established Church were unanimous and the Anglican clergy almost unanimous in their opposition. The Presbyterian Church of Scotland, which is the state church of Scotland, and the Irish Presbyterian Church, which annually receives from the state government a *regium donum* (a royal present) of £30,000, likewise passed resolutions against Mr. Gladstone's bill. The Wesleyan Connection were non-committal. All the other religious denominations of Great Britain strongly supported Mr. Gladstone and the Liberal party. At the election of a new House of Commons, in November, the Liberal party had a majority of over 110. The Conservative Ministry resigned, and Mr. Gladstone formed a new Liberal Ministry, which is pledged to carry through the disestablishment. Previously the report of the royal commissioners on the revenues and condition of the Church of Ireland had appeared (the report is dated July 27, 1868), and recommended important reductions as to the benefices of the Irish Church. The report is signed by the Earl of Meath, as chairman, by Earl Stanhope, Lord de Vesci, Sir Joseph Napier, and Messrs. Shafto Adair, John T. Ball, Evelyn Shirley, George Clive, and Edward Howes; and it forms, with summary, tables, and schedules, a bulky volume of more than six hundred pages. The report is replete with interesting information on the Irish Church. It states that the total revenue of the Irish Church from all sources is £618,984; 1,319 benefices have a church population of over forty, and extending to 5,000 and upward. The bishoprics suggested for abolition are Meath, Killaloe, Cashel, and Kilmore. The majority of the commissioners are in favor of leaving one archbishopric only, that of Armagh. All bishops are to receive £3,000 a year income, and an additional £500 when attending Parliament. The Primate is to get £6,000, and the Archbishop of Dublin, if continued, £5,000. The abolition is recommended of all cathedrals and deaneries, except eight. With a view to a rearrangement of benefices, it is proposed that ecclesiastical commissioners shall have extended powers to suppress or unite benefices. All benefices, not having a Protestant population of forty, to be abolished. The estates of all caputular bodies and of the bishoprics abolished are to be vested in ecclesiastical commissioners, and the surplus of all property vested in them to be applicable at their discretion to augmentation of benefices. The Ecclesiastical Commission is to be modified by the introduction of three unpaid laymen and two paid commissioners, one appointed by the Crown, the other by the Primate. The management of all lands is to be taken out of the hands of ecclesiastical persons and placed in those of the Ecclesiastical Commissioners. The commissioners expressly state that they

have conducted their inquiry, and that they report, on the assumption that the Irish Church will continue by law established and endowed.

The question of effecting a union between the Anglican and other divisions of the Christian world continued to be the subject of an earnest discussion. As regards the Eastern Churches, public opinion both in the Protestant Episcopal Church of the United States and in the Church of England, clearly favors the project of, at least, intercommunion. The action of the Triennial Convention of the American Church has already been referred to. In England the subject was debated at considerable length, in the Convocation of Canterbury, on the 4th of July, at which the difference in the creed of the two churches, and the former and present relations to each other, received a thorough review. A committee had submitted a report, declaring the object sought by the movement to be not a fusion of the two bodies or a submission of either to the superior authority of the other, or a modification of the services of one to correspond with those of the other, but "simply the mutual acknowledgment that all churches which are one in the possession of a true episcopate, one in sacraments, and one in their creed, are, by their union in their common Lord, bound to receive one another to full communion in prayers and sacraments as members of the same household of faith."

A new project of this kind was brought forward in England, in the early part of the year, having for its object a union between the Anglicans and the Wesleyans. The plan was briefly advocated by an Anglican paper of High-Church tendencies, the *Guardian*, which proposed to the Wesleyans an adhesion to the established order of the Church of England, Episcopal supervision, confinement of the administration of the sacraments to persons Episcopally ordained, with ordination of such Wesleyan ministers as might desire it, who might retain their itinerancy, and minister in their churches as licensed chapels-of-ease, subordinate to the jurisdiction of the parish in which they are situated, other Wesleyans to be licensed as lay readers. The Anglicans would make no alterations in their services and Prayer Book, but would allow the Wesleyans the use of a set of subsidiary services. The attention of the Convocation of York, on the 6th of February, was directed to the subject, and the bishops resolved that they would cordially welcome any practical attempt to effect a brotherly reconciliation between the Wesleyan body and the Church of England. As this plan proposed to treat with the Wesleyans as an inferior body, the latter were not able to consider it with a view to adopting it. The same plan was the subject of considerable discussion in the Protestant Episcopal Church of the United States. A number of Anglican clergymen signed a memorial to the Quadrennial General Conference of the Methodist

Episcopal Church to appoint a commission, with a view to a reunion of the two churches. The Methodist Conference complied with this request; but the House of Bishops of the Triennial General Convention of the Protestant Episcopal Church, to which a numerous signed petition for the appointment of a similar commission was presented, contented itself with the appointment of a General Committee on Christian Unity, without instructing the committee as to negotiations with any particular religious denomination. For the object of promoting a union between the Anglican, the Eastern, and the Roman Catholic Churches, the "Association for promoting the Unity of Christendom" was founded in 1857. In September of 1858—a year after the formation of the society—675 members had been enrolled, and the following numbers were added to the lists in the years enumerated below respectively: In 1859, 833 members; in 1860, 1,060; in 1861, 1,007; in 1862, 1,393; in 1863, 1,202; in 1864, 1,340; in 1865, 1,317; in 1866, 1,401; in 1867, 1,647; in September, 1868, 803; making a total of 12,684. The division of these, as given by the Rev. George F. Lee, D. C. L., who in 1868 retired from the office of general secretary, is interesting. Of the 12,684 members of the society, 1,881 belong to the Roman Catholic Church in various countries; 685 are Orientals; 92 are attached to such uncertain or miscellaneous communities, whose names the secretary was unwilling to take upon himself to decline; and 10,026 belong to the Church of England and other churches in communion with the same. The names have been obtained by a systematic circulation of the formal prospectus of the association in English, Latin, French, German, Spanish, and Italian. The following paragraph from Dr. Lee's report is indicative of the objects of the Association: "It has been the secretary's honor and privilege to correspond with a large number of distinguished Catholics of many rites, whose private letters to himself officially have been carefully preserved, as they may in future throw considerable light on the great movement for effecting corporate reunion, which the late Cardinal Wiseman theoretically inaugurated in 1841, and which the Association for promoting the Unity of Christendom first put in practical shape in 1857."

The ritualistic controversy continues to occupy a prominent place in all the branches of the Anglican Church. The action taken with regard to it, by the Triennial General Convention of the Protestant Episcopal Church, has already been stated. It was regarded, by both parties in the Church, as favorable to the hopes of the ritualists. In England, the Royal Commission on Ritualism* presented their second

* On the appointment of this commission and their first report, see ANNUAL AMERICAN CYCLOPEDIA for 1867. The recommendations of the commissioners with respect to the rubrics, orders, and directions contained in the Prayer Book will form the subject of the next report.

report to the Queen. The commissioners say that although there have been candlesticks with candles on "the Lord's table" during a long period in many cathedrals and collegiate churches and chapels, and also in the chapels of some colleges, and of some royal and episcopal residences, the instances that have been adduced to prove that candles have been lighted as accessories to the Holy Communion are few and much contested; but no sufficient evidence has been adduced to prove that at any time, during the last three centuries, have lighted candles been used in parish churches as accessories to the celebration of the Holy Communion, until within the last twenty-five years. The use of incense, too, in the public services of the Church, during the present century, is very recent, and the instances of its introduction very rare; and, so far as the commissioners have any evidence before them, it is at variance with the Church's usage for 300 years. They are, therefore, of opinion that it is inexpedient to restrain in the public services of the Church all variations from established usage in respect of lighted candles, and of incense. The "speedy and inexpensive remedy," which the commissioners suggest should be provided for parishioners aggrieved by the introduction of incense and candles, is as follows: "First, that whensoever it shall be found necessary that order be taken concerning the same, the usage of the Church of England and Ireland, as above stated to have prevailed for the last 300 years, shall be deemed to be the rule of the Church in respect of vestments, lights, and incense; and, secondly, that parishioners may make formal application to the bishop *in camera*, and the bishop, on such application, shall be bound to inquire into the matter of the complaint; and if it shall thereby appear that there has been a variation from established usage, by the introduction of vestments, lights, or incense, in the public services of the Church, he shall take order forthwith for the discontinuance of such variation, and be enabled to enforce the same summarily." The commissioners also think that the determination of the bishop on such application "should be subject to appeal to the archbishop of the province *in camera*, whose decision thereon shall be final; provided always, that if it should appear to either party that the decision of the bishop or archbishop is open to question on any legal ground, a case may be stated by the party dissatisfied, to be certified by the bishop or archbishop as correct, and then submitted by the said party for the decision of the court of the archbishop without pleading or evidence, with a right of appeal to the Privy Council, and with power for the court, if the statement of the case should appear to be in any way defective, to refer back such case to the bishop or archbishop for amendment." Precautions are suggested to prevent "frivolous applications" from being brought before the bishop. The commission-

ers intimate that their intention in making these recommendations is simply to provide a special facility for restraining variations from established usage, without interfering with the general law of the Church as to ornaments or the ordinary remedies now in force. No action of importance on the subject was taken by the convocations, but trials were instituted against several prominent ritualists. In the most celebrated of these cases, that of the Rev. Mr. Mackonochie (*Martin vs. Mackonochie*), the decision was against the ritualists. This decision by the Judicial Committee of the Privy Council is not only the most important which has yet been made in the Church of England on the subject of ritualism, but it is expected to involve grave consequences for the future of the Church. Mr. Mackonochie was originally charged: 1. With elevating the elements during the prayer of consecration. 2. With kneeling before them during the same prayer. 3. With using lighted candles on the communion-table during the celebration of the holy communion, when they were not required for the purpose of giving light. 4. With using incense in the same service. 5. With mixing water with the wine. The elevation by Mr. Mackonochie discontinued before the suit commenced, and he was admonished not to resume it. The judgment of the Court of Arches condemned the use of incense and of water. It admitted, however, the lawfulness of lighted candles, and considered the kneeling a minor point of order, which, if raised at all, should be referred to the discretion of the bishop. The Judicial Committee have now ruled that kneeling during the prayer of consecration is contrary to the rubric, and that lighted candles are not admissible. While giving its decision in this particular case, the Court also gave its opinion on several important general principles. With respect to the kneeling, the Court observe, that the posture of the officiating minister is prescribed by various directions throughout the communion service. He is directed when to stand and when to change this posture for that of kneeling. But it is expressly ordered that the prayer of consecration is to be said by the priest "standing before the table," and there is no indication that he is intended to change his posture during the prayer. To the objection made by the defence, that this was one of those minute details which the rubric could not be held to cover, the Court make the important answer, that it is not for any minister of the Church, or even for themselves, to assume that any departure from or violation of the rubric is trivial. The use of lighted candles raised a question of even greater significance and importance. They alleged that they are justified in adopting any practice which the prayer-book does not explicitly condemn—in other words, that whatever is not expressly abolished is retained as lawful. In this instance they appeal to certain injunctions issued in the first year of Edward VI., and their counsel even went so

far as to quote a constitution made by a council held under the Archbishop of Canterbury in 1822. The court dismissed those references as irrelevant, and lay it down, in direct opposition to the principle of the ritualists, that all ceremonies are abolished which are not expressly retained in the Prayer Book. This they regard as being placed beyond doubt by Elizabeth's act of uniformity, now applicable to the present Prayer Book, which prohibits any rite, ceremony, order, or form which is not mentioned in the Prayer Book, and declares void all prior usages and ordinances. The opening rubric, again, orders that "such ornaments of the Church and of the ministers thereof shall be retained, and be in use, as were in this Church of England, by authority of Parliament, in the second year of King Edward VI." The ritualists have argued from this, that whatever was lawful in the designated year of Edward VI. is lawful now. The Court, however, now distinctly explain that those things only possess the authority of Parliament which are expressly in the named Prayer Book referred to. It is nothing to the point, that the candles were lawful at the time when the Prayer Book was issued. They are not prescribed in it, and they are, therefore, abolished. In the Dominion of Canada, the Provincial Synod, which met at Montreal, adopted a resolution prohibiting the elevation of the elements, the use of incense, the mixing of water with wine, the use of the water-bread, of lights on the communion-table, and the wearing of vestments while saying prayers.

It is commonly stated, that the number of monastic and similar institutions in the Church of England is on the increase. According to a statement in the *Rock*, a Low-Church organ, the Order of St. Benedict, over which the Rev. J. L. Lyne (Father Ignatius) presides, numbers fifteen thousand Brothers and Sisters. For the daily use of Anglican Benedictines a volume has been published, entitled "The Monastic Breviary for all those Fighting against the World, under the rule of our Most Holy Father Benedict." This Benedictine office is now regularly used at the Monastery of Laleham, the nunnery at Feltham, the Convent of Second Order Sisters in London and in Scotland, and at the Convent of Benedictine Tertiaries in London, Newcastle, and Norwich. Among the new religious associations, is a "Confraternity of the Blessed Sacrament of the Body and Blood of Christ." The "Order for Intercessory Prayer," of which the Rev. R. Benson is Superior, has a home for the celibate clergy at Cowley, near Oxford. In London, the "Sisters of St. John the Evangelist" have been for several years under the patronage of Bishop Tait, of London, who in 1868 was appointed Archbishop of Canterbury. The city of New York has two Sisterhoods: the Sisterhood of the Holy Communion, established, in 1845, by the Rev. Dr. Muhlenberg, after the model of the Deaconesses of Kaiser-

werth, in Prussia; and the Sisterhood of St. Mary. The former comprise United or Full Sisters, Probationers, and Resident Associates. The superintending lady is styled the First Sister. The Sisters have charge of St. Luke's Hospital in the city of New York; and at St. John, L. I., have a house for crippled boys and girls. There is also the Parish Sisterhood of St. Luke's Hospital, and the Sisterhood of St. Luke's Hospital, at Cincinnati, Ohio. Dr. Muhlenberg, the pastor and founder of the Sisterhood, desires it to be understood that "it is distinctively an evangelical association, not an ecclesiastical organization." He has published a small work entitled "Evangelical Sisterhoods," in which he describes the character and principle of action of this community, and the mode in which he proposes to extend its operations. The Sisterhood of St. Mary consists of three orders: Sisters living in community and rigidly observing the rules of their order; Associate Sisters, who are unable to live in community, but who do so whenever they have the opportunity, and who are bound by less strict rules than the Sisters; and Associates who, having domestic ties, are nevertheless desirous of laboring among the poor, and gladly avail themselves of the advantages and assistance to be derived from working in connection with, and under the guidance of, the Sisters. The Sisterhood, which now comprises twenty Sisters of the first order, is entirely directed and governed by the Mother Superior. The Right Rev. Bishop Potter is the visitor; the Rev. Morgan Dix, Rector of Trinity Parish, is the chaplain. The Sisters occupy three separate houses, one of which is their home, and where they also have an educational establishment for young ladies; another where they have an asylum called The Sheltering Arms, in which they have at present ninety-four poor children; and the House of Mercy, for fallen women, where they have at present (January, 1869) forty-five penitents. The Sisters of St. Mary rigidly observe the canonical hours, and on Thursday they have always an early celebration of the Holy Communion. The walls of their oratory are hung with the Fourteen Stations of the Cross, and the little altar, which is beautifully vested, has all the proper accessories. The work that has been done by the Sisterhood since it was first established, four years ago, is highly appreciated by several bishops, and the Mother Superior is constantly receiving applications from all parts to open branches of the order.

The excitement which has been produced by the Colenso case has begun to subside. His standing in the Church was again the subject of a long discussion in the Convocation of Canterbury. The bishops, in reply to numerous petitions asking them to recognize the validity of the sentence of deposition pronounced by the Bishop of Capetown on Dr. Colenso, declared that they were of opinion—1. That substantial justice was done to the accused. 2.

That though the sentence, having been pronounced by a tribunal not acknowledged by the Queen's courts, whether civil or ecclesiastical, can claim no legal effect, the Church as a spiritual body may rightly accept its validity. Only the Bishop of London (now Archbishop of Canterbury) declared that he was unable to append his signature to the report of the committee which had recommended the above declaration; and stated his own views to be as follows: "1. I consider the trial to have been altogether set aside by the decision given by the highest court in the empire, that it was null and void in law. 2. I consider that if it had been thought right that a trial of a purely spiritual character was to take place, without reference to any binding legal authority on the part of the Metropolitan or his Suffragans assembled in Synod, such trial could only be held in virtue of a compact; and I find no proof that Bishop Colenso entered into such a compact with Bishop Gray, otherwise than on the supposition that the letters patent were valid and that Bishop Gray possessed coercive jurisdiction. 3. Independently of my views as to the general invalidity of the trial, I entertain grave doubts whether, in conducting the proceeding, Bishop Gray did not, in several important points, so far depart from the principles recognized in English courts of justice as to make it highly probable that, if the trial had been valid, and had become the subject of appeal on the merits of the case to any well-constituted court ecclesiastical, the sentence would have been set aside. These difficulties have all along made me feel that the case of Bishop Colenso cannot be satisfactorily disposed of without fresh proceedings in lieu of those which I understand to have entirely failed." The office of Bishop of Natal was accepted by the Rev. Mr. Macrorie, who accompanied the Bishop of Capetown to South Africa, and was there to be consecrated as bishop.

ANHALT, a duchy of the North-German Confederation. Area, 1,026 square miles; population, according to the census of 1867, 197,041 (in 1864, 198,046; increase, 2.07 per cent.). With regard to their religious denominations, the inhabitants were, in 1864, divided as follows: 148,805 Evangelicals, 21,265 Lutherans, 27,118 Reformed, 8,156 Catholics, 2,108 Israelites, and 89 members of Free Congregations. The capital, Dessau, had, in 1867, 16,904 inhabitants. In the budget for 1868, the revenue and expenditure are estimated at 3,698,558 each. The public debt, in 1865, amounted to 1,827,598 thalers for the duchy of Anhalt-Dessau-Cöthen, and 1,618,634 thalers for the duchy of Anhalt-Bernburg. (See GERMANY.)

ARGENTINE REPUBLIC, a republic in South America. President, from 1868 to 1874, Domingo F. Sarmiento; Vice-President, Adolfo Alsina. The estimates of the area and population of the republic greatly vary. According to Behm (*Geograph. Jahrbuch*, vol. ii., Gotha, 1868), the area is 826,828 English square miles,

and the population, 1,465,000.* The following table shows the names of the provinces, with the number of inhabitants, and the name and the population of the capital of each State:

PROVINCES.	Inhabit- ants.	Capital.	Inhabit- ants.
1. River and maritime:			
Buenos Ayres.....	450,000	Buenos Ayres	190,000
Santa Fé.....	45,000	Santa Fé.....	8,000
Entreríos.....	107,000	Entreríos.....	18,000
Corrientes y Misiones	90,000	Concepcion...	8,000
2. At the foot of the Andes.			
La Rioja.....	40,000	La Rioja.....	4,000
Catamarca.....	97,000	Catamarca.....	6,000
San Juan.....	70,000	San Juan.....	20,000
Mendoza.....	58,000	Mendoza.....	10,000
3. Central:			
Cordoba.....	140,000	Cordoba.....	25,000
San Luis.....	58,000	San Luis.....	5,000
Santiago.....	90,000	Santiago.....	6,000
Tucuman.....	100,000	Tucuman.....	11,000
4. Northern:			
Salta.....	80,000	Salta.....	11,200
Jujuy.....	40,000	Jujuy.....	6,900
Total.....	1,465,000		

The number of the foreign-born population is considerable. The immigration, from 1858 to 1862, amounted to 28,066, and from 1863 to 1867 to 64,599; total from 1858 to 1867, 92,665. The immigration of the year 1867 was 17,022, and was larger than in any previous year.† During the first six months of 1868, the immigration again largely increased, amounting to 17,187, chiefly from Germany and Italy.

The revenue and the expenditures of the republic, from 1864 to 1867, were as follows:‡

	Revenue.	Expenditure.
1864.....	7,005,830 pesos.	6,179,490 pesos.
1865.....	8,295,070 "	6,876,175 "
1866.....	8,768,880 "	8,265,750 "
1867.....	12,040,287 "	

The chief sources of revenue are the proceeds of the customs, which in 1865 constituted 95 per cent. of the entire income. The customs on imports, in 1867, were on an average 23 per cent. *ad valorem*, and those on exports 10 per cent. *ad valorem*. The public debt, in October, 1866, amounted to 82,483,710 pesos. Each of the fourteen provinces has its own budget. That of the province of Buenos Ayres amounts to about 2,000,000 pesos annually.

The army is estimated at 10,700 men, exclusive of the militia and national guard of Buenos Ayres. The republic has no war-vessels.

The imports of the chief port of the republic, Buenos Ayres, during the year 1865, were valued at 5,420,000 pounds sterling; the exports at 4,400,000; the imports of 1866, at 6,450,000, and the exports at 4,610,000. The value of the aggregate commerce of all the ports of the republic, in 1866, was estimated at 16,000,000 pounds sterling.§

* For further details, see ANNUAL CYCLOPEDIA for 1867.

† For other interesting information on immigration and foreign residents, see ANNUAL CYCLOPEDIA for 1867.

‡ 1 peso fuerte equals about one dollar. At the close of the year 1866, a law fixed the value of a Spanish silver peso at 25 paper pesos.

§ Additional commercial statistics may be found in the ANNUAL CYCLOPEDIA for 1867.

The movement of shipping at the port of Buenos Ayres, in 1866, was as follows: Entrances, 1,190 vessels, 252,670 tons; clearances, 1,184 vessels, 848,451 tons. Among the arrivals were 56 vessels from the United States, 85 Argentine (7,958 tons); 252 English, 193 German (40,000 tons); 148 French (59,000 tons).

The most important event in the history of the republic, during the year 1868, was the election of a new President for the term from 1868 to 1874. Although the excitement ran very high, no disturbances took place. There were three candidates: Señor Elizalde, Minister of Foreign Affairs, a strong partisan of the alliance with Brazil; General Urquiza, the chief of the ancient Federalists and supposed to be opposed to the alliance with Brazil and the continuance of war; and Domingo F. Sarmiento, Argentine minister in Washington, whose policy, it was known, would chiefly consist in the promotion of popular education and agriculture. The preliminary elections (choice of electors) took place on the 12th of April; the election of the President by the electors on the 12th of July. General Urquiza received the votes of two provinces, Entrerios and Santa Fé; Elizalde, of three provinces, Santiago del Estero, Catamarca, and Tucuman; no election took place in Corrientes; seven provinces, Cordova, Mendoza, San Luis, San Juan, Jujuy, Salta, Rioja, cast the entire electoral vote for Sarmiento, and, of the electors of Buenos Ayres (28), 24 voted for Sarmiento, 3 for Rawson, and 1 for Sarsfield. The following table gives the aggregate vote for each of the candidates for President and Vice-President:

President.		Vice-President.	
Sarmiento.....	91	Alsina.....	83
Elizalde.....	82	Paunero.....	55
Urquiza.....	16	Ocampo.....	8
Rawson.....	3	Alberdi.....	1
Sarsfield.....	1	Carreras.....	1
	148		148
Votes lost (12 in Corrientes and 1 in Jujuy, 18)		Votes lost.....	18
Total.....	156	Total.....	156

President Sarmiento was installed on the 18th of October, amid great festivities, in which, in particular, the order of Freemasons took part, as both President Sarmiento and Ex-President Mitre are prominent members of the order. For the first time in the history of the republic, both the election and the installation of President passed off without the least disturbance.

The war which the Argentine Republic for some time has been carrying on, conjointly with Brazil and Uruguay against Paraguay, continued throughout the year. But, the opposition to the war greatly increasing in strength, Governor Alsina, of Buenos Ayres (now Vice-President of the republic), in his message to the Provincial Diet, thus expressed himself on the subject:

The war with the Paraguayan Government becomes

every day more barbarous, because so must be styled a war that can only end by the annihilation of one of the belligerents, however praiseworthy the heroism of those engaged in the struggle—a murderous war, since half the combatants have already succumbed—a fatal war, and I call it so because we are shackled to it by a treaty also fatal—not because our ally is an empire—I am not influenced by similar prejudices, but because its clauses seem calculated to prolong the war, until the republic shall fall an exhausted and lifeless victim.

And yet, Honorable Senators and Representatives, in stating this, I am far from wishing to lay the blame upon any individual person or party—a series of events, bound together by the hand of fate, have so willed it, and the truth is, that if the public powers committed an error in 1865, the country accepted it, and assumed its solidarity—it is the law that must rule where the people does not itself govern, but allows its delegates to govern.

But if this be true, not less true is it that the moment has arrived when those very public powers, should themselves decide upon the question of honor, the momentous question for every Argentine heart, whether the insult inflicted on the blue and white stripes by the brutal and cowardly attack upon our men-of-war has not been sufficiently washed off by the blood of a hundred thousand combatants, or revindicated by the occupation of the enemy's country.

At the close of the year it was reported that President Sarmiento was willing to accept the mediation of the United States.

The Argentine Congress adopted a bill, to make the city of Rosario the capital of the Republic. President Mitre sent the bill back to Congress, with a recommendation to amend it by a provision, securing to the national Government the necessary jurisdiction for the regular exercise of its functions in the territory of its temporary residence, while awaiting the transfer to the permanent capital. This jurisdiction, in the opinion of the President, should embrace the superintendence of the police and the direct command of the National Guard.

ARKANSAS. The general affairs of this State continued, at the end of 1867, to be managed by the civil authorities, in whose hands the administration had been placed by the people. They proceeded, however, in a provisory manner, consistently with their almost absolute dependence on the military power, to which Congress, by acts passed March 2 and 23, 1867, subjected Arkansas and the other once seceded States, until "a republican government could be legally established" therein.

Concerning the exercise of judicial power, the order from headquarters, dated September 6, 1867, wherein Major-General Ord enjoined the courts of the State to suspend proceedings against any offender, if two credible persons made affidavits that he would meet by them with unfair trial, and to transmit to headquarters all acts and papers thereunto belonging, that such offender might be tried by a military commission, was in January, 1868, rather modified in cases of horse-stealing, which seems to have been a frequent occurrence in the Fourth Military District, as appears from the following order of Major-General Gillem, successor to General Ord in that command:

General Orders, No. 3.

HEADQUARTERS FOURTH MILITARY DISTRICT,
MISSISSIPPI AND ARKANSAS,
HOLLY SPRINGS, MISS., January 9, 1868.

1. General order No. 9, series of 1867, from these headquarters, is hereby so modified and amended as to restore to the civil tribunals, properly having cognizance under the respective statute laws of the States of Mississippi and Arkansas, entire jurisdiction in all ordinary cases of horse-stealing, heretofore made triable under the provisions of that order before military commission. In case, however, any person charged with the crime of horse-stealing, and indicted therefor, shall make oath before a judicial officer that, by reason of service in the army of the United States, or of political sentiments entertained by him, or of his race or color, he cannot have an impartial trial at the hands of the civil authorities—then all action in the case shall be suspended, and the case reported at once to the nearest military post commander, who will cause an immediate investigation to be made by an officer of all the facts thereof. Should there be no military post within, say, fifty miles of the point, the case will be reported to the sub-district commander, who will order the investigation.

If, in the opinion of the officer making the investigation, the accused can have an impartial trial before the civil tribunal having cognizance, he will officially notify the proper civil officer; the suspension of the proceedings will cease from that time, and the case will proceed in due course.

But if, in the opinion of the investigating officer, an impartial trial cannot be had in the case before the civil authorities, a full and explicit report of all the facts of his reasons for his belief will be forwarded at once to these headquarters, for the consideration and further orders of the district commander.

2. The cases of all citizen prisoners, now in confinement under military guard, awaiting trial on the charge of horse-stealing, will be at once investigated by the respective commanding officers of the posts at which they are confined, and special report made to the sub-district commander of all cases which, in their judgment, will receive impartial justice at the hands of the civil authorities having cognizance.

The sub-district commanders are hereby authorized to give the necessary orders and instructions, to cause all such cases to be returned to civil jurisdiction with the least possible delay and expense. A report of the action taken in each case will be forwarded by the sub-district commander for file at these headquarters.

By order of Brevet Maj.-Gen. ALVAN C. GILLEM.
O. D. GREENE, Assistant Adjutant-General.

By a subsequent order, issued in the same month, General Gillem allowed the State courts to have cognizance and proceed undisturbed in other matters also, which his predecessor had taken away from them, as follows:

General Orders, No. 6.

HEADQUARTERS FOURTH MILITARY DISTRICT,
MISSISSIPPI AND ARKANSAS,
VICKSBURG, MISS., January 27, 1868.

Circulars Nos. 19, 22, and 24, series of 1867, from these headquarters, are hereby revoked—without prejudice, however, to any action which may have been already taken in accordance with said circulars. Hereafter, all questions arising from settlements of crops, and generally the relations of debtors and creditors of civil suitors, will be left to the proper civil courts—except such cases affecting the rights of freedmen, or others, as by acts of Congress are specially committed to the care of the Bureau of Refugees, Freedmen, and Abandoned Lands.

By order of Brevet Maj.-Gen. ALVAN C. GILLEM.
JOHN TYLER, A. A. G.

The great event of the year 1868, in Arkan-

sas, however, was the preparation of a new State constitution, intended to correspond with the Reconstruction Acts of Congress, mentioned above, as it vitally affected the political and social condition of her inhabitants. The matter being naturally of the highest importance to them, and they being divided concerning it into quite opposite parties, though not in equal numbers, every man in Arkansas took eager part in the struggle for carrying or defeating the measure; which contention, and the reciprocal efforts against each other to obtain victory, so engrossed, if not wholly absorbed, the people, that the ordinary affairs of the State were now little cared for, and allowed to remain in comparative neglect, except in so far as they could be used as means to serve in the present contest.

For the purpose of assembling the convention to frame a new State constitution, to be submitted to the people for ratification or rejection, an order was issued by General Ord, on December 5, 1867, in which, after stating that, in the election just closed, the people of Arkansas had decided by a majority of votes in favor of holding a convention, he fixed the 7th day of January, 1868, for the delegates to assemble at Little Rock. They met accordingly, and began their work. As they belonged, however, to opposite parties, called Democrats, Conservatives, and Republicans, the latter being in a large majority, the debate during the session, which lasted about six weeks, was warm throughout; the subjects of dispute among the members were, whether the new constitution should be framed and submitted to the people in general for their ratification or rejection, and also every provision offered to be inserted in it. Most prominent among the latter were the measures relating to the negroes, as, the extending to them the elective franchise; the necessity of the whites' and negroes' children attending one common school together; and the clause forbidding intermarriage between the two races.

It seems not out of place to notice here the sentiments entertained by the negroes of Arkansas (and the same apparently prevail among those of the other Southern States) concerning the Government of the United States, their own right to vote as citizens, their ability to use such right properly, their native intelligence and capacity, as well as that of the white men in general, and other things regarding the relations between the two races under one common government. Mr. Cypert, a delegate from White County, styled in the reports as Conservative, and of note in the convention, having offered, in its fifth sitting, an ordinance "to adopt and submit to the people for their ratification, as the constitution of the State of Arkansas, the same as now in force, being that adopted on the 18th day of March, 1864," and having, in the course of debate thereupon, said that "he was a friend to the negroes, had served in the Freedmen's Bureau, was glad they

were free, would have them protected in their just rights, as they were by law, but would never consent to see them enfranchised and made the rulers of white men"—not without referring also to the negroes' natural want of intelligence, their incapability of culture and development, and the consequent impossibility of their properly using the right of suffrage, on which points he and others had frequently spoken at length—William H. Gray, a negro, and delegate to the convention from Phillips County, rose and spoke as follows:

"It appears to me, the gentleman has read the history of his country to little purpose. When the Constitution was framed, in every State but South Carolina free negroes were allowed to vote. Under British rule this class was free, and he interpreted that 'we the people' in the preamble of the Constitution, meant all the people of every color. The mistake of that period was that these free negroes were not represented in *propria persona* in that constitutional convention, but by the Anglo-Saxon. Congress is now correcting that mistake. The right of franchise is due the negroes bought by the blood of forty thousand of their race shed in three wars. The troubles now on the country are the result of the bad exercise of the elective franchise by unintelligent whites, the 'poor whites' of the South. I could duplicate every negro who cannot read and write, whose name is on the list of registered voters, with a white man equally ignorant. The gentleman can claim to be a friend of the negro, but I do not desire to be looked upon in the light of a client. The Government has made a solemn covenant with the negro to vest him with the right of franchise if he would throw his weight in the balance in favor of the Union and bare his breast to the storm of bullets; and I am convinced that it would not go back on itself. There are thirty-two million whites to four million blacks in the country, and there need be no fear of negro domination. The State laws do not protect the negro in his rights, as they forbade their entrance into the State. [Action of loyal convention of '64.] I am not willing to trust the rights of my people with the white men, as they have not preserved those of their own race, in neglecting to provide them with the means of education. The Declaration of Independence declared all men born free and equal, and I demand the enforcement of that guarantee made to my forefathers, to every one of each race, who had fought for it. The constitution which this ordinance would reenact is not satisfactory, as it is blurred all over with the word 'white.' Under it one hundred and eleven thousand beings who live in the State have no rights which white men are bound to respect. My people might be ignorant, but I believe, with Jefferson, that ignorance is no measure of a man's rights. Slavery has been abolished, but it left my people in a condition of peonage or caste worse than slavery, which had its humane masters.

White people should look to their own ancestry; they should recollect that women were disposed of on James River, in the early settlement of the country, as wives, at the price of two hundred pounds of tobacco. When we have had eight hundred years as the whites to enlighten ourselves, it will be time enough to pronounce them incapable of civilization and enlightenment. The last election showed that they were intelligent enough to vote in a solid mass with the party that would give them their rights, and that too in face of the influence of the intelligence and wealth of the State, and in face of threats to take the bread from their very mouths. I have no antipathy toward the whites; I would drop the curtain of oblivion on the sod which contains the bones of my oppressed and wronged ancestors for two hundred and fifty years. Give us the franchise, and if we do not exercise it properly you have the numbers to take it away from us. It would be impossible for the negro to get justice in a State whereof he was not a full citizen. The prejudices of the entire court would be against him. I do not expect the negro to take possession of the government; I want the franchise given him as an incentive to work to educate his children. I do not desire to discuss the question of the inferiority of races. Unpleasant truths must then be told; history tells us of your white ancestors who lived on the acorns which dropped from the oaks of Didona, and then worshipped the tree as a God. I call upon all men who would see justice done, to meet this question fairly, and fear not to record their votes."

In the session of January 29th, he said: "Negroes vote in Ohio and Massachusetts, and in the latter State are elected to high office by rich white men. He had found more prejudice against his race among the Yankees; and if they did him a kind act, they did not seem to do it with the generous spirit of Southern men. He could get nearer the latter: he had been raised with them. He was the sorrier on this account that they had refused him the rights which would make him a man, as the former were willing to do. He wanted this a white man's government, and wanted them to do the legislating as they had the intelligence and wealth; but he wanted the power to protect himself against unfriendly legislation. Justice should be like the Egyptian statue, blind and recognizing no color."

Concerning intermarriage between whites and negroes, Mr. Bradley, a delegate to the convention, having offered to insert in the constitution a clause "forbidding matrimony between a white person and a person of African descent," on which point nearly all of the members spoke *pro* and *con*. in that and the following days, Mr. Gray said: "It was seldom such outrages were committed at the North, where there are no constitutional provisions of the kind proposed. He saw no necessity of inserting any in the present constitution. As

for his people, their condition now would not permit any such marriages. If it was proposed to insert a provision of the kind, he would move to amend by making it an offence punishable with death for a white man to cohabit with a negro woman." At another time he observed on the same subject, that "there was no danger of intermarriage, as the greatest minds had pronounced it abhorrent to nature. The provision would not cover the case, as the laws must subsequently define who is a negro; and he referred to the law of North Carolina, declaring persons negroes who have only one-sixteenth of negro blood. White men had created the difficulty, and it would now be impossible to draw the line which the gentleman desired established."

The new State constitution, as framed by the committee previously appointed for that purpose, having finally been put to the vote, was adopted by 46 yeas against 20 nays. Its chief provisions, which had also been the most hotly-contested points of debate in the convention, are the bill of rights, the article on elective franchise, which is extended to the negroes who are recognized politically and socially equal to the whites in the State, and the article on education, which is made common to the children and youth of both races. The following are extracts:

BILL OF RIGHTS.—*Section 1.* All political power is inherent in the people. Government is instituted for the protection, security, and benefit of the people, and they have the right to alter or reform the same whenever the public may require it. But the paramount allegiance of every citizen is due to the Federal Government in the exercise of all its constitutional powers as the same may have been or may be defined by the Supreme Court of the United States; and no power exists in the people of this or any other State of the Federal Union to dissolve their connection therewith or perform any act tending to impair, subvert, or resist the supreme authority of the United States. The Constitution of the United States confers full powers on the Federal Government to maintain and perpetuate its existence, and whensoever any portion of the States, or the people thereof, attempt to secede from the Federal Union, or forcibly resist the execution of its laws, the Federal Government may, by warrant of the Constitution, employ armed force in compelling obedience to its authority.

Sec. 3. The equality of all persons before the law is recognized and shall ever remain inviolate; nor shall any ever be deprived of any right, privilege, or immunity, nor exempted from any burden or duty on account of race, color, or previous condition.

FRANCHISE.—*Sec. 1.* In all elections by the people the electors shall vote by ballot.

Sec. 2. Every male person born in the United States, and every male person who has been naturalized or has legally declared his intention to become a citizen of the United States, who is twenty-one years old or upward, and who shall have resided in the State six months next preceding the election, and who at the time is an actual resident of the county in which he offers to vote, except as hereinafter provided, shall be deemed an elector: *Provided,* No soldier or sailor or marine in the military or naval service of the United States shall acquire a residence by reason of being stationed on duty in this State.

Sec. 3. The following classes shall not be permitted to register or hold office, namely: First, those who during the rebellion took the oath of allegiance

or gave bonds for loyalty and good behavior to the United States Government, and afterward gave aid, comfort, or countenance to those engaged in armed hostility to the Government of the United States, either by becoming a soldier in the rebel army, or by entering the lines of said army, or adhering in any way to the cause of rebellion, or by accompanying any armed force belonging to the rebel army, or by furnishing supplies of any kind to the same. Second. Those who are disqualified as electors or from holding office in the State or States from which they came. Third. Those persons who during the late rebellion violated the rules of civilized warfare. Fourth. Those who may be disqualified by the proposed amendment to the Constitution of the United States known as article fourteen, and those who have been disqualified from registering to vote for delegates to the convention to frame a constitution for the State of Arkansas, under the act of Congress entitled "An act to provide for the more efficient government of the rebel States," passed March 2, 1867, and the acts supplemental thereto. Fifth. Those who shall have been convicted of treason, embezzlement of public funds, malfeasance in office, crimes punishable by law with imprisonment in the penitentiary, or bribery. Sixth. Those who are idiots or insane: *Provided,* That all persons included in the first, second, third, and fourth subdivisions of this section, who have openly advocated or who have voted for the reconstruction proposed by Congress, and accept the equality of all men before the law, shall be deemed qualified electors under this constitution.

Sec. 4. The General Assembly shall have the power, by a two-thirds vote of each House, approved by the Governor, to remove the disabilities included in the first, second, third, and fourth subdivisions of section three of this article, when it appears that such person applying for relief from such disabilities has in good faith returned to his allegiance to the Government of the United States: *Provided,* The General Assembly shall have no power to remove the disabilities of any person embraced in the aforesaid subdivisions who, after the adoption of this constitution by the convention, persists in opposing the acts of Congress and reconstruction thereunder.

Sec. 5. All persons before registering or voting must take and subscribe the following oath: "I, ———, do solemnly swear (or affirm) that I will support and maintain the Constitution and laws of the United States and the constitution and laws of the State of Arkansas; that I am not excluded from registering or voting by any of the clauses in the first, second, third, or fourth subdivisions of Article VIII. of the constitution of the State of Arkansas; that I will never countenance or aid in the secession of this State from the United States; that I accept the civil and political equality of all men, and agree not to attempt to deprive any person or persons, on account of race, color, or previous condition, of any political or civil right, privilege, or immunity enjoyed by any other class of men; and furthermore, that I will not in any way injure, or countenance in others any attempt to injure, any person or persons on account of past or present support of the Government of the United States, the laws of the United States, or the principle of the political and civil equality of all men, or for affiliation with any political party."

EDUCATION.—*Sec. 1.* A general diffusion of knowledge and intelligence among all classes being essential to the preservation of the rights and liberties of the people, the General Assembly shall establish and maintain a system of free schools for the gratuitous instruction of all persons in this State between the ages of five and twenty-one years, and the funds appropriated for the support of common schools shall be distributed to the several counties in proportion to the number of children and youths therein between the ages of five and twenty-one years, in such manner as shall be prescribed by law, but no religious or

other sect or sects shall ever have any exclusive right to or control of any part of the school funds of this State.

Sec. 6. No township or school district shall receive any portion of the public school fund unless a free school shall have been kept therein for not less than three months during the year, for which distribution thereof is made. The General Assembly shall require by law that every child of sufficient mental and physical ability shall attend the public schools during the period between the ages of five and eighteen years for a term equivalent to three years, unless educated by other means.

An act, annexed to the new constitution, provided for its ratification by the people by ordering a general election to begin for that purpose on March 18, 1868, prescribing also that the voters should at the same time choose the State officers, the members of both branches of the Legislature, and the Representatives of Arkansas in the Federal Congress. To superintend and control this election it appointed by name two delegates of the convention and its president, as a Board of Commissioners, vested with ample power.

The framers of the constitution, anticipating the fact of its being both adopted by the delegates in convention, and then ratified by the people, made further provision that the members of the General Assembly, twenty-six Senators and eighty-two Representatives, should be elected every fourth and second year respectively, and should meet and commence their sessions on the first of April, 1868. And for the purpose of holding the first-mentioned and other elections, they grouped together and apportioned into twenty-two districts the fifty-eight counties of Arkansas somewhat differently than they had been before.

It seems worthy of notice that at the final voting in the convention for the adoption or rejection of this constitution, every member of that body accompanied his vote with remarks, objecting to one or more specified parts of it; the remarks also were recorded with the vote upon the journal: so that there is scarcely a point to be found in that instrument which is not condemned in express terms by one or many of the delegates—even those who voted for its adoption—seven of whom were negroes.

On February 11th, when the voting had taken place, the president communicated to the convention the answer of the military commander to whom he had previously applied for money wherewith to pay the delegates and defray the other expenses of the convention, in which he stated as follows:

That an ordinance to be entitled "an ordinance raising revenue for the purpose of defraying the expenses of the Constitutional Convention," and "an ordinance providing for the per diem and mileage of the members and the per diem of the officers of the Constitutional Convention of the State of Arkansas" are in his opinion in conformity with the "reconstruction laws."

Referring to the ordinance providing and making appropriation for the per diem and mileage of the members of the Constitutional Convention, the general commanding directs me to inform you that the Honorable Treasurer of the State has been instructed to pay

accounts to the amount of fifty thousand dollars in the manner therein provided, from funds to be obtained by the sale of United States bonds, now deposited to the credit of the State of Arkansas in the U. S. Treasury at Washington, D. C.

On the same day, in compliance with a provision purposely inserted in the constitution, the president informed the people of the election to be held for its ratification.

Agreeably to a measure previously carried in the convention, the president, on February 12th, appointed two boards, each consisting of three delegates, "for the purpose of digesting and arranging laws, and to arrange a code of practice for the State."

On the 14th of February, which was the thirty-first day of the session, the present work of the convention being at an end, the president, in accordance with resolutions adopted before, announced "the convention adjourned, subject to the call of the president, or, in case of his inability, of one of the six vice-presidents."

On the day of adjournment, but before the adjournment was announced, fifteen delegates, who had declined subscribing their names to the new constitution, caused a common protest, signed by themselves, to be read aloud by one of their number before the convention, of the following tenor: "We, the undersigned, delegates to the Constitutional Convention, do hereby protest against the above and foregoing constitution, and decline to indorse or sign it, as the same, in our opinion, is anti-republican, proscriptive, and destructive to the liberties, rights, and privileges of the people of this State." They requested also that the protest with their names should be attached to the constitution. This the convention refused to permit, but allowed the document "to be spread upon the journal."

On February 14, 1868, the military commander ordered the holding of the election for the ratification or rejection of the new constitution, and made dispositions to secure quiet and regularity in the voting.

The fifteen delegates, who, upon the adjournment of the convention, had entered a protest against the new constitution, published in the papers, of February 18, 1868, a common address to the people, "announcing their objections to the said constitution, and some of the reasons which should induce the people to vote against its ratification." Nor did their party, before and after that time, cease from exerting themselves to prevent the new order of things being introduced in Arkansas. Even before the end of 1867, the State Central Committee had called upon the Democratic State Convention to assemble at Little Rock, on January 27, 1868, "for the purpose of perfecting a more thorough organization," in order to put themselves in connection and act in unison with the Democrats and Conservatives of the North. On the appointed day they actually met, passed resolutions, and elected their officers, who, in this capacity, signed and pub-

lished a lengthy address to the people, explaining the importance of the political questions implied in the measures proposed for their State, and the manner in which they should meet and decide them.

Outside of these matters, immediately connected with the State Convention and its work, some occurrences of interest took place. The military commander appointed for Little Rock, the capital of Arkansas, another mayor and other aldermen in the place of those who were actually in charge of the said offices confided to them by the people. The following correspondence took place February 13, 1868, between the heads of the old and new boards:

LITTLE ROCK, ARKANSAS, February 12, 1868.
To the Honorable John W. Hopkins, Mayor of the City of Little Rock:

SIR: The undersigned would respectfully communicate to your honor, and through you to the board of aldermen over which you preside, the information that they have been appointed by the commanding general to relieve you and your associates from any further duties as mayor and aldermen of this city.

Our commissions, and authority for making this communication and request to you and your board, are subject to your inspection.

Be good enough to inform us at what time it will best suit your convenience, and that of the board, to transfer and deliver to us, your successors in office, the books, seals, records, city bonds, money, or other property that may belong to the corporation of said city.

Very respectfully,

JOHN WASSELL, Mayor.

John Donohue, R. A. Edgerton, Albert Adams, H. T. Gibb, Rufus S. Sayward, J. G. Botaford, George R. Weeks, R. L. Dodge, Aldermen.

MAYOR'S OFFICE,

LITTLE ROCK, ARKANSAS, February 12, 1868,
Messrs. John Wassell, Sayward, Botaford, Weeks, Dodge, Donohue, Edgerton, Adams, and Gibb:

GENTLEMEN: I am in receipt of yours, dated February 12th, in which you are pleased to communicate to me, and through me to the board of aldermen of the city of Little Rock, the information that you have been appointed by the commanding general to relieve us and our associates of any further duties, as the mayor and aldermen of said city. To which I beg leave, on behalf of myself and the board of aldermen, to reply that we are in no manner engaged in the military service, and were elected to our several positions in accordance with the charter of the city, to hold during our term of service, and until our successors should be elected and qualified. That we are not aware that your fitness for the several places into which you would seek a forcible intrusion has ever been submitted to the people, whose affairs you propose to administer, in the formal manner required by the charter of the city. That upon our qualifying for our several offices, we were required to take an oath to support the Constitution of the United States, and the State of Arkansas, a conspicuous feature in which is, that the military authorities shall always be kept in strict subordination to the civil, a remembrance of which makes it as difficult to us to approve the steps which you suggest, as it might be found embarrassing to you, under the circumstances, to take a similar oath on your proposed inauguration. We are pleased, however, to recognize the only semblance of right which you pretend to claim, and whose virtues are included in mere physical force, which suffices to excuse us from the further performance of duties which we are no longer able to discharge. Upon satisfactory evidence being presented, therefore, that you have been commissioned to subvert the rights of the city and her people, freely given,

exercised, we believe, with equity and firmness for many years, and resisting the destructive influences of violent times, not from any force of its own, but from that of the law, and the sense of justice and propriety which usually pervades the minds of men, and that your authority emanates from a military source, which implies absolute force; the property of the city will be transferred to you by such titles as you have been commanded to assume, or may choose to adopt. Very respectfully, your obdt^d serv't,

J. W. HOPKINS,

Mayor of the City of Little Rock.

On the day next preceding his expulsion from office, Mayor Hopkins issued an ordinance, forbidding, under penalty of ten to twenty-five dollars, the practice of ringing bells and beating drums through the streets of Little Rock, "to attract custom;" as this could not be but of great disturbance, perhaps, actual injury to quiet people, and, especially, the sick. He limited to auctioneers the liberty of making such noise, and this only "for five minutes, before the door of the place of auction."

By an order dated March 31, 1868, the military commander of the Sub-District of Arkansas, the better to insure tranquillity and safety, during the impending election for the ratification or rejection of the new State constitution, provided for the disposition of troops, throughout the State, as follows:

General Orders, No. 5.

HEADQUARTERS SUB-DISTRICT OF ARKANSAS,
LITTLE ROCK, ARKANSAS, March 8, 1868.

During the period of the approaching election, commencing the 18th instant, post-commanders will distribute their troops, by small detachments, at such places within their respective jurisdictions, as their services may be most needed for the purpose of assisting the commissioners of election and deputy sheriffs in preserving order, also for the purpose of protecting every voter in the exercise of his right to go to and return from the polls without restraint or molestation. Parties guilty of unlawful interference with the rights of voters at the polls, or elsewhere, will be promptly arrested and reported.

Post-commanders will notify the boards of registrars of their several counties, at once, for their information, what disposition of troops they propose to make, and immediately after the election will forward a full report of action, taken under this order, to these headquarters. The mounted troops will be sent to remote stations, while dismounted detachments will be sent to places of less distance. A commissioned officer will accompany each detachment when practicable.

By command of

Brevet Brigadier-General C. H. SMITH, U. S. A.,
SAMUEL M. MILLS, A. A. A. G.

The polls at this election were kept open unusually long, from the 18th day of March till the beginning of April; and when they had been finally closed, loud complaints were made by the Democrats against the Republicans of illegal and fraudulent voting, practised in several counties, but especially in two, to the extent of above 2,000 ballots.

A petition, signed on April 18th, by several prominent persons, was addressed to the military commander, requesting him to inquire into these frauds, of which the petitioners gave him some specimens and promised to furnish others, if time were allowed. General Gillem

dispatched Colonel Tourtelotte to Little Rock, for the purpose of investigating the matter, and the colonel, in his report of April 22d, said the petitioners assured him it would take above six weeks before the frauds complained of could be traced up, and months before the investigation could be completed; that persons registered in one county had been allowed to vote in another, upon the authority of the law of Congress, passed March 11, 1868, permitting registered persons to vote in any county by a ten days' residence in the same, which law, though not officially published, the judges of election knew of, and apparently assumed to execute it on their own responsibility; adding that the Republicans, on the other hand, had made complaints to him that, by intimidation, and in some cases by actual force, the opposite party had hindered them from going to the polls.

But concerning the occurrences and final result of this election, whereby the new State constitution of Arkansas is declared to have been ratified by the people by a majority of 1,816 votes, it may be proper to subjoin that part of the official report, transmitted by General Gillem to the army headquarters at Washington, in which, after stating the facts returned to him, the general seems to regard the above-mentioned result of the election questionable, remitting its decision to the proper authority as follows:

It will be perceived by the foregoing table that there were cast for the constitution twenty-seven thousand nine hundred and thirteen (27,913); against the constitution, twenty-six thousand five hundred and ninety-seven (26,597); total, fifty-four thousand five hundred and ten (54,510); majority for the constitution, one thousand three hundred and sixteen (1,816).

Had the election been conducted in strict compliance with General Order No. 7, and the result been indicated by the above figures, the adoption of the constitution would have been indisputable; but an examination of the foregoing table of returns shows that, in Pulaski County, the total vote exceeds the total number registered by one thousand one hundred and ninety-five (1,195). This is explained by the registrars, who admit that they permitted persons registered in other counties to vote on the presentation of their certificates of registration, and without taking their names, or the counties and precincts in which they claim to be registered; nor did the officers conducting the election in this (Pulaski) county comply with par. III., General Order No. 7, from these headquarters, providing for the manner of conducting the election, by "checking off the voter's name on the precinct-book serving as the poll-book." It is, therefore, impossible to ascertain the number of the registered voters in Pulaski County who availed themselves of the right of franchise, and therefore impossible to ascertain the number in excess of eleven hundred and ninety-five (1,195) who voted in that county, and who were registered in other places. It is also impossible to ascertain whether or not these persons have voted where registered.

The same irregularities occurred in Jefferson County, where seven hundred and thirty (730) votes were cast by voters claiming to be registered in other counties or precincts.

Of these votes, eleven hundred and ninety-five (1,195) in Pulaski, and seven hundred and thirty (730) in Jefferson—making a total of one thousand

nine hundred and twenty-five (1,925)—there is no means of ascertaining whether they were cast for or against the constitution.

Prior to the act of Congress passed March 11, 1868, and which was promulgated in General Order No. 14, from the War Department, dated March 14, 1868, there was no law or order in existence permitting voters registered in one county or precinct to vote in any other county or precinct. The act above referred to authorizes "any person duly registered in the State to vote in the election district where he offers to vote when he has resided therein for ten days next preceding such election, upon his presentation of his certificate of registration, his affidavit, or other satisfactory evidence, under such regulations as the district commander may prescribe.

The order containing this law was not received until after the election, and the dispatch from the General-in-chief containing no intimation of this provision, I was unaware of the existence of the law, and therefore prescribed no regulation for persons voting at other precincts than those in which they registered.

It appears from the report of Colonel J. E. Tourtelotte that the registrars in Pulaski, Jefferson, and Washington Counties, learning unofficially of this law, determined, on their own responsibility, to receive the votes of persons registered in other counties.

Colonel Tourtelotte was ordered to Little Rock for the purpose of investigating the frauds alleged by those opposed to the constitution, and was informed, by the parties preferring the charges, that at least six weeks would elapse before they could be ready to proceed with the investigation, and that months would be required to complete them. Such delay was not deemed expedient. All the evidence bearing on the subject is transmitted herewith.

As there was no separate record kept of the 1,925 votes cast in Pulaski and Jefferson Counties by persons not registered in those counties, there are no means of ascertaining whether or not they were cast for or against the constitution; and, therefore, if the reception of these votes by the registrars, under a law of the existence of which they had no legal notification, is held not to invalidate the election in the two counties above named, the constitution appears to have been adopted by a majority of 1,816.

In a question of such importance, and one purely civil, in which the action to be taken by the district commander is not prescribed by section five of the act of March 28, 1867, I have determined to forward the entire record for the action of the proper authorities. I am, General, very respectfully,

Your obedient servant,

ALVAN C. GILLEM, Brevet Maj.-Gen. U. S. A.
Commanding Fourth Military District.
General U. S. GRANT,
Commanding Armies of the U. S.

Three weeks in advance of General Gillem's official report on this election, those who had been elected members of the State Senate and House of Representatives, upon the assumption that, in said election, the new State constitution had been ratified by the people, assembled together, on April 1, at Little Rock, to begin their sessions. The constitution had designated that day and place for their meeting. They would have commenced their sessions on this day, had not the superintendent of the public buildings refused to open for them the appropriate halls as they requested. He refused on the ground that he had no official knowledge of such assembly. Whereupon they caused the building to be opened by a smith with tools, and on April 2, 1868, began to hold

their respective sessions and make laws, among which is their adoption of the amendment to the Constitution of the United States known as "Article Fourteen." These sessions of the Assembly have been continued since without interruption, except by recesses or adjournments. Its acts from the beginning may be looked upon as legalized by the subsequent action of Congress; though influential papers of the State published the reports of its proceedings under the heading, "The Pretended Legislature."

Upon these grounds has Arkansas been recognized and readmitted by Congress as a State of the Union, and entitled to have her representatives sitting among those of the other States in both halls of the Federal Legislature; as appears from the following act passed in May and June, 1868:

Whereas, The people of Arkansas, in pursuance of the provisions of an act entitled an "Act for the more effective government of the rebel States," passed March 2, 1867, and the acts supplementary thereto, have framed and adopted a constitution of State government which is republican in form, and the Legislature of said State has duly ratified the amendment to the Constitution of the United States, proposed by the Thirty-ninth Congress, and known as article fourteen: therefore,

Be it enacted and it is hereby enacted, That the State of Arkansas is entitled and admitted to representation in Congress, as one of the States of the Union, upon the following fundamental condition: That the constitution of Arkansas shall not be so amended or changed as to deprive any citizen or class of citizens of the United States of the right to vote who are entitled to vote by the constitution herein recognized, except as a punishment for such crimes as are now felonies at common law, whereof he shall have been duly convicted.

This bill was indeed vetoed by the President; it has, however, become a law notwithstanding; and the Representatives of Arkansas, on the basis of her new constitution, have taken their respective seats in Congress.

In consequence of the new condition of things thus introduced in Arkansas, the commander of the Fourth Military District, by an order dated June 30, 1868, its provisions, however, to be reckoned as from June 22d, turned that State over to her civil authorities, recognizing them to have the full power in the government and administration of her affairs, as follows:

General Orders, No. 25.

HEADQUARTERS FOURTH MILITARY DISTRICT,
DEPARTMENT OF MISSISSIPPI AND ARKANSAS,
VICKSBURG, MISSISSIPPI, June 30, 1868. }

1. Official information having, this day, been received at these headquarters, of the admission, on the 22d inst., of the State of Arkansas to representation in Congress, it is hereby made known to all concerned that so much of the Act of March 2, 1867, and of the several acts supplementary thereto, as provides for military government in certain States, have become imperative as to said State of Arkansas; and that every thing in the hands of the military authorities concerning its civil affairs will be immediately turned over to the several duly elected officers of the State, to date as from the 22d instant.

2. Brevet Brigadier-General C. H. Smith, com-

manding Sub-District of Arkansas, will see to the immediate execution of this order.

By command of Brevet Maj.-Gen. McDOWELL.

JOHN TYLER, First Lieutenant 43d Infantry.

Brevet Major U. S. A., A. A. A. General.

Official:

NAT WOLF, Second Lieut. 34th Infantry, A. A. A. General.

By a subsequent order of August 4th, General Gillem, pursuant to directions from the army headquarters at Washington, declared the State of Arkansas as separated from any further connection in military matters with the State of Mississippi, and attached for the future to the Department of Louisiana, headquarters at New Orleans, whereto he enjoined the military commander of the late Sub-District of Arkansas, at Little Rock, to report himself for instructions.

Meantime, under the auspices of the new State constitution, General Powell Clayton had been elected Governor of Arkansas, and on July 2, 1868, entered upon the duties of his office.

Serious disturbances having taken place in various parts of the State, and enormities perpetrated, especially within three counties, Governor Clayton adopted severe measures to suppress the disorders and restore public tranquillity, for which purpose, on August 27, 1868, he issued the following proclamation:

Whereas, It has been made known to me that a large number of lawless and evil-disposed persons in the counties of Conway, Perry, and Columbia, in the State of Arkansas, are in open rebellion against the laws of the State, that a court of justice has been broken up, and the civil authorities overpowered in said counties, by bodies of armed men, who have driven from their homes a large number of peaceable loyal citizens; and that the officers of the law are wholly powerless to preserve order or protect citizens from violence, within either of said counties; and reliable information having been received that quiet men have been assassinated, and attempts have been made upon the lives of others, in various other counties in this State, in which the laws are set at defiance, the lives of officers are threatened, and the civil authorities of the State are openly defied and set at naught, rendering it impossible for the constituted authorities of the law to preserve order and protect the lives and property of the people:

Now, therefore, I, Powell Clayton, Governor of the State of Arkansas, do hereby enjoin upon all persons within said State to keep the peace, and command all bodies of armed men (not organized in pursuance of the laws of the State, or of the United States) to immediately disperse, and return to their homes.

I do furthermore make known that I shall at once cause to be enrolled and organized the reserve militia in pursuance of said act, and shall use, as far as may be necessary, all the power and authority vested in me by the constitution and laws of the State of Arkansas, to preserve order, enforce the law, and protect the lives and property of every person within the State.

[SEAL]

In testimony whereof, I have hereunto set my hand, and caused the seal of the State of Arkansas to be affixed, at Little Rock, this the twenty-seventh day of August, A. D. one thousand eight hundred and sixty-eight.

POWELL CLAYTON, Governor.

By the Governor:

ROBERT J. T. WHITE, Secretary of State.

In accordance with the provisions of this proclamation, the enrolment of the State militia was set immediately on foot by order of the commander of the regular army in Arkansas, issued on the same day.

Public disturbances and criminal acts of violence did not cease, however; they continued and even increased in frequency as well as enormity and extent of place; so that, on November 9, 1868, Governor Clayton placed ten counties of the State—Ashley, Bradley, Columbia, Lafayette, Mississippi, Woodruff, Craighead, Greene, Sevier, and Little River—under martial law.

"For the purpose of perfecting the organization of the militia and carrying into effect this proclamation," a general order from headquarters of the State of Arkansas, dated November 7, 1868, abolished the previously-existing districts and established in their stead four military districts, apportioning to each respectively a proportionate number of the counties in the State.

In the House of the General Assembly of Arkansas, at its session of November 23, 1868, two memorials, addressed to the Legislature of the State, were duly presented and read, wherein the petitioners, proffering themselves advocates of peace, "most solemnly protest against the organization and arming of the militia and the levy of a tax for its support." After consideration of the matter, the action and answer of the House was, that all of the fifty-nine members present, without a dissenting voice, adopted among other resolutions the following:

8. Being fully persuaded of the preconcerted existence of wide-spread lawlessness and systematic assassination of the friends of the government, State and national, in certain counties for months past, and the desperadoes without a single exception being still at large and defying the officers of the law, we do, therefore, most earnestly approve and indorse the recent course of Governor Powell Clayton declaring martial law in several counties.

Of this deplorable condition of things, Governor Clayton spoke at length in his message sent to the Assembly at the opening of its session in November, 1868. They seem, however, to have grown still worse afterward, notwithstanding the organization and actual operations of the militia.

As to the present political disabilities of a portion of the white residents in the State, who are looked upon to be the principal, if not the only, authors of the criminal acts and disturbances which have so long kept and still keep that community in anxiety, the Governor said in his message that he "desired to see these disabilities removed as soon as it is safe to do so;" namely, "when this class of people show a willingness to recognize and fully acquiesce in these measures, and support the government established thereby."

In respect to the State finances, Governor Clayton expressed his gratification, and recommended the funding of the State indebtedness,

which amounts to less than five millions, by "issuing new bonds and cancelling the old ones."

He recommended also, as a measure worthy the attention of the Legislature at a future time, a new assessment of taxable property, one-third of which he says has heretofore escaped taxation, assuming that "the taxes of the great mass of tax-payers will be reduced very nearly in the same ratio as the valuation is increased." For the rest he sets down the best rule that "the burden of taxation rest equally upon all, in proportion to the property they possess."

Concerning the taxes to be levied on the people under different titles and for various purposes in detail, a number of tax-payers in Arkansas signed and submitted to the consideration of the Legislature during its session a memorial, of which the following is an extract:

"From the new tax law passed during your recent session, it appears that the taxes have been greatly increased by adding new subjects of taxation, by making new levies for extraordinary purposes, and by making provision for a new assessment, from which the revenue to be derived for the year 1868, even according to the moderate estimate of Treasurer Page, will amount to \$600,000, not including the school-tax of one-tenth per cent., nor the poll-tax for school purposes of one dollar, which will amount to about \$150,000 more, making, together, the sum of \$750,000 for State purposes alone, to say nothing about county, town, and local railroad taxes, and the United States internal revenue taxes and licenses, which together will amount to at least \$1,750,000, altogether making the enormous sum of \$2,500,000—ten times more than the government ever cost before."

The unsettled condition of affairs greatly retarded the prosperity of the State, and has afforded little opportunity for the development of its resources.

The vote of the State at the presidential election was as follows: Total vote, 41,230. Majority for Gen. Grant, 3,074. In fifteen counties the registration and returns were rejected. The Legislature was divided as follows: Senate—Republicans, 21; Democrat, 1; House—Republicans, 79; Democrat, 1.

ARMY, UNITED STATES. The work of reducing the army has gone on with considerable celerity during the year. Orders were issued in November, 1867, to reduce all regiments of infantry and artillery, with the exception of the ten light batteries, to the number of fifty privates in each company, and to diminish the recruiting rendezvous to four for cavalry and four for infantry. On the 3d of April, 1868, all enlistment for artillery or infantry service was suspended, except in the case of old soldiers desiring to enlist; and further instructions, issued on the 24th of July, prohibited all enlistment or reënlistment in these two branches of the service. The war with the

Indians on the Western plains prevented a corresponding reduction of the cavalry force, and the services of a volunteer regiment of cavalry from the State of Kansas were accepted, which regiment was mustered in on the 6th of October. Five stations for recruiting the cavalry force remained open through the year.

The actual strength of all the regiments in the service, on the 30th of September, was 43,741, and it was reported that the term of enlistment of 4,500 of these would expire before the close of the year. The engineer, ordnance, and other special branches of the service employed 4,340 men. Of 203 volunteer officers remaining in the service in November, 1867, all have been mustered out but General Howard, the head of the Freedmen's Bureau. The whole number of colored troops mustered into service during the civil war was 169,624; of these 86,923 were mustered out, 20,236 were discharged, 81,866 died, 14,887 deserted, 1,514 were killed in action, 1,344 missing in action, and 366 were transferred to the navy. Several colored regiments still belong to the army.

The actual current expenses of the War Department for the fiscal year, ending June 30th, were \$68,743,094.71, to which is to be added the sum of \$9,961,405.43, old war debts paid during the year, making the total expenditures of the department \$78,704,501.14. The appropriations for the fiscal year, ending June 30, 1869, were \$35,400,557.47, and it has been estimated that there will be deficiencies to the amount of \$13,975,000. The requirements of the department for the year, ending June 30, 1870, are estimated at \$65,682,880.85. The disbursements of the pay department for the last year were:

For the Regular Army.....	\$17,808,963 53
For the Military Academy.....	169,199 04
For Volunteer Services.....	42,696,444 08
Total.....	\$60,669,606 65

The expenditures of the Ordnance Bureau for the last fiscal year were \$3,192,000, which is less than three-fifths those of the previous year. From the Commissary Department supplies were furnished for freedmen and refugees to the extent of \$882,884 in the year 1867, and \$632,776 in the year 1868, making a total of \$1,515,461, of which the Freedmen's Bureau repaid \$1,048,669. Army stores were issued to the Indians to the extent of \$640,439 in 1867, and \$378,926 in 1868. Besides these expenses outside of the ordinary claims on the department, \$250,500 were paid for commutation of rations, to soldiers who were prisoners during the war, or to their heirs, under the act of Congress of July, 1864.

Claims to additional bounty were allowed during the year, to the number of 241,992, involving an expenditure of \$23,649,157.78. Since the act of Congress granting this bounty, 433,199 claims have been received, of which 337,091 have been paid, 32,403 rejected, and 15,705 remain unsettled. The aggregate dis-

bursement on these claims has already amounted to about \$54,000,000.

The cost of reconstruction during the year was \$2,261,415.02, and a balance of funds to the amount of \$467,626.46 remains available for that object, which it is thought will finish the business.

The amount of money subject to the requisitions of the Quartermaster-General for the year was \$37,000,000, of which \$36,500,000 were disbursed. The surplus and new appropriations for the fiscal year, ending in 1869, amount to about \$15,000,000. The debts of Southern railroads to this department, for material furnished and interest thereon, are \$8,500,000. This is chiefly due from four roads in Tennessee, namely: Nashville and Chattanooga; Northwestern; Memphis, Clarksville, and Louisville; and East Tennessee and Georgia. A large quantity of clothing and equipments was left on hand at the close of the war, and no appropriation for new purchases has been made since.

More attention has been given, than heretofore, to the inspection of the army, and still further improvements in that regard are suggested. The officers of the Bureau of Inspection consist of a Judge Advocate-General, an Assistant Judge Advocate-General, and eight Judge Advocates. The work of the bureau, thus far, is comprised in 15,046 records of military courts, received, reviewed, and registered; and 1,457 reports on various subjects especially referred for opinion.

The number of military arsenals in the country is 27, including the national armory at Springfield. Measures have been taken for the sale of the St. Louis and Liberty Arsenals, and legislative authority is recommended to sell those at Rome, N. Y., and Vergennes, Vt., and a new arsenal is required at Omaha.

The Bureau for Refugees, Freedmen, and Abandoned Lands, has been kept up through the year, but there has been considerable reduction in the number of officers and agents, and arrangements are in progress to put an end to all its functions, excepting those of collecting claims for colored soldiers, and organizing and supporting schools for the freedmen. Treasury certificates and checks, for the settlement of claims of colored soldiers and marines, have been collected by the bureau to the number of 17,000, having a total value of nearly \$3,500,000. During the past year transportation was furnished to 6,418 persons; 150,000 received medical attendance; and 2,802,478 rations were issued, affording subsistence to an average of 16,000 persons daily; 27 hospitals have been closed and 21 still remain; but efforts are made to turn over the charge of the sick, the infirm, and the insane, to the civil authorities. The number of day and night schools in operation was 1,831, with 2,295 teachers, and 104,827 pupils. The aggregate number of Sunday and day schools of all kinds was 4,026, with 241,819 scholars; \$942,523.66 were ex-

pendent in the support of these schools during the year, besides the funds furnished by benevolent societies, amounting to \$700,000, and about \$860,000 contributed by freedmen. Fifteen normal schools and colleges have been chartered and incorporated in different parts of the country. The total expenditures of the bureau during the fiscal year were \$3,977,041.72, and a balance of \$3,622,067.99 remained on hand.

The corps of cadets on the 1st of June numbered 210 members, under the care and instruction of a superintendent, eight professors, and thirty-two army officers. Fifty-four members of the class were graduated on the 15th of June, and appointed to the army. The number of candidates admitted during the last academic year is ninety-six. The whole number of graduates of the Academy, from its first establishment at West Point to this time, is 2,278; the total cost has been \$8,286,878. The full number allowed by law at one time, when all the States are represented, is 290. It has been suggested of late that the number should be increased to four hundred.

An artillery school was organized at the close of 1867, by order of the General of the Army, and Brevet Major-General Barry, colonel of the 2d artillery, was assigned to its command. It was established at Fortress Monroe, and one battery from each of the five regiments of artillery was ordered to that post to be used in the instructions and experiments of the first year. The course of instruction includes both the theory and practice of that branch of military tactics. The theoretical studies embrace mathematics, military surveying, and engineering, artillery, military history, and military, international, and constitutional law.

Provision has, moreover, been made for instruction in military telegraphy and signalling. Books on these subjects have been furnished to each company and post, and steps have been taken to provide the necessary telegraphic apparatus and equipments for signalling. A school for study and practice in these branches has been put in successful operation at Fort Grebel, Maryland; and they have been introduced at the Military School at West Point, and the Naval Academy at Annapolis.

Some changes were made in the military districts and departments in the South, owing to the admission to their normal relations in the Union of several of the reconstructed States. The changes are indicated in the following order:

General Orders, No. 55.

HEADQ'S OF THE ARMY, ADJ.-GENERAL'S OFFICE, }
WASHINGTON, July 28, 1868.

The following orders from the War Department, which have been approved by the President, are published for the information and government of the army and of all concerned:

The commanding generals of the Second, Third, Fourth, and Fifth Military Districts having officially reported that the States of Arkansas, North Carolina, South Carolina, Louisiana, Georgia, Alabama, and

Florida, have fully complied with the acts of Congress known as the reconstruction acts, including the act passed June 22, 1868, entitled "An act to admit the State of Arkansas to representation in Congress," and the act passed June 25, 1868, entitled "An act to admit the States of North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida to representation in Congress," and that, consequently, so much of the act of March 2, 1867, and the acts supplementary thereto, as provides for the organization of military districts, subject to the military authority of the United States, as therein provided, has become inoperative in said States; and that the commanding generals have ceased to exercise in said States the military powers conferred by said acts of Congress: therefore, the following changes will be made in the organization and command of military districts and geographical departments:

1. The Second and Third Military Districts having ceased to exist, the States of North Carolina, South Carolina, Georgia, Alabama, and Florida, will constitute the Department of the South; Major-General George G. Meade to command. Headquarters at Atlanta, Georgia.

2. The Fourth Military District will now consist only of the State of Mississippi, and will continue to be commanded by Brevet Major-General A. C. Gillem.

3. The Fifth Military District will now consist of the State of Texas, and will be commanded by Brevet Major-General J. J. Reynolds. Headquarters at Austin, Texas.

4. The States of Louisiana and Arkansas will constitute the Department of Louisiana. Brevet Major-General L. H. Rousseau is assigned to the command. Headquarters at New Orleans, Louisiana. Until the arrival of General Rousseau at New Orleans, Brevet Major-General Buchanan will command the department.

5. Brevet Major-General George Crooke is assigned, according to his brevet of major-general, to command the Department of the Columbia, in place of Rousseau, relieved.

6. Brevet Major-General E. R. S. Canby is assigned to command the Department of Washington.

7. Brevet Major-General Edward Hatch, Colonel 9th cavalry, will relieve General Buchanan as Assistant Commissioner of the Bureau of Refugees, Freedmen, and Abandoned Lands in Louisiana.

By command of General Grant:

E. D. TOWNSEND, Assistant Adjutant-General.

With regard to the employment of the troops in those States after the reestablishment of the civil authorities, instructions were issued to the several commanders on the 25th of August, based upon an opinion, given by the Attorney-General on the subject. The important points in these instructions are contained in the following passage: "The obligation of the military, individual officers and soldiers, in common with all citizens, to obey the summons of a marshal or sheriff, must be held subordinate to their paramount duty as members of a permanent military body; hence the troops can act only in their proper organized capacity under their own officers, and in obedience to the immediate commanders of those officers. The officers commanding troops summoned to the aid of a marshal or sheriff, must also judge for himself, and upon his own official responsibility, whether the service required of him is lawful and necessary, and compatible with the proper discharge of his ordinary military duties, and must limit his action absolutely to proper aid in the execution of the lawful precepts exhibited to him by the marshal or

sheriff. If time will permit, every demand from a civil officer for military aid, whether it be for the execution of civil process or to suppress insurrections, should be forwarded to the President with all the material facts in the case for his orders, and in all cases the highest commander, whose orders can be given in time to meet the emergency, will alone assume the responsibility of action. By a timely disposition of troops where there is reason to apprehend a necessity for their use, and by their passive interposition between hostile parties, dangers of collision may be avoided. Department commanders, or, in case of necessity, their subordinates, are expected in this regard to exercise upon their own responsibility a wise discretion, to the end that in any event the peace may be preserved."

In his "opinion," Attorney-General Evarts used this language: "Nothing can be less in accordance with the nature of our Government, or the disposition of our people, than a frequent or ready resort to military aid, in execution of the duties confided to civil officers. Courage, vigor, and intrepidity, are appropriate qualities for the civil service, which the marshals of the United States are expected to perform, and a reinforcement of their power by extraordinary means is permitted by the law only in extraordinary emergencies."

The only portion of the army which has seen active service during the year is that under the command of General Sherman in the Department of the Missouri, where operations against the hostile Indians on the Plains have been carried on from time to time. (*See INDIAN WAR.*)

Among the changes recommended in the general administration of affairs, is the transfer of the management of all matters pertaining to the Indians from the Department of the Interior to that of War, and there is considerable probability that such a change will be made.

Steps have been taken, under authority of the acts of Congress, approved August 3, 1861, and June 25, 1864, for dropping from the rolls of the army, upon the report of an examining board, such officers as may be found unfit for service on account of intemperate or vicious habits. Much will undoubtedly be done in this way to elevate the character of the service. A reform is recommended by the Adjutant-General in the matter of military prisons. Guardhouse confinement he regards as an ineffectual and very injurious mode of punishment, and discharge from the regiment is at once followed by an enlistment in another regiment under an assumed name. He recommends military prisons, which, he says, if properly managed, would serve as reformatory institutions, and would rid the army of many vicious and insubordinate men; they would materially diminish the need and expense of court-martial, prevent the discharge of many desperate men in the unsettled parts of the country, where they always become pests and outlaws,

and would facilitate the recognition of offenders against the civil law who have entered the ranks of the army. He proposes to build the first prison in New York harbor, and if that is found to work well, then he would have Congress to provide for similar institutions on Ship Island, at one point on the Pacific coast and at one point in the Mississippi valley. The labor of convicts and the stoppages of pay would, he thinks, nearly support each prison after its erection. He would have companies of discipline attached to each prison, into which, under proper regulations, all idle and worthless men of the class who prefer being in the guardhouse to doing duty should be transferred, and would have these vagabonds severely dealt with.

Great attention has been given to gathering and identifying the remains of soldiers, slain in the late civil war. There are now 72 national cemeteries, besides very many local and private grounds. The whole number of graves recorded is 316,283, and the occupants of 145,764 have been already clearly identified. Some twenty-five rolls of honor have been prepared, which contain a list of the graves of nearly 200,000 soldiers, with a record of the place where the remains were found, and about 100,000 concerning the occupants of which no record has yet been made, though documents in existence may furnish the needed information. The records which are made contain all the facts which could be gathered concerning the bodies of the dead. The expense of this care for the relics of the fallen soldiers of the nation thus far is about \$2,000,000, and it is thought that \$500,000 more will be needed. The Grand Army of the Republic inaugurated this year a custom of strewing with flowers the graves of the buried soldiers, on the 30th of May, a tribute to their departed comrades which it is proposed sacredly to observe from year to year. This touching observance was by no means confined to the members of the Grand Army, but people of all classes throughout the country joined in this floral tribute to the memory of the dead.

There was a "grand reunion" of the officers of the Thirteenth Army Corps, and of the Armies of the Ohio, Tennessee, Cumberland, and Georgia, at Chicago, on the 15th and 16th of December. These reunions, it is thought, will become common with the officers of the army of the late war.

ASIA. The territory of the European governments in Asia, which already embraces about one-half of the entire area, is steadily enlarging. The war between Russia and the Khan of Bokhara, and the conquest of nearly the whole territory of the latter by Russia, must have taught the weak rulers of Central Asia that they are powerless against their two great Christian neighbors, Russia and England. Only to the disagreement of these two powers is it due that Khokan, Bokhara, Afghanistan, Beloochistan, and a few other countries of Central Asia, are still enumerated among the states of

Asia. English and Russian influences were especially at conflict in Afghanistan, which, throughout the year, was the scene of a civil war between the sons and grandsons of the late Dost Mahomed. In the latter part of the year, the partisan of England, Sheere Ali, seemed to have established his rule.

No part of Asia is making as rapid progress in civilization as British India. As it is the wealthiest empire of Asia, and by far more populous than any single state of Europe, its advance in civilization is of immense importance for the future of both Asia and Europe. The foreign relations of India, throughout the year, were of a pacific nature. Indian troops were employed by England in the Abyssinian war, where they acquitted themselves to the entire satisfaction of their English commander. At home some trouble was caused by the Wahabees, a fanatical sect of Mohammedans.

In Arabia, the Imaum of Muscat, by far the most powerful sovereign of the country, who claims authority over the whole of Omam, the islands of the Persian Gulf, and a vast extent of territory on the east coast of Africa, was dethroned and succeeded by the chief of the Wahabees. This sect, which designs to restore Mohammedanism to its ancient purity, has of late obtained control of a large portion of Central Arabia, and now, having added Muscat to its empire, constitutes a greater power than this part of Asia has known for centuries.

China is beginning to derive great advantages from the establishment of the regular monthly steamship line which connects it with the United States. The commerce of the great ports is developing at a very rapid rate. Of still greater importance are likely to be the negotiations which the Hon. Anson Burlingame, as Chinese plenipotentiary, has been conducting with the United States, England, and France. The Chinese Government is willing to harmonize its administration in all essential points with that of the civilized nations, and in return asks to be treated itself by foreigners as any other civilized government. Mr. Burlingame's mission in the United States was entirely successful. In England, though at first received with great mistrust, he likewise succeeded in effecting a new treaty. Reports from the interior of China state that Christianity, and in particular the Roman Catholic Church, is making great progress. (*See CHINA.*)

For Japan, the past year was the turning-point in its political history, and the beginning of a new era. The young Mikado resumed the reins of the government, which for centuries had been in the hands of the Tycoon. As the latter resisted the claims of the Mikado by force of arms, a civil war ensued, which resulted in the resignation of the Tycoon, the abolition of the Tycoonate, the reestablishment of the Mikado's authority, and the transfer of the seat of government to Yeddo. The civil war was continued by some Daimios of the party of the

Tycoon, even after the resignation of the latter; but, at the close of the year, the complete triumph of the Mikado seemed to be fully secured. (*See JAPAN.*)

The area and population of the independent Asiatic states are shown by the following table:

COUNTRIES.	Square miles.	Population.
Turkey in Asia.....	672,007	16,468,000
Arabia.....	1,086,040	4,000,000
Persia.....	562,244	8,000,000
Afghanistan and Herat.....	268,530	4,000,000
Beloochistan.....	165,830	2,000,000
Independent Tartary (embracing the khanates of Khiva, Kokan, Bokhara, Maymene, and the country of the Turcomans).....	640,516	7,780,000
China.....	4,995,294	477,500,000
Japan.....	149,899	35,000,000
Burmah.....	190,617	193,240,414
Siam.....	309,024	6,226,998
Anam.....	198,048	9,000,000

The following exhibits the area and population of the European dependencies:

COUNTRIES.	Square miles.	Inhabitants.
Russian Territory.....	5,812,353	9,742,017
Turkey in Asia.....	672,007	16,468,000
East India and British Burmah.....	1,558,772	193,240,414
Ceylon.....	24,705	2,048,728
Cochin China (French).....	21,723	978,116
Straits Settlement.....	1,034	232,531
Peninsula of Malacca.....	31,700	308,000
East India Islands.....	799,359	27,673,804

ASTRONOMICAL PHENOMENA AND PROGRESS. *The Total Solar Eclipse.*—The most important astronomical event of the year was the total eclipse of the sun, which took place August 17th. It could be seen in its perfection only in a path which traversed India, the Malay Peninsula, and the Oriental islands. The English, French, and German Governments took great interest in the phenomenon, and sent out parties of astronomers and photographers, thoroughly equipped with the finest instruments, to make scientific observations of it. The points which it was desired to elucidate in connection with the eclipse may be briefly given as follows: 1. Whether the corona or bright white aureole, seen around the moon during the solar obscuration, is the sun's atmosphere, or a thin atmosphere of the earth extending to the moon and made suddenly visible by the solar rays striking through it. Royal Astronomer Airy, of England, inclines to the latter hypothesis, but has not been sustained by the prevailing sentiment of astronomers throughout the world. Tests by polarization had tended to show that this effect of the corona was caused by a solar atmosphere surrounding the sun for a great distance, and visible to us at certain seasons, as the zodiacal light. 2. What is the nature of the rosy protuberances, the glowing mountains of flame, the ragged, fiery fringe seen upon the limb of the moon at the moment of total eclipse? At the eclipse of 1860, several photographs were taken of these lurid excrescences, and they all agreed in giving the same position and outlines to them, thereby demonstrating that they were not apparitions, but

realities. It was hoped that spectrum analyses would solve this enigma; as it was to be the first eclipse at which the science of the spectroscopy would be called into play. Kirchhoff, De la Rue, Nasmyth, and others, had already, by the agency of this instrument, observing the sun, under the ordinary conditions, become convinced of the existence of incandescent vaporous matter around that body, to which they had given the name of photosphere. According to their view, it was an envelope of gaseous matter in a state of combustion, at an inconceivably high temperature, by which the most refractory metals would be readily vaporized. The inspection of the lurid prominences seen during the eclipse was expected to confirm this generally-accepted theory.

Full reports of the observations of the various parties have not yet been made public; but the following statements, from official and unofficial sources, give the more important facts and inferences with regard to the eclipse.

An observer of the eclipse, at Aden, writes the following to the London *Times*:

As the result of the observations taken by our astronomical expeditions in Southern India can only have reached England through the medium of electricity, I avail myself of the passage of a mail steamer to communicate what was observed at this station. The only astronomers and photographers that have come to Aden are all Germans; three of them, Dr. Weiss, Navigating Lieutenant Rhea, and another gentleman, are Austrians. Their chief object was to make observations on the constitution of the corona. From the observations taken by these gentlemen, there can be no doubt that the problem is now solved, several varied experiments proving in a most conclusive manner that the corona merely consists of inflammable gas in a high state of combustion: The South-German party consisted of one astronomer, Dr. Tiell, of Bremen, and four Prussian photographers working under the direction of Dr. Fritsch, of Berlin. This party devoted their attention chiefly to photographing the different phases of the eclipse, having selected Aden as the most likely spot in the zone of "totality" to be free from clouds.

Several English amateurs, officers of the army and navy, also contributed their help in recording various experiments according to their respective abilities.

The weather for a week preceding the eventful 18th had been unusually cloudy for Aden, and prevented the masses who had arrived in the beginning of August from making as many observations as they would have wished. The mornings had been particularly trying, the sun rising between thick banks of purple-gray clouds.

On the evening of the 17th almost all the rank and file of Aden made an exodus to Marshag Hill, the eastern promontory of Aden, where the German party were established with all their instruments. The night was very cloudy, and much anxiety was felt by all interested in the success of the observations. At gray dawn, however, and just before first contact, the banks of cloud separated into broad beds, occasionally shutting out a view of the eclipse. Totality commenced at 6h. 29m. 28s. A. M., and lasted 55s., during which interval a most magnificent view of the phenomena was obtained, and four most successful photographs were taken.

The only planets and stars observed during the totality were Venus, Jupiter, and Sirius, which at once shows that the darkness was not great.

At the time of totality the height of the tide was 7 feet, or for Aden a good average spring tide. The preceding spring tides (about a fortnight before)

were very bad, the rise and fall not being more than four feet.

On first separation a most beautifully soft light stole out from behind the moon, lighting up the sea and rocks of Aden in an indescribably beautiful manner.

The sun was unfortunately behind a cloud at the final separation, which could not be, therefore, determined within a second of time. The times were, of—

	H.	M.	S.
Totality.....	6	29	28
First separation.....	6	33	23
Totality.....	0	2	55

The German party were delighted with all their experiments, and considered themselves amply repaid for their trouble. They had most superb instruments, and were particularly civil and obliging in explaining their use, mechanism, etc. Among the most interesting was a photographing telescope, which is made self-acting by means of a most ingenious clock-work mechanism, which, with the help of a simple pendulum and endless wheels, is so delicately adjusted as to counteract the motion of the earth, and to keep the telescope rightly fixed on the star or planet during the ten or fifteen seconds required to receive the impression.

I send a rough representation of the corona. Its size was accurately measured by means of a telescope with small squares in the diaphragm. These valves can be exactly determined by experiments with the same telescope in the distance between known stars, which can be brought to scale.

I have the honor to be, sir, your most obedient servant,

ADEN, August 21.

Dr. Weiss, of Vienna, had charge of the Austrian expedition, and selected Aden as his place of observation, chiefly because he had heard much of the usual freedom of the sky there from rain and cloud. The doctor and his assistants observed three large prominences on the border of the moon during the eclipse. The most remarkable of these he describes as sharply defined, finger-shaped, brilliant with the most vivid carmine red, the length of which amounted to about the eighth part of the sun's semi-diameter. Dr. Weiss and Dr. Theodor Oppolzer both made measures of the position and magnitude of each of these protuberances, and the results agreed with each other. Attention was also directed to the corona, which had a certain general similarity to that seen in Spain at the solar eclipse of July 18, 1860. It could not, however, be perfectly observed, because its longer radiations were for the most part concealed by clouds. Lieutenant Rhea conducted the spectral investigations. He remarked, at the occurrence of the totality, a sudden disappearance of all the dark (Fraunhofer's) lines, the spectrum passing into a so-called continuous one, faint indeed, but still quite distinctly visible. Toward the end of the totality, when a thin veil of cloud had passed over the sun, by which the corona was hidden, whilst the protuberances glimmered through it, the most refrangible part of the spectrum disappeared almost entirely, and there remained a series of red bands, separated from each other by broad dark spaces.

Major G. F. Tennant, R. E., who had com-

mand of the English expedition, gives the following account of photographic operations, in a letter to Prof. G. B. Airy, the Astronomer Royal, dated Guntoor, April 18th:

The morning was very promising, and, if it had followed the course of its predecessor, we would have had a magnificent clear sky, but it clouded over the east with thin cumulo-strati, which, while hardly stopping vision, interfered very much with the photographic energy; and the result was that every negative was under-exposed, and we have little more than very dense marks, showing the protuberances. The six plates arranged for were duly exposed, but the heat so concentrated the nitrate of silver solution, that, besides showing but faint traces of any corona, they are all covered with spots. Still, we may make something of them, and will try.

Captain Branfill reports the protuberances unpolarized, and the corona strongly polarized everywhere, in a plane passing through the centre of the sun.

Complementarily, I have to report a continuous spectrum from the corona, and one of bright lines from the prominence I examined. I am, I believe, safe in saying that three of the lines in the spectrum of the protuberances compared to C, D and b. I saw a line in the green near F, but I had lost so much time in finding the protuberance (owing to the finder having changed its adjustment since last night), that I lost it in the sunlight before measuring it, and I believe I saw traces of a line in the blue near G, but to see them clearly involves a very large change in the focus of the telescope, which was out of the question then. I conclude that my result is, that the atmosphere of the sun is mainly of non-luminous (or faintly luminous) gas at a short distance from the limb of the sun. It may have had faintly luminous lines, but I had to open the jaws a good deal to get what I could see at first, and consequently the lines would be diffused somewhat; still, I think I should have seen them. The prominence I examined was a very high narrow one, almost to my eye like a bit of the sun through a chink in brightness and color (I could see no tinge of color), and somewhat zigzagged like a flash of lightning. It must have been three minutes high, for it was on the preceding side of the sun near the vertex, and was a marked object both in the last photo-plate, just before the sun reappeared, and to the eye.

Captain Branfill saw the prominence colored, as did two other gentlemen; but one in my observatory (like myself) only saw it white. I should, however, say that for long, I never saw Alpha Orionis markedly red, nor Antares, and I may not catch red soon, though I cannot conceive this being so.

In conclusion, I may note that the darkness was very slight, and the color not half so gloomy as in the eclipse of 1857, which was partial at Delhi, where I was then.

The *London News*, of August 25th, says:

Telegrams have been received almost simultaneously from Major Tennant, who commanded the expedition sent out by the Astronomical Society, and from Dr. Janssen, who commanded the French expedition. Major Tennant states that light fleecy clouds covered the sky, but that the eclipse has been, in the main, successfully observed. This news is very promising, because his party had undertaken the duty of photographing the eclipse. The Government of India had obtained from England a Newtonian reflector, especially constructed for the occasion; and arrangements had been made by means of which it was hoped that six photographic pictures would be taken during the totality. Major Tennant would hardly have described the observation of the eclipse as successful, unless several trustworthy photographs had been taken.

M. Janssen states that the eclipse has been successfully observed. The spectrum of the red protu-

berances which are seen around the black disk of the moon during totality, and which have long since been proved to belong to the sun, has been found to present a very remarkable and unexpected appearance. What this appearance is he does not tell us; but one conclusion drawn from the nature of the spectrum is that the protuberances themselves are gaseous. It will interest our readers to know that, whatever dubiety must still be attached to the results of the observations made by M. Janssen, we may accept at once this general conclusion of his as beyond a peradventure. There are few observations more simple and conclusive than those by which the general character of a self-luminous object is determined by spectroscopic analysis. The rainbow-colored streak of light which indicates that the source of light is a luminous solid or liquid; the colored streak crossed by dark lines which indicates that before reaching us the light from such a source has passed through absorptive vapors; and the spectrum consisting of bright lines only, which indicates that the source of light is a luminous gas; all these spectra are so readily distinguishable ~~enter~~ that it is impossible for the veriest beginner to mistake one for another. Thus it may be looked upon as absolutely certain that the nature of the colored prominences has now been definitely settled. Those enormous masses of luminous matter, some of which exceed the earth many hundreds of times in volume, are now known to be great gas-heaps. It had been supposed that they were solar clouds, formed by the condensation of the metallic vapors which exist within the solar atmosphere into liquid globules, in a manner precisely corresponding to the formation of aqueous clouds in our own atmosphere. This view will now in all probability have to be definitively abandoned. Yet that the prominences are formed by some sort of condensation taking place within the solar atmosphere seems almost indisputable; so that the evidence we now have seems to show that, as a modern astronomer has suggested, the fierce heat which exists in the sun's immediate neighborhood is sufficient to "melt solid matter, turn liquids into vapors, even vapors into some still more subtle form."

Dr. Hermann Vogel, who accompanied the North-German expedition to Aden, as photographer, writes to the *Augsburg Gazette*. His experiences were:

At 4 o'clock on the 18th of August, we left Aden, where the expedition had established its headquarters. Nine-tenths of the sky was overcast, and we endeavored to feel as resigned as possible to our probable disappointment. Our object was to obtain as many photographs as could be taken of the phenomena during the three minutes they would last, and in order to do this we had practised with our machine, like soldiers with fire-arms. Dr. Frische was charged with the preparation of the plates, Dr. Zenker with putting the slides into the machine, Dr. Therle with drawing them out when they had been exposed a sufficient time, while my business was in the tent. With this division of labor we found that it would be possible to obtain six photographs in the three minutes. As the important moment approached, to our delight we saw, through a break in the clouds, the disk of the sun, partially covered by the moon. The landscape around us assumed a strange hue, neither sunlight nor moonlight—the chemical-color rays were exceedingly weak. As a test, we exposed a plate in the machine for fifteen seconds, and obtained a good impression of the clouds; as the disk of the sun grew smaller the clouds opened out. The last minute before the total eclipse arrived, Dr. Frische and I crept into our tent—our work began. The first plate was experimentally exposed five and ten seconds, in order to be sure of the right time. Mohammed, our black servant, brought me the first slide into the tent. I prepared the plate, and anxiously watched to see what would appear. Just then my light went out. I

rushed out of the tent with the plate in my hand, and came back with a small oil lamp, which, in case of accidents, I had placed on a table outside. Eagerly I gazed on the plate; the dark border of the sun was surrounded on one side by peculiar protuberances, and on the other was a remarkable horn. The phenomena were the same on both pictures. My joy was great, but I had no time to indulge in it. The second plate, and, a moment afterward, the third plate, were brought into the tent. Dr. Zenker shouted to us that the sun was reappearing. The total eclipse was over. The last two plates only showed slight impressions of pictures, as they had been spoilt by the clouds, which, while they were exposed in the machine, had closed in. The three plates showed protuberance on the lower border. We washed, fixed, and lacerated our plates, and took several copies of them on glass, which will be sent separately to Europe, in order to insure their safe arrival.

Commander Perrin, of the Peninsular and Oriental steamship Carnatic, reported to the directors of his company from Suez:

The position of the ship at the time of the first contact was lat. 16 N., lon. 54.15 E., being thus twenty miles north of the northernmost limit of totality in that meridian. The eclipse was with us only partial, that portion of the sun's disk remaining unobscured being, however, only about one-sixteenth part of its diameter. Unfortunately, at the time of the first contact, the sun was obscured by clouds, which threatened to deprive us entirely of seeing any part of the eclipse. At intervals, however, we got very hasty glimpses of its progression, though so short as to prevent reliable observations being taken; at length the bank of clouds dispersed and left a perfectly clear view of the eclipse at that stage, the sun having about two-thirds of its diameter eclipsed. At 7 A. M., the nearest point of totality had been reached, the altitude being twenty-two degrees ten minutes. It was at this time our best efforts were directed for observing the phenomena presented. That portion of the sun remaining uneclipsed consisted of a narrow streak in shape like a crescent of its upper left limb, in size about one-sixteenth part of its diameter. The light emitted from this was of a peculiar character and difficult to describe, being at the same time extremely brilliant and yet most remarkably pale. The high sea running appeared like huge waves of liquid lead, and the ghastly paleness of the light thrown upon it and all around revealed a scene which, for its weird-like effect, it would be as impossible to depict as it is to describe. The eclipse not being total with us, the corona was not visible. The first appearance noted by the spectroscope was that of several dark lines in the spectrum of that portion of the sun visible at its greatest obscuration, which was examined through a narrow chink with the instrument, as recommended by Lieutenant Herschel. The next appearance was a roughness on the concave edge of the crescent of sunlight left visible. This was well marked, and seen very plainly with the unarm'd spectroscope; the rapidly increasing brightness of the sun prevented the prisms being of much use except during the darkest part of the eclipse. Throughout, the rays between red and green predominated over those between green and violet. A small black spot was observed on the sun's disk, situated in its upper right limb, distant about one-eighth part of its diameter from its extreme edge. Contact ceased at 16h. 43m. 39s. Greenwich mean time. The only meteorological peculiarities discovered were that the temperature the day before the eclipse was unusually low, being 74 degrees at noon, while, on the preceding day and that of the eclipse, it was 80 degrees and 79 degrees respectively. The direction or force of the usual monsoon wind was not apparently affected; the two only noticeable features being the extreme haziness of the horizon, with a clear sky, and the highly luminous appearance of the sea at night. The daily tidal range

of the barometer was considerably greater in scope than I have ever remarked before upon the day preceding the eclipse. The temperature of the sea during the eclipse was 75 degrees, that of the air 77 degrees, and barometer steady, at 29.70 degrees.

The commander of the Peninsular and Oriental steamship Rangoon had a good view of the eclipse. He writes:

The ship was at that time on the central line, viz.: in lat. 15.43 N., lon. 59.15 E. The total eclipse lasted four minutes eight seconds. The sketch shows what was seen by a large number of persons. In observing with the spectroscope, I saw what none of the others could see with their glasses, viz.: two prominences on the right limb of the moon (showing in the spectroscope to the left), of a yellow flame-color immediately opposite to the red ones, the whole forming a square, with the moon in the centre showing out like a mass of rock. The color of the corona as seen through the prism was red, a yellowish green, blue, and violet; the violet the brightest till the middle of the eclipse, when the red became lumpy and showed brighter. The spectrum from the moon cut through the centre of this but very faint, the red thrown out with a curve. The motion of the ship was so great, it was impossible to get minute observations. There was so much haze and flying cloud, only Venus and one other star could be seen.

1. A small red flame or protuberance on the right-hand lower corner of the moon, visible a few seconds before the sun was totally eclipsed, disappeared a few seconds after.

2. A minute and a half after commencement of total eclipse, a long, red flame of about five minutes of arc on lower left-hand corner, and a red flame or blotch on upper hand, both visible from commencement of totality and very bright.

3. Three minutes after commencement, the long red flame rather shorter, and the upper one increased in size.

4. At reappearance of the sun's upper limb, the upper protuberance disappeared, the lower one was visible for about ten seconds after, about half its former size.

A native Bombay journal publishes the following descriptive paragraph: "The scene in the native town was curious at the time of this solar phenomenon. Men and women in their half-barbaric shabby dress were to be seen going from one temple to another to pray the deity to go to the help of the luminary of the day in his duel with the headless giant, 'Rahu.' The hallalcores, who are the dregs of the native community, received charities of gold and silver, copper, and clothes of various kinds. The ignorant thought that these sweepers have the efficacy of freeing the sun from this torment."

The Lunar Crater Linné.—Mr. W. R. Birt, Secretary of the British Association Moon Committee, furnishes a paper to the *Student* for August, on later observations of the supposed new lunar crater Linné (see ANNUAL CYCLOPEDIA for 1867, article ASTRONOMICAL PHENOMENA AND PROGRESS). He says that on June 26, 1868, at 9.45, G. M. T., he had a very favorable view of Linné with a Crossley equatorial of 7.8 inch aperture, and powers 122, 182, and 384. Nothing was visible but a small cone casting a shadow to the east, not quite so distinct and persistent as the shadow of the highest part of the ridge to

the south (the sixth ridge of Schroter). On that date there was not the slightest indication of a shallow crater, nor the least appearance in the surface round the cone which might be considered indicative of its becoming a white spot as the sun rose above it. The terminator was a little east of the cone, and the next ridge beyond the cone toward the east was becoming visible. Mr. Huggins, Mr. Carpenter, and Mr. Penrose observed Linné the same evening, with the same results obtained by Mr. Birt. Mr. Carpenter also gives the crater opening on the cone. Rev. T. W. Webb made observations confirming those of the other gentlemen. The portion of the Mare Serenitatis on which the cone was seen is so surrounded by ridges as to be easily taken for a large shallow crater, and it may be that some of the discordances between observers may be thus explained. Mr. Birt remarks that we are greatly ignorant of the true nature of the moon's surface. The extent of our knowledge appears to be of a twofold character: First, we perceive differences of color and brightness, from which we infer that the surface consists of different materials reflecting different degrees of light, and also of tint. Second, the presence of shadow reveals to us manifest irregularities of surface as regards level, elevation, and depression. With the nature of the surface beyond these two characteristics we are unacquainted, and can only trace out slowly certain analogies with phenomena that are familiar to us on the earth's crust.

Other supposed Changes in the Moon.—Herr J. F. Julius Schmidt, Director of the Athens Observatory, notified Mr. Birt, in June, of his discovery of another supposed change on the moon's surface. The region of the phenomenon is situated easterly, near Alpetragius. At this point Mädler in his Atlas has a crater almost a mile in diameter, and says, "in the farthest east shines also, with a light of 8°, the small crater d." This crater d, Herr Schmidt proceeds to say, now no longer exists, but, in

its place is a round spot of light more than two miles broad, extremely brilliant, which has quite the character of the spot Linné and of the few others of this kind which are found on the moon. The small crater south of d, which Mädler gives, is still distinctly visible. Schroter has nothing about this spot of light. Lohrmann's (unedited) plate gives a very large spot, almost 2° in magnitude, and a very small hill inside of it. Herr Schmidt sent to Mr. Birt three sketches, the first from Mädler, the second from Lohrmann, and the third his own. Mr. Birt took an early opportunity to examine the region of the supposed change. Schmidt's sketch was found to be a faithful representation of the spot, with perhaps the exception of the white spot being better defined and in more striking contrast with the surface near it. Two friends, who were with Mr. Birt at the time, bore testimony to the accuracy of Schmidt's sketch. Mr. B., of course, failed to identify the features depicted by Lohrmann and Mädler.

Mr. W. R. Birt communicated a paper to the meeting of the Manchester Literary and Philosophical Society, giving an account of a new variable spot on the moon's surface, which exhibited similar phenomena to those of the crater Linné. The observations were made by Rev. W. O. Williams, of Pwllheli, who had undertaken the examination of a zone on the moon's surface, of 2° of latitude, from 4° to 6° south. The spot in question was situated on the southwestern side of the ridge forming the northeastern boundary of Hipparchus. Its diameter is 5°.94, and magnitude 0°.37, the diameter of Dionysius being regarded as unity. On De la Rue's photograph, February 22, 1858, it appears as a spot of about 4° of brightness. It is not so bright as Linné, which is about 5°. On Rutherford's photograph it appears brighter than in De la Rue's, namely, 5°—Linné being 6° in the same photograph. The observations alluded to by Mr. Birt are as follows:

YEAR.	Date.	Authority.	Character.	Brightness.
1858	February 22.....	De la Rue, Ph.	A bright spot.	4°
1865	March 6.....	Rutherford, Ph.	A bright spot.	5°
1867	May 11 8h.....	Birt, Obs.	A shallow crater.	
1867	October 7 8½ to 10...	Williams, "	A very bright spot.	
1867	" 17.....	Ingall, "	A faint shallow crater.	
1867	" 17 13½.....	Ingall, "	Drawn as a crater.	
1867	" 17 18 to 15...	Williams, "	A very conspicuous crater.*	
1867	" 18 17 to 19...	Williams, "	Crater very conspicuous, with a small central cone casting a shadow.	
1867	November 5 9 to 10...	Williams, "	Very bright, a streak of interior shadow on the west.	7°
1867	" 6 8 to 10...	Williams, "	A bright patch of light, streak of shadow scarcely discernible.	6°
1867	" 15 18 to 20...	Williams, "	Very bright.*	10°
1867	December 5 6 to 8...	Williams, "	A whitish spot, no trace of a crater.	5°
1867	" 6 9 to 10...	Williams, "	A whitish spot, no crater.	5°

Mr. Barendell states that on the night of the 8d of January, 1868, he had an opportunity of examining the spot referred to by Mr. Birt, with Mr. Gladstone's equatorially mounted

achromatic of 7½ inches aperture, using pow-

* On these occasions Mr. Williams saw a small bright point to the east, which he considered to be the highest point of the ridge.

ers from 60 to 250. It was then a well-marked though shallow crater, having a diameter about three-fourths of that of Beer and Mädler's Hipparchus F. The shadow of the western wall was very conspicuous on the floor of the crater.

In a paper read before the British Association, Baron von Mädler makes a few suggestions to moon-observers. He calls attention to certain straight lines of light which only show themselves in high sun illumination; of these nothing is known, except that they are by no means elevations. Ridges of only 500 feet high are to be recognized through this shadow near the light edges; but these straight lines never show the smallest shadow, and vanish in the vicinity of the light edges. They proceed in a radiating manner from single bright Ring-mountains, especially from Tycho, Copernicus, Kepler, Byrgins, Aristarchus, and Olbers; from some other Ring-mountains they proceed only from one side, as from Menelaus and Proclus. By a superficial observation they may easily be confounded with the mountain veins, but an attentive examination will remark essential differences between them. The easiest to observe is the light straight which divides the Mare Serenitatis almost equally in halves. He had observed this several times for shadow, but could never detect the smallest. The author alludes to the rills on the moon's surface, as objects whose variability, probably, does not depend on our atmosphere, but is to be referred to real changes. He had sought for two years in vain for the southwest continuation of the Ariadens rill, though its existence came to his knowledge from other quarters—till, unexpectedly, he obtained sight of it in 1833. He remarks that it is advisable to observe on the same evening, not merely a single rill, but many somewhat similar ones; for as the earth's atmosphere must exercise a like effect upon them all, so would a perceptible variation present us with a hint for further investigations.

Heat given out by the Moon.—Mr. J. P. Harrison, in a paper read before the Royal Astronomical Society, takes the ground that the heat acquired by the moon, and radiated to the earth, is what Prof. Tyndall calls "dark heat," or what would be almost wholly absorbed by our atmospheric vapor. This would raise the temperature of the air above the clouds, increase evaporation from their surface, diminish their density, raise them to a higher elevation, and under favorable circumstances disperse them. In either case, a sensible fall would take place in the temperature of the air near the ground. This occurs at the period of lunation when the moon has acquired the greatest amount of heat it can receive from the sun, which is when the half-moon then illuminated has been subjected to solar radiation for about 265 hours, or at the third or last quarter. Opposite results will occur at

the time of minimum heat in the moon. Experiments to test the heat of the moon have been made by Prof. C. P. Smyth, at Teneriffe. He found that it amounted to no more than would be given out by the heat of a wax-candle at a distance of fifteen yards. Mr. Harrison shows that this was not the right time to have expected to discover heat from the moon; that at the time when most heat was really given out, the effect upon the earth's surface was, that a lowering of the temperature was produced. Mr. Harrison refers to the tabulated results of temperature at Oxford, Greenwich, and Berlin, taken for several years, which agree in proving that, at the time when by calculation the moon must have acquired the greatest heat, the average temperature of the earth's surface was lower, accompanied by a dispersion of cloud.

Solar and Planetary Tables.—The Royal Astronomical Society of England, at their annual meeting in February, awarded the gold medal to M. Le Verrier for his solar and planetary tables, which include Mercury, Venus, the Earth, and Mars, and have superseded others for calculating the places referred to.

Secular Variation of the Elements of the Earth's Orbit.—Mr. John L. Stockwell communicated to the *American Journal of Sciences* for July an interesting paper on the "Secular Variations of the Elements of the Earth's Orbit" (see ANNUAL CYCLOPEDIA, for 1867, art. ASTRONOMICAL PHENOMENA AND PROGRESS). Mr. Stockwell furnished a table, appended hereto, based upon data and formulas more fully given in his treatise on the "Secular Equations of the Moon's Mean Motion." The materials used in the preparation of the formulas are those used in the construction of the American *Ephemeris and Nautical Almanac*, with the exception of the mass of the earth, which has been increased to 10000. The contents obtained by Mr. Stockwell differ somewhat from those given by Le Verrier in his Memoir on the Secular Inequalities of the Seven Principal Planets, not only on account of the disturbing influence of the planet Neptune, which had not been discovered at the time of his investigation, but also on account of the improved values of the masses and elements of the other planets. The superior limit of the eccentricity of the earth's orbit, which Le Verrier gives as equal to 0.07775, should be reduced to 0.06989, and an increase of the mass of the earth, corresponding to the latest determinations of the solar parallax, would reduce the value of the superior limit still more.

In Mr. Stockwell's treatise on Secular Equations, etc., already referred to, he gave a table and chart showing the eccentricity of the earth's orbit during the period of a million of years; and the table here presented is merely an extension of the former one. The first date in the following table corresponds to 1,175,566 years before the year 1850, or to 1,100,000

Helena (101).

Ecliptic and mean equinox 1898.0.

No. 102 (for which the name of Miriam is proposed) was discovered by Dr. C. H. F. Peters, at Hamilton College, August 24th. It was in the constellation of Pisces, and had, at three o'clock of that morning, $18^{\circ} 38'$ of right ascension, and $12^{\circ} 54'$ declination, moving slowly to the east, and equal to a star of about the 11th magnitude. Observations were taken by the discoverer September 13th and 14th, with the following result:

Clinton M. T.

(102) α

(102) δ

1898, Sept. 13, $12^{\text{h}} 49^{\text{m}} 30^{\text{s}}$ $1^{\text{h}} 14^{\text{m}} = 1.98$ $+12^{\circ} 8' 50''.3$
 $14, 13 \ 17 \ 23 \ 1 \ 18 \ 40.13 \ 13 \ 8 \ 57.1$

Professor Watson calculated the elements of this planet in the following October, and found them to be:

Minor Planet (102).

Oct. 11, $11^{\text{h}} 54^{\text{m}} 10^{\text{s}}$ $0^{\text{h}} 57^{\text{m}} 29''.07$ $+8^{\circ} 49' 49''.4$
 $12, 10 \ 53 \ 37 \ 0 \ 56 \ 43.78 \ +8 \ 35 \ 15.7$

September 7th Professor Watson added another planet to his catalogue. The following were his observations:

Ann Arbor M. T.

(103) α

(103) δ

Comp.

Sept. 7, $13^{\text{h}} 21^{\text{m}} 40^{\text{s}}$ $0^{\text{h}} 23^{\text{m}} 13''.18$ $-3^{\circ} 49' 51''.3$ 9
 $9, 14 \ 45 \ 43 \ 0 \ 20 \ 53.94 \ 4 \ 3 \ 47.0 \ 1$
 $10, 9 \ 59 \ 59 \ 0 \ 20 \ 20.06 \ -4 \ 9 \ 24.5 \ 7$

The planet is of the 10th magnitude.

Planets 104, 105, and 106, successively discovered by the indefatigable Professor Watson, were thus reported on by him to the *American Journal of Science*:

Communicated September 14th.—I have the pleasure to send you the following observations of a new planet which I discovered last night:

Ann Arbor M. T.

α

δ

Comp.

Sept. 13, $11^{\text{h}} 35^{\text{m}} 5^{\text{s}}$ $0^{\text{h}} 20^{\text{m}} 25''.61$ $-1^{\circ} 10' 59''.6$ 2 5
 $13, 12 \ 35 \ 52 \ 0 \ 20 \ 22.53 \ -1^{\circ} 10' 59''.6$ 2 5
 $13, 13 \ 1 \ 33 \ 0 \ 20 \ 22.56 \ -1^{\circ} 10' 43''.0$ 3 6
 $13, 15 \ 55 \ 57 \ 0 \ 20 \ 17.38 \ -1^{\circ} 11' 23''.7$ 10 6

Daily motion, $\Delta \alpha = -45''$ $\Delta \delta = -5''$.

The planet is of the 11.5 magnitude.

I have yet to add that I discovered still another planet on the 16th October, of which I have observed the following places:

Ann Arbor M. T.

(106) α

(106) δ

1898, Sept. 16, $16^{\text{h}} 8^{\text{m}} 15^{\text{s}}$ $0^{\text{h}} 18^{\text{m}} 47''.43$ $+6^{\circ} 19' 4''.9$
 $16, 16 \ 33 \ 22 \ 0 \ 13 \ 46.28 \ 6 \ 11 \ 45.3$
 $17, 10 \ 29 \ 16 \ 0 \ 13 \ 10.57 \ +6 \ 1 \ 7.3$

Communicated October 13th.—I have observed the following places of a new planet discovered by me on the 10th inst.:

Ann Arbor M. T.

(106) α

(106) δ

1898, Oct. 10, $10^{\text{h}} 36^{\text{m}} 37^{\text{s}}$ $1^{\text{h}} 1^{\text{m}} 21''.84$ $+0^{\circ} 21' 49''.5$
 $11, 11 \ 0 \ 19 \ 1 \ 0 \ 34.33 \ 0 \ 23 \ 31.0$
 $12, 10 \ 26 \ 52 \ 0 \ 59 \ 48.73 \ +0 \ 25 \ 31.3$

The planet resembles a star of the 10th magnitude.

The Motion of Sirius in Space.—With the aid of a new spectroscope, consisting in part

of compound prisms, which gives a dispersive power equal to nearly seven prisms of 60° of dense flint glass, Mr. Huggins has been making a new series of observations on heavenly bodies. His conclusions with regard to Sirius are specially interesting. He is of the opinion that the substance in that star, which produces the strong lines in the spectrum, is hydrogen; also that the aggregate result of the motions of the star and the earth in space, at the time the observations were made, was to degrade the refrangibility of the dark line in Sirius by an amount of wave length equal to 0.109 millionth of a millimetre. Taking the velocity of light at 185,000 miles per second, and the wave length of the dark line at 486.50 millionths of a millimetre, the observed alteration in period of the line in Sirius will indicate a motion of recession, between the earth and the star, of 41.4 miles per second. At the time of observation, that part of the earth's motion which was in the direction of the visual ray was equal to a velocity of about twelve miles per second from the star. There remains unaccounted for, a motion of recession from the earth amounting to 29.4 miles per second, which the author feels entitled to attribute to Sirius. He refers to the inequalities in the proper motion of Sirius, and remarks that, at the present time, the proper motion of the star in declination is less than its average amount by nearly the whole of that part of it which is variable, which circumstance may show that a part of the motion of the star is now in the direction of the visual ray.

Observations of Nebulae.—Mr. Huggins has applied his new spectroscope with some success to the study of a large number of nebulae. About one-third of them give a spectrum of bright lines. The spectrum of the great nebula in Orion was carefully examined by several methods of comparison, with the spectra of terrestrial substances. The coincidence of the lines with those of hydrogen and nitrogen, remained apparently perfect with an apparatus in which a difference in wave length of 0.0460 of a millimetre would have been detected. These results increase greatly the probability that the lines are emitted by nitrogen and hydrogen. Mr. Huggins regards it as a question of much interest whether the few lines of the spectra of the nebulae represent the whole of the light emitted by those bodies, or whether those lines are the strongest lines of their spectra which have succeeded in reaching the earth. He supposes that, since the nebulae are bodies that have a sensible diameter, and in all probability present a continuous luminous surface, no lines have been extinguished by the effect of the distance of the objects from us; and he suggests that, if we had reason to believe that the other lines which present themselves in the spectra of nitrogen and hydrogen were quenched on their way to us, we should have to regard their disappearance as an indication of a power of extinction residing in cosmical

space, similar to that inferred from theoretical considerations by Chéseaux and afterward supported, on other grounds, by Olbers and the elder Struve. The author concludes that, at the time of his observation, the nebula of Orion was not receding from the earth with a velocity greater than ten miles per second; for this motion, added to the earth's orbital velocity, would have caused a want of coincidence of the lines of the spectrum that could have been observed.

Suspected Change in a Nebula.—The Rev. H. Cooper Key, of England, has been making observations on the nebula, 45 Herschel, iv Germinorum, with a silvered glass speculum of eighteen-inch aperture, and ten feet focal length, using an eye-piece giving a power of 510. This nebula presented to the Herschels a uniform nebulous disk, with a stellar centre; Lord Rosse saw one ring only; in Mr. Key's telescope, two rings were distinctly visible. Mr. Huggins considers the observation important, as showing a definite change in these objects; the central star of the nebula gives a continuous spectrum, and possibly the luminous haze surrounding it also; but of that Mr. Huggins is not so certain, the difficulty of getting spectrum observations of such faint objects is so great.

Stellar Spectra.—Father Secchi has communicated to the French Academy of Sciences some further observations on stellar spectra, made by means of a new spectroscope, with a cylindrical achromatic eye-piece. He concludes that, 1st, red stars have generally spectra of the third type; when the color is pale, it may be referred to an intermediate place between the second and third; 2d, a great number of these stars have their spectra perfectly resolvable into columns which are afterward themselves resolvable into finer lines. There are many others that cannot be resolved into secondary lines, on account of the faintness, but of which the principal lines indicate the type; 3d, the stars which cannot be referred to the three established types are very rare. Some of the author's speculations and suggestions are interesting. He says:

We have, therefore, without doubt, in the heavens a grand fact, which is the fundamental distinction of the stars in a small number of types, which opens the field to very many cosmological important speculations.

Secondly, another grand fact, which was brought out from those researches, was, that the stars of the same type are crowded occasionally in the same space of the heavens, so the white stars are thickly gathered in the Leo, in the Ursa Major, in Lyra, Pleiades, etc., while the yellow ones are very frequent in Cetus, in Eridanus, Hydra, etc. The region of Orion is very remarkable for having all through, and in the neighborhood, green stars of the first type, but with very narrow lines and with scarcely any red color. It seems that this particular kind of star is seen through the great mass which constitutes the great nebula of Orion, whose spectrum may contrast with the primitive spectrum of the stars. Sirius is perhaps too near us to be affected by this influence. The distribution of stars seems to indicate in space a particular distri-

bution of matter or of temperature in the different regions.

Thirdly, all the spectra of the third and fourth type belong to variable stars. The representative of these is the wonderful (Mira) Ceti. This has been carefully examined and found that, even when it is only of the seventh magnitude, it has the same spectrum as the typical, but only reduced to its few bright lines; α Orion is in the same condition, ϵ Tauri or Aldebaran, and Antares, this year appeared to be smaller and of a more red hue than in the past year, and in the first appeared traces of columns which were not seen the year before; so that it is evident that the change of these stars depends on a periodical change which happens in their atmosphere. It is not so, however, with Algol, which has the very same spectrum of the first class or type in every stage of greatness; which induces me to believe that there the variation is produced by the passage of an opaque body passing between us and the central star, giving thus an example of eclipse of a fixed star, by his own obscure planet.

Finally, a very delicate question I propose to myself to be resolved by spectral analysis; this consists in ascertaining whether the star has a proper motion from the displacement of the lines, which ought to take place in the spectrum by the combined motion of the star and the propagation of light. From this new kind of aberration it would be easy to ascertain if a star has a motion whose velocity should be five times that of our earth around the sun. The star α of Lyra, examined in this manner, has not given any such displacement, so that it appears not to have such a motion. In some other stars I have found that there is a little displacement, as in Ursa Majoris, but this seems especially due to the different breadth of the hydrogen line in the star and in the compared spectrum. I have employed for this study the comparison of the direct image of the stars with its own spectrum, but I have found no such quantity of displacement.

A New Comet.—A new comet (II. 1868) was discovered June 18th, by Dr. Winnecke, at Carlsruhe. It was also independently discovered, the same night, at the Marseilles observatory. The next night, several astronomers, to whom the discovery had been communicated, observed the comet, and described it as very bright and having a tail. On the 20th, the tail was more than 3° in length. About that time the comet was just visible to the naked eye, and, when brightest, was comparable to a star of the fifth magnitude. It passed its perihelion, June 26th; its distance from the sun being then about six-tenths of that of the earth. It was nearest the earth, June 30th, and was then within about 56,000,000 miles of us. Early in July it gradually ceased to be visible.

The Spectrum of Comet II., 1868.—Mr. Huggins, the industrious and skilful observer of the spectra of astronomical bodies, made a careful study of the spectrum of comet II., of the past year. The results he communicated to the Royal Society in July. He describes the appearance of the comet in the telescope, June 22d, as a nearly circular corona, which became rather suddenly brighter toward the centre, where there was a nearly round spot of light. A tail was traced for almost a degree. The light of the comet, examined with a spectroscopic, furnished with two prisms of 60° , was resolved into three broad bright bands. In the two more refrangible of these bands, the

light was brightest at the less refrangible end, and gradually diminished toward the other limit of the bands. The least refrangible of the three bands did not exhibit a similar gradation of brightness. These bands could not be resolved into lines, nor was any light seen beyond the bands toward the violet and the red. The author found this cometic spectrum to agree exactly with a form of the spectrum of carbon which he had observed and measured in 1864. When an induction spark, with Leyden jars intercalated, is taken in a current of olefiant gas, the highly heated vapor of carbon exhibits a spectrum which is somewhat modified from that which may be regarded as typical of carbon. The light is of the same refrangibility, but the separate strong lines are not to be distinguished. The shading, composed of numerous fine lines, which accompanies the lines, appears as an unresolved nebulous light. On June 23d the spectrum of the comet was compared directly in the spectroscope with the spectrum of the induction spark taken in a current of olefiant gas. The three bands of the comet appeared to coincide with the corresponding bands of the spectrum of carbon. In addition to an apparent identity of position, the bands in the two spectra were very similar in their general characters and in their relative brightness. These observations were confirmed on June 25th.

The remarkably close resemblance of the spectrum of the comet to that of the spectrum of carbon necessarily suggests the identity of the substances by which in both cases the light was emitted. The great fixity of carbon seems, indeed, to raise some difficulty in the way of accepting the apparently obvious inference from these prismatic observations. Some comets have approached sufficiently near the sun to acquire a temperature high enough to convert even carbon into vapor. In the case of other comets, the author suggests that the difficulty is one of degree only, for the conditions are not known under which even a gas permanent, at the temperature of the earth, could maintain sufficient heat to emit light. The spectrum shows that the color of this comet was bluish green. Considerable difference of color has been remarked in the parts of some comets. Sir William Herschel described the head of the comet of 1811 to be of a greenish or bluish-green color, while the central point appeared of a ruddy tint. The same colors have been observed in other comets. If carbon be the substance of some comets, this substance, if incandescent in the solid state, or reflecting when in a condition of minute division, the light of the sun, would afford a light which, in comparison with that emitted by the luminous vapor of carbon, would appear yellowish or approaching to red. The author refers to the bearing of these results on certain cometary phenomena, and on the apparent identity of the orbits of the periodical meteors with those of some comets.

The Colors of Saturn.—Mr. John Browning has sent to the *Student* a report of his recent observations of the colors of Saturn. Examining the planet at midnight, May 9th, with a 12½-inch instrument and a power of 100, he found no perceptible color. Under a power of 200 to 450, the ring appeared lemon-yellow; the globe, light cinnamon with darker belts scarcely of the same color; Ball's division, purple-chocolate; crape ring, same color; pole of the planet, bright azure. May 14th he took another set of observations. The definition was much better than on the 9th, but the colors were not nearly so vivid as on the former date. The north pole of the globe was neutral gray and darker than any other part of the planet, excepting the broad reddish-brown belt immediately north of the equatorial white belt. No part of the globe was pure white. The author remarks that with a 12-inch silvered glass mirror, and a power of 500, the whole ring system produces the impression that it consists of fine lines. Slight inequalities may sometimes be detected in the belts of the globe; more generally they appear quite regular, like the rim of a wheel in rapid motion.

Mr. Huggins hearing that Mr. Browning was engaged on this subject, sent him notes of some of his own observations of Saturn. Mr. H. says that though he can see the colors of Saturn fairly with powers of 500 or 600, yet he finds a power of, at least, 900 necessary to bring out the contrast of the colors in the fullest manner. He warns inexperienced observers that, in consequence of the small altitudes of Saturn, there are prismatic colors seen on it, produced by our atmosphere. From this cause red is seen along the upper edge of the planet in an inverting telescope, and a strong blue at the lower or north edge of the ring, and at the pole. Some time ago, he had considered the crape ring to be of the color of watch-spring; lately he has regarded it as rather more of a grayish blue. Mr. Browning remarks upon this, that the color of the crape ring will vary greatly with the state of an atmosphere. When there is much mist in the air, the color will incline toward red; when the air is clear, the color will become a purer blue.

The author thinks that the different tints on different portions of the rings may be ascribed to the unequal distribution of the countless multitude of minute satellites of which the rings are supposed to be made up. The presence of an atmosphere may further modify their colors. That the rings have an atmosphere, he regards as pretty certain, from the appearance they present when their edges are turned toward us. At such times, nebulous appendages like clouds have been seen upon them. The surface of the globe of Saturn may have a soil of the color of new red sandstone. This color would certainly be strongly modified by cloud-belts, which exist principally at the equator, but extend to the poles. The poles may consist of masses of ice; but it is difficult

to account for their strong blue color on that hypothesis. Yet the same difficulty would be experienced in the case of Mars, whose poles appear light blue, or light green, to many observers; and the existence of ice on those poles may be considered as proved. The uniformity of the red belts would seem to indicate that the whole of the surface over which they extend must possess the same character. Mr. Browning concludes that, if the color is due to the soil, the seas must be confined to the poles of the planet.

The Color of the Moon and Stars.—Different observers had made different reports upon the amount of color visible in the moon during the same lunar eclipse. These discrepancies suggested to Mr. John Browning an inquiry into the causes of them. In his own observations of a lunar eclipse in which coppery or blue tints had been generally seen, he had failed to detect either of those colors. The explanation he found to be this: that he had used a telescope of larger diameter than the telescopes employed by most observers. The observers who had instruments of only three or four inches aperture spoke of the color as being less than usual, but very noticeable; those who had telescopes of seven or eight inches aperture saw very little color; and observers with telescopes of 10½ inches aperture, or a 12½-inch, silvered glass speculum, could not detect any color at all. Mr. Browning thus concludes a paper upon the subject, presented by him to the Royal Astronomical Society:

It is true that I failed equally in detecting color with a four-inch object-glass, but I account for this by supposing that the sensitiveness of my eye to faint-colored light had been injured by the glare of the moon in the large aperture. Experimenting in connection with this subject, I have noticed that the chocolate color of the so-called belts of Jupiter is much more perceptible with 6 inches aperture than with 12 inches. Again, a small star in the cluster in Perseus appears of an indigo-blue with 8½ inches, Prussian-blue with 10½ inches, and royal-blue with 12½ inches of aperture. It follows from this that colors estimated by comparison with the ingenious chromatic scale of Admiral Smyth, in which each color is represented of four different degrees of intensity, will not possess any relative value unless taken in connection with the aperture employed when the color was estimated. Were due allowance made for this disturbing influence of variation of aperture, I think many discrepancies between the colors attributed to double stars by different observers might probably be reconciled.

On the Fall of Rain as affected by the Moon.—Mr. Pliny Earl Chase has contributed to the proceedings of the American Philosophical Society a paper on this subject. His attention was specially called to it by an article by Mr. George Dines in the Proceedings of the Meteorological Society No. 86, which presented a summary of observations of rain which fell during each day of the moon's age, through a period, with few interruptions, of over forty years. Upon those data the author based the "decided opinion that the fall of rain is in no way influenced by the changes of the moon or the moon's age." Mr. Chase, however, upon a careful examination of

the same tables, deduces the conclusion—that, notwithstanding the complete veiling of all the disturbances which may be due to the moon's variable distance and declination, there was a marked tendency to increase at quadrature and to decrease at syzygy, both in the amount of rain and in the number of rainy days. This tendency, which becomes evident even in the majority of the five years' groupings, is uniformly shown in all the groups of ten years, twenty years, and forty years, as well as in the number of rainy days and in the number of heavy rains during the entire period.

Mr. Chase gives the following forty years' aggregates (1825 to 1864 inclusive) at Surrey, the place of observations referred to by Mr. Dines, and at the Pennsylvania Hospital, Philadelphia:

	Surrey.	Philadelphia.
Week of new moon.....	98.2	97.6
“ first quarter.....	103.1	100.3
“ full moon.....	97.4	95.8
“ last quarter.....	101.4	106.3

Mr. J. H. N. Hennessey, First Assistant on the great Trigonometrical Survey of India, in a paper to the Royal Society, alludes to a record of the rainfall at Mussoorie extending over thirty-two years, and remarks:

The results tabulated have been obtained by employing an *average daily* fall as the means for comparing the fall at "the changes" with that at intermediate intervals. The annual average result may be stated thus:

	Inch.
At "the changes" of the moon the <i>mean daily</i> fall of rain is.....	0.466
Between "the changes" of the moon the <i>mean daily</i> fall is.....	0.525

which is in opposition to the popular belief on the subject.

The Melbourne Telescope.—This great instrument, manufactured by Mr. Grubb, of Dublin, has been examined and favorably reported on by a committee of the Royal Society, composed of Earl Rosse, Dr. Robinson, and Mr. Warren De la Rue. The telescope is of the reflecting order. The reflector is of metal—a fact which calls down the criticisms of those astronomers who believe the new silvered glass mirrors of Foucault to be much preferable. The former, it is claimed, reflect less light, are much heavier, and, when their polish is lost, do not admit of reparation, except at a great expense, as the repolishing is nothing short of refiguring, which is a costly and delicate operation. Resilvering a glass mirror costs little, and does not demand unusual skill. The point of suspension of the Melbourne telescope is near the mirror, on account of its immense weight; and in front of this point the telescope stretches forward to about 80 ft. of open lattice-work, made of bands of elastic steel. It is thought that heavy winds must produce considerable motion in so long an instrument. The telescope is on Cassegrain's plan, with the eye-piece, as in the Gregorians, at the bottom, and very convenient for use. The adjusting appara-

tus is brought close to the observer. The committee found that by this instrument the light even of large stars was collected into small, hard, and perfectly circular disks free from rays. The fifth and sixth stars in the trapezium of Orion were not only plainly seen but were very bright. The light-collecting power was very satisfactory. The planetary nebula in 46 M. was revealed as a ring bright even as the dazzling ground of the surrounding stars, which were as brilliant as the Pleiades appear in ordinary instruments.

AUSTRALIA. The five English colonies on the continent of Australia, as well as the neighboring colonies of Tasmania and New Zealand, continue to advance rapidly in population, commerce, and wealth. The province of Victoria had, in 1836, 177 souls; in 1841, 11,738; in 1851, 77,845; in 1861, 540,822; and in 1867, 659,887. New South Wales, settled in 1788 as a penal colony, numbered in 1803 but 7,097. In 1821 it had 29,788; in 1840, 129,463; in 1850, 265,508. [In 1866 it had 481,414, notwithstanding that the new provinces of Victoria and Queensland had been withdrawn from its territory a few years before. The latter, from a population of 30,059 in 1861, increased to 96,172 in 1866. South Australia, from 17,366 persons in 1844, possessed 63,700 in 1850, and 172,880 in 1867. Tasmania, from 14,192 in 1825, rose to 98,455 in 1867. The population of the European settlements in New Zealand in 1864 amounted to over 172,000, an increase of seventy-four per cent. from 1861, while in 1851 the number of Europeans was only 25,807. In 1867, it amounted to 220,192. The English race predominates everywhere, followed by the Irish, Scotch, German, and Chinese. The inequality of the sexes was formerly a great cause of complaint. In 1838 there were but fourteen females to every hundred males, but in 1866 there were seventy-five to each hundred. The rapid increase of the tropical province of Queensland, the hottest of all the settlements, proves that the British race can labor hard and thrive well under a burning sun, without resorting to the compulsory labor of dark-skinned races. Every thing indicates that Australia is becoming a great empire.]

The Australian trade, during the five months of 1868, presented upon the whole an increased activity. Thus the value of the British goods and produce taken by the Australian colonies to May 31, 1868, was £4,251,144, as compared with £3,407,728 in the corresponding five months of 1867, and £5,502,014 in the corresponding five months of 1866. The increased demand was shared in by all the colonies of Australia properly so called, but the value of English exports to Tasmania, in the first five months of 1868, was only £25,867, as compared with £41,414 in the corresponding period of 1867, and to New Zealand £544,508, against £610,846 in the corresponding period of 1867.

The whole of Australia is equal in extent to

Europe, and, together with Tasmania (15,000,000 acres) and New Zealand 77,000,000 acres, extending from 11° to 47° south latitude, affords almost every variety of climate, and can produce every necessary, and even luxury, that civilization requires.

Our latest statistical advices from all the above colonies, except New South Wales, are to the end of 1867, or two years later than those published in the *ANNUAL CYCLOPEDIA* for 1867. The following are some extracts from the official reports:

The population of *New South Wales* in 1866 was 481,414; the deaths registered were 7,861, or 17.5 per 1,000 of population was the death-rate of the year. The births were 16,950. The marriages were 8,462. The aspect of the year's registration was unfavorable. Instead of the births receiving an addition of 600 during the year, the returns exhibited an actual deficit of more than half that number. The marriage rate was depressed; and the deaths were 765 in excess of the number registered in 1865. It is worthy of remark that the immigration into the colony in 1866 from the United Kingdom showed a larger falling off than in any previous year, the total being 1,852, of whom 1,204 were assisted.

The value of the imports was £9,403,192; of the exports, £9,913,839; being a slight advance on those of the previous year, and averaging £23 12s. 5d. per head of population. The value of articles of colonial produce was £6,057,585. The imports averaged £22 8s. 1d. per head of population; £3,852,768 was the value of the imports from the United Kingdom. The value of the wine imported amounted to £128,202; the exports under this head were £8,847. The wine produced in the colony in 1866 was 168,123 gallons. There was a decrease in the quantity of gold brought to the mint by escort. In 1862 the quantity was 575,538 oz.; in 1866 it was only 241,489 oz., showing a decrease of 334,049 oz., of the value of £1,284,259. The quantity of coal raised in the year was 774,238 tons, of the value of £324,049, or 188,718 tons in excess of the quantity raised in 1865. The quantity shipped in 1866 was 540,905 tons. The quantity of copper exported was 278 tons, of the value of £20,790. The number of vessels that entered the ports of the colony in 1866 was 2,099; their tonnage was 730,354, being about double that of 1857. The number of outward clearances was 2,259, with an aggregate of 784,381 tons. The financial statistics show that coin and bullion in the banks and Mint amounted to £1,356,776. The paper currency in circulation in 1866 averaged £674,507. Since the opening of the Mint in New South Wales, there have been 5,584,669 oz. of gold, of the value of £21,864,668, received for coinage, and £20,828,000 of coin has been issued, exclusive of £1,528,574 of bullion. In 1866, 739,362 oz. of gold were sent to the Mint for coinage, representing a value of £2,935,928. The depositors

in savings-banks numbered 17,576; the amount deposited was £707,815. The public debt at the end of 1866 was £6,418,080. The agricultural statistics record 24,629 occupiers of land in 1866, with 7,448,200 acres. The cultivation of the land was increasing, 452,850 acres being under tillage in 1866, against 381,400 acres in 1865. In no year was there so large a wheat crop as in 1866, the produce being 2,226,027 bushels. Cotton was no longer cultivated in New South Wales, but the cultivation of sugar had increased. The live-stock returns show a large increase in the number of sheep, but a decrease in horses, cattle, and pigs. The quantity of wool sent out of the colony in 1866 was 36,980,685 lbs., which was the largest quantity ever shipped.

The most populous of the Australian colonies is *Victoria*, which had, at the close of the year 1867, 659,887 inhabitants (against 643,912 in 1866). The arrivals in the colony in 1867 amounted to 27,242, of whom 19,904 were from the neighboring colonies, and 6,522 from the United Kingdom. The numbers of Chinese who left the colony were 1,709, while the arrivals were only 317. The estimated population on the various gold-fields of the colony, at the end of the year, is returned at 271,115, of whom 68,058 were miners. Of these, 47,377 were Europeans, and 15,676 Chinese. 33,407 Europeans, and 15,629 Chinese, were at work as alluvial miners, and 18,970 Europeans, and only 47 Chinese, as quartz miners. There are 62 corporate towns and boroughs in Victoria, with a gross population of 326,216; 71,833 dwellings; 70,969 rate-payers; £20,894,918 value of ratable property. The aboriginal population is estimated at 1,908 persons. The number of electors on the rolls of the Legislative Council is 11,602. The number who voted at the triennial election in 1866, in the districts that were contested, was 2,329, or 63.1 of those who were entitled to vote. There are 115,842 electors on the rolls for the Assembly. In the districts contested at the general election of 1866, there were 63,275 who voted, being a percentage of 61.59 of the whole.

The approximate tables of the Registrar-General's agricultural statistics for the year, ended the 31st of March, 1868, show that the present number of holdings in the colony, exceeding one acre in extent, is 25,214. The extent of purchased freehold land in occupation is 5,472,205 acres; and of rented land, 1,148,726 acres; crown lands rented for other than pastoral purposes, 1,826,524 acres; total area in occupation, 7,947,455 acres; extent reserved, 6,970,106 acres; under tillage, 634,270 acres.

As Victoria is the largest, *Western Australia* is the smallest of the Australian colonies. It has the distinction of thus being the only Australian colony free from debt; having cleared itself of its debt in 1866. The public expenditure, in 1866, nearly £85,000, was well kept within the revenue, notwithstanding a

considerable outlay on roads and bridges. The Colonial Blue-book, laid before Parliament, shows that Western Australia is in a condition to meet the cessation of transportation, with a reasonable hope that the sources of wealth opening up in various ways may, with care, prevent the stagnation which was apprehended. There is a steady annual increase in the amount of land under cultivation, and also in the tonnage entered and cleared at the ports. A supply of free labor will now be of vast importance to this colony. Nearly two-thirds of its 22,000 people are males, and the demand for female servants keeps increasing, because, as the Governor reports, those who come are "quickly absorbed by marriage." He is able to state that the settlement on the northwest coast is progressing steadily. Considerable attention is attracted to it from all parts of Australia; the country appears to be admirably adapted for stock of all kinds; and now that the necessary staff of officers are on the spot, and a town has been established, the Governor considers that there is every reason to believe that its progress will be rapid and satisfactory.

South Australia is a colony which has been liable to periodical depression, but equally open to times of great prosperity. The population, on December 31, 1867, was 89,991 males, 82,889 females; total, 172,880. Number of persons enjoying the electoral franchise, 41,657, of whom 14,830 were voters for the Legislative Council, and 27,327 for the House of Assembly. Up to 31st December, 1867, 3,568,742 acres of land had been purchased from the crown, while 2,177,941 acres were held by freeholders. The quantity of land enclosed was 4,812,276 acres, while the land under cultivation amounted to 810,734 acres; and the land enclosed, but not cultivated, to 3,991,542 acres. The general revenue of South Australia for the year 1867, amounted to £716,294 13s. 6d., against £949,774 2s. 4d., in 1866, and £1,089,128 14s. 4d. in 1865. Total imports of South Australia, £2,506,394 5s., exports, £3,164,622, of which £2,776,045 was the produce of the colony, giving a net excess of exports over imports, of £658,227 15s.

The population of *Queensland*, in 1866, was 96,172. Public revenue, £593,000; expenditure, £594,000; public debt, £2,150,000. The imports were valued at £2,470,000, and the exports at £1,370,000.

The official report on *Tasmania*, for 1867, presents few encouraging features. In almost every direction, the same law of decadence is found to have been in operation as in the preceding years. The Government statist says, however, that, since he began to write his review (which is dated July 20, 1868), there was more ground for encouragement, as regards the future of Tasmania, than had appeared for several years. The estimated population of Tasmania at the end of 1867 was 98,455. The return of the aborigines in the establishment at Oyster Cove shows that one man and two women were the sole remains of the original

possessors of this island. The immigration and emigration returns show an actual loss to the population of 466 souls. The deaths in 1867 numbered 1,413, being in the proportion of 14.4 per 1,000 of population. The births registered during the year were 2,971, or 166 more than in 1866. The value of the imports in 1867 was £856,348, that of the exports was £790,494, the former exceeding the latter by £65,854. Compared with the results of the preceding year, there was a decrease of £25,759 on the imports, and of £44,112 on the exports; indeed, the exports had not been so limited since 1851. The number of vessels which entered inward was 598, and shows a decrease of 7 per cent.; the tonnage was 97,890, and shows a decrease of 9½ per cent. as compared with the results of 1866. The number of vessels cleared outward was 631, of 102,754 tons in the aggregate. The revenue in 1867 was £272,953, being an increase, on that of 1866, of £27,531. The expenditure last year was £255,552, or £13,191 more than in 1866.

The colony of *New Zealand* had, in December, 1867, according to the official census, 218,637 inhabitants, exclusive of the military and their families, and the aboriginal natives; an absolute increase, as compared with 1864, amounting to 46,479, or 26.99 per cent. Of this population (1867), the Northern Island (comprising the provinces of Auckland, Taranaki, Wellington, and Hawke's Bay) had 45,189 males, and 34,724 females, making a total of 79,913, or 36.55 per cent. on the population of the colony; and the Middle Island (comprising the province of Nelson, Marlborough, Canterbury, Otago, and Southland) 86,697 males, and 51,843 females, making a total of 138,540, or 63.37 per cent. on the whole population. The addition of 184 (or .08 per cent.) for the Chatham Islands will bring out the general total as above. The population of the chief town in every province is as follows: Auckland, 11,153. New Plymouth, 2,180. Wellington, 7,460. Napier, 1,827. Nelson, 5,652. Picton, 465. Christchurch, 6,647. Lyttleton, 2,510. Dunedin, 12,776. Invercargill, 2,006. The military and their families numbered, officers and men, 918; male children, 175; women and female children, 362; making a total of 1,455. This number, added to the population shown by the census, gives a total of 220,192; viz., 133,103 males, and 86,990 females. Although the numbers of the aboriginal native population are not ascertained by the census of the colony, the Registrar-General is enabled, by returns supplied from the native secretary's office, to introduce an approximate estimate of them. As respects the provinces of Canterbury, Otago, and Southland, an enumeration, described as a "census," was taken in the early part of the year, which shows for those provinces a total of 1,433. For the North Island, with the province of Nelson, and the prisoners at the Chatham Islands, the numbers stated are 37,107. These numbers, however, are only

given as approximate, and in one or two instances are represented as probably under-estimated. Taking the figures as they appear however, they show an (estimated) native population of 38,540 in the colony. This number added to the population shown by the census, and the military and their families, would make the aggregate number of the inhabitants of New Zealand 258,632. The total quantity of land fenced—which, in 1858, was 235,561 acres; in 1861, 409,768 acres; and in 1864, 1,072,388 acres—had increased in 1867 to 3,454,535 acres; and the total quantity under crop—which, in 1858, was 141,007 acres; in 1861, 226,219 acres; and in 1864, 382,655 acres—had increased in 1867 to 676,867 acres. The aggregate numbers of live-stock of all kinds (excepting poultry)—which in 1858 were 1,728,093; in 1861, 3,088,557; and in 1864, 5,310,062—had increased in 1867 to 8,924,489.

New Zealand was again the scene of a bloody outbreak of the natives, who massacred a considerable number of the white settlers, and offered a desperate resistance to the Government troops sent against them. According to the advices received up to the close of January, 1869, the outbreak was not yet fully quelled.

In the first months of the year, Prince Alfred, the second son of Queen Victoria, visited several of the colonies. His visit was celebrated by great official festivities, but was cut short by an attempt upon his life, made by a Fenian. As he received a serious wound, it was deemed best that he should at once return to England.

AUSTRIA. Emperor, Francis Joseph I., born August 18, 1830; succeeded his uncle, Ferdinand I. (as King of Hungary and Bohemia, called Ferdinand V.), on December 2, 1848. Heir-apparent, Archduke Rudolph, born August 21, 1858. Since 1867, the empire, in point of administration, is divided into two parts, the chief frontier of which is the river Leitha, whence the one (the western) half is called the cis-Leithan, and the other (eastern) the trans-Leithan portion of the empire. The former is also commonly designated by the name of Austria proper, and the latter by the name of Hungary. The whole Austrian monarchy is now officially called the Austro-Hungarian empire, or Austro-Hungarian monarchy. In the following article we treat of the affairs belonging to the Austrian monarchy as a whole, and those belonging to Austria proper, or the cis-Leithan provinces, reserving the affairs of the trans-Leithan provinces for the article HUNGARY.

The area of the Austrian empire, according to the latest official statements, amounts to 240,381 square miles, and the population, in 1867, to 35,558,000 inhabitants. An official census was taken in 1868, but its results have not yet been published. The previous census was of 1857, which showed the population of the provinces now constituting Austria (Lombardy and Venetia have since been lost) to amount to 32,530,000. By adding the yearly excess

of births over deaths, the above number of 85,553,000 is obtained for the year 1867.

The following is a list of the provinces into which each of the two halves of the empire is divided, with the population in 1867, as ascertained by adding the excess of births over deaths to the official statements of the census of 1857:

I. Cis-Leithan Provinces (Austria Proper):

1. Lower Austria.....	1,762,784
2. Upper Austria.....	719,427
3. Salzburg.....	143,870
4. Styria.....	1,091,647
5. Carinthia.....	342,656
6. Carniola.....	475,437
7. Goertz, Gradisca, Istria, and Trieste	566,666
8. Tyrol and Vorarlberg.....	878,733
9. Bohemia.....	5,153,602
10. Moravia.....	2,008,572
11. Silesia.....	498,825
12. Galicia.....	5,147,021
13. Bukovina.....	516,418
14. Dalmatia.....	446,680

Total.....19,750,318

Adding army, and travelling population—about.....20,205,000

II. Trans-Leithan Provinces (Hungary):

15. Hungary.....	10,814,208
16. Croatia and Slavonia.....	962,081
17. Transylvania.....	2,095,215
The Military Frontier.....	1,181,502

Total.....15,002,954

Adding army, and travelling population—about.....15,348,000

Total of I. and II., or the whole monarchy, 85,553,000

In no country of the world is the difference of nationality of so great political importance as in Austria, as it has been the primary cause of all the territorial losses which the empire has suffered since 1815, and of nearly all the commotions which still threaten its unity. According to the calculations of the Imperial Bureau of Statistics, the statistics of nationalities, in both cis-Leithan and trans-Leithan provinces, were, in 1864, as follows:

NATIONALITIES.	CIS-LEITHAN PROVINCES.		TRANS-LEITHAN PROVINCES.		TOTAL.*	
	Pop. in thousands	Per cent.	Pop. in thousands	Per cent.	Pop. in thousands	Per cent.
Germans.....	6,963	35.5	1,670	11.3	8,793	25.4
Czechs, Moravians and Slovaks.....	4,638	23.7	1,763	11.9	6,519	18.6
Poles.....	2,340	11.9	2,330	6.8
Ruthenians.....	2,490	12.7	450	3.0	2,996	8.5
Southern Slavi.....	1,690	8.6	2,379	16.0	4,120	11.7
Magyars.....	18	0.6	5,313	35.3	5,401	15.4
Western Roumanians.....	581	3.0	1	...	599	1.6
Eastern Roumanians.....	302	1.0	2,635	17.8	2,934	8.2
Israelites.....	683	3.5	423	2.9	1,121	3.2
Gypses.....	150	...	153	...
Bulgarians.....	26	...	27	...
Armenians.....	6	0.6	11	1.3	17	0.6
Other races.....	7	...	8	...	10	...

The religious statistics, in 1867, were, according to the calculations of the Statistical Bureau, about as follows (population expressed in thousands):

	Cis-Leithan.	Trans-Leithan.	Total.*
Catholics—Latin.....	15,766	7,120	22,385
Greek.....	2,308	1,498	3,861
Armenian.....	4	9	13
Total of Roman Catholics..	18,073	8,627	27,139
Oriental Greeks.....	490	2,620	3,166
Evangelical (Lutherans and Reformed).....	351	3,088	3,436
Unitarians.....	...	54	55
Israelites.....	683	423	1,121
Other sects.....	6	2	8

A ministry for the affairs common to the whole monarchy, *Reichs-Ministerium*, was appointed on the 24th of December, 1867, consisting of the following members: Count *Friedrich Ferdinand von Beust*, Minister of Foreign Affairs, and of the Imperial House (since October 30 and November 12, 1866), Chancellor of the Empire (June 23, 1867); Minister of State (December 24, 1867); Baron *Franz von Becke*, Minister of Finances (December 24, 1867); Baron *Franz Kuhn von Kuhnfeld*, January 18, 1868.

The ministry for Austria Proper, or the cis-Leithan provinces (appointed December 30, 1867), was composed in December, 1868, as follows (the Prime Minister, *Prince Carlos Wilhelm von Auersperg* having resigned in September, 1868); *Count Edward von Taaffe*, President of the Council, *pro tem.* (September, 1868), Minister for the Defence of the Country, and Public Safety; *Ignaz von Plener*, Commerce; *Leopold Hasner, Chevalier von Artha*, Public Worship and Education; *Karl Giskra*, Interior; *Edward Herbst*, Justice; *Rudolph Brestel*, Finances; *Johann Berger*, without portfolio; *Count Alfred Potocky*, Agriculture.

The Parliament of Austria Proper consists of two Houses. The Upper House, in 1868, contained 11 princes of the imperial house; 56 hereditary members, who are chiefs of noble families, possessing very extensive landed possessions; 9 archbishops, and 7 others, having the rank of bishops; finally, of 77 members appointed by the Emperor for life. President of the House, *Prince Joseph von Colloredo-Mansfeld*. The House of Representatives consists of 208 members, sent by the provincial Diets. President of the Chamber, *Moriz von Kaisersfeld*.

In the budget of 1868, for the whole monarchy, the estimates of expenditure and receipts were as follows:

Expenditures.		Austrian Notes.
1. Common Ministry for Foreign Affairs..	4,375,221	
2. Common Ministry of War.....	97,914,192	
(1.) for the Army }		
(2.) for the Navy }	8,455,677	
3. Common Ministry on Finances.....	223,000	
Total.....	110,968,090	
Receipts.		
Receipts of Ministry of War,...	3,298,900	
Receipts from Customs.....	7,200,000	
Receipts from Consulates.....	112,000	
Remaining.....	100,357,190	

* Inclusive of the army.

* Inclusive of the army.

Of which sum the cis-Leithan provinces furnish 70 per cent., or 70,250,088; and the trans-Leithan provinces 30 per cent., or 30,107,157.

The budget of 1868, for the cis-Leithan provinces, was as follows: Receipts, 317,336,591; expenditures, 322,892,490; deficit, 5,555,899. The public debt, on December 31, 1867, was 3,025,315,896 florins; on December 31, 1866, 2,919,717,689 florins.

The strength of the army on the peace and war footing was, in 1868, as follows:

	Peace footing.	War footing.
Infantry.....	153,700	608,447
Cavalry.....	39,329	42,706
Other troops.....	43,073	106,019
Total.....	236,001	756,171

In addition to these troops, there were "Troops of Public Safety," consisting of eleven commands of gendarmierie, and the corps of military police; together 7,927 men.

The navy consisted, in 1868, of 45 steamers, with 12,756 horse-power and 529 guns, and 16 sailing-vessels, with 76 cannons. The merchant marine, in 1868, consisted of 7,886 vessels, together of 324,415 tons.

The liberal ministry, which had been appointed, in December, 1867, for the cis-Leithan countries, showed a firm determination to carry through constitutional principles. Dr. Giskra, the Minister of the Interior, in January, issued a circular to the chief officials in the provinces, announcing that as in future all members of the administration are bound to swear to inviolably observe the fundamental laws of the empire, so also must those who have already been sworn now make a fresh declaration, swearing fidelity to the new constitution. Nobody is to be forced to make this declaration. It is not a mere formality, but a political act of national importance. Besides inviolable fidelity to the Emperor, there will be required from all functionaries an unconditional observance of the constitution and fundamental laws. The minister the more emphatically requires sincere devotion and stainless fidelity to the constitution, since he is responsible for all acts of the internal administration. Treachery and hostility to the constitution, he says, must be regarded as quite as grave a dereliction of duty as any other violation of the official oath. Mere indifference or neutrality to the constitution is not sufficient. In conclusion, the minister requires from the officials strict punctuality, quick transaction of business, a thorough emancipation from formalism, constant willingness in their communications with the people, disinterested impartiality, and the maintenance of their social position by an irreproachable private life. Then will the Austrian officials be the most efficient interpreters of the constitutional idea.

In a second circular to the provincial governors of Upper Austria and Styria, Dr. Giskra calls attention to the agitation fo-

mented by the clergy in the above-named districts against the new constitution, and instructing the governors to warn the clergy against encouraging intrigues. The governors are desired to inform the bishops that the Government has no intention of interfering with the clergy in the execution of their spiritual duties, but that it also demands that they should not consider themselves above the laws. In case of non-compliance, says the circular, the Government will be compelled to bring the disturbers of the public peace before the tribunals.

The two Houses of the *Reichsrath* adopted in April and May several important laws intending to introduce equality of civil rights for all inhabitants of the empire, and restricting the influence of the church. The following is an abstract of the most important of these laws:

The law concerning civil marriage consecrates, for the benefit of all citizens, the right to contract a lawful union outside of the Catholic or any other church, and without the intervention of the clergy of any sect whatever.

The law relative to primary instruction restores the principle of the civil authority in the public schools founded and maintained by the state; it takes away from the clergy the exclusive direction of such instruction.

Article 1 of the law, on the subject of profession of faith, declares invalid every engagement made with the heads or the subordinate officers of any church or religious society concerning the profession of faith in which the children (of the party) are to be brought up. (This refers to the solemn engagement required in the Catholic Church as a condition of its assent to such a proposed marriage, that the children of mixed marriages shall be brought up as Catholics.)

Article 4 sanctions in the most absolute manner the principle of liberty of conscience. At the age of fourteen years every one has the right of freely choosing his religion according to his own convictions, and the civil authority is bound in case of need to protect this free choice. Before that age legitimate children follow the religion of their parents, if both belong to the same faith; illegitimate children follow the religion of their mother. In the case of mixed marriages the son follows the religion of his father, the daughter that of her mother; this arrangement may, however, be modified by the contract of marriage.

After the age of fourteen every one may freely change his religion. Notice of such a change must be given to the civil authorities, in order that it may have its legal effect.

The provisions of the civil and penal codes, which disinherited any one who should abandon the Christian religion, are annulled by article seven. The same is true of those sections which characterized as crimes all acts tending to pervert any one from Christianity, or the propagation of doctrines contrary to the Christian religion.

According to articles 9 and 10, no one can be bound to contribute, in money or in kind, to the support of a form of worship not his own. The same provision applies to contributions for schools, unless the adherents of different sects have agreed to the support of a common school. Articles 12 and 13 regulate the question of cemeteries until the passage of a special law on the subject. The police of the cemeteries is under the jurisdiction of the civil authorities of the parish. No religious community can refuse burial in its cemetery to a member of another church, either first, in case of an interment in a family vault, or second, if there be in the parish where the death occurs no cemetery belonging especially to the church or religious society of which the deceased was a mem-

ber. Finally, by article 14, no one can be compelled to abstain from work on days celebrated as *fêtes* by any church not his own.

The bishops of Austria made a decided opposition to all these laws. While the one on civil marriage was under consideration in the Lower House of the Reichsrath, fourteen bishops addressed to the president of the ministry a letter, in which they express apprehension that, by the first article of the fundamental laws, the Church will be deprived of the right of settling her own affairs. In reply to this letter, the president of the ministry, Prince Auersperg, declared that during the debate on the bill in the Reichsrath the most ample opportunity was given for the free discussion of its provisions, an opportunity which was not neglected; that no present law empowers the courts to take cognizance of the question of religious teaching; and as to the administration of the Church's own affairs, guarantees for the future are afforded by articles 14 and 15 of the constitutional law. The Government, Prince Auersperg says, entertains the highest regard for religious liberty, and would at all times be ready to afford powerful support to the authority of the church, but equally, as the Government has no intention of passing beyond the limits of state authority, just as little can it assist in this being done by others. The Government, therefore, declines entering upon that part of the remonstrance which, even although unintentionally, makes the obligations imposed upon state officials by the constitution the subject of an interpretation calculated to lead the sentiment of duty in the minds of those officials astray.

In June, the Pope, in an allocution, complained of those new laws as a one-sided violation of the Concordat, concluded in 1855, between the Austrian Government and the Papal See. (*See ROMAN CATHOLIC CHURCH.*) The Chancellor of the Emperor, Baron von Beust, addressed, on July 3d, to Baron von Maysenburg, the Austrian ambassador in Rome, a reply to the allocution, of which the following are the most essential paragraphs:

We cannot (it says), in the first place, admit the obligation which imposes upon the Holy See the necessity of following certain precedents, and of adopting toward Austria the same proceedings as toward other countries, of which the Holy See has had to complain. Is it possible, in fact, to draw any comparison? Have we attacked the territory or property of the Church? Have we oppressed the Catholic religion and its ministers? Putting aside examples which do not bear on the case, we may, I think, boldly affirm that there is no country in Europe where the Catholic Church has so privileged a position as in Austria, notwithstanding the laws of May 26th. The circumstance ought to have been taken into account before the imperial Government was confounded in the same reprobation with other Governments which were in reprobation to the Church and the Catholic religion in a different way. We can understand that the Holy Father may have felt it to be indispensable to protest against the laws which modify the situation created by the Concordat of 1855. We fully expected

a proceeding of this kind, and we might have accepted it silently, even if its form were less conciliatory than we permitted ourselves to hope. But what we cannot pass over without objection is, the condemnation hurled against the fundamental laws on which the new institutions of the empire are based. These laws were not the subject of dispute, and, by attacking them as it has, the Holy See deeply wounds the national feeling, and gives to the present difference a meaning that is very much to be regretted, even in the interest of the Church. Instead of simply contesting this or that application of the principles which form the basis of the present Government of Austria, and which are the fruit of the happy accord between the peoples of the empire and their sovereign, it is the principles themselves that are condemned. The Holy See thus extends its representation to objects which we can by no means admit to be within its authority. It evenness a question which already produced only too much excitement, by directing men's minds to matters where political will be associated with religious passions. Finally, by condemning laws which include the principle of the liberty of the Church, and thus offering it compensation for the privileges it loses, it renders more difficult a conciliatory attitude of the Government. It may not be useless to remark here that these laws expressly guarantee to the Church the property of the wealth it possesses in Austria. This stipulation proves that the laws in question are not hostile to the Church, since they maintain to her those rights of which she has been deprived in so many other countries. It is not for me to judge in what measure this last consideration ought to mitigate the judgment of the court of Rome. What I have not a shadow of doubt about is, that the people of Austria will find consolation in remembering that more than one very Catholic nation is subject to legal arrangements of the same kind, which yet live in peace with the Church, and that there is especially one great and powerful empire in Europe whose tendencies toward progress and liberty have always been allied with very decided attachment to the Catholic faith, and which, though governed by laws quite as abominable, has, up to the latest moment, been blest with the indulgent sympathies of the Holy See. My dispatch of the 17th of June last, anticipated the bad consequences which the allocution would produce, if it was not worded in very moderate language. I regret extremely that the court of Rome did not pay more attention to these anticipations. They have been completely realized. I do not think the Catholic population of the empire have more zeal now than they had before for the interests of their religion. On the contrary, we see an increased ardor in the attacks directed against the Church, the clergy, and the Pope. This hostility would have been confined within the narrowest limits, and would have been easily appeased, if the special questions affected by the laws of May 26th had alone been treated of in the Papal allocution. Before concluding, I must here also express the painful surprise which the appeal addressed to the Hungarian bishops in the closing sentences of the allocution has produced. It seems to me that Rome ought to be thankful for the perfect tact and reserve with which these delicate matters have been hitherto treated in Hungary. It would be undesirable in every point of view to raise new differences, and thereby to augment the embarrassments which already exist. But it is especially in the very interest of the court of Rome that it appears to us inopportune to arouse the national susceptibilities of the Hungarians. The appearance of foreign pressure would produce in that nation results the opposite to those which the Holy See desires, and we should see a storm raised against the legitimate influence of the court of Rome, similar to that which is raging on this side of the Leitha. These are the observations suggested to us by a perusal of the pontifical allocution. Lay them before his eminence the Cardinal Secretary of State. We

shall none the less persevere in the way we have begun. While we shall continue to maintain intact the rights of the State and respect for the laws, we shall allow the Church to enjoy in peace the liberties which our laws secure to her; and we shall endeavor to observe, in the mutual relations between Church and State, a spirit of conciliation and equity, which I hope will be reciprocal. Your excellency will be pleased to make yourself the faithful organ of these sentiments, and in doing so you will only conform to the views of the Emperor, our august master.

The Czechs, who, as may be seen from the above table of nationalities, constitute a majority of the total population of Bohemia and Moravia, kept up an active agitation for consolidating their nationality, and for securing the control of these two provinces. Most of the leaders of the national party even went so far as to demand a repeal of the union of Bohemia and Moravia with the *cis-Leithan* part of the empire, and the establishment of an equal degree of independence for the lands of the Bohemian crown as that which has been conceded to Hungary. The Czech deputies to the *Reichsrath* declined to take any part in its deliberations. A number of excited mass-meetings stirred up the national spirit. At an open-air meeting, held at the foot of the Rip Mountain, at which, according to the Czech journals, there were 20,000 people present, the wishes of the nation were thus expressed:

"We wish to be as prosperous and free in our own country as our fathers have been; we wish the once free Czech people to be again master of its destinies, and alone to decide on all its affairs together with its crowned King. We wish no laws to be valid in Bohemia but such as are prepared by the Bohemian Diet and sanctioned by the crowned Bohemian King, that no taxes be raised or men levied for the army except by the constitutional direction of the Bohemian King and Diet."

In order to give effect to these views, it was agreed that steps should be taken for the dissolution, as early as possible, of the present Bohemian Diet, and the election of another on the principle of universal suffrage, which should be directed to prepare a constitution for Bohemia similar to that enjoyed by Hungary; the establishment of a great political society "on a national and democratic basis;" the publication of a journal representing democratic principles, and the election of a committee of twenty-five trustworthy persons for the purpose of making the necessary preparations for these measures.

At Prague and other places serious riots took place, at which excesses were committed against German institutions. The Government, accordingly, deemed it necessary (for the first time since its appointment) to suspend the usual securities for the liberties of the individual citizens in Prague and its vicinity, namely *Surichow* and *Karolinenthal*.

The provincial Diets of *cis-Leithania* were all opened on August 22d. Important action was taken by some of them. The Lower Austrian Diet adopted a petition to the *Reichsrath* praying it to abolish the present system of indirect elections to the *Reichsrath*, and to introduce

(with the consent of the respective Diets) a system of direct elections. The Diet declares its wish to resign its present electoral rights in favor of its constituents. As it is known that several of the Diets, especially the Galician one, are as strongly in favor of indirect elections as the Lower Austrian is in favor of direct ones, it is proposed to make the change a permissive one, so that each province may decide for itself how it will conduct its elections to the *Reichsrath*.

The Galician Diet before it adjourned passed a bill abolishing the disabilities of the Jews in municipal and communal affairs. These disabilities consisted mainly in this—that the law, as it was, required that in every commune and municipality at least two-thirds of the town fathers should be Christians. As, in many Galician townships, the Jewish population is a majority of the whole number of inhabitants, this provision was complained of by the Jews as a grievance. The parties opposed to this measure were the Catholic party, the peasant members, and the Ruthenian faction.

The Tyrolese Diet refused to amend its school legislation in such a manner as to bring it into harmony with the provisions of the school law, passed by the *Reichsrath* at its last session. This is the only Diet in the purely German provinces where the liberal and ministerial party are in a minority, and where the Conservative or Catholic party is in a majority. The majority of this Diet passed an amended law, according to which the bishops will have undivided control over the common schools of Tyrol.

In January the Emperor appointed the Archduke Albrecht commander of the Austrian military forces, and imposed upon him the duty of inspecting the army, of organizing it in a manner fit to take the field, and of submitting the requisite proposals on the subject to the Ministry of War.

According to a report of M. Mahy, director of the Austrian telegraphs, the extent of telegraphs in the *cis-Leithan* countries is 1,918 German miles, with 4,617 miles of wire, besides 1,258 miles of lines used for railway signals. In the course of 1867 seventeen new offices and forty-six auxiliary stations were opened, and, in all, 858 were at work at the end of the year. Those in Hungary are 135 in number. In June, 1867, a treaty was concluded with Turkey, and in September five others with Switzerland, in virtue of which a great portion of the English correspondence with India has been diverted to the Austrian lines. In the year 1867, 2,217,929 dispatches were sent off from the *cis-Leithan* offices, producing a receipt of 1,512,922 florins. The whole revenue of the telegraphs for that year was 2,830,000 florins, and the expense 2,200,000.

A new commercial treaty was concluded with the *Zollverein*. Each party renounces all power of imposing any prohibition on the export, import, or transit of goods between their

respective territories, except in as far as sanitary considerations or a state of war may make such prohibition necessary. The citizens of both countries are to enjoy equal rights in nearly all commercial respects, with very few exceptions. Export duties are to be abolished in all but a few cases especially excepted, and transit duties are to cease altogether. Import duties are not to exceed the excise duties levied on the same article in the respective territories. Each party has the right of establishing consulates in the territory of the other in those places in which other countries have consuls. The consuls also of each party are to afford the same protection to the subjects of the other as to their own. The treaty is to remain in force till the end of 1877, and a year's notice is necessary for its termination.

The delegations of the Cis-Leithan and Trans-Leithan Diets, for the discussion of affairs common to the whole monarchy, met at Pesth in November. The "Red Book" laid before the members clearly showed that the relations of

Austria to Prussia and Russia had not been of a friendly nature. Baron Beust, in a dispatch to the Austrian ambassador in London, says that the Austrian Government has never changed its desire to contribute as much as possible to the maintenance of peace, and that it attributed special importance to the maintenance of a good understanding with Prussia. He thinks that latterly nothing has occurred which might be a special subject of satisfaction to Austria. He does not see that the intention of Prussia, not to follow a policy in the East contrary to that of Austria, is corroborated by facts. When Russia and France contemplated the presentation of their note on the affairs of Crete, Prussia at first hesitated to join, and it was only after England and Austria had declared they would abstain from joining in such a step, that Prussia joined in it. Although since that time France had shown signs of a disposition to accept the views of Austria and England in this matter, Prussia has not done so.

B

BADEN, a grand-duchy in South Germany. Grand-duke Friedrich, born September 9, 1826; succeeded his father Leopold, as regent, on April 24, 1852; assumed the title of Grand-duke, on September 5, 1856. Area, 5,912 square miles; populations according to the census of December, 1867, 1,488,872, (1,429,199 in 1864). The ecclesiastical statistics of the grand-duchy were reported in 1867 as follows (the total showing a slight difference from the total population as stated above): Roman Catholics, 981,007; Protestants, 475,918; Mennonites, 1,319; German Catholics, 885; Baptists, 455; Greek Catholics, 254; Christians of other confessions, 22; Jews, 25,594; persons who were neither Christians nor Jews, 11. The following towns had, in 1867, more than 10,000 inhabitants: Carlsruhe (the capital), 82,004; Freiburg, 20,792; Pforzheim, 16,417; Mannheim, 84,017; Heidelberg, 18,827; Rastadt, 10,726. In the budget for the two years, 1868 and 1869, the aggregate receipts are estimated at 28,898,998 florins; the expenditures at 28,154,819; surplus, 744,679. The public debt, on January 1, 1868, amounted to 82,285,008 florins. Military service, in virtue of a law of February 12, 1868, is obligatory for all. The annual contingent is 4,700 men. The duration of service is three years in the active army, four years in the reserve, five years in the landwehr. The whole army, on a peace footing, consists of 14,812, and on a war footing, of 45,897 men. The state ministry was partly reconstructed in 1868, with Dr. Julius Jolly, Minister of the Interior, as president. The new ministry announced, as the chief aim of its policy, the establishment of German unity. (On the relations of

Baden to the North-German Confederation, and the other South-German States, *see* GERMANY.)

BANKS. There are no State banks in operation in the States of Massachusetts, North and South Carolina, Georgia, and a few other States. The following is a recapitulation of banks now in operation under State laws:

STATES.	No. of Banks.	Capital.
Alabama.....	2	\$1,000,000
California.....	1	5,000,000
Connecticut.....	7	1,676,900

SAVINGS BANKS.—In Massachusetts the deposits have increased in one year from \$67,900,571 to \$80,431,583, or over 18 per cent.; with an average of \$230.76 to each depositor. The population of the State, in 1860, was 1,281,066; the deposits, in 1867, were \$80,431,583. The surplus on hand was \$3,172,877, or nearly four per cent. The average rate of dividend last year was 5.42 per cent. The gross annual expenditures for the management of these 108 savings institutions were \$254,226, or less than one-third of one per cent. These depositors hold thirty millions of Government and State bonds, ten millions of bank stock, and twenty-one millions on bond and mortgage.

Rhode Island has the largest savings deposits to each depositor, being \$362.51 for each. In Rhode Island the deposits have increased from \$17,751,713 to \$21,413,648, or about 20 per cent.; with an average deposit of \$362.51, and 59,071 depositors out of an aggregate population, in 1860, of 174,620. This shows that the savings depositors are more than one-third of

the population. This is a most remarkable exhibit of labor and thrift. This State is, in fact, a vast "bee-hive" in its industrial pursuits.

Connecticut is the second State in New England as to the average savings deposits, having reached, in 1867, the sum of \$261.82. The deposits have increased from \$27,810,018 to \$36,283,460, with 138,846 depositors, who form thirty per cent. of the whole population. This is strong evidence of the industry and economy of the people.

New Hampshire shows the next largest average of savings. In this State the savings have increased from \$7,857,600, in 1865, to \$18,541,535 in 1867, or about 72 per cent., and the depositors from 42,903 to 55,218, or nearly 80 per cent., with an average deposit of \$245.24 to each. This is a larger increase than is shown in any other New England State.

Massachusetts has a net average sum of \$230.76 to each depositor, being the fourth in the average.

In the State of Maine the savings deposits have increased, since 1866, \$1,652,000, or about 42 per cent.; and the number of depositors about 37 per cent.; showing an average of \$213.71 to each depositor in November, 1867.

Vermont stands the sixth in the New England States for its number of savings banks and amount of deposits, having only ten of these institutions, with an aggregate deposit of \$1,805,086, an average of \$140.54 to each depositor.

We now present a recapitulation of the savings banks in the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, and New York, and in the cities of Baltimore and San Francisco:

RECAPITULATION.

STATES.	Population, 1860.	No. of depositors, 1867.	Amount of deposits, 1867.
Maine.....	628,279	26,197	\$5,598,600
New Hampshire.....	336,078	55,218	13,541,535
Vermont.....	315,008	12,844	1,805,086
Massachusetts.....	1,281,066	348,553	80,431,583
Rhode Island.....	174,360	59,071	21,413,648
Connecticut.....	460,147	138,846	36,283,460
New England.....	3,124,833	640,739	\$159,073,913
New York.....	8,880,725	537,466	151,127,563
San Francisco.....		26,024	19,637,000
Baltimore.....		35,414	9,800,735
Totals.....		1,239,638	\$339,699,199

The rapid growth of savings institutions is shown in the following table:

STATES.	YEAR 1864.		YEAR 1867-'68.	
	No. of depositors.	Amount of deposits.	No. of depositors.	Amount of deposits.
Maine.....	13,506	\$3,672,975	26,197	\$5,598,600
N. Hampshire.....	43,175	7,661,728	55,218	13,541,535
Vermont.....	11,364	1,600,000	12,844	1,805,086
Massachusetts.....	298,332	62,604,076	348,553	80,431,583
Rhode Island.....	44,352	12,815,098	59,071	21,413,648
Connecticut.....	121,682	30,142,388	138,846	36,283,460
New England..	538,331	\$117,486,175	640,739	\$159,073,913
New York.....	400,194	93,736,334	537,466	151,127,563

The following table shows the relative number of depositors to the inhabitants, the average deposit to each inhabitant, and the average deposit to the credit of each depositor in each State named, near the close of the year 1867:

STATE.	Depositors to population.	Av. deposit per capita.	Av. sum to each depos'r.
Massachusetts.....	1 in 3.53	\$65 83	\$230 76
Maine.....	1 in 24.00	8 91	213 71
Connecticut.....	1 in 3.31	78 85	261 23
New Hampshire.....	1 in 5.90	41 53	245 24
Vermont.....	1 in 24.45	5 73	140 54
Rhode Island.....	1 in 2.95	123 83	323 50
New England.....	1 in 4.39	\$50 44	\$245 26
New York.....	1 in 7.32	38 91	251 18

THE SAVINGS BANKS OF NEW YORK.—From the official summary it appears that the largest savings funds outside of New York City and Brooklyn are, in Erie County, \$7,517,132; Monroe County, including the city of Rochester, is the next; Albany County is the third; Oneida County, including Rome and Utica, is the fourth; and Rensselaer County (mainly Troy) is the fifth.

There are thirty-one counties in the State having no savings banks, and six counties having no national banks established. There are four counties in which there are neither savings banks nor national banks, viz., Cattaraugus, Essex, Hamilton, and Yates, with a population of 92,840.

The savings accumulations are mainly in the large manufacturing centres—such as New York, Brooklyn, Albany, Buffalo, Troy, Rochester, Utica, etc.

The city of Buffalo alone has over \$7,000,000 savings deposits. The next in importance are: Rochester, \$5,221,000; Albany, \$3,944,000; Syracuse, \$3,429,000; Troy, \$2,457,000; Utica, \$2,400,000; Poughkeepsie, \$1,318,000; Auburn, \$1,179,000. No other place in the State has over one million in savings deposits.

Increase of Savings Deposits in the State of New York, from 1859 to 1868.

January.	New York City.	Brooklyn.	Lancaster.	Total.
1859.....	\$36,808,490	\$4,270,213	\$7,118,214	\$48,196,917

BAPTISTS. The collective name of those Christian denominations which reject the validity of infant baptism, and hold that the ordinance of baptism can be administered only to those who have made a personal profession of faith in Christ. The Baptist churches also, in general, maintain that the entire immersion of the body is the only scriptural mode of baptism; yet the Mennonites, who are generally regarded as Baptists, use sprinkling. The most numerous organization of Baptists are the Regular Baptists in the United States, who number over 1,000,000 members. The Free-Will Baptists are Armenians in theology and open communionists, while the Regular Baptists are Calvinists and close communionists. The "Liberal Baptists" and "General Baptists" in the United States generally agree with the Free-Will Baptists. The Disciples of Christ reject all creeds and confessions of faith as of human origin, and believe that the effect of baptism is the remission of sins. The "Church of God" believes feet-washing to be, in addition to Baptism and the Lord's Supper, a positive ordinance of perpetual standing in the Church. The "Particular Baptists" in England are Calvinists, and divided on the subject of strict communion. The "General Baptists" lean toward the Unitarians, while the "New Connection of General Baptists" are Armenians. The Baptist churches on the continent of Europe, in Asia, Africa, and Australia, are chiefly branches of the Regular Baptists in the United States, and of the Particular Baptists of England.

1. **REGULAR BAPTISTS IN AMERICA.**—The statistics of regular Baptists in the United States, and British possessions of North America, as reported in 1868, were as follows:

STATES.	Associations.	Churches.	Total.
Alabama, 1860.....	29	808	61,219
Arkansas, 1860.....	16	321	11,341

West India Islands.....	4	101	22,281
Grand total N. America	629	13,605	1,157,221

These Provinces report 444 ministers and 2,036 baptisms.

The anniversaries of the (Northern) Baptist Societies were held in May, in New York. The receipts of the *Publication Society*, in both the Missionary and Business Departments, were \$234,412, an increase of \$34,685 over the preceding year. It was resolved to establish branch houses in New York and St. Louis. The society, during the year, issued 59 new publications and sold in all 46,970 volumes. The papers published by the society are the

Baptist Quarterly, the *National Baptist* (weekly), and the *Young Reaper* (monthly), the total number of publications, now on the society's catalogue, amounts to 982. The *American Baptist Historical Society* received during the year an addition of 294 volumes for its library. The receipts of the *American Baptist Home Missionary Society* were \$6,237 less than for the preceding year, amounting to \$135,736. The society sustained 331 missionaries, 30 of whom devoted themselves to the education of colored preachers. A magnificent donation of 25,000 acres of land on the Osage River, in Kansas, was received from the Ottawa Indians, to establish a university. A delegation from the Colored Baptist Convention, at Nashville, reported that that body represented a hundred thousand colored Baptists. The *American Baptist Missionary Union* supports twelve missions. In Asia there are 18 stations and 400 out-stations; in the European missions, 1,328 stations and out-stations. The total number of American missionaries in the Asiatic missions is 93; of active helpers, about 400. The number of members connected with the missions is 43,775; the number of churches, 568; the number of baptisms in Asia and Europe, 4,200. The *American Baptist Free Mission Society*, which is now in the twenty-sixth year of its existence, expressed, at its anniversary, continued devotion to the antislavery principles of its organization, which it considers not yet wholly beyond the need of support, and opposed to all the ends and objects of colonization of the blacks in Africa, asserting their equal right with the whites to choose the United States as their residence. The union of the society with the consolidated Missionary Convention (of colored Baptists) which met at Nashville, Tenn., in August, 1867, is regarded as accomplished, so far as harmony of action is concerned, though an organic union has not yet been effected. A correspondence has been carried on with the American Baptist Missionary Union, which has as yet not produced a definite result, though both parties seem willing to enter the union. The receipts of the society for the year were \$19,005.72. Besides the missionaries in the Southern States, the society supports missionaries in Burmah and Japan.

The Southern Baptist Convention met at Baltimore on the 7th of May, and was attended by about two hundred delegates. A delegation from the American Home Missionary Society, with which the convention has not been in correspondence for many years, was warmly welcomed. It was resolved to remove the Sunday-school Board to Memphis. Thirty churches have been constituted among the freedmen by the missionaries, twenty-four meeting-houses have been commenced, and ten finished. The Board of Foreign Missions of this convention sustains missions in China and Africa. The following are the statistics of the other Southern Baptist Societies, as reported in 1868:

Home Missionary Society—Receipts, \$25,994.75; missionaries, 108; number of persons baptized, 1,918, of whom 611 were colored; sermons preached, 7,369; visits made, 12,467. *Indian Missions*—Receipts, \$452.83. *Sunday-school Board*—Contributions, \$2,521.98. Publications, 2,000,000 pages.

II. "FREE-WILL BAPTISTS," "LIBERAL BAPTISTS," AND "GENERAL BAPTISTS," IN AMERICA.—According to the *Free-Will Baptist Register* for 1869, the statistics of this denomination in 1868 were as follows:

YEARLY MEETINGS.	Quarterly Meetings.	Churches.	Ordained Preachers.	Communicants.
New Hampshire.....	9	133	138	8,841

Total.....	150	1,279	1,161	61,344

Showing an increase of 2 quarterly meetings, 2 churches, 27 ministers, and 2,033 members. There are also 87 "licensed preachers."

The societies, etc., of the Free-Will Baptist Church, are the printing establishments at Dover, N. H., and Chicago, a theological school at New Hampton, N. H., a Foreign Mission Society, a Home Mission Society, an Education Society, a Female Systematic Benevolence Society, a Sabbath-school Union, a Temperance Society, the Western Home Mission Committee, the New York State Mission Society, and the Commission for the Promotion of Education in the South.

The Free-Will Baptists have four colleges: Bates College, at Lewiston, Me.; Hillsdale College, at Hillsdale, Mich.; West Virginia College, at Flemington, W. Va.; and Ridgeville College, at Ridgeville, Ind. They have thirteen male and female seminaries and academies.

The twentieth Triennial Session of the General Conference of Free-Will Baptists met at Buffalo, on the 7th of October. About seventy

members and a number of visitors were present, among whom was a representative of the Free Christian Baptists of New Brunswick, who reported that his denomination had adopted the Free-Will Baptist Articles of Faith, and that they had received six hundred members, by baptism, during the past year. A prominent feature of the business was the adoption of articles under which the society should be incorporated. The subject of changing the name, by adopting that of Baptist or Free Baptist or Union Baptist, was agitated; but the Conference resolved to adhere to the name of "Free-Will Baptist." The Liberty Association of Free-Will (heretofore General) Baptists of Indiana, numbering 25 churches and 1,653 members, and the Ohio Association of Free-Will (heretofore General) Baptists, numbering about 12 churches and 500 members, were received by delegates into the Conference. A net increase of members was reported of 9,420, the present membership being 63,440. The Home Mission Society, now in the thirty-second year of its existence, reported its receipts to be ten times as great as during its first years. The American Missionary Association states that this denomination has done more, according to its numbers, for the freedmen than any other people. Over thirty-five thousand dollars have been raised, in a little over a year, for the various departments of mission work. Taking the Eastern and Western work together among the freedmen, this society has sustained 37 laborers and 1,800 scholars; has established ten new churches and one quarterly meeting, containing 1,800 members, and is supporting two normal schools. In the department of Home Missions proper, there are 24 ministers, making altogether 60 Home Missionary laborers. Several associations are reported in Alabama as agreeing with the Free-Will Baptists, with whom the Society hopes to arrange for a Union.

This Church has had for many years flourishing missions in India. The last annual report again shows favorable progress. The report recommended the policy for the future of keeping a sufficient force only in the field to superintend native preachers and teachers. In Turkey the field seems to be open. The receipts for the year have been about \$10,500. A resolution was adopted looking to the opening of additional missions in China and Turkey. The members of the Church were advised to give this Society the preference in their contributions over those not of their denomination. The Home and Foreign Mission Society are to be united into one after 1871.

The "Liberal Baptists" or "General Baptists," two associations of which, as reported above, joined the "Free-Will Baptists" at their General Conference in November, had previously (May 28th) held a convention at Fort Branch, Indiana, for the purpose of promoting a union of all Baptists believing in "free salvation and free communion." It appeared that

there were two associations in Indiana, three in Kentucky, three in Illinois, three in Georgia, one in Alabama, one Separatist Baptist in Illinois, one Free-Will Baptist in Tennessee. The total number of members was estimated at 8,000 or 10,000. Six of the associations reported as follows:

Cumberland Association, Ky.....	848	members.
Union " Ky.....	613	"
Ohio " Ill.....	556	"
Southern Illinois " Ill.....	686	"
Union Grove " Ill.....	330	"
Liberty " Ind.....	1,412	"
United " Ind.....	1,480	"
Central (General Free-Will) Association, Ill.....	819	"

Total..... 4,743 "

III. OTHER BAPTIST DENOMINATIONS IN AMERICA.—The statistics of other American denominations practising immersion are as follows:

DENOMINATIONS.	Assoc'ns.	Churches.	Tot. Pop.
Anti-Mission Baptists.....	180	1,800	105,000
Free-Will Baptists.....	147	1,284	56,258
Six-Principle Baptists, 1860..	..	18	3,000
Seventh-Day Baptists.....	4	68	7,038
Church of God (Winebrennarians).....	10	880	32,000
Disciples (Campbellites)...	..	5,000	500,000
Tunkers, 1860.....	..	200	20,000
Mennonites, 1860.....	36,280

These denominations have 5,022 members.

The fifty-fourth General Conference of the Seventh-Day Baptists was held at Albion, Wisconsin, September 10th. A prominent subject of discussion was the expediency of creating a denominational literature, particularly in the matter of Sabbath-school libraries, and of a Hymn-book. Measures were taken to publish a Sabbath-school paper. The organization of the General Conference was perfected by the adoption of a constitution. The state of the churches and missionary interests of the Society was reported as hopeful.

The annual meeting of the German Baptists or Tunkers was held at Millersburg, Indiana, on the 2d of June, and was attended by about 5,000 persons. Among the questions discussed were: the nature of Scriptural divorces, which has been under discussion for the last ten years; taxation for church purposes, which was decided to be not unscriptural, but inexpedient; lyceums, which were not indorsed; whether voting for persons in the ministry is more in accord with the gospel order than casting lots—decided in the affirmative; the reception of ministers of other orders; feet washing, the Sunday-school system; the stand of ministers; support of evangelists. The question of adherence to the name of German Baptists was decided in favor of adherence.

IV. BAPTISTS IN GREAT BRITAIN.—The largest body of Baptists in England are the "Particular Baptists" or "Calvinistic Baptists." Most of the churches of this class are connected with the "Baptist Union." In 1868

the following statistics were reported of the churches in connection with the "Union:— Number of churches, 2,411; of chapels, 2,642; of members, 221,524, a clear increase of 7,757. Additions to the ministry, 88; 25 new places of worship have been erected at a cost of £33,623, and 31 others enlarged. The "General Baptists," who lean toward the "Unitarians," reported, in 1868, 20,899 members, 537 less than in 1865. The baptisms of 1867 fell short of those of 1862 by 619.

The "Baptist Union," at its meeting held in May, declared in favor of the establishment of an equitable system of national education, with separation of secular and religious instruction, the former only to be controlled by the State. The receipts of the Baptist Missionary Society were £39,912, the largest it ever has had except in the Jubilee year. The number of missionaries and assistants was 58; of native churches, 105; of members connected with missions, 6,200.

V. BAPTISTS ON THE CONTINENT OF EUROPE.—The Baptist Churches on the Continent of Europe have generally been organized by the American Baptist Missionary Union, and most of them remain in connection with it. According to the last annual report of the Union, the statistics of the Baptist churches on the Continent of Europe were, in December, 1867, as follows:

COUNTRIES.	Churches, 1867.	Members, Dec., 1867.	Members, Dec., 1866.
France.....	6	378	858
Germany.....	67	12,631	11,894
Denmark.....	17	1,728	1,726
Holland.....	1	60	52
Switzerland.....	8	292	292
Poland.....	1	352	312
Russia.....	3	918	857
Sweden.....	199	7,444	6,875
	297	23,796	22,463

Outside of Sweden, where the Baptist missions are self-supporting and independent, there are, in the European missions, 1,118 stations, with about 250 ministers and colporteurs; 102 Sunday-schools, with 3,194 scholars. The churches in Sweden form 10 Associations.

VI. ASIA.—The missions of the American Baptist Missionary Union in *Burma* now constitute a separate Association. The convention of 1867 was attended by 91 members, of whom 15 were American missionaries, 20 native ordained preachers, 38 native unordained preachers, and 18 native laymen. There are 10 districts, with 20 missions. The number of baptisms reported in 1866 and 1867 is 1,172; present number of members, 19,231; pupils in schools, 4,517; of churches, 360; of ordained native preachers, 66; of unordained native preachers, 246. The total of benevolent contributions from 12 missions, for the two years, is 20,187 rupees. The contributions for schools, books, etc., from 6 missions, 5,368 rupees. There have been issued in the year ending

September 30, 1867, from the mission press at Rangoon, a total of 90,750 copies of books and tracts, comprising 5,502,800 pages. The theological seminary at Rangoon has had an average attendance of about 58 pupils, who were supported at a total expense of \$1,375.70, or \$23.72 each. Two missions (Bassein and Rangoon) are supported in Burma by the American Free Mission Society. In the Bassein mission there is 1 missionary on duty, with a Karen co-laborer. Members, 5,862; village schools, 43; pupils, 1,173. In the Rangoon mission there are 2 missionaries; nearly 1,000 members have been added in 6 years; 20 new chapels were erected last year. Pupils in the schools, 1,500.

The distinguishing feature of the Assamese mission (Amer. Bapt. Miss. Union) during the past year has been the work among the Garos, where a church of nearly 40 members has sprung up almost in a day. There are two schools, and four Garo assistants are already engaged. There has been issued a total of 547,400 pages of books and tracts from the press of this mission.

The Mission to the Telooagoos (Amer. Bapt. Miss. Union) reports the following statistics: Missionaries, 3, and their wives; native assistants, etc., 9; stations, 6; members, 139, an increase of 93. Local receipts of over 1,200 rupees have been realized at the Nellore station.

In *Siam*, the Amer. Bapt. Miss. Union supports 1 missionary and wife, and has 1 station. There are 24 members, an increase of 2; 2 missionaries and their wives and 2 female missionaries labor among the Chinese population of Siam. The number of members of this mission is 53; number of baptized during the year, 40.

In *China*, the Amer. Bapt. Miss. Union has now two missions: the *Southern China* Mission (late Tie Chin) and *Eastern China* Mission (late Ningpo Mission). The statistics of the former mission were: Missionaries, 3, and their wives; out-stations, 11; native assistants, 9, 2 of whom have been ordained during the year. The statistics of the latter: Missionaries, 4, and their wives; native assistants, etc., 16; stations and out-stations, 12; preaching-places, 13; churches, 5; baptized, 30; members, 178; local contributions, \$93.49. A new station has been opened at Hang Chau, 100 miles from Ningpo. It has 8 members. The Board of Foreign Missions of the Southern Baptist Convention sustains in China 7 American missionaries with several native helpers, at Canton, Shanghai, and Shantung. The mission has 180 members, of whom 39 have been baptized during the year. The Seventh-Day Baptist Missionary Society has a mission church of 20 members, with a native pastor.

The mission of the Free-Will Baptists in *India* has been more than usually successful. There are now some 70 or 80 pupils in the normal schools, over 900 in the boarding and day schools, and about 700 in the Sabbath-schools.

In one of the girls' schools 81 out of 98 have been baptized. Over \$168,000 have been expended in the last 36 years, with a result of 4 churches and 149 members.

In Japan there is a mission of the American Free Mission Society. In the spring of 1867, Mr. Goble, the missionary, visited the northern portion of Sikok, the central Japanese island. On the vessel were two Japanese passengers, naval officers of the princes of Awa and Tōsa, the latter having been a pupil in Mrs. Goble's school. Through him Mr. Goble became acquainted with several influential Japanese officers, from whom he received a very cordial invitation to visit and locate himself in Tōsa, the southern part of Sikok.

VI. AFRICA.—The Baptists in Liberia have 20 organized churches, 12 ordained preachers, and 1,300 members. They received assistance, until 1861, from the Southern Baptist Board. The missionary premises of the Board at Yoruba were destroyed by a mob, and the missionaries driven to Lagos. One of the missionaries (Mr. Phillips) returns to America for his health, leaving Mr. Stone alone.

The African mission of the American Union is to be resumed.

A missionary convention was held at Marshall, on the Junk River, in Liberia, on Wednesday, March 25, and Thursday, March 26, 1868. Ten Baptist churches were represented. It was unanimously voted to organize the "Liberian Baptist Missionary Union," for "the evangelization of the heathen" within the borders of the republic of Liberia, "and contiguous thereto." Twelve fields of missionary labor were designated and commended to the care of the nearest churches. Rev. John T. Richardson was appointed a commissioner to represent the "Liberian Baptist Missionary Union" in the United States. Two young men were chosen as students of divinity to accompany the commissioner, in order to be educated for the ministry.

BAUGHER, HENRY L., D. D., an American Lutheran clergyman, teacher and college President, born at Abbottstown, Pa., about 1805; died at Gettysburg, Pa., April 14, 1868. He graduated at Dickinson College, Carlisle, Pa., in 1825, studied theology at Princeton and Gettysburg, was licensed to preach by the Maryland Synod, and elected pastor at Boonsboro, Md., in 1829 and in 1830 called to Gettysburg to take charge of a classical school, called into existence by the exigencies of the Lutheran Theological Seminary, already established there. The school rapidly expanded into a college, and in 1832 Rev. Dr. Kranth became its first President, while Mr. Baugher filled the chair of the Greek language and Belles-Lettres. He continued in this professorship until 1850, when, on the retirement of Dr. Kranth from the presidency of the college, he was chosen his successor, and continued in that position until his death. He was an excellent and successful teacher, an able execu-

tive officer, uniting courtesy and kindness with strict discipline, a ready and eloquent preacher, and an easy, graceful and accomplished writer. He was a frequent and valued contributor to the *Evangelical Review*, as well as to the Lutheran papers; but, aside from his contributions to these, his baccalaureate and other addresses, and some occasional sermons and essays, he has left little published matter to demonstrate his rare abilities. His health had been generally robust, and his last illness, an affection of the throat, was of only eight days' duration.

BAVARIA, a kingdom in South Germany. King, Ludwig II., born August 25, 1845; succeeded his father, Maximilian II., on March 10, 1864. Prime minister (since January 1, 1867), Prince Clovis von Hohenlohe-Schillingsfürst. Bavaria has an area of 29,373 square miles, and, according to the census of 1867, a population of 4,824,421, which was divided as follows among the eight provinces of the kingdom:

	Inhabitants.
Upper Bavaria.....	827,669
Lower Bavaria.....	594,511
Palatinate.....	628,068
Upper Palatinate and Ratisbon.....	491,295
Upper Franconia.....	535,060
Central Franconia.....	579,688
Lower Franconia.....	584,972
Suabia.....	585,160
Total.....	4,824,421

A census of religious denominations, taken in 1852, showed 8,176,838 Catholics, 1,233,894 Protestants, 5,560 other Christians, and 56,033 Israelites. In December, 1867, a new census of religious denominations was taken, but its results had not been published in January, 1869. It was thought that the number of Catholics would amount to about 8,800,000, Protestants 1,320,000, other Christians 6,000, Israelites 64,000. The capital, Munich, had, in 1867, 170,688 inhabitants. The army, according to the law of January 30, 1868, consists, first, of the standing army, and, second, of the landwehr. The standing army is divided into the active army and the reserve. The time of service is three years in the active army, three years in the reserve, and five years in the landwehr. The active army consists of 49,949 men. In the budget for one year of the ninth financial period (1868 and 1869), both revenues and expenditures are estimated at 87,144,606 florins. The public debt in April, 1866, amounted to 384,405,150 florins (of which 121,739,300 was railroad debt).

Bavaria celebrated, in 1868, the fiftieth anniversary of the constitution, which, with slight modifications, still exists in the country. The king, on this occasion, issued the following proclamation to the people:

PALACE OF BERG, May 26th.

Fifty years to-day have elapsed since the first King of Bavaria, my ancestor, Maximilian I., granted a constitution to the country. The principles on which this fundamental law rests have not ceased to rule, unrestrictedly, the nation, from that memorable

day on which the benefits of the new institutions drew closer and made more cordial the ties which for centuries have united the prince and the people of Bavaria. Faithful to the example of my illustrious ancestors, I also will bear aloft the standard of the constitution; and under its protecting shelter may the prosperity of my beloved country increase and become still more solid, for I find my highest happiness in that of my people.—*LOUIS.*

On May 26th a treaty was concluded between Bavaria and the United States as to the nationality of emigrants. Its stipulations are similar to those of the American treaty upon the same subject with the North-German Confederation. (*See GERMANY.*)

BAVARIA, LUDWIG, KARL AUGUST (LOUIS I.), ex-KING OF, born at Munich, August 25, 1786, died at Nice, France, February 29, 1868. He was the son of Maximilian Joseph, King of Bavaria, and was educated at the Universities of Landshut and Göttingen, and served in the campaign against Austria, in 1809. He had a remarkable taste for the fine arts, and paid much more attention to painting and sculpture than to the principles of government. He saved as much as possible from his allowance as crown prince, to invest in works of art, and built at his own cost the magnificent Glyptothek, at Munich. On his accession to the throne after his father's death, October 13, 1825, he speedily became popular from his liberal schemes of government, economic reforms, and his enlightened patronage of letters and art. He opened the first railway in Germany, and promoted the canal which opened water communication between the Main and the Danube. He removed the University of Landshut to Munich, reorganized the Academy of Fine Arts, and erected the Odeon, Basilica, the Royal Palace, the Gate of Victory, and the new Pinacothek at Munich, and the Walhalla at Ratisbon. In the sphere of learning he gave great encouragement to the prosecution of historical studies, and attested his taste for poetry, by the publication of two volumes, of his own composition, one entitled "Poems" (1829), the other "Companions of the Walhalla" (1843). The ultramontane or clerical party, after a time, began to gain the ascendancy over him, and the former liberal and constitutional monarch became a reactionist. In 1831 the ultramontanists began to predominate in his councils, and within the next ten years the number of convents was doubled. Behr, Eisenmann, Volkhardt, and other liberals were exiled or imprisoned. In 1846, however, a change was made; the minister Abel and his successor were both dismissed from office, and the King called a Liberal to fill the place. The peers were, however, mostly reactionists. Serious riots ensued in 1848, and the people now began to clamor for reforms, and for a special convocation of the Chambers (the Bavarian Legislature). The King refused both requests, and there were strong indications of a revolution. On the 21st of March the King abdicated in favor of his son Maximilian, protesting in his

farewell proclamation that he had sought the welfare of his people before his own, and that his heart still glowed with affection for Bavaria and Germany. The twenty years which have passed since his abdication have been spent by the King in dignified retirement, in the pursuits of literature and art, and have doubtless been happier than those in which he wore the crown. His contributions from his private income to Catholic institutions in the United States exceed 110,000 florins. More than twenty different institutions, chiefly educational, were thus aided by him.

BEACH, MOSES YALE, an American publisher and editor, born in Wallingford, Conn., January 7, 1800; died in the same town, July 19, 1868. In early boyhood he exhibited unusual skill in mechanics, and while attending school, or at home, he was constantly whittling out models of machines, or making curious contrivances of wood. When fourteen years of age he was apprenticed to a cabinet-maker in Hartford, and, by diligence in performing extra tasks, was able to purchase his freedom in his eighteenth year. After being employed as a journeyman in Northampton, Mass., a short time, he went into business for himself, and it was not long before his cabinet-work was reputed to be the best in the country. Yet his business was unsuccessful, and he removed to Springfield, where he neglected other interests, to experiment with a gunpowder engine for propelling balloons. Not succeeding with this invention, he next attempted to open steam navigation on the Connecticut River, between Hartford and Springfield, and would have done so, if the state of his affairs had not obliged him to cease operations before his steamer was completed. Others, for adopting his plan, gained much credit, taking a steamer over Enfield Falls, a feat that had been looked on as impossible. Soon afterward Mr. Beach invented a rag-cutting machine, which has been generally used by paper-mills, yet he received no pecuniary benefit from his machine, because he delayed taking out a patent for it. He next removed to Ulster County, N. Y., where he became interested in an extensive paper-mill, and though amassing a large property in six years, he lost it all during the seventh. This was the last of his reverses. In 1835 he came with his family to New York City, where he bought an interest in *The Sun* newspaper, and in a short time became its sole proprietor. The wealth which he acquired in publishing this paper made him prominent in banking and other financial operations. President Polk sent him to Mexico, during the Mexican war, to arrange a treaty of peace. The negotiations, though satisfactory, were broken off by a false report, announcing that Santa Anna had annihilated General Taylor's army. Mr. Beach retired from business in 1857, and up to the time of his death resided in his native town, where his liberality and readiness to aid in all movements for the im-

provement of the place, and its intellectual and moral advancement, greatly endeared him to its citizens.

BELGIUM, a kingdom in Europe. King, Leopold II., born April 9, 1865; succeeded his father, Leopold I., on December 10, 1865. The only son of the king, Prince Leopold, born June 12, 1859, died in January, 1869. Heir-apparent is now the king's only brother, Count Philip of Flanders, born March 24, 1837, married April 25, 1867, to Princess Maria of Hohenzollern-Sigmaringen. The area is 11,373 square miles. The population was estimated in December, 1865, at 4,984,451, but in 1866, according to the "provisional" results of the census of that year, it only amounted to 4,839,094. The following cities had above 100,000 inhabitants: Brussels, 163,434 (with eight adjacent communities, 286,827); Ghent, 116,607; Antwerp, 123,571; Liege, 101,699.

The ministry was reorganized on January 3, 1868, so as to consist of the following members: President of the Council and Minister of Finance, Hubert Frère-Orban, appointed January 3, 1868; Minister of Justice, Jules Bara, November 12, 1865; Minister of Foreign Affairs, Jules van der Stichelen, January 8, 1868; Minister of War, General Renard, January 3, 1868; Minister of the Interior, Endore Pirmez, January 8, 1868; Minister of Public Works, Jamar, January 3, 1868.

The budget for 1868, as approved by the Chambers, fixed the revenue at 169,403,280 francs; the expenditures at 171,911,650 francs. The national debt, in 1868, amounted to 717,155,214 francs.

The army, according to the law of April 5th, is to be raised, in time of war, to 100,000 men.

The exports and imports of Belgium, in 1866 and 1865 were as follows (value in millions of francs):

COUNTRIES.	EXPORTS.		IMPORTS.	
	1866.	1865.	1866.	1865.
Europe.....	578.27	611.88	611.86	575.78
America.....	157.78	185.37	29.94	24.12
Asia.....	8.92	5.24	0.51	0.33
Africa.....	1.88	4.44	1.29	1.30
Australia.....	0.10	0.18
Total.....	747.85	758.42	643.20	601.65

The amount of shipping during 1866 was as follows: Arrivals, 4,568 vessels, of 1,067,886 tons; clearances, 4,478 vessels of 1,029,113 tons. The merchant navy, on December 31, 1865, consisted of 98 vessels, together of 37,925 tons.

An election for the renewal of one-half of the House of Representatives, which, according to the Belgian Constitution, takes place every two years, resulted in the gain of one member by the Government, or Liberal party, which has now in the House seventy-three members, against fifty-one belonging to the Catholic party.

On March 13th the Chamber of Representa-

tives passed the Government bill for the contingent of 12,000 men for 1869, being an increase of 2,000 men over the previous year, by sixty-eight votes against forty-three. The bill proposing to divide the contingent into two sections, one effective and the other reserve, was adopted, by sixty-six votes against thirty-five, after a very stormy sitting. The reduction of the time of service to twenty-four months was adopted by eighty-seven votes against twenty-one. The Chamber subsequently adopted, by a majority of thirty-eight votes, a reorganization of the regimental lists. Previously (February 22d), M. Lehardy's amendment, proposing that the army should be exclusively composed of volunteers, had been rejected, by seventy-four against eighteen.

Owing to the pressure exercised by France and other governments, the Government of Belgium has for years expelled a number of liberal refugees. In May, the Chamber of Representatives adopted the Government bill, proposing to renew until 1871 the law relating to foreigners residing in Belgium. During the debate the ministry stated that the expulsion of M. Rogeard took place in consequence of his attacks upon the Belgian Government, and with a view to avoid eventual difficulties with France. General Prim and M. Vessinier were not expelled, but simply requested to leave Belgium.

BELL, HENRY H., U. S. N., a Rear-Admiral in the United States naval service, born in North Carolina, about 1808; drowned at the mouth of Osaka River, Japan, January 11, 1868. Rear-Admiral Bell was appointed a midshipman from North Carolina, in August, 1823, and during his more than forty-five years of service in the Navy, twenty-five of which were passed afloat, he saw more severe fighting than has usually fallen to the lot of our naval commanders. His first experience, in naval warfare, was on board of the *Grampus*, when she was engaged in clearing the coast of Cuba of pirates. He was connected with the East India squadron for many years, and commanded one of the vessels of the squadron which, in November, 1856, captured and destroyed the four barrier forts near Canton, China. Early in the late war he was assigned to the command of one of the first-rates forming the West Gulf squadron, took an active part in the capture of New Orleans, and the siege of Vicksburg, and in the blockade rendered essential service. For a time, in 1863, he was in command of the West Gulf squadron, and when Rear-Admiral Thatcher was ordered to other duty the command of it again devolved on him. In July, 1865, he was ordered to the command of the East India squadron, his rank being then that of commodore. In July, 1866, he was promoted to be rear-admiral, and, in 1867, having served more than forty years in the navy, he was retired; but Rear-Admiral S. O. Rowan, who was to have relieved him, had not arrived when he was drowned. He

had been, during his service in the Chinese waters, very active in putting down the Chinese and Malayan piratical vessels, which were so numerous and dangerous in those waters. He had gone to the Japanese coast, and anchored in a somewhat rough and unsafe roadstead, off the mouth of the Osaka River, which he was desirous of entering, but which was closed by a sand-bar, thrown up in a recent violent storm; and, at length, weary of the delay, set out, accompanied by Flag-Lieutenant John H. Reed and thirteen men, in a boat from the Hartford, to enter the river. The boat was capsized at the entrance of the river, and the admiral, Lieutenant Reed, and ten of the thirteen men, were drowned.

BELL, SAMUEL DANA, LL. D., an eminent jurist of New Hampshire, born in Frances-town, N. H., October 9, 1798; died in Manchester, N. H., July 31, 1868. Judge Bell was the son of Samuel Bell, Governor of the State, Senator in Congress, and Justice of the Superior Court, and a brother of Dr. John Bell, James Bell, and Dr. Luther V. Bell. He graduated from Harvard University, in the class of 1816; read law with George Sullivan, of Exeter, Attorney-General of New Hampshire, and commenced practice in Meredith. In 1820 he removed to Chester, N. H., and ten years later to Concord. In 1839 he removed again, to Manchester, where he resided till his death. He was a member of the Legislature about 1825; and, from 1823 to 1828, Solicitor for Rockingham County, and for several years Clerk of the Legislature. In 1830 he was one of the commissioners appointed to revise the statutes of the State, and held the same appointment in the revisions of 1842 and 1867. In 1849 he was appointed Justice of the Superior Court, and in 1855, on the reorganization of the court, he was chosen Justice of the Supreme Court. In 1859 he was appointed Chief Justice of the same court, and resigned August 1, 1864. In 1861 he was the unsuccessful Democratic candidate for Congress, in the second New Hampshire District. He received the degree of LL. D. from Dartmouth College in 1854. By constant industry and untiring devotion to his profession, Judge Bell became one of the most eminent and profound jurists of New England, and by his death the bar of his State, and of the country, sustained a great loss. His extensive legal learning was united to a character of unspotted integrity. The amiability of his deportment and disposition, and the charm of his conversation, won him a multitude of friends, and universal respect and esteem. He was one of the early members of the New Hampshire Historical Society, and one of the most valuable associates of that organization. It has been often stated that no man living was so well versed in early New Hampshire history as he. He was true and liberal to the best interests of the city where he resided, and the establishment of the Man-

chester Public Library was due, in a large measure, to his personal efforts.

BERRYER, PIERRE ANTOINE, a French advocate, politician, and orator, born in Paris, January 4, 1790; died at Angerville, near Paris, November 29, 1868. His father was an advocate, but at first intended his son for the church, and placed him at the school of the Oratoriens at Juille, to be educated for the priesthood. He was a favorite with his teachers from his intelligence and devotion, though inclined to indolence, but no sooner had he arrived at the age of manhood, than he abandoned theology, and began the study of the law, marrying, when he was only twenty-one years old, a girl of sixteen. He soon entered on the practice of his profession, and his powers as an orator and debater were shown not only in the courts of law, but in his political addresses. His father was one of those liberal royalists who had hoped to engraft on the French monarchy a constitution like that of England; and both father and son were consistent Liberals, though neither of them allowed political feeling to interfere with the duties of an advocate. As Napoleon was tottering to his downfall, Berryer had the boldness to proclaim his downfall at Rennes, and to raise the white cockade. This proceeding led to an order from the prefect for his arrest; but, fearing a too summary execution of justice, he escaped to Nantes. He won his first distinction at the bar, by his father's side, in contending for the life of the unfortunate Marshal Ney. His eloquence on this occasion assured the successful career of the young advocate. Cambonne, another of the Bonapartists then accused of treason, immediately confided his cause to Berryer, Junior, and was justified by an acquittal, though Berryer was himself accused of uttering sedition in his speech. He stood this attack firmly; and the King, admiring his steadiness, granted the pardon of General Debelle to his solicitation. In 1826 he defended the Abbé Lamennais on a charge of sedition, and obtained his acquittal on one count of the indictment, and the infliction of a very small penalty on the other. In 1830 Berryer was elected deputy for the Haute Loire, and made his first appearance in the Chamber, taking, as might be expected, high rank as a speaker. He was opposed to the Revolution, and favored the succession of the young Duc de Bordeaux, under the regency of his mother, the Duchess de Berri. He was, in fact, the head of the Legitimists, and was therefore suspected of complicity with the Duchess de Berri in her insurrection in La Vendée in 1832. Berryer had gone to Nantes with a letter from Chateaubriand, urging the duchess to abstain from such a course as she meditated; and, being naturally apprehensive of an arrest, he determined to go to Switzerland for a time. He was, however, apprehended and taken to Nantes. He was tried at Blois on October 16, 1832; and the case was seriously damaging to the French

Government. The royalist feelings of Berryer were well known; but the public were amazed to find that the evidence against him was a fabrication supported by perjury. Berryer was at once acquitted, and speedily assumed his place in the Legislature, from which he demanded the pardon of the duchess, who had been at length found and imprisoned. On this event occurring, Chateaubriand published a pamphlet, in which he addressed the duchess, and used the words, "Votre fils est notre roi." He received addresses from a large number of students. The Government prosecuted him for sedition, along with the editors of six journals in which his reply to the students had appeared. Berryer was retained for the defence, and obtained a unanimous verdict of acquittal for all his clients. In 1834-'35 he successfully defended D'Argenson, De Puyraveau, and Garnier Pages; and in 1836 was presented by the French Legitimists with the estate of Angerville, which his difficulties compelled him to offer for sale in the following year; but the party again raised a subscription for him. He paid a visit to Charles X. in his exile shortly before his decease. On the trial of Louis Napoleon for his attempt at Boulogne in 1840, the prince chose Berryer and Marie as his defenders, and Berryer made a bold speech, saying it was natural that the prince should desire to place himself at the head of the French nation as chief mourner for Napoleon, whose remains were then on their way from St. Helena. His dynasty had been elected by 4,000,000 Frenchmen, and he was the heir to that throne. He must be treated like those of other deposed dynasties, and condemned simply to exile. At the end of the same year France was roused by the success of Sir C. Napier at Acra, and the peaceful address of the French ministry was fiercely debated. Berryer, in his speech against it, called on the Chamber to make a protest which would gladden the spirit of the French people. Berryer was one of the French deputies who attended the mock court of the Count de Chambord in Belgrave Square in 1843; but he spoke powerfully in his own defence and that of 8,000 other French subjects, and in indignant protest against a paragraph of the royal address reflecting on them. He attacked the ministry in the same year for disavowing the acts of Admiral Dupetit Thouars in seizing Tahiti; and in 1845 he urged the plea of liberty of conscience against the law to exile the Jesuits. At the Revolution of 1848 Berryer made no sign, but was chosen deputy for the Bouches du Rhône. During the republic he said little, but was opposed to Louis Napoleon, and protested against the repeal of the law exiling the Bourbons, for the curious reason that the Count de Chambord, a monarch kept illegally from his throne, could not accept permission to enter his own kingdom. Berryer joined with the party that endeavored to destroy the power of the President and to impeach him; but, when the *coup d'état* of

December 2, 1851, had been effected, he ceased to take an active part in politics. He endeavored to effect a reconciliation between the branches of the Bourbons. He was bâtonnier of the French bar in 1852, and was elected an Academician in 1855, when he did not, as was customary, pay a complimentary visit to the head of the Government. When Montalembert was prosecuted, in 1858, for publishing his celebrated "Debate on India in the English House of Commons," he intrusted his defence to Berryer; and in 1861 Berryer was counsel for Miss Patterson in her suit against the representatives of Jerome Bonaparte. He allowed himself to be nominated as a candidate in 1863 for the representation of the Bouches du Rhône, and was returned along with Thiers and M. Marie. In the Imperial Chamber of Deputies, Berryer did not take a very active part. He spoke in 1867 in favor of the French intervention in Rome, and made an indignant protest against the attacks on the French press by the Count de Kerveguen. Berryer's latest act in political life was his adhesion to the Baudin subscription by a public letter dictated from his bed and addressed to the editor of the *Electeur*. It runs as follows: "Sir: On the 2d of December, 1851, I moved and obtained from the National Assembly, sitting in the mairie of the eleventh arrondissement, a decree of forfeiture and outlawry against the President of the Republic, inviting citizens to resist the violation of the laws if the President was guilty. This decree was made as public in Paris as was possible. My colleague, M. Baudin, energetically obeyed the orders of the Assembly; he was a victim of his obedience, and I feel myself bound to join in the subscription opened for the erection of an expiatory monument over his grave." The day when Berryer entered the Chamber of Deputies, Royer Collard said of him: "It is not merely a talent; it is a power." After hearing his first great speech in 1830, his friends hailed in him the advent of a second Mirabeau. All critics seem to be agreed that, since that "imperial voice" fell silent, no other has so dominated and swayed a French audience as that of Berryer. "He was more than an orator; he was the living personification of human speech, in its splendor and in its majesty. In him all was eloquent—the tone, gesture, attitude, and look, as well as the inspiration." All ear and eye witnesses testify to an imperial something in his manner, which, with the words, produced effects that the reading of these alone, forcible as they are, utterly fails to explain. It was only in the last session that with this, and a phrase, he cowed to silence the noisy majority of the Corps Legislatif. Rouher's petulant hardihood, defiant of Favre and Thiers, was veiled with respect before Berryer, before whose silent look and brief contemptuous pause, even Granier Cassagnac himself, for once in his boisterous life, sank abashed. His person was good, his features were fine and

expressive, his gestures animated, his diction was noble, and his voice incomparably sweet and sonorous. Then his intellect was of grand proportions, and his speech bore reading as well as hearing.

BETTS, SAMUEL R., LL. D., one of the ablest of American jurists, born in Richmond, Berkshire County, Mass., in 1787; died at New Haven, Conn., November 8, 1868. He was the son of a respectable farmer; and, after a thorough early training in his native town, entered Williams College, where he graduated with honor in 1806. After a diligent study of the law in Hudson, N. Y., he was admitted to the bar, and commenced practice in Sullivan County, N. Y., where he was winning a fair reputation, at the outbreak of the War of 1812, when he entered the army, and soon after was appointed Judge-Advocate by Governor D. D. Tompkins. In 1815 he was elected to Congress for the district comprising Orange and Sullivan Counties. At the close of the term, he declined a reelection, and devoted himself with great assiduity to the study and practice of his profession. He was for some years District-Attorney of Orange County. At that time, the bar of the State of New York was remarkable for the numerous eminent legal minds who were engaged in the practice of the profession in the courts of the eastern counties. Martin Van Buren, Elisha Williams, Thomas J. Oakley, George Griffin, Ogden Hoffman, Prescott Hall, and Thomas Addis Emmet, were the great lights of the bar, and with all of them Mr. Betts was brought in almost constant contact, and, though younger than most of them, was soon recognized as their peer in legal attainments and intellectual acumen. After about eight years of this practice, Mr. Betts was appointed by President Monroe, in 1823, Judge of the United States District Court. This position he held for the long period of forty-four years, and throughout the whole term presided over it with a dignity, a courtesy, a profundity of legal knowledge, a carefulness of research, and a patience of investigation which made him a model jurist in all the great questions brought before him. To him belongs the high honor of having shaped and settled in a great degree the maritime laws of the United States. The whole subjects of salvage, general average, wages of seamen, freighting, contracts, charters, insurance, and prizes, owe the greater portion of their present condition to the honored Judge, who has made the law so perfect and complete on these points, that the best lawyers in New York regard it as a finished code. For the first twenty years of his connection with the District Court, there was never an appeal from his decisions, and his opinions in his own court on maritime questions, and in the Circuit Court on patents, have been uniformly upheld. Every kind of question arising out of the criminal law of the United States has been before him; he has tried cases of piracy and murder on the high-seas, and discharged the whole

criminal business of a large district. The war brought before him an entirely new class of questions, affecting national and international rights; but although beyond the age of three-score-years-and-ten, the Judge bent himself to the new tasks imposed, and, with a vigor, a perseverance, and an ability rarely equalled, met the great demand of the most trying period of our history, in a manner which was creditable to himself, and reflected honor upon the country he so patriotically and faithfully served. His decisions upon the neutrality laws, and his judgments on the slave-trade, are fine specimens of constitutional reasoning and argument. As a judge, the lawyers who have had the best opportunities of forming an opinion say that Judge Betts never had a superior, and doubt if he had an equal. His bearing toward members of the bar was always gentlemanly and courteous. His judgments were regarded as the best considered on record. He conducted a case with coolness, clearness, and deliberation, allowing counsel every latitude that might tend to throw light on the matter at issue. And it may be well doubted whether any man on the bench in this country ever possessed the same amount of judicial ability. He held the place he vacated and honored for the lengthened period of forty-four years, and up to the day of his death he was still the revered and upright judge of that important court, where he pronounced numerous decisions, which are regarded as text-books of federal jurisprudence, and in after-years will be looked upon as the highest and soundest efforts of legal skill and research. In social and domestic life he was always highly esteemed and beloved; his conversational powers were unusually fine, his acquaintance with literature and men extensive, his manners courteous, and his treatment of all, especially of the young, such as to endear him to those with whom he came in contact. He did not outlive his interest in passing events, but his mind was bright and vigorous, even after the bodily frame showed signs of weakness and decay. In May, 1867, having entered upon his eighty-first year, and feeling the infirmities of age, Judge Betts retired from the bench he had so long honored, and passed the brief remainder of his life in the comforts and privacies of his home at New Haven.

BOLIVIA, a republic in South America. Provisional President since the revolution of December, 1864, General Mariano Melgarejo. The limits of the republic have not yet been fixed, and the statements of the area therefore widely differ. A treaty concluded between Bolivia and Chili, on August 10, 1866, fixed the 24th degree S. latitude as the dividing line between these two republics. Another treaty for regulating the frontier between Bolivia and Brazil was concluded on March 27, 1867. By this compact Bolivia resigns her claims to the western bank of the river Paraguay, a territory of about 18,000 square leagues.

The area is now (Behm *Geogr. Jahrbuch*, vol. II., Gotha, 1868) estimated at 535,769 square miles. The population of the nine provinces into which the republic was divided in 1858, was as follows:

La Paz.....	475,322	Veni.....	55,973
Cochabamba.....	349,891	Atacama	5,273
Potosi.....	231,229		
Chuquisaca.....	223,668	Total	1,744,351
Oruro.....	110,931	Indians	24,500
Santa Cruz.....	153,164		
Tarija.....	88,900	Total	1,763,851

The capital, La Paz, has 76,372 inhabitants.

The army formerly consisted of 2,000 men, but was, in 1866, in consequence of the war with Spain, raised to 3,000 men, 500 of whom were cavalry. In 1867 the revenue was 2,471,000 piasters, and the expenditures 2,435,000 piasters. The revenue in 1865 was estimated at about 3,000,000 piasters, nearly one million and a half being a tribute from the Indians, 450,000 import duties, 315,000 export duties, and the remainder the proceeds of mines, stamp duties, etc. There is neither a direct tax nor a public debt, nor paper money. The imports are valued at about 5,570,000 piasters.

A new Congress was elected in 1868, the number of deputies elected by the several provinces being as follows: Chuquisaca, 8; La Paz, 8; Cochabamba, 6; Potosi, 8; Oruro, 4; Santa Cruz, 4; Tarija, 4; Cobija, 2; Veni, 2; Tarate, 6; Mejillones, 2. The new Congress met on August 6th, and confirmed all the acts of President Melgarejo, inclusive of the treaty of Bolivia. As some deputies (especially Señor Muñoz Cabrera) made, however, a violent opposition to the treaty, amidst the applause of the galleries, the Congress was dissolved at the point of the bayonet.

In September, President Melgarejo issued a decree extending the rights of citizenship to Americans. The articles of the decree are:

1. No American shall be considered a foreigner in Bolivia.
2. Every American, of whatever nationality he be, can obtain Bolivian citizenship by alone declaring in writing, in the presence of any of the prefects, his wish to settle in the republic. His name being inscribed in the civic register, the same prefect will extend him his citizenship papers.
3. Americans may in like manner freely exercise in the republic their liberal, scientific, literary or artistic professions, in all cases, on presenting their respective diplomas, credentials, or titles extended to them by competent and legalized authority, in proper form for its examination and acceptance by the national government.
4. The present decree shall be considered as confirming that of the 18th March, 1866.

The Minister of Foreign Affairs was directed to communicate both decrees to the governments of the American nations, soliciting at the same time the adoption of like measures to extend to the whole continent the privileges accorded.

By a decree of August 27th, a contract was made with Colonel George E. Church, engineer of New York, for the establishment of a "National Bolivian Navigation Company,"

which is to navigate by steamers and with other vessels the Bolivian rivers which are tributary to the Madeira, the principal affluent of the Amazon. The Government conceded in favor of the company the following privileges and rights:

1. In the populated ports it gives in property to the company one square mile of State lands, and at the points where new ports should be founded to facilitate commerce, according to the judgment of the company, a square of the same lands upon the river margins, which shall have two leagues front and two of depth, the company having the right to make that use of them which may be most to its interests.

2. The Government of Bolivia will pay to the company \$10,000 gold, the day upon which the first steamer moves upon the waters of the Mamore, as a premium offered by the Government in supreme decree of 1853.

3. The same Government concedes to the company the right to cut wood for burning, exportation, and other uses, in the forests which have no private owner, and that of collecting 8,000 head of horned cattle from the herds owned by the State in the department of the Beni—it being the obligation to make this collection in the method most to the advantage of the Government and the company.

4. The Government guarantees to the company the free exportation of the products of the country without paying duties or imposts of any class. The importation of merchandise and foreign effects will only pay half of the tariff of duties collected upon those imported by Cobija. One and the other privileges will continue for ten years, counting from the day upon which the navigation of the Madeira may be free from impediment by the clearing of the rapids, it being impossible to recover any class of imposts up to this time. This term of ten years expired, the Government can only levy upon the merchandise imported by the Madeira a duty inferior by one-third part to that recovered by Cobija, until the twenty-five years mentioned in the following article have expired.

BRADBURY, WILLIAM B., a musical teacher and composer, and, since 1854, one of the most successful piano manufacturers in the United States, born in York, Maine, in 1816; died in Montclair, N. J., January 7, 1868. Both his parents were well known as excellent singers, and from them he inherited that musical taste, the development of which has rendered his name a household word. Before he was fourteen, he had mastered every instrument that came in his way; but until 1830 he had never seen an organ or a piano. In that year he moved to Boston, where he formed the acquaintance of Dr. Lowell Mason and his coadjutor, George J. Webb, who at that time stood at the head of the musical celebrities of New England. In 1834 he was known as a practical organist, and six years later began teaching in New York under the most flattering auspices. His free singing-schools in this city and Brooklyn became very popular, and, on his concert nights, the old Tabernacle, between Franklin and Leonard Streets, on Broadway, was filled to overflowing. On these occasions, his performers, all children, numbered from five hundred to one thousand. These concerts gave Mr. Bradbury great notoriety, and secured him hosts of friends. He had many enemies, too, among members of his profession, and they

made more than one futile attempt to destroy his popularity, going so far at one time as to organize an association to oppose him. About this time he published his "Golden Chain," which had an immense sale, but was mercilessly criticised by his rivals, on account of a few trifling errors which it contained. These were corrected by the well-known composer, Hastings, who assisted Mr. Bradbury in the preparation of several other deservedly popular musical works. Among these were "The Shawm" and "The Jubilee," "The Key Note" and "The Temple Choir," both very popular, were among his later publications. During these many years of labor, Mr. Bradbury had not neglected his studies in the art which he so passionately loved; but, feeling that there was still much to learn, he went to Leipsic in 1847, where he received instruction from the best German masters. He studied harmony and composition with Hauptmann, vocal music with Boehme, the piano with Wenzel, and, a first-class teacher superintended his practice on the organ. In 1854 he began in New York the manufacture of pianos, and these soon acquired a very high reputation for their excellent tone and perfection of workmanship. Meantime he was bringing out with great rapidity those juvenile collections of music which have made his name a household word all over the land. Among them were the "Golden Chain," "Golden Shower," "Golden Censer," "Golden Trio," and "Fresh Laurels," his last work. No collection of religious music ever had so extensive a sale as these books. More than three millions of copies of his musical works have been sold. His excessive labors induced pulmonary disease, and for two years previous to his death he had been in very feeble health.

BRAZIL, an empire in South America. Emperor, Pedro II., born December 2, 1825; succeeded his father, Pedro I., on April 7, 1831. The Emperor has no son. His oldest daughter, Princess Isabella, is married (since October, 1864) to Count d'Eu, grandson of the late king Louis Philippe of France. The second daughter, Princess Leopoldina, is married (since December, 1864) to the Duke Augustus of Saxe-Coburg-Gotha. Duke Augustus has two sons: Prince Pedro, born March 19, 1866; and Prince Augustus, born December 6, 1867.

A new ministry (Conservative) was appointed in July, 1868, composed of the following members: President and Minister of Finance, Senator Viscount de Itaboraay; Interior, Dr. Paulin Joseph Soarez de Souza; Justice, Dr. Joseph Martiniano de Alencar; Foreign Affairs, Senator Joseph Maria da Silva Paranhos; War, Senator Baron de Murityba; Navy, Senator Baron de Cotegipe; Public Works, Commerce, and Agriculture, Joachim Antão Fernandez Leão.

Minister of the United States in Brazil, in 1868, was J. Watson Webb (accredited October 21, 1861); Brazilian Minister at Washington,

Dominio Joseph Gonzalvez de Magalhães, appointed in 1867.

The area of Brazil is estimated at about 3,231,047 square miles. The population,* according to a recent work published by the Brazilian Government (*L'Empire de Brésil*, Rio de Janeiro, 1867), was 11,780,000, of whom 1,400,000 were negro slaves, and 500,000 Indians. The population of the capital, Rio de Janeiro, is estimated at 600,000.

In the budget for the years 1869-'70, the expenditure is estimated at 70,786,927 paper milreis (350 paper reis, or 180 silver reis, are equal to about 19 cents [gold]; 1 milreis means 1,000 reis), the revenue at 70,000,000 milreis; the deficit at 786,927 milreis. The chief source for the revenue are the customs. The external debt, on December 31, 1866, amounted to 381,189,950 milreis; the internal consolidated debt, on April 15, 1868, to 125,206,700 milreis.

The standing army, in 1867, consisted of 25,844 men. The strength of the army employed in the war against Paraguay was estimated, in April, 1868, at 42,998 men, of whom, however, 10,816 were reported sick. The total number of Brazilian troops forwarded to the war since the commencement was 84,219 (up to May 1st). The fleet, in 1868, was composed as follows: 1. *Iron-clads*, 17 afloat, 4 in course of construction. 2. Other armed vessels, 63. 3. Vessels not armed: 3 frigates, 2 corvettes, 1 brig, 1 transport. There are also (since the early part of 1868) twelve screw launches intended for the police of the Amazon. They are fifty feet long, draft three feet, and mount a thirty-two pound swivel forward. A fine steamer called the Arary had also come from England for the Amazonas Navigation Company, which steamer is 221 feet long, 26 beam, 10 hold, and of 739 tons burden.

The imports and exports of Brazil during the three years 1865-1867 were as follows (value expressed in milreis):

	Exports.	Imports.
1866-'67.....	156,900,000	143,800,000
1865-'66.....	157,000,000	138,100,000
1864-'65.....	141,100,000	131,600,000

Chiefly concerned in the foreign trade of Brazil, in 1867, were the following countries:

	Exports.	Imports.
Great Britain and dependencies.....	37,300,000	53,300,000
United States.....	81,200,000	4,300,000
France.....	13,660,000	22,000,000
Argentine Republic	7,000,000	12,300,000
Portugal.....	4,300,000	5,600,000

The chief article of export is coffee, of which Rio de Janeiro alone, in 1867, exported 425.5 millions of pounds, valued at 87.8 millions of milreis.

The movement of shipping of the year 1866-'67 was as follows:

* The names of the twenty provinces into which Brazil is divided, with the name of the capital of each, and the free and slave population, are given in the *ANNUAL AMERICAN CYCLOPEDIA* for 1867.

FLAG.	ARRIVALS.		DEPARTURES.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
Foreign.....	3,439	1,945,314	2,499	1,496,974
Braslian.....	265	42,570	209	47,708
Coasting vessels under Brazilian flag.....	3,694	1,988,784	2,698	1,542,977
	4,098	796,737	3,661	642,799

The port of Santos, which is the only port of foreign trade allowed to the province of São Paulo, rose in 1868 to the fourth rank as regards exportation, being exceeded only by Rio Janeiro, Bahia, and Pernambuco. In imports it would have the same rank, instead of the seventh, if it were not that six-sevenths of its imports of foreign goods come from Rio Janeiro, where the duties are paid, the bonded system not having been adopted in Brazil as yet. In the financial year of 1866-'67 the commerce of the port was as follows:

Exports of produce.....	\$3,057,000
Exports of produce coastwise.....	2,900,000
Exports of foreign goods coastwise...	30,085
Imports from abroad, direct.....	773,380
Imports from abroad, coastwise.....	4,477,680
Imports of produce coastwise.....	697,000
Total	\$11,934,145

The duties on these exports and imports amounted to \$490,000.

The General Assembly of Brazil was opened by the Emperor, on May 9th. The principal points of the home and foreign policy of the empire were thus referred to in the speech from the throne:

Public tranquillity has been maintained throughout the empire, an evident proof of the deep love of the people for the institutions which govern us. Brazil is at peace with the foreign powers, and seeks to cultivate their good relations. The war, to which we were provoked by the President of the Republic of Paraguay, is not yet ended. Since the successes announced in the speech with which I closed the legislative session of last year, glorious and important deeds, such as Potreira Ovelha, Tayl, the defence of Tuyuty, the passage of Humaita, and the taking of Establecimiento, and also the repulse of the boarding of the iron-clads, and the attack and occupation of Curupaity, and of a great part of the enemy's lines, have proved still more the value of our sea and land forces and those of our allies, and promise a brief and honorable termination to the war. I have again the pleasure to acknowledge that the Government has been aided by every Brazilian in the defending of the national honor, outraged by the President of Paraguay.

I feel deep sorrow in telling you that small-pox caused so considerable losses to the expeditionary column from the capital of Matto Grosso as to force it to retreat, and that the disease reaped a harvest of very many lives in that city and its neighborhood. The retreat of the column was signalized by the brilliant feat of Alegre, showing that the diminished number of Brazilians fighting in that province—a province well worthy of respect for its constancy in adversity—make up by courage and devotion for what is wanting to them in material resources. Cholera morbus, which, a short time ago, unhappily desolated Montevideo and the Argentine Republic, likewise made victims in our transports and stations, and some cases occurred also in our army. This plague reappeared at places in some of our provinces, but, thanks to Divine Providence, did not spread, and was in gen-

eral of a mild character, the public health returning in a little time to a satisfactory condition.

The Government of the United States of America again offered its gracious mediation for the reestablishment of peace with Paraguay. While thanking that nation, the Government of Brazil declared, however, in agreement with the allied republics, that the same reasons existing, strengthened by the late triumphs, which prevented acceptance of the first offer, a different procedure could not now be taken.

The empire celebrated with Bolivia, on the 25th of March, 1867, a treaty of friendship, boundaries, navigation, commerce, and extradition.

An agreement as to the meaning of the 9th article of the consular convention with Switzerland has been signed at Berne, with the purpose of preventing any dispute regarding the collection, administration, and liquidation of inheritances.

With the product of the new taxes the revenue of the empire exceeds the ordinary expenditure, and the estimates show a surplus. Notwithstanding this, economy is an unavoidable necessity, so much the more as the exigencies of the war require extraordinary expenditures, for which I hope you will empower the Government. The development of education and public instruction should be one of the principal objects of your watchfulness.

The municipal institution requires a reform based on the dictates of experience. The law of elections urgently demands a modification, in order that it may assure the liberty of vote. A law of recruitment and a military penal and practice code continue to be much-felt wants in our legislation, as it becomes indispensable to reform the law of December 3, 1841, of the national guard. Immigration calls for special solicitude, and the means of facile communications are equally worthy of particular care. The servile element has been an object of assiduous study, and at a convenient moment the Government will submit a suitable bill for your wisdom.

On July 11th, a difference occurred between the Emperor and the (Liberal) Zacharias ministry upon the question of the Emperor's selection of a Conservative instead of a Liberal as senator for the province of Rio Grande do Norte; the ministry resolved to resign, and, as it persisted in its determination, the resignation was finally accepted upon the 14th. The Emperor then instructed the Visconde de Itaboraah, Conservative, to organize a ministry, and on the 16th the decrees of appointment were signed. (The names of the ministers have been given above.) On the 17th the programme of the new ministry was declared, acknowledging the need of some reforms, but postponing their consideration, and asking the Chamber of Deputies to proceed at once to vote the supplies, indispensable in the present condition of the Treasury. But a vote of want of confidence was at once proposed by Senhor José Bonifacio, and, after a short debate, in which the ministry declared that it would accept the motion as equivalent to a refusal to give supplies, it was carried in the same session by 85 to 10, all the Liberals uniting against the ministry. On Saturday, the 18th, the decree of dissolution was signed, and on Monday the Chamber of Deputies was formally dissolved. The new ministry dismissed all the Presidents (Governors) of States, Vice-Presidents, chiefs of police, and, in general, all public officers belonging to the Liberal party. Extraordinary efforts were made by the new ministry to carry the

election, and, in September, they were successful, the result being an overwhelming majority for the Conservatives.

General Caxias, the commander of the Brazilian troops in Paraguay, having refused to let the American gunboat *Wasp* go up the Paraguay River for Mr. Washburn, the American minister in Paraguay (*see* PARAGUAY), General Webb, the American minister in Brazil, on July 7th, demanded, first, an ample apology; second, a condemnation of the conduct of Caxias; third, free license for the *Wasp* to go up at once, threatening to close his diplomatic relations with Brazil if a satisfactory reply were not given by August 4th. The Brazilian Government complied with the demand, and friendly relations between the two Governments were restored. The repeated offer of the United States to mediate in the war against Paraguay was declined by the Brazilian Government.

The Conservative party, which has been in power since July, being opposed to freeing slaves and to taking any steps toward such an object, no further advance was made by the cause of emancipation. The (Liberal) Zacharias ministry were in favor of declaring all the births after a certain future date to be free, so as to get rid of slavery entirely when the generation then existing should be extinct. This matter, however, it did not intend to take in hand until the war was over and the army returned, so that, in case of any troubles through the excitement of the slaves or slave-owners, the means might be ready to repress the turbulence.

The war against Paraguay continued throughout the year. The levying of fresh troops led several times to riots, all of which were promptly suppressed. (On the progress of the war, *see* PARAGUAY.)

BREMEN, a republic belonging to the North-German Confederation. Burgomasters, Johann Daniel Meyer (1867-1871); President of the Senate for the year 1868, Arnold Duckwitz (1865-'69). Area, 74 square miles; population in 1867, 109,572 (in 1864, 104,091). Population of the city of Bremen, in 1867, 74,945 (in 1864, 70,692). In the budget for 1868, the revenue is estimated at 1,960,113 thalers, the expenditure at 2,286,557 thalers; deficit, 326,444 thalers. The public debt, in 1867, amounted to 12,066,394 thalers. In virtue of a convention concluded with Prussia, on June 27, 1867, the recruits of Bremen are incorporated with the Prussian army. The value of imports and exports of Bremen, in 1867 and 1866, as compared with the annual average of former periods, was as follows (value expressed in million thalers [gold]):

	Imports.	Exports.
Total for 1867	98,17	92,31
" " 1866	89,22	80,33
Annual average 1862-'66	73,55	68,89
" " 1857-'61	66,95	61,19
" " 1852-'56	50,34	45,27
" " 1847-'51	32,06	27,72

The merchant navy, at the close of the year 1867, consisted of 287 vessels, together of 115,587 lasts (one last = 4,000 lbs.).

The movement of emigration from the port of Bremen, since 1854, has been as follows:

	Emigrants.	Vessels.
1867	73,971	226
1866	61,877	179
1861-'65 (annual average)	20,397	126
1856-'60	32,450	183
1855	31,550	174
1854	76,875	362
Total since 1854	523,595	2,434

BREWSTER, Sir DAVID, K. H., F. R. S. L. and E., LL. D., D. C. L., associate member of the Imperial Institute of France, etc., a distinguished British physicist and author, who had done more than any other man of his time to popularize science, born at Jedburgh, Scotland, December 11, 1781; died at Allerly, near Melrose, February 10, 1868. His father, who was rector of the Grammar School of Jedburgh, had destined him as well as his three brothers for the ministry, but his love for natural science was so strong, that he chose to devote himself to it rather than to theology, though all his brothers had followed the paternal wishes. He was educated at the University of Edinburgh, where he enjoyed the society as well as the instructions of Robinson, Playfair, and Dugald Stewart. Early in his twentieth year he commenced those researches into the composition and influence of light which were continued for many years, and which were eventually to make his name so famous. In 1807 his remarkable researches had caused the University of Aberdeen to confer upon him the degree of LL. D., and in 1808 he was elected a fellow of the Royal Society of Edinburgh. In that year also, at the age of twenty-seven, he projected and commenced that great work, the *Edinburgh Cyclopædia*, of which he continued the editor till its completion in 1830, and in which he first published the results of his researches on light, and kindred topics. In 1813, he published a "Treatise on New Philosophical Instruments," in which, after describing various optical instruments used in the arts and sciences, he detailed some of his important experiments in light and colors. He commenced also about this time his contributions of important papers to the Royal Society of London, two of which are particularly noticeable, that "On some Properties of Light," and that on "Polarization of Light by Reflection." The latter gained him the Copley Medal, and led to his election as a fellow of the Society. In 1816 he invented the popular scientific toy, the "Kaleidoscope," which brought him fame but no pecuniary reward. In 1818, he received from the Royal Society of London the Rumford Medal, for further "Discoveries relating to the Polarization of Light," and soon after twice received the Keith Medals from the Royal

Society of Edinburgh, of which he was for many years Vice-President. He had already (in 1816) received half the French Institute's physical prize bestowed for two of the most important discoveries made in Europe during the two preceding years. In 1819, in conjunction with Professor Jamieson, he undertook the editing and publication of the *Edinburgh Philosophical Journal*, which he subsequently continued alone, through sixteen volumes, under the title of the *Edinburgh Journal of Science*. He was also, for many years and until his death, one of the editors of the *London, Edinburgh, and Dublin Philosophical Magazine*. In 1825 he was elected a corresponding member of the Institute of France; in 1830 he received the Royal Medal from the Royal Society of London, for his further discoveries in the polarization of light, and the same year received from William IV. the Guelphic Order, and the following year was knighted. From 1827 to 1833 he was engaged in investigations on the best methods of illumination for light-houses, and published a treatise on the subject, which led to the great improvements that have been made in light-houses since that time. In 1833 he was chosen principal of the United Colleges of St. Leonard's and St. Salvador at St. Andrew's, which position he continued to hold till his death. In 1859 he was chosen as one of the eight foreign associates of the Institute of France, and, the same year, Principal and Vice-Chancellor of Edinburgh University. He was one of the prime movers in the organization of the "British Association for the Advancement of Science," and attended its annual sessions very regularly till within the last two years of his life. In 1857 he presided over its session at Edinburgh. Though not the discoverer of the principle of the stereoscope, he was the first to reduce it to practical uses. His improvements upon the construction of microscopes and telescopes were numerous and of great value to science. Among his other contributions to practical science were the initiation of the Bude Light, and his demonstration of the utility of dioptric lenses and of zones in light-houses. Few men were as familiar as he with the profoundest secrets of natural science, yet no man of his time did as much to popularize it and excite a thirst for scientific knowledge in the hearts of even the illiterate. His works on the "Kaleidoscope," "The Stereoscope," "Natural Magic," "Martyrs of Science," "More Worlds than One" (a reply to Dr. Whewell's "Plurality of the Worlds"), his admirable "Life of Newton," and that long succession of brilliant and charming articles on scientific subjects in the *North British Review*, and *Popular Science Magazine*, gave evidence of his disposition in this respect. He retained his intellectual and much of his physical vigor to the close of his life, and, though in his eighty-sixth year, came forward in the summer of 1867 and took an active part

in exposing the literary forgery of the pretended correspondence between Sir Isaac Newton and Pascal. Sir David was the last as he was one of the ablest of the great physicists of the last generation.

BRIDGES. *Quincy Railway Bridge.*—This bridge, crossing the Mississippi, and connecting with the Chicago, Burlington, Quincy, and the Hannibal and St. Joseph Railways, having just been completed, was opened for general traffic on the 7th of November. The design and execution were intrusted to Mr. T. O. Clarke, of Chicago. The part of the bridge crossing the main branch of the river, consists of two draw spans of 180 feet each, 11 spans of 157 feet each, 2 spans of 250 feet, 3 of 200 feet, 1,400 feet of embankment and trestle-work, and a smaller bridge 613 feet long, divided into one draw span 160 feet long, and four openings of 85 feet each, making the total length of the bridge and embankment from one railway to the other nearly two miles. The bridge is elevated 10 feet above high-water, and 20 feet above low-water mark, and the iron superstructure, on the Pratt-truss system, is supported on stone piers and abutments. The work was completed with unusual expedition, the first stone having been laid on September 25, 1867, and the bridge finished on the 5th of August, 1868. The total cost was \$1,500,000.

The bridge is so proportioned that, under the greatest loads, the utmost strain that can be brought upon it is 7,500 tons to the inch, the ultimate strength being 60,000 lbs. to the inch. In selecting the iron employed, all bars were tested up to a strain of 23,600 lbs. to the inch. The average quality of the material resisted a tension of 28,000 lbs. to the inch before a permanent set took place; some of the specimens broke under a strain of 80,000 lbs. The bridge before it was opened was subject to the following tests: Three of the heaviest locomotives upon the Chicago, Burlington, and Quincy Railroad, weighing together 300,000 lbs., were coupled together, and placed upon each of the 250-foot spans, in succession, and the deflection was accurately observed. The maximum deflection under this load was $2\frac{1}{100000}$ inches, being less than one-sixteenth of the previous calculation. The same load was then placed upon a span 157 feet; the deflection in this case was $1\frac{1}{100000}$ inches. The three locomotives, still coupled together, were then run backward and forward over the 157-foot span, at rates varying from 10 to 16 miles an hour. The deflection produced was $1\frac{1}{100000}$ inches, or $\frac{1}{100000}$ of an inch more than was produced by the load when at rest. In every case the structure resumed its form when the engines were withdrawn, no permanent set being visible. On the 157-foot span the load applied was equivalent to a stress of 9,000 lbs. per square inch on the wrought iron, and 10,200 lbs. on the cast iron, or about one quarter more than the passage of the heaviest freight trains over the bridge can produce.

Railway Bridge at India Point, Providence.

—Soundings for this bridge were made to ascertain the nature of the river-bed, the depth of water, etc., in June, 1868. A good solid bottom was found, consisting of gravel, covered with a layer of mud, on top of which is a crust of oyster-shells, forming the river-bed. In the places where the piles were to be sunk, no obstructions were discovered, with the exception of the stump of an old pile, which was removed by the divers. On account of the soft, muddy layer of several feet in thickness, which covers the solid bottom, the piles were driven from temporary platforms. They were constructed of piles driven in four rows, about 20 feet into the bed of the river, and about 9 feet apart; these piles were capped with hard pine, about 13 inches square, and then covered with spruce plank. The permanent piles are arranged in clusters of 12 for the 2 piers west of the draw, and also 2 groups under the draw contain the same number. The other groups, five in number, contain 9 piles each. The piles were driven in the following manner: the first pile driven in was sharpened on all sides, the bevel commencing about 18 inches above the lower end, and the end left about 4 inches square; all the remaining piles, that presented only one side to those already driven, were sharpened only on one side, and the corner piles and those that were in contact with other piles were sharpened upon the two opposite sides. They are encased in cast-iron cylinders driven over them, the space between the piles and cylinders being firmly packed with concrete; the diameter of the cylinders west of the draw is 6 feet; the other 5 feet. The castings were made four and a half feet long, one and an eighth inches thick, having a flange four and five-eighths inches wide. The weight of the sections, as they came from the moulds, was, for those six feet in diameter, 5,459 pounds, and those five feet in diameter, 4,360 pounds. The rough castings were covered with a coating of cement, which attached itself firmly to the rough scale, thus forming a solid, durable covering; the sections were then firmly bolted together and carried by a scow to the platform, upon which they were hoisted, and from there forced down over the piles by means of a powerful screw-press. Notwithstanding the immense pressure brought to bear upon the cylinders, they were unable to penetrate the solid crust of oyster shells at the river-bed; the crust was then broken up by driving piles all around, and the cylinder again lowered; its weight alone, this time, carried it about four feet into the crust, and upon piling about ten tons of iron together, with continued rocking (accomplished by means of levers), the cylinder was finally forced home; all the others were sunk in a similar manner.

The capping of the piers west of the draw consists of yellow pine, that of the draw is formed of oak; the pier upon which the east end of the draw rests consists of granite,

twenty-two feet long, and six feet thick, resting on piles driven to a depth of thirty feet below the river-bed. The superstructure is of the ordinary form of Howe truss.

Bridge over the Alleghany.—The bridge of the Pittsburg, Fort Wayne, and Chicago Railroad, over the Alleghany River, is now completed. An interesting account of its construction we extract from the *Pittsburg Gazette*: The original superstructure for double track was of wood, on the Howe-truss plan, with arches for additional strength, and consisted of seven spans of various lengths, being in all 1,172 feet long. On account of the peculiar form and location of the company's freight-yard at Pittsburg, an additional pier 101 feet long was built on the wharf, under the first span on the Pittsburg side, and the abutment extended parallel with the river, along Duquesne Way, to 148 feet in length. By this arrangement the bridge opens gradually like a fan toward the Pittsburg freight-yard, being at the narrowest part, next to the main span, 55 feet in width, and extending out for 176 feet in length, to the point where it connects with the yard, where the width is 138 feet. For symmetry and economy in the construction, another pier was also built on the wharf at the Alleghany City end span of the bridge. At both of these end spans the tracks are now supported from below by girders, made entirely of plate and angle iron. The two western spans have each three girders 89 feet in length and 6 feet 6 inches deep, to support the double line of railway, the middle one being made proportionately stronger. On the two eastern spans, which form the above-mentioned addition to the yard, eighteen iron-plate girders, varying in length from 86 to 93 feet, all 6 feet 1 inch deep, are placed, distributed according to the tracks they are intended to support. The five large spans over the main part of the Alleghany River are built for a double line of railway, with one projecting footpath on the outside, consisting of three main girders, one on each side and one in the centre, between the ways. The average length of the spans is 153½ feet in the clear, with a bearing of 5 feet on each pier. The depth of the girders is 19 feet. The clear width between the outside and the central girders is 14 feet, except the south part of the first main span, where it widens from 14 feet at one end to 32 feet at the other. The top and bottom sections of the girders are in the form of the letter T; the cross-sectional area of the top chord consists of 4 thicknesses of iron laid one over the other, well riveted, and forming together a plate 24 inches thick, and 24 inches wide in the centre part of the girder, and diminishing gradually to about two-thirds its cross-section at the ends, where it rests on the piers. In addition to which there are 2 large angle-irons 5 inches by 3½ × ½ inch to ½ inch thick, and two vertical bars 12 inches by ½ inch on the inside between the angle-iron, running along the centre of the horizontal

plates which form the top and bottom portion of the girders, to which they are attached by two of the angle-irons, the other two serving to join the flanges to the bars, which form the vertical web. The cross-sectional area of the bottom chords consists of three thicknesses of iron, well riveted, forming together a plate, in the centre part $2\frac{1}{2}$ inches thick, and 27 inches wide, the balance of the construction being similar to the top chord. The vertical web is composed of lattice-work, which is framed with two sets of bars six inches wide, crossing each other and inclined to the top and bottom at an angle of 48 degrees, and forming a network, the distance of the crossing apart being 2 feet 1 inch between the centres of the rivets, measured along the bars, the thicknesses of the bars increasing from $\frac{1}{2}$ inch at the centre part, to $\frac{3}{4}$ inch at the ends of the girders. They are secured at their crossings by two rivets. The lattice-work is stiffened by vertical angle-irons fixed double on both sides, at distances of about 8 feet apart. The central girder has about one-third more iron in the cross-section than the outside girders. The principle of the construction is known as the latticed-girder plan with vertical stiffenings.

Bridge Strains.—Mr. W. Airy has invented and applied a very novel and ingenious method of determining bridge strains. The problem was on the determination of the strains on every one of the intermediate bars connecting the top and bottom members of a bowstring bridge as ordinarily constructed, the said strains being those due to various arrangements of weights upon the bridge. To solve this problem practically, Mr. Airy has availed himself of the sense of hearing, or rather of comparison of musical sounds. It is well known that a steel wire, if stretched and sounded, will give forth a note dependent on its weight, length, and tension. If, therefore, two wires of the same steel, and of equal lengths, and at equal tensions, are sounded, they will give forth the same note, and, conversely, if they give forth the same musical note, it is to be inferred that the tensions are equal. In order to turn this principle to account, a model of a bowstring girder was constructed with great care, of which the intermediate ties were of thin steel wire. If, therefore, a load were hung from the string, these ties would at once go into tension, and each one, if sounded, would give forth a musical note due to its length and tension. To determine this tension, a wooden frame was constructed, and in this frame was hung a wire of the same steel as the ties; a sliding bridge was provided by which the wire could be cut off to any required length, by merely leaning against the bridge, and a small scale-pan was fastened to the end of the wire. This frame was moved close up to the model, and the wire in the frame being cut off by the bridge to the exact length of any one of the ties, the scale-pan was gradually loaded with weights till the

musical note of the monochord exactly coincided with the note of the tie under comparison. In this condition, since the two wires are of the same steel and of the same length, and give forth the same musical note, their tensions are equal, and the weight in the scale-pan is the tension of the tie. In this way every tension was determined separately and independently. Mr. Airy reckons that he determined all the tensions on his model to the extent of $\frac{1}{100}$ th part of the whole tension of each.

An ingenious artifice was employed to eliminate the unavoidable errors of original adjustment of the wires, and at the same time to obtain expressions for the strains of *thrust* as well as strains of tension; it is clear that there must be errors of original adjustment of the wires, for, even if it were possible so to adjust the lengths of the wires that each should have the strain due to a certain disposition of load, yet this very condition assumes that the problem is already solved, and that we know the exact strain that each wire ought to have; consequently, the determination of the strains is throughout a differential process: a certain load is laid upon the model, and each wire acquires a degree of tension, the precise amount of which is determined by the method of comparison with the monochord; these tensions are booked, and an additional load is then introduced; this will cause an alteration of the tensions on every wire, and the tensions of all are again taken. The differences of the tensions, before and after the introduction of the additional load, are formed for every wire, and these represent the strains on the wires due to the additional load only. The same process determines also the strains of thrust, for thrust is but negative tension, and if the tension of a wire, after the additional load is introduced, be less than it was previously, the difference is negative, and represents a thrust strain of that amount on that wire. Mr. Airy also discovered a ready method for throwing *all* the wires into tension, by a uniform distribution of the preliminary load along the whole length of the model.

BROOKE, Sir JAMES, K. C. B., D. C. L., Rajah of Sarawak, and Governor of Labuan, an English knight-errant, philanthropist, and governor, whose love of adventure made his career one of the most remarkable of modern times, born in Bandel, Zillah Hoogly, Bengal, in 1808; died at Burrator, Devon, June 11, 1868. His father, who was a government officer of considerable wealth and prominence, returned to England when James was a child, and he received his education there. His father's influence secured him a cadetship in the East-Indian army, and he soon distinguished himself by his bravery and daring. He was in most of the engagements of the Burmese War, under Sir Archibald Campbell, but in the storming of a stockade, in 1826, received a severe gunshot wound in the chest, and was forced to return to England for surgical treat-

ment. Having recovered, he was ordered to report for duty in India, but, his furlough being extended, he travelled for a time on the Continent, and, being shipwrecked on his voyage to India, did not reach headquarters till some time after its expiration. Finding that he had thus forfeited his position in the army, he resigned, and sailed from Calcutta, for China, in 1830. Observing the condition of the islands of the Indian Archipelago, and the prevalence of piracy there, he formed the determination to attempt the improvement of their condition. Returning to Europe in 1834, after the death of his father, he purchased one of the yachts of the Royal Yacht squadron, and, selecting a crew with great care, whom he drilled thoroughly in a preliminary cruise in the Mediterranean, he sailed from London, in October, 1838, for the East. Arriving at Sarawak, a province on the northwest coast of Borneo, he found Muda Hassim, the uncle of the Sultan of Borneo, and acting Rajah of the province, carrying on an unequal contest with rebel tribes from the interior, who descended in large bands upon his territory to plunder and lay it waste. He promptly offered his assistance, and, with his guns and trained troops, soon punished the rebels so severely that they were glad to make peace. Muda Hassim at once prompted his nephew to offer the Englishman the rajahship and make him absolute governor of the province. Mr. Brooke accepted the appointment, and, selecting a council of intelligent Dyaks to aid him in administering the government, he commenced a series of reforms which, carried out through many years, entitled him to be regarded as the greatest benefactor of the native population of Borneo. He would not suffer the people of Sarawak to be taxed for his support, but maintained himself upon his own income, and the rewards paid by the British Government for the suppression of piracy. His people had been a nation of pirates, but, by attaching the native rulers to himself by his astute measures for their welfare, and by making war upon pirates a pastime, he succeeded, in a few years, in clearing the entire archipelago of its bands of freebooters. He accustomed his people to the strict execution of justice, suffered no bribes to be given, was as accessible to the lowest and humblest of his subjects as to the mightiest; encouraged industry, commerce, and such manufactures as they were capable of producing, and so won the love of his people, that they almost paid him divine honors. The jealousy of some of the officials of the East India Company was excited, by the independence of the Rajah; they coveted his territory, and desired to squeeze from the natives the revenue which Rajah Brooke had so nobly refused, and hence they were loud in their clamors against him, to the English Government, to which he was really not responsible. Waiving his rights in the matter, however, Mr. Brooke visited England, in 1847, and courted the most thorough

investigation of his conduct. This resulted in a complete approval, in his receiving the honor of being created Knight Commander of the Order of the Bath, and a baronetcy, and of his appointment as Governor of the island of Labuan, near Sarawak (which had been purchased by the British Government), with a salary £2,000. He still retained his office as Rajah of Sarawak. He returned to his Dyaks and prosecuted, with even more zeal than before, his measures for their improvement and elevation. The port of Sarawak, which at his first visit contained but 1,000 inhabitants, had risen, under his management, to a population of 25,000, and its exports from £25,000 to more than £800,000. He compiled laws, coined money, made roads, established schools, raised a regular revenue, and provided for the security of persons and property, and the strict administration of justice. But his enemies were still unsatisfied. Taking advantage of a change of administration, they procured his removal from the governorship of Labuan, thwarted his projects for making the ports of Borneo free to British vessels, and professed the utmost horror at the strictness of his rule over the lawless and thievish tribes of the interior, and the Chinese pirates, who began again to make their appearance on the coast of Borneo. The attachment of his people was strikingly manifested in 1857, when he was suddenly attacked in his house, at night, by a band of about 4,000 Chinese pirates and opium-smugglers, who hated him for his interference with their nefarious business. They burned his house, destroyed his gardens, and committed terrible havoc with his property, and he was compelled to save his own life by swimming. In the early morning, however, he had collected his faithful Dyaks, who were almost frantic with grief for the losses which the Chinese had inflicted upon him, and, leading them in person, attacked the Chinese, defeated them in several successive fights, and drove them into the jungle, with a loss of over 2,000 killed. The next year he returned to England again, and though a public subscription was made, amounting to a large sum, to reimburse his losses at Sarawak, yet the bitter attacks made upon him by his enemies in Parliament distressed him, and probably induced a paralytic attack, from which he suffered that year. He made his residence thenceforward in Burrator, Devon, but in 1861 made two voyages to Borneo, for the purpose of suppressing an insurrection, and settling the government, which he afterward left in charge of his nephew, though he retained the title and authority of Rajah till his death. Portions of his journals have been published, and also "The Private Letters of Sir James Brooke, K. C. B., from 1838 to 1853," edited by J. C. Temples, Esq., in three vols., London, 1853.

BROUGHAM, HENRY, Lord BROUGHAM AND VAUX, a British statesman and reformer, Lord

Chancellor of England 1830-1834, born in Edinburgh, September 19, 1778; died in Cannes, France, May 9, 1868. His father, Henry Brougham, was the descendant of an ancient family in Westmoreland, and his mother, Eleonora Syme, was a niece of Robertson the historian. Young Brougham was afforded excellent advantages of education, receiving his early training in the Edinburgh High School, and being transferred at an early age to the University. He was particularly fond of mathematical studies, and at the age of eighteen or nineteen communicated to the Royal Society of Edinburgh three mathematical papers which possessed such merit as to be published in the Society's Transactions. He was, even at that age, a proficient in the highest branches of mathematical science; and late in life he often avowed the opinion that he had mistaken his calling; that he should have devoted his life to mathematical studies, and that in them he might have surpassed all previous mathematicians. After taking his first degree at the University, he spent some time in travelling on the Continent, and in 1800 was admitted to the Scotch bar. He became about this time a member of the "Speculative Club," an association for the discussion of metaphysical and political questions, and was then brought into intimacy with Jeffrey, Horner, and Sydney Smith, with whom in 1802 he participated in the establishment of the *Edinburgh Review*, to which from its commencement he was a constant contributor, and the writer of some of its most powerful and caustic articles. So versatile were his talents, and so wide the range of his knowledge, that no subject came amiss to him. He was equally at home in physical and mathematical science, history, biography, literary criticism, and politics, and even plunged into the more recondite investigations of the medical and surgical professions. With two classes of topics, however, he did not interfere, theology and poetry. For neither of these had he any predilection. He displayed marked ability as an advocate, but his known liberal opinions embittered the Tories, who were largely in the majority, against him, and the character he had acquired for eccentricity and indiscretion prevented his attaining a large practice, except in the unremunerative work of the criminal courts. In 1807, he was retained as one of the counsel in the case of the disputed succession of the dukedom of Roxburgh before the House of Lords. His argument in this case was one of his finest efforts, and attracted the attention of the nation to the eloquent young advocate, who, yet under thirty years of age, could bring such learning, research, and legal ability to such a cause. Encouraged by the warmth of his reception in London, and despairing of any speedy success in Scotland, Brougham now resolved to remove to the metropolis, and was called to the bar at Lincoln's Inn in 1808. He rose rapidly in his profession, and soon acquired a large and lucrative

practice in the common law courts, and in the northern circuit. He was employed in the winter of 1809-'10 by some Liverpool merchants to bring their grievances before the House of Commons, and ask for the repeal of the Orders in Council, and in his advocacy of their cause displayed such eloquence and legal ability, that he attracted public notice, and became a distinguished favorite of the leading Whigs, who caused his election to Parliament the same year for the pocket borough of Camelford. In Parliament his vehemence in debate, his aggressive zeal, his caustic wit, and unsparing sarcasm, combined with a remarkable and convincing eloquence, made him a welcome and valued addition to the Whig force, and a formidable opponent to the Tories. He associated himself with the most advanced Whigs, and proved a valuable recruit to Wilberforce and Clarkson, who had been, for years, struggling against the slave-trade. Within a few months after entering Parliament, he had carried the first public measure he proposed, that of making the slave-trade a felony. He was unceasing in his attacks upon the measures of the Tory Government, and in 1812 succeeded in carrying the repeal of the obnoxious Orders in Council. He had also successfully defended Leigh Hunt, the poet-editor, against a libel prosecution instituted by the Government. He had advocated Catholic emancipation, reform in the government of India, and the abolition of flogging in the army. At the general election in 1812, he boldly contested (in company with another Whig) the membership for Liverpool, against Mr. Canning and his Tory associate. But the great Tory minister was too strong in Liverpool to be beaten, and Brougham and his friend were defeated. In a subsequent canvass for a seat from Scotland, he was also defeated, and remained out of Parliament till 1816, when he was returned for Winchester, and again became an opposition leader. He signaled his return to the House of Commons also by a movement of inquiry into the state of education of the poor in the metropolis, which he followed, in 1818, by procuring the appointment of a commission to inquire into the abuses of the public charitable foundations of the kingdom connected with education. These efforts for the improvement of the schools and the establishment of a system of national education were never intermitted until the end sought was gained. He had acquired by this time also a high reputation as an advocate in the defence of persons prosecuted for libel or other offences by the crown. His most famous appearance in this capacity was in 1820 and 1821, when, associated with Lord Denman, he undertook the defence of Queen Caroline against the charges of the King, before the House of Lords. Both the eminent counsel knew that the result would be their exclusion for years to come from all professional advancement; but Brougham's defence was bold, able, eloquent,

expressive, his gestures animated, his diction was noble, and his voice incomparably sweet and sonorous. Then his intellect was of grand proportions, and his speech bore reading as well as hearing.

BETTS, SAMUEL R., LL. D., one of the ablest of American jurists, born in Richmond, Berkshire County, Mass., in 1787; died at New Haven, Conn., November 3, 1868. He was the son of a respectable farmer; and, after a thorough early training in his native town, entered Williams College, where he graduated with honor in 1806. After a diligent study of the law in Hudson, N. Y., he was admitted to the bar, and commenced practice in Sullivan County, N. Y., where he was winning a fair reputation, at the outbreak of the War of 1812, when he entered the army, and soon after was appointed Judge-Advocate by Governor D. D. Tompkins. In 1815 he was elected to Congress for the district comprising Orange and Sullivan Counties. At the close of the term, he declined a reelection, and devoted himself with great assiduity to the study and practice of his profession. He was for some years District-Attorney of Orange County. At that time, the bar of the State of New York was remarkable for the numerous eminent legal minds who were engaged in the practice of the profession in the courts of the eastern counties. Martin Van Buren, Elisha Williams, Thomas J. Oakley, George Griffin, Ogden Hoffman, Prescott Hall, and Thomas Addis Emmet, were the great lights of the bar, and with all of them Mr. Betts was brought in almost constant contact, and, though younger than most of them, was soon recognized as their peer in legal attainments and intellectual acumen. After about eight years of this practice, Mr. Betts was appointed by President Monroe, in 1823, Judge of the United States District Court. This position he held for the long period of forty-four years, and throughout the whole term presided over it with a dignity, a courtesy, a profundity of legal knowledge, a carefulness of research, and a patience of investigation which made him a model jurist in all the great questions brought before him. To him belongs the high honor of having shaped and settled in a great degree the maritime laws of the United States. The whole subjects of salvage, general average, wages of seamen, freighting, contracts, charters, insurance, and prizes, owe the greater portion of their present condition to the honored Judge, who has made the law so perfect and complete on these points, that the best lawyers in New York regard it as a finished code. For the first twenty years of his connection with the District Court, there was never an appeal from his decisions, and his opinions in his own court on maritime questions, and in the Circuit Court on patents, have been uniformly upheld. Every kind of question arising out of the criminal law of the United States has been before him; he has tried cases of piracy and murder on the high-seas, and discharged the whole

criminal business of a large district. The war brought before him an entirely new class of questions, affecting national and international rights; but although beyond the age of three-score-years-and-ten, the Judge bent himself to the new tasks imposed, and, with a vigor, a perseverance, and an ability rarely equalled, met the great demand of the most trying period of our history, in a manner which was creditable to himself, and reflected honor upon the country he so patriotically and faithfully served. His decisions upon the neutrality laws, and his judgments on the slave-trade, are fine specimens of constitutional reasoning and argument. As a judge, the lawyers who have had the best opportunities of forming an opinion say that Judge Betts never had a superior, and doubt if he had an equal. His bearing toward members of the bar was always gentlemanly and courteous. His judgments were regarded as the best considered on record. He conducted a case with coolness, clearness, and deliberation, allowing counsel every latitude that might tend to throw light on the matter at issue. And it may be well doubted whether any man on the bench in this country ever possessed the same amount of judicial ability. He held the place he vacated and honored for the lengthened period of forty-four years, and up to the day of his death he was still the revered and upright judge of that important court, where he pronounced numerous decisions, which are regarded as text-books of federal jurisprudence, and in after-years will be looked upon as the highest and soundest efforts of legal skill and research. In social and domestic life he was always highly esteemed and beloved; his conversational powers were unusually fine, his acquaintance with literature and men extensive, his manners courteous, and his treatment of all, especially of the young, such as to endear him to those with whom he came in contact. He did not outlive his interest in passing events, but his mind was bright and vigorous, even after the bodily frame showed signs of weakness and decay. In May, 1867, having entered upon his eighty-first year, and feeling the infirmities of age, Judge Betts retired from the bench he had so long honored, and passed the brief remainder of his life in the comforts and privacies of his home at New Haven.

BOLIVIA, a republic in South America. Provisional President since the revolution of December, 1864, General Mariano Melgarejo. The limits of the republic have not yet been fixed, and the statements of the area therefore widely differ. A treaty concluded between Bolivia and Chili, on August 10, 1866, fixed the 24th degree S. latitude as the dividing line between these two republics. Another treaty for regulating the frontier between Bolivia and Brazil was concluded on March 27, 1867. By this compact Bolivia resigns her claims to the western bank of the river Paraguay, a territory of about 18,000 square leagues.

The area is now (Behm *Geogr. Jahrbuch*, vol. II., Gotha, 1868) estimated at 535,769 square miles. The population of the nine provinces, into which the republic was divided in 1858, was as follows:

La Paz.....	475,323	Veni.....	55,973
Cochabamba...	349,891	Atacama....	5,273
Potosi.....	281,229		
Chuquisaca.....	223,665	Total	1,744,351
Oruro.....	110,931	Indians	24,500
Santa Cruz.....	153,164		
Tarija.....	88,900	Total	1,768,851

The capital, La Paz, has 76,372 inhabitants.

The army formerly consisted of 2,000 men, but was, in 1866, in consequence of the war with Spain, raised to 3,000 men, 500 of whom were cavalry. In 1867 the revenue was 2,471,000 piasters, and the expenditures 2,435,000 piasters. The revenue in 1865 was estimated at about 3,000,000 piasters, nearly one million and a half being a tribute from the Indians, 450,000 import duties, 315,000 export duties, and the remainder the proceeds of mines, stamp duties, etc. There is neither a direct tax nor a public debt, nor paper money. The imports are valued at about 5,570,000 piasters.

A new Congress was elected in 1868, the number of deputies elected by the several provinces being as follows: Chuquisaca, 8; La Paz, 8; Cochabamba, 6; Potosi, 8; Oruro, 4; Santa Cruz, 4; Tarija, 4; Cobija, 2; Veni, 2; Tarate, 6; Mejillones, 2. The new Congress met on August 6th, and confirmed all the acts of President Melgarejo, inclusive of the treaty of Bolivia. As some deputies (especially Señor Muñoz Cabrera) made, however, a violent opposition to the treaty, amidst the applause of the galleries, the Congress was dissolved at the point of the bayonet.

In September, President Melgarejo issued a decree extending the rights of citizenship to Americans. The articles of the decree are:

1. No American shall be considered a foreigner in Bolivia.

2. Every American, of whatever nationality he be, can obtain Bolivian citizenship by alone declaring in writing, in the presence of any of the prefects, his wish to settle in the republic. His name being inscribed in the civic register, the same prefect will extend him his citizenship papers.

3. Americans may in like manner freely exercise in the republic their liberal, scientific, literary or artistic professions, in all cases, on presenting their respective diplomas, credentials, or titles extended to them by competent and legalized authority, in proper form for its examination and acceptance by the national government.

4. The present decree shall be considered as confirming that of the 18th March, 1866.

The Minister of Foreign Affairs was directed to communicate both decrees to the governments of the American nations, soliciting at the same time the adoption of like measures to extend to the whole continent the privileges accorded.

By a decree of August 27th, a contract was made with Colonel George E. Church, engineer of New York, for the establishment of a "National Bolivian Navigation Company,"

which is to navigate by steamers and with other vessels the Bolivian rivers which are tributary to the Madeira, the principal affluent of the Amazon. The Government conceded in favor of the company the following privileges and rights:

1. In the populated ports it gives in property to the company one square mile of State lands, and at the points where new ports should be founded to facilitate commerce, according to the judgment of the company, a square of the same lands upon the river margins, which shall have two leagues front and two of depth, the company having the right to make that use of them which may be most to its interests.

2. The Government of Bolivia will pay to the company \$10,000 gold, the day upon which the first steamer moves upon the waters of the Mamore, as a premium offered by the Government in supreme decree of 1853.

3. The same Government concedes to the company the right to cut wood for burning, exportation, and other uses, in the forests which have no private owner, and that of collecting 8,000 head of horned cattle from the herds owned by the State in the department of the Beni—it being the obligation to make this collection in the method most to the advantage of the Government and the company.

4. The Government guarantees to the company the free exportation of the products of the country without paying duties or imposts of any class. The importation of merchandise and foreign effects will only pay half of the tariff of duties collected upon those imported by Cobija. One and the other privileges will continue for ten years, counting from the day upon which the navigation of the Madeira may be free from impediment by the clearing of the rapids, it being impossible to recover any class of imposts up to this time. This term of ten years expired, the Government can only levy upon the merchandise imported by the Madeira a duty inferior by one-third part to that recovered by Cobija, until the twenty-five years mentioned in the following article have expired.

BRADBURY, WILLIAM B., a musical teacher and composer, and, since 1854, one of the most successful piano manufacturers in the United States, born in York, Maine, in 1816; died in Montclair, N. J., January 7, 1868. Both his parents were well known as excellent singers, and from them he inherited that musical taste, the development of which has rendered his name a household word. Before he was fourteen, he had mastered every instrument that came in his way; but until 1830 he had never seen an organ or a piano. In that year he moved to Boston, where he formed the acquaintance of Dr. Lowell Mason and his coadjutor, George J. Webb, who at that time stood at the head of the musical celebrities of New England. In 1834 he was known as a practical organist, and six years later began teaching in New York under the most flattering auspices. His free singing-schools in this city and Brooklyn became very popular, and, on his concert nights, the old Tabernacle, between Franklin and Leonard Streets, on Broadway, was filled to overflowing. On these occasions, his performers, all children, numbered from five hundred to one thousand. These concerts gave Mr. Bradbury great notoriety, and secured him hosts of friends. He had many enemies, too, among members of his profession, and they

Baptist Quarterly, the *National Baptist* (weekly), and the *Young Reaper* (monthly), the total number of publications, now on the society's catalogue, amounts to 982. The *American Baptist Historical Society* received during the year an addition of 294 volumes for its library. The receipts of the *American Baptist Home Missionary Society* were \$6,237 less than for the preceding year, amounting to \$135,786. The society sustained 331 missionaries, 30 of whom devoted themselves to the education of colored preachers. A magnificent donation of 25,000 acres of land on the Osage River, in Kansas, was received from the Ottawa Indians, to establish a university. A delegation from the Colored Baptist Convention, at Nashville, reported that that body represented a hundred thousand colored Baptists. The *American Baptist Missionary Union* supports twelve missions. In Asia there are 18 stations and 400 out-stations; in the European missions, 1,328 stations and out-stations. The total number of American missionaries in the Asiatic missions is 93; of active helpers, about 400. The number of members connected with the missions is 43,775; the number of churches, 568; the number of baptisms in Asia and Europe, 4,200. The *American Baptist Free Mission Society*, which is now in the twenty-sixth year of its existence, expressed, at its anniversary, continued devotion to the antislavery principles of its organization, which it considers not yet wholly beyond the need of support, and opposed to all the ends and objects of colonization of the blacks in Africa, asserting their equal right with the whites to choose the United States as their residence. The union of the society with the consolidated Missionary Convention (of colored Baptists) which met at Nashville, Tenn., in August, 1867, is regarded as accomplished, so far as harmony of action is concerned, though an organic union has not yet been effected. A correspondence has been carried on with the American Baptist Missionary Union, which has as yet not produced a definite result, though both parties seem willing to enter the union. The receipts of the society for the year were \$19,005.72. Besides the missionaries in the Southern States, the society supports missionaries in Burmah and Japan.

The Southern Baptist Convention met at Baltimore on the 7th of May, and was attended by about two hundred delegates. A delegation from the American Home Missionary Society, with which the convention has not been in correspondence for many years, was warmly welcomed. It was resolved to remove the Sunday-school Board to Memphis. Thirty churches have been constituted among the freedmen by the missionaries, twenty-four meeting-houses have been commenced, and ten finished. The Board of Foreign Missions of this convention sustains missions in China and Africa. The following are the statistics of the other Southern Baptist Societies, as reported in 1868:

Home Missionary Society—Receipts, \$25,994.75; missionaries, 108; number of persons baptized, 1,918, of whom 611 were colored; sermons preached, 7,369; visits made, 12,467. *Indian Missions*—Receipts, \$452.83. *Sunday-school Board*—Contributions, \$2,521.98. Publications, 2,000,000 pages.

II. "FREE-WILL BAPTISTS," "LIBERAL BAPTISTS," AND "GENERAL BAPTISTS," IN AMERICA.—According to the *Free-Will Baptist Register* for 1869, the statistics of this denomination in 1868 were as follows:

YEARLY MEETINGS.	Quarterly Meetings.	Churches.	Ordained Preachers.	Communion.
New Hampshire.....	9	133	138	8,841
Maine (Western).....	4	72	59	4,353

Quarterly Meetings not connected.....	9	46	36	1,069
Churches not connected.....	..	6	6	147
Total.....	150	1,279	1,161	61,344

Showing an increase of 2 quarterly meetings, 2 churches, 27 ministers, and 2,033 members. There are also 87 "licensed preachers."

The societies, etc., of the Free-Will Baptist Church, are the printing establishments at Dover, N. H., and Chicago, a theological school at New Hampton, N. H., a Foreign Mission Society, a Home Mission Society, an Education Society, a Female Systematic Benevolence Society, a Sabbath-school Union, a Temperance Society, the Western Home Mission Committee, the New York State Mission Society, and the Commission for the Promotion of Education in the South.

The Free-Will Baptists have four colleges: Bates College, at Lewiston, Me.; Hillsdale College, at Hillsdale, Mich.; West Virginia College, at Flomington, W. Va.; and Ridgeville College, at Ridgeville, Ind. They have thirteen male and female seminaries and academies.

The twentieth Triennial Session of the General Conference of Free-Will Baptists met at Buffalo, on the 7th of October. About seventy

members and a number of visitors were present, among whom was a representative of the Free Christian Baptists of New Brunswick, who reported that his denomination had adopted the Free-Will Baptist Articles of Faith, and that they had received six hundred members, by baptism, during the past year. A prominent feature of the business was the adoption of articles under which the society should be incorporated. The subject of changing the name, by adopting that of Baptist or Free Baptist or Union Baptist, was agitated; but the Conference resolved to adhere to the name of "Free-Will Baptist." The Liberty Association of Free-Will (heretofore General) Baptists of Indiana, numbering 25 churches and 1,653 members, and the Ohio Association of Free-Will (heretofore General) Baptists, numbering about 12 churches and 500 members, were received by delegates into the Conference. A net increase of members was reported of 9,420, the present membership being 63,440. The Home Mission Society, now in the thirty-second year of its existence, reported its receipts to be ten times as great as during its first years. The American Missionary Association states that this denomination has done more, according to its numbers, for the freedmen than any other people. Over thirty-five thousand dollars have been raised, in a little over a year, for the various departments of mission work. Taking the Eastern and Western work together among the freedmen, this society has sustained 37 laborers and 1,800 scholars; has established ten new churches and one quarterly meeting, containing 1,300 members, and is supporting two normal schools. In the department of Home Missions proper, there are 24 ministers, making altogether 60 Home Missionary laborers. Several associations are reported in Alabama as agreeing with the Free-Will Baptists, with whom the Society hopes to arrange for a Union.

This Church has had for many years flourishing missions in India. The last annual report again shows favorable progress. The report recommended the policy for the future of keeping a sufficient force only in the field to superintend native preachers and teachers. In Turkey the field seems to be open. The receipts for the year have been about \$10,500. A resolution was adopted looking to the opening of additional missions in China and Turkey. The members of the Church were advised to give this Society the preference in their contributions over those not of their denomination. The Home and Foreign Mission Society are to be united into one after 1871.

The "Liberal Baptists" or "General Baptists," two associations of which, as reported above, joined the "Free-Will Baptists" at their General Conference in November, had previously (May 28th) held a convention at Fort Branch, Indiana, for the purpose of promoting a union of all Baptists believing in "free salvation and free communion." It appeared that

there were two associations in Indiana, three in Kentucky, three in Illinois, three in Georgia, one in Alabama, one Separatist Baptist in Illinois, one Free-Will Baptist in Tennessee. The total number of members was estimated at 8,000 or 10,000. Six of the associations reported as follows:

Cumberland Association, Ky.....	348	members.
Union " Ky.....	612	"
Ohio " Ill.....	558	"
Southern Illinois " Ill.....	686	"
Union Grove " Ill.....	330	"
Liberty " Ind.....	1,412	"
United " Ind.....	1,480	"
Central (General Free-Will) Association, Ill.....	819	"

Total..... 4,743 "

III. OTHER BAPTIST DENOMINATIONS IN AMERICA.—The statistics of other American denominations practising immersion are as follows:

DENOMINATIONS.	Assoc'ns.	Churches.	Tot. Pop.
Anti-Mission Baptists.....	180	1,800	105,000
Free-Will Baptists.....	147	1,284	56,258
Six-Principle Baptists, 1860..	..	18	8,000
Seventh-Day Baptists.....	4	68	7,038
Church of God (Winebrennarians).....	10	860	32,000
Disciples (Campbellites)...	..	5,000	500,000
Tunkers, 1860.....	..	200	20,000
Mennonites, 1860.....	36,280

These denominations have 5,022 members.

The fifty-fourth General Conference of the Seventh-Day Baptists was held at Albion, Wisconsin, September 10th. A prominent subject of discussion was the expediency of creating a denominational literature, particularly in the matter of Sabbath-school libraries, and of a Hymn-book. Measures were taken to publish a Sabbath-school paper. The organization of the General Conference was perfected by the adoption of a constitution. The state of the churches and missionary interests of the Society was reported as hopeful.

The annual meeting of the German Baptists or Tunkers was held at Millersburg, Indiana, on the 2d of June, and was attended by about 5,000 persons. Among the questions discussed were: the nature of Scriptural divorces, which has been under discussion for the last ten years; taxation for church purposes, which was decided to be not unscriptural, but inexpedient; lyceums, which were not indorsed; whether voting for persons in the ministry is more in accord with the gospel order than casting lots—decided in the affirmative; the reception of ministers of other orders; feet washing, the Sunday-school system; the stand of ministers; support of evangelists. The question of adherence to the name of German Baptists was decided in favor of adherence.

IV. BAPTISTS IN GREAT BRITAIN.—The largest body of Baptists in England are the "Particular Baptists" or "Calvinistic Baptists." Most of the churches of this class are connected with the "Baptist Union." In 1868

of births over deaths, the above number of 85,553,000 is obtained for the year 1867.

The following is a list of the provinces into which each of the two halves of the empire is divided, with the population in 1867, as ascertained by adding the excess of births over deaths to the official statements of the census of 1857:

I. Cis-Leithan Provinces (Austria Proper):

1. Lower Austria.....	1,762,784
2. Upper Austria.....	719,427
3. Salzburg.....	148,870
4. Styria.....	1,091,647
5. Carinthia.....	342,656
6. Carniola.....	475,487
7. Goertz, Gradisca, Istria, and Trieste	566,666
8. Tyrol and Vorarlberg.....	878,733
9. Bohemia.....	5,153,602
10. Moravia.....	2,008,572
11. Silesia.....	493,825
12. Galicia.....	5,147,021
13. Bukovina.....	516,418
14. Dalmatia.....	446,660

Total.....19,750,318

Adding army, and travelling population—about.....20,205,000

II. Trans-Leithan Provinces (Hungary):

15. Hungary.....	10,814,206
16. Croatia and Slavonia.....	962,081
17. Transylvania.....	2,095,215
The Military Frontier.....	1,181,502

Total.....15,002,954

Adding army, and travelling population—about.....15,348,000

Total of I. and II., or the whole monarchy, 85,553,000

In no country of the world is the difference of nationality of so great political importance as in Austria, as it has been the primary cause of all the territorial losses which the empire has suffered since 1815, and of nearly all the commotions which still threaten its unity. According to the calculations of the Imperial Bureau of Statistics, the statistics of nationalities, in both cis-Leithan and trans-Leithan provinces, were, in 1864, as follows:

NATIONALITIES.	CIS-LEITHAN PROVINCES.		TRANS-LEITHAN PROVINCES.		TOTAL.*	
	Pop. in thousands	Per cent.	Pop. in thousands	Per cent.	Pop. in thousands	Per cent.
Germans.....	6,963	35.5	1,670	11.3	8,783	26.4
Czechs, Moravians and Slovaks.....	4,638	23.7	1,763	11.9	6,512	18.6
Poles.....	2,340	11.9	2,380	6.8
Ruthenians.....	2,490	12.7	450	3.0	2,938	8.5
Southern Slavi.....	1,630	8.6	2,379	16.0	4,130	11.7
Magyars.....	18	0.6	5,313	35.8	5,401	15.4
Western Rumanians.....
Eastern Rumanians.....	581	3.0	1	...	599	1.6
Israelites.....	202	1.0	2,635	17.3	2,834	8.2
Gypsies.....	638	3.5	493	2.9	1,121	3.2
Bulgarians.....	150	...	153	...
Armenians.....	6	0.6	26	...	27	...
Other races.....	7	...	11	1.3	17	0.6

The religious statistics, in 1867, were, according to the calculations of the Statistical Bureau, about as follows (population expressed in thousands):

	Cis-Leithan.	Trans-Leithan.	Total.*
Catholics—Latin.....	15,786	7,130	22,916
Greek.....	2,306	1,496	3,802
Armenian.....	4	9	13
Total of Roman Catholics.....	18,078	8,627	27,139
Oriental Greeks.....	490	2,630	3,166
Evangelical (Lutherans and Reformed).....	351	2,068	2,425
Unitarians.....	54	55
Israelites.....	688	428	1,121
Other sects.....	6	2	8

A ministry for the affairs common to the whole monarchy, *Reichs-Ministerium*, was appointed on the 24th of December, 1867, consisting of the following members: Count *Friedrich Ferdinand von Beust*, Minister of Foreign Affairs, and of the Imperial House (since October 30 and November 12, 1866), Chancellor of the Empire (June 23, 1867); Minister of State (December 24, 1867); Baron *Franz von Becke*, Minister of Finances (December 24, 1867); Baron *Franz Kuhn von Kuhnfeld*, January 18, 1868.

The ministry for Austria Proper, or the cis-Leithan provinces (appointed December 30, 1867), was composed in December, 1868, as follows: the Prime Minister, *Prince Carlos Wilhelm von Auersperg* having resigned in September, 1868); Count *Edward von Taaffe*, President of the Council, *pro tem.* (September, 1868). Minister for the Defence of the Country, and Public Safety; *Ignaz von Plener*, Commerce; *Leopold Hasner*, *Chevalier von Artha*, Public Worship and Education; *Karl Giskra*, Interior; *Edward Herbst*, Justice; *Rudolph Brestel*, Finances; *Johann Berger*, without portfolio; Count *Alfred Potocky*, Agriculture.

The Parliament of Austria Proper consists of two Houses. The Upper House, in 1868, contained 11 princes of the imperial house; 56 hereditary members, who are chiefs of noble families, possessing very extensive landed possessions; 9 archbishops, and 7 others, having the rank of bishops; finally, of 77 members appointed by the Emperor for life. President of the House, *Prince Joseph von Colloredo-Mansfeld*. The House of Representatives consists of 203 members, sent by the provincial Diets. President of the Chamber, *Moriz von Kaisersfeld*.

In the budget of 1868, for the whole monarchy, the estimates of expenditure and receipts were as follows:

Expenditures.		Austrian florins.
1. Common Ministry for Foreign Affairs.....	4,375,231	
2. Common Ministry of War.....	97,914,192	
(1.) for the Army.....	8,455,677	
(2.) for the Navy.....	223,000	
3. Common Ministry on Finances.....	223,000	
Total.....	110,968,090	
Receipts.		
Receipts of Ministry of War.....	3,298,900	
Receipts from Customs.....	7,200,000	10,610,900
Receipts from Consulates.....	112,000	
Remaining.....		100,357,190

* Inclusive of the army.

* Inclusive of the army.

Of which sum the cis-Leithan provinces furnish 70 per cent., or 70,250,088; and the trans-Leithan provinces 30 per cent., or 80,107,157.

The budget of 1868, for the cis-Leithan provinces, was as follows: Receipts, 817,886,591; expenditures, 822,892,490; deficit, 5,555,899. The public debt, on December 31, 1867, was 3,025,315,896 florins; on December 31, 1866, 2,919,717,689 florins.

The strength of the army on the peace and war footing was, in 1868, as follows:

	Peace footing.	War footing.
Infantry.....	153,700	608,447
Cavalry.....	89,329	43,705
Other troops.....	48,072	105,019
Total.....	236,001	756,171

In addition to these troops, there were "Troops of Public Safety," consisting of eleven commands of gendarmes, and the corps of military police; together 7,927 men.

The navy consisted, in 1868, of 45 steamers, with 12,756 horse-power and 529 guns, and 16 sailing-vessels, with 76 cannons. The merchant marine, in 1868, consisted of 7,886 vessels, together of 324,415 tons.

The liberal ministry, which had been appointed, in December, 1867, for the cis-Leithan countries, showed a firm determination to carry through constitutional principles. Dr. Giskra, the Minister of the Interior, in January, issued a circular to the chief officials in the provinces, announcing that as in future all members of the administration are bound to swear to inviolably observe the fundamental laws of the empire, so also must those who have already been sworn now make a fresh declaration, swearing fidelity to the new constitution. Nobody is to be forced to make this declaration. It is not a mere formality, but a political act of national importance. Besides inviolable fidelity to the Emperor, there will be required from all functionaries an unconditional observance of the constitution and fundamental laws. The minister the more emphatically requires sincere devotion and stainless fidelity to the constitution, since he is responsible for all acts of the internal administration. Treachery and hostility to the constitution, he says, must be regarded as quite as grave a dereliction of duty as any other violation of the official oath. Mere indifference or neutrality to the constitution is not sufficient. In conclusion, the minister requires from the officials strict punctuality, quick transaction of business, a thorough emancipation from formalism, constant willingness in their communications with the people, disinterested impartiality, and the maintenance of their social position by an irreproachable private life. Then will the Austrian officials be the most efficient interpreters of the constitutional idea.

In a second circular to the provincial governors of Upper Austria and Styria, Dr. Giskra calls attention to the agitation fo-

mented by the clergy in the above-named districts against the new constitution, and instructing the governors to warn the clergy against encouraging intrigues. The governors are desired to inform the bishops that the Government has no intention of interfering with the clergy in the execution of their spiritual duties, but that it also demands that they should not consider themselves above the laws. In case of non-compliance, says the circular, the Government will be compelled to bring the disturbers of the public peace before the tribunals.

The two Houses of the *Reichsrath* adopted in April and May several important laws intending to introduce equality of civil rights for all inhabitants of the empire, and restricting the influence of the church. The following is an abstract of the most important of these laws:

The law concerning civil marriage consecrates, for the benefit of all citizens, the right to contract a lawful union outside of the Catholic or any other church, and without the intervention of the clergy of any sect whatever.

The law relative to primary instruction restores the principle of the civil authority in the public schools founded and maintained by the state; it takes away from the clergy the exclusive direction of such instruction.

Article 1 of the law, on the subject of profession of faith, declares invalid every engagement made with the heads or the subordinate officers of any church or religious society concerning the profession of faith in which the children (of the party) are to be brought up. (This refers to the solemn engagement required in the Catholic Church as a condition of its assent to such a proposed marriage, that the children of mixed marriages shall be brought up as Catholics.)

Article 4 sanctions in the most absolute manner the principle of liberty of conscience. At the age of fourteen years every one has the right of freely choosing his religion according to his own convictions, and the civil authority is bound in case of need to protect this free choice. Before that age legitimate children follow the religion of their parents, if both belong to the same faith; illegitimate children follow the religion of their mother. In the case of mixed marriages the son follows the religion of his father, the daughter that of her mother; this arrangement may, however, be modified by the contract of marriage.

After the age of fourteen every one may freely change his religion. Notice of such a change must be given to the civil authorities, in order that it may have its legal effect.

The provisions of the civil and penal codes, which disinherited any one who should abandon the Christian religion, are annulled by article seven. The same is true of those sections which characterized as crimes all acts tending to pervert any one from Christianity, or the propagation of doctrines contrary to the Christian religion.

According to articles 9 and 10, no one can be bound to contribute, in money or in kind, to the support of a form of worship not his own. The same provision applies to contributions for schools, unless the adherents of different sects have agreed to the support of a common school. Articles 12 and 13 regulate the question of cemeteries until the passage of a special law on the subject. The police of the cemeteries is under the jurisdiction of the civil authorities of the parish. No religious community can refuse burial in its cemetery to a member of another church, either first, in case of an interment in a family vault, or second, if there be in the parish where the death occurs no cemetery belonging especially to the church or religious society of which the deceased was a mem-

ber. Finally, by article 14, no one can be compelled to abstain from work on days celebrated as *fetes* by any church not his own.

The bishops of Austria made a decided opposition to all these laws. While the one on civil marriage was under consideration in the Lower House of the Reichsrath, fourteen bishops addressed to the president of the ministry a letter, in which they express apprehension that, by the first article of the fundamental laws, the Church will be deprived of the right of settling her own affairs. In reply to this letter, the president of the ministry, Prince Auersperg, declared that during the debate on the bill in the Reichsrath the most ample opportunity was given for the free discussion of its provisions, an opportunity which was not neglected; that no present law empowers the courts to take cognizance of the question of religious teaching; and as to the administration of the Church's own affairs, guarantees for the future are afforded by articles 14 and 15 of the constitutional law. The Government, Prince Auersperg says, entertains the highest regard for religious liberty, and would at all times be ready to afford powerful support to the authority of the church, but equally, as the Government has no intention of passing beyond the limits of state authority, just as little can it assist in this being done by others. The Government, therefore, declines entering upon that part of the remonstrance which, even although unintentionally, makes the obligations imposed upon state officials by the constitution the subject of an interpretation calculated to lead the sentiment of duty in the minds of those officials astray.

In June, the Pope, in an allocution, complained of those new laws as a one-sided violation of the Concordat, concluded in 1855, between the Austrian Government and the Papal See. (*See ROMAN CATHOLIC CHURCH.*) The Chancellor of the Emperor, Baron von Beust, addressed, on July 8d, to Baron von Maysenburg, the Austrian ambassador in Rome, a reply to the the allocution, of which the following are the most essential paragraphs:

We cannot (it says), in the first place, admit the obligation which imposes upon the Holy See the necessity of following certain precedents, and of adopting toward Austria the same proceedings as toward other countries, of which the Holy See has had to complain. Is it possible, in fact, to draw any comparison? Have we attacked the territory or property of the Church? Have we oppressed the Catholic religion and its ministers? Putting aside examples which do not bear on the case, we may, I think, boldly affirm that there is no country in Europe where the Catholic Church has so privileged a position as in Austria, notwithstanding the laws of May 25th. The circumstance ought to have been taken into account before the imperial Government was confounded in the same reprobation with other Governments which were in reprobation to the Church and the Catholic religion in a different way. We can understand that the Holy Father may have felt it to be indispensable to protest against the laws which modify the situation created by the Concordat of 1855. We fully expected

a proceeding of this kind, and we might have accepted it silently, even if its form were less conciliatory than we permitted ourselves to hope. But what we cannot pass over without objection is, the condemnation hurled against the fundamental laws on which the new institutions of the empire are based. These laws were not the subject of dispute, and, by attacking them as it has, the Holy See deeply wounds the national feeling, and gives to the present difference a meaning that is very much to be regretted, even in the interest of the Church. Instead of simply contesting this or that application of the principles which form the basis of the present Government of Austria, and which are the fruit of the happy accord between the peoples of the empire and their sovereign, it is the principles themselves that are condemned. The Holy See thus extends its representation to objects which we can by no means admit to be within its authority. It even opens a question which already produced only too much excitement, by directing men's minds to matters where political will be associated with religious passions. Finally, by condemning laws which include the principle of the liberty of the Church, and thus offering it compensation for the privileges it loses, it renders more difficult a conciliatory attitude of the Government. It may not be useless to remark here that these laws expressly guarantee to the Church the property of the wealth it possesses in Austria. This stipulation proves that the laws in question are not hostile to the Church, since they maintain to her those rights of which she has been deprived in so many other countries. It is not for me to judge in what measure this last consideration ought to mitigate the judgment of the court of Rome. What I have not a shadow of doubt about is, that the people of Austria will find consolation in remembering that more than one very Catholic nation is subject to legal arrangements of the same kind, which yet live in peace with the Church, and that there is especially one great and powerful empire in Europe whose tendencies toward progress and liberty have always been allied with very decided attachment to the Catholic faith, and which, though governed by laws quite as abominable, has, up to the latest moment, been blest with the indulgent sympathies of the Holy See. My dispatch of the 17th of June last, anticipated the bad consequences which the allocution would produce, if it was not worded in very moderate language. I regret extremely that the court of Rome did not pay more attention to these anticipations. They have been completely realized. I do not think the Catholic population of the empire have more zeal now than they had before for the interests of their religion. On the contrary, we see an increased ardor in the attacks directed against the Church, the clergy, and the Pope. This hostility would have been confined within the narrowest limits, and would have been easily appeased, if the special questions affected by the laws of May 25th had alone been treated of in the Papal allocution. Before concluding, I must here also express the painful surprise which the appeal addressed to the Hungarian bishops in the closing sentences of the allocution has produced. It seems to me that Rome ought to be thankful for the perfect tact and reserve with which these delicate matters have been hitherto treated in Hungary. It would be undesirable in every point of view to raise new differences, and thereby to augment the embarrassments which already exist. But it is especially in the very interest of the court of Rome that it appears to us inopportune to arouse the national susceptibility of the Hungarians. The appearance of foreign pressure would produce in that nation results the opposite to those which the Holy See desires, and we should see a storm raised against the legitimate influence of the court of Rome, similar to that which is raging on this side of the Leitha. These are the observations suggested to us by a perusal of the pontifical allocution. Lay them before his eminence the Cardinal Secretary of State. We

shall none the less persevere in the way we have begun. While we shall continue to maintain intact the rights of the State and respect for the laws, we shall allow the Church to enjoy in peace the liberties which our laws secure to her; and we shall endeavor to observe, in the mutual relations between Church and State, a spirit of conciliation and equity, which I hope will be reciprocal. Your excellency will be pleased to make yourself the faithful organ of these sentiments, and in doing so you will only conform to the views of the Emperor, our august master.

The Czechs, who, as may be seen from the above table of nationalities, constitute a majority of the total population of Bohemia and Moravia, kept up an active agitation for consolidating their nationality, and for securing the control of these two provinces. Most of the leaders of the national party even went so far as to demand a repeal of the union of Bohemia and Moravia with the *cis-Leithan* part of the empire, and the establishment of an equal degree of independence for the lands of the Bohemian crown as that which has been conceded to Hungary. The Czech deputies to the *Reichsrath* declined to take any part in its deliberations. A number of excited mass-meetings stirred up the national spirit. At an open-air meeting, held at the foot of the *Rip Mountain*, at which, according to the Czech journals, there were 20,000 people present, the wishes of the nation were thus expressed:

"We wish to be as prosperous and free in our own country as our fathers have been; we wish the once free Czech people to be again master of its destinies, and alone to decide on all its affairs together with its crowned King. We wish no laws to be valid in Bohemia but such as are prepared by the Bohemian Diet and sanctioned by the crowned Bohemian King, that no taxes be raised or men levied for the army except by the constitutional direction of the Bohemian King and Diet."

In order to give effect to these views, it was agreed that steps should be taken for the dissolution, as early as possible, of the present Bohemian Diet, and the election of another on the principle of universal suffrage, which should be directed to prepare a constitution for Bohemia similar to that enjoyed by Hungary; the establishment of a great political society "on a national and democratic basis;" the publication of a journal representing democratic principles, and the election of a committee of twenty-five trustworthy persons for the purpose of making the necessary preparations for these measures.

At Prague and other places serious riots took place, at which excesses were committed against German institutions. The Government, accordingly, deemed it necessary (for the first time since its appointment) to suspend the usual securities for the liberties of the individual citizens in Prague and its vicinity, namely *Surichow* and *Karolinenthal*.

The provincial Diets of *cis-Leithania* were all opened on August 22d. Important action was taken by some of them. The Lower Austrian Diet adopted a petition to the *Reichsrath* praying it to abolish the present system of indirect elections to the *Reichsrath*, and to introduce

(with the consent of the respective Diets) a system of direct elections. The Diet declares its wish to resign its present electoral rights in favor of its constituents. As it is known that several of the Diets, especially the Galician one, are as strongly in favor of indirect elections as the Lower Austrian is in favor of direct ones, it is proposed to make the change a permissive one, so that each province may decide for itself how it will conduct its elections to the *Reichsrath*.

The Galician Diet before it adjourned passed a bill abolishing the disabilities of the Jews in municipal and communal affairs. These disabilities consisted mainly in this—that the law, as it was, required that in every commune and municipality at least two-thirds of the town fathers should be Christians. As, in many Galician townships, the Jewish population is a majority of the whole number of inhabitants, this provision was complained of by the Jews as a grievance. The parties opposed to this measure were the Catholic party, the peasant members, and the Ruthenian faction.

The Tyrolese Diet refused to amend its school legislation in such a manner as to bring it into harmony with the provisions of the school law, passed by the *Reichsrath* at its last session. This is the only Diet in the purely German provinces where the liberal and ministerial party are in a minority, and where the Conservative or Catholic party is in a majority. The majority of this Diet passed an amended law, according to which the bishops will have undivided control over the common schools of Tyrol.

In January the Emperor appointed the Archduke *Albrecht* commander of the Austrian military forces, and imposed upon him the duty of inspecting the army, of organizing it in a manner fit to take the field, and of submitting the requisite proposals on the subject to the Ministry of War.

According to a report of *M. Mahy*, director of the Austrian telegraphs, the extent of telegraphs in the *cis-Leithan* countries is 1,918 German miles, with 4,617 miles of wire, besides 1,258 miles of lines used for railway signals. In the course of 1867 seventeen new offices and forty-six auxiliary stations were opened, and, in all, 858 were at work at the end of the year. Those in Hungary are 135 in number. In June, 1867, a treaty was concluded with Turkey, and in September five others with Switzerland, in virtue of which a great portion of the English correspondence with India has been diverted to the Austrian lines. In the year 1867, 2,217,929 dispatches were sent off from the *cis-Leithan* offices, producing a receipt of 1,512,922 florins. The whole revenue of the telegraphs for that year was 2,830,000 florins, and the expense 2,200,000.

A new commercial treaty was concluded with the *Zollverein*. Each party renounces all power of imposing any prohibition on the export, import, or transit of goods between their

ment. Having recovered, he was ordered to report for duty in India, but, his furlough being extended, he travelled for a time on the Continent, and, being shipwrecked on his voyage to India, did not reach headquarters till some time after its expiration. Finding that he had thus forfeited his position in the army, he resigned, and sailed from Calcutta, for China, in 1830. Observing the condition of the islands of the Indian Archipelago, and the prevalence of piracy there, he formed the determination to attempt the improvement of their condition. Returning to Europe in 1834, after the death of his father, he purchased one of the yachts of the Royal Yacht squadron, and, selecting a crew with great care, whom he drilled thoroughly in a preliminary cruise in the Mediterranean, he sailed from London, in October, 1838, for the East. Arriving at Sarāwak, a province on the northwest coast of Borneo, he found Muda Hassim, the uncle of the Sultan of Borneo, and acting Rajah of the province, carrying on an unequal contest with rebel tribes from the interior, who descended in large bands upon his territory to plunder and lay it waste. He promptly offered his assistance, and, with his guns and trained troops, soon punished the rebels so severely that they were glad to make peace. Muda Hassim at once prompted his nephew to offer the Englishman the rajahship and make him absolute governor of the province. Mr. Brooke accepted the appointment, and, selecting a council of intelligent Dyaks to aid him in administering the government, he commenced a series of reforms which, carried out through many years, entitled him to be regarded as the greatest benefactor of the native population of Borneo. He would not suffer the people of Sarāwak to be taxed for his support, but maintained himself upon his own income, and the rewards paid by the British Government for the suppression of piracy. His people had been a nation of pirates, but, by attaching the native rulers to himself by his astute measures for their welfare, and by making war upon pirates a pastime, he succeeded, in a few years, in clearing the entire archipelago of its bands of freebooters. He accustomed his people to the strict execution of justice, suffered no bribes to be given, was as accessible to the lowest and humblest of his subjects as to the mightiest; encouraged industry, commerce, and such manufactures as they were capable of producing, and so won the love of his people, that they almost paid him divine honors. The jealousy of some of the officials of the East India Company was excited, by the independence of the Rajah; they coveted his territory, and desired to squeeze from the natives the revenue which Rajah Brooke had so nobly refused, and hence they were loud in their clamors against him, to the English Government, to which he was really not responsible. Waiving his rights in the matter, however, Mr. Brooke visited England, in 1847, and courted the most thorough

investigation of his conduct. This resulted in a complete approval, in his receiving the honor of being created Knight Commander of the Order of the Bath, and a baronetcy, and of his appointment as Governor of the island of Labuan, near Sarāwak (which had been purchased by the British Government), with a salary £2,000. He still retained his office as Rajah of Sarāwak. He returned to his Dyaks and prosecuted, with even more zeal than before, his measures for their improvement and elevation. The port of Sarāwak, which at his first visit contained but 1,000 inhabitants, had risen, under his management, to a population of 25,000, and its exports from £25,000 to more than £800,000. He compiled laws, coined money, made roads, established schools, raised a regular revenue, and provided for the security of persons and property, and the strict administration of justice. But his enemies were still unsatisfied. Taking advantage of a change of administration, they procured his removal from the governorship of Labuan, thwarted his projects for making the ports of Borneo free to British vessels, and professed the utmost horror at the strictness of his rule over the lawless and thievish tribes of the interior, and the Chinese pirates, who began again to make their appearance on the coast of Borneo. The attachment of his people was strikingly manifested in 1857, when he was suddenly attacked in his house, at night, by a band of about 4,000 Chinese pirates and opium-smugglers, who hated him for his interference with their nefarious business. They burned his house, destroyed his gardens, and committed terrible havoc with his property, and he was compelled to save his own life by swimming. In the early morning, however, he had collected his faithful Dyaks, who were almost frantic with grief for the losses which the Chinese had inflicted upon him, and, leading them in person, attacked the Chinese, defeated them in several successive fights, and drove them into the jungle, with a loss of over 2,000 killed. The next year he returned to England again, and though a public subscription was made, amounting to a large sum, to reimburse his losses at Sarāwak, yet the bitter attacks made upon him by his enemies in Parliament distressed him, and probably induced a paralytic attack, from which he suffered that year. He made his residence thenceforward in Burrator, Devon, but in 1861 made two voyages to Borneo, for the purpose of suppressing an insurrection, and settling the government, which he afterward left in charge of his nephew, though he retained the title and authority of Rajah till his death. Portions of his journals have been published, and also "The Private Letters of Sir James Brooke, K. O. B., from 1838 to 1853," edited by J. C. Temples, Esq., in three vols., London, 1858.

BROUGHAM, HENRY, Lord BROUGHAM AND VAUX, a British statesman and reformer, Lord

Chancellor of England 1880-1884, born in Edinburgh, September 19, 1778; died in Cannes, France, May 9, 1868. His father, Henry Brougham, was the descendant of an ancient family in Westmoreland, and his mother, Eleonora Syme, was a niece of Robertson the historian. Young Brougham was afforded excellent advantages of education, receiving his early training in the Edinburgh High School, and being transferred at an early age to the University. He was particularly fond of mathematical studies, and at the age of eighteen or nineteen communicated to the Royal Society of Edinburgh three mathematical papers which possessed such merit as to be published in the Society's Transactions. He was, even at that age, a proficient in the highest branches of mathematical science; and late in life he often avowed the opinion that he had mistaken his calling; that he should have devoted his life to mathematical studies, and that in them he might have surpassed all previous mathematicians. After taking his first degree at the University, he spent some time in travelling on the Continent, and in 1800 was admitted to the Scotch bar. He became about this time a member of the "Speculative Club," an association for the discussion of metaphysical and political questions, and was then brought into intimacy with Jeffrey, Horner, and Sydney Smith, with whom in 1802 he participated in the establishment of the *Edinburgh Review*, to which from its commencement he was a constant contributor, and the writer of some of its most powerful and caustic articles. So versatile were his talents, and so wide the range of his knowledge, that no subject came amiss to him. He was equally at home in physical and mathematical science, history, biography, literary criticism, and politics, and even plunged into the more recondite investigations of the medical and surgical professions. With two classes of topics, however, he did not interfere, theology and poetry. For neither of these had he any predilection. He displayed marked ability as an advocate, but his known liberal opinions embittered the Tories, who were largely in the majority, against him, and the character he had acquired for eccentricity and indiscretion prevented his attaining a large practice, except in the unremunerative work of the criminal courts. In 1807, he was retained as one of the counsel in the case of the disputed succession of the dukedom of Roxburgh before the House of Lords. His argument in this case was one of his finest efforts, and attracted the attention of the nation to the eloquent young advocate, who, yet under thirty years of age, could bring such learning, research, and legal ability to such a cause. Encouraged by the warmth of his reception in London, and despairing of any speedy success in Scotland, Brougham now resolved to remove to the metropolis, and was called to the bar at Lincoln's Inn in 1808. He rose rapidly in his profession, and soon acquired a large and lucrative

practice in the common law courts, and in the northern circuit. He was employed in the winter of 1809-'10 by some Liverpool merchants to bring their grievances before the House of Commons, and ask for the repeal of the Orders in Council, and in his advocacy of their cause displayed such eloquence and legal ability, that he attracted public notice, and became a distinguished favorite of the leading Whigs, who caused his election to Parliament the same year for the pocket borough of Camelford. In Parliament his vehemence in debate, his aggressive zeal, his caustic wit, and unsparing sarcasm, combined with a remarkable and convincing eloquence, made him a welcome and valued addition to the Whig force, and a formidable opponent to the Tories. He associated himself with the most advanced Whigs, and proved a valuable recruit to Wilberforce and Clarkson, who had been, for years, struggling against the slave-trade. Within a few months after entering Parliament, he had carried the first public measure he proposed, that of making the slave-trade a felony. He was unceasing in his attacks upon the measures of the Tory Government, and in 1812 succeeded in carrying the repeal of the obnoxious Orders in Council. He had also successfully defended Leigh Hunt, the poet-editor, against a libel prosecution instituted by the Government. He had advocated Catholic emancipation, reform in the government of India, and the abolition of flogging in the army. At the general election in 1812, he boldly contested (in company with another Whig) the membership for Liverpool, against Mr. Caning and his Tory associate. But the great Tory minister was too strong in Liverpool to be beaten, and Brougham and his friend were defeated. In a subsequent canvass for a seat from Scotland, he was also defeated, and remained out of Parliament till 1816, when he was returned for Winchelsea, and again became an opposition leader. He signaled his return to the House of Commons also by a movement of inquiry into the state of education of the poor in the metropolis, which he followed, in 1818, by procuring the appointment of a commission to inquire into the abuses of the public charitable foundations of the kingdom connected with education. These efforts for the improvement of the schools and the establishment of a system of national education were never intermitted until the end sought was gained. He had acquired by this time also a high reputation as an advocate in the defence of persons prosecuted for libel or other offences by the crown. His most famous appearance in this capacity was in 1820 and 1821, when, associated with Lord Denman, he undertook the defence of Queen Caroline against the charges of the King, before the House of Lords. Both the eminent counsel knew that the result would be their exclusion for years to come from all professional advancement; but Brougham's defence was bold, able, eloquent,

expressive, his gestures animated, his diction was noble, and his voice incomparably sweet and sonorous. Then his intellect was of grand proportions, and his speech bore reading as well as hearing.

BETTS, SAMUEL R., LL. D., one of the ablest of American jurists, born in Richmond, Berkshire County, Mass., in 1787; died at New Haven, Conn., November 8, 1868. He was the son of a respectable farmer; and, after a thorough early training in his native town, entered Williams College, where he graduated with honor in 1806. After a diligent study of the law in Hudson, N. Y., he was admitted to the bar, and commenced practice in Sullivan County, N. Y., where he was winning a fair reputation, at the outbreak of the War of 1812, when he entered the army, and soon after was appointed Judge-Advocate by Governor D. D. Tompkins. In 1815 he was elected to Congress for the district comprising Orange and Sullivan Counties. At the close of the term, he declined a reelection, and devoted himself with great assiduity to the study and practice of his profession. He was for some years District-Attorney of Orange County. At that time, the bar of the State of New York was remarkable for the numerous eminent legal minds who were engaged in the practice of the profession in the courts of the eastern counties. Martin Van Buren, Elisha Williams, Thomas J. Oakley, George Griffin, Ogden Hoffman, Prescott Hall, and Thomas Addis Emmet, were the great lights of the bar, and with all of them Mr. Betts was brought in almost constant contact, and, though younger than most of them, was soon recognized as their peer in legal attainments and intellectual acumen. After about eight years of this practice, Mr. Betts was appointed by President Monroe, in 1823, Judge of the United States District Court. This position he held for the long period of forty-four years, and throughout the whole term presided over it with a dignity, a courtesy, a profundity of legal knowledge, a carefulness of research, and a patience of investigation which made him a model jurist in all the great questions brought before him. To him belongs the high honor of having shaped and settled in a great degree the maritime laws of the United States. The whole subjects of salvage, general average, wages of seamen, freighting, contracts, charters, insurance, and prizes, owe the greater portion of their present condition to the honored Judge, who has made the law so perfect and complete on these points, that the best lawyers in New York regard it as a finished code. For the first twenty years of his connection with the District Court, there was never an appeal from his decisions, and his opinions in his own court on maritime questions, and in the Circuit Court on patents, have been uniformly upheld. Every kind of question arising out of the criminal law of the United States has been before him; he has tried cases of piracy and murder on the high-seas, and discharged the whole

criminal business of a large district. The war brought before him an entirely new class of questions, affecting national and international rights; but although beyond the age of three-score-years-and-ten, the Judge bent himself to the new tasks imposed, and, with a vigor, a perseverance, and an ability rarely equalled, met the great demand of the most trying period of our history, in a manner which was creditable to himself, and reflected honor upon the country he so patriotically and faithfully served. His decisions upon the neutrality laws, and his judgments on the slave-trade, are fine specimens of constitutional reasoning and argument. As a judge, the lawyers who have had the best opportunities of forming an opinion say that Judge Betts never had a superior, and doubt if he had an equal. His bearing toward members of the bar was always gentlemanly and courteous. His judgments were regarded as the best considered on record. He conducted a case with coolness, clearness, and deliberation, allowing counsel every latitude that might tend to throw light on the matter at issue. And it may be well doubted whether any man on the bench in this country ever possessed the same amount of judicial ability. He held the place he vacated and honored for the lengthened period of forty-four years, and up to the day of his death he was still the revered and upright judge of that important court, where he pronounced numerous decisions, which are regarded as text-books of federal jurisprudence, and in after-years will be looked upon as the highest and soundest efforts of legal skill and research. In social and domestic life he was always highly esteemed and beloved; his conversational powers were unusually fine, his acquaintance with literature and men extensive, his manners courteous, and his treatment of all, especially of the young, such as to endear him to those with whom he came in contact. He did not outlive his interest in passing events, but his mind was bright and vigorous, even after the bodily frame showed signs of weakness and decay. In May, 1867, having entered upon his eighty-first year, and feeling the infirmities of age, Judge Betts retired from the bench he had so long honored, and passed the brief remainder of his life in the comforts and privacies of his home at New Haven.

BOLIVIA, a republic in South America. Provisional President since the revolution of December, 1864, General Mariano Melgarejo. The limits of the republic have not yet been fixed, and the statements of the area therefore widely differ. A treaty concluded between Bolivia and Chili, on August 10, 1866, fixed the 24th degree S. latitude as the dividing line between these two republics. Another treaty for regulating the frontier between Bolivia and Brazil was concluded on March 27, 1867. By this compact Bolivia resigns her claims to the western bank of the river Paraguay, a territory of about 18,000 square leagues.

The area is now (Behm *Geogr. Jahrbuch*, vol. II., Gotha, 1868) estimated at 535,769 square miles. The population of the nine provinces, into which the republic was divided in 1858, was as follows:

La Paz.....	475,822	Veni.....	55,973
Cochabamba...	349,891	Atacama.....	5,273
Potosi.....	291,229		
Chuquisaca.....	223,668	Total	1,744,351
Oruro.....	110,931	Indians	24,500
Santa Cruz.....	153,164		
Tarija.....	88,900	Total	1,768,851

The capital, La Paz, has 76,372 inhabitants.

The army formerly consisted of 2,000 men, but was, in 1866, in consequence of the war with Spain, raised to 3,000 men, 500 of whom were cavalry. In 1867 the revenue was 2,471,000 piasters, and the expenditures 2,435,000 piasters. The revenue in 1865 was estimated at about 3,000,000 piasters, nearly one million and a half being a tribute from the Indians, 450,000 import duties, 815,000 export duties, and the remainder the proceeds of mines, stamp duties, etc. There is neither a direct tax nor a public debt, nor paper money. The imports are valued at about 5,570,000 piasters.

A new Congress was elected in 1868, the number of deputies elected by the several provinces being as follows: Chuquisaca, 8; La Paz, 8; Cochabamba, 6; Potosi, 8; Oruro, 4; Santa Cruz, 4; Tarija, 4; Cobija, 2; Veni, 2; Tarate, 6; Mejillones, 2. The new Congress met on August 6th, and confirmed all the acts of President Melgarejo, inclusive of the treaty of Bolivia. As some deputies (especially Señor Muñoz Cabrera) made, however, a violent opposition to the treaty, amidst the applause of the galleries, the Congress was dissolved at the point of the bayonet.

In September, President Melgarejo issued a decree extending the rights of citizenship to Americans. The articles of the decree are:

1. No American shall be considered a foreigner in Bolivia.

2. Every American, of whatever nationality he be, can obtain Bolivian citizenship by alone declaring in writing, in the presence of any of the prefects, his wish to settle in the republic. His name being inscribed in the civic register, the same prefect will extend him his citizenship papers.

3. Americans may in like manner freely exercise in the republic their liberal, scientific, literary or artistic professions, in all cases, on presenting their respective diplomas, credentials, or titles extended to them by competent and legalized authority, in proper form for its examination and acceptance by the national government.

4. The present decree shall be considered as confirming that of the 18th March, 1866.

The Minister of Foreign Affairs was directed to communicate both decrees to the governments of the American nations, soliciting at the same time the adoption of like measures to extend to the whole continent the privileges accorded.

By a decree of August 27th, a contract was made with Colonel George E. Church, engineer of New York, for the establishment of a "National Bolivian Navigation Company,"

which is to navigate by steamers and with other vessels the Bolivian rivers which are tributary to the Madeira, the principal affluent of the Amazon. The Government conceded in favor of the company the following privileges and rights:

1. In the populated ports it gives in property to the company one square mile of State lands, and at the points where new ports should be founded to facilitate commerce, according to the judgment of the company, a square of the same lands upon the river margins, which shall have two leagues front and two of depth, the company having the right to make that use of them which may be most to its interests.

2. The Government of Bolivia will pay to the company \$10,000 gold, the day upon which the first steamer moves upon the waters of the Mamore, as a premium offered by the Government in supreme decree of 1853.

3. The same Government concedes to the company the right to cut wood for burning, exportation, and other uses, in the forests which have no private owner, and that of collecting 8,000 head of horned cattle from the herds owned by the State in the department of the Beni—it being the obligation to make this collection in the method most to the advantage of the Government and the company.

4. The Government guarantees to the company the free exportation of the products of the country without paying duties or imposts of any class. The importation of merchandise and foreign effects will only pay half of the tariff of duties collected upon those imported by Cobija. One and the other privileges will continue for ten years, counting from the day upon which the navigation of the Madeira may be free from impediment by the clearing of the rapids, it being impossible to recover any class of imposts up to this time. This term of ten years expired, the Government can only levy upon the merchandise imported by the Madeira a duty inferior by one-third part to that recovered by Cobija, until the twenty-five years mentioned in the following article have expired.

BRADBURY, WILLIAM B., a musical teacher and composer, and, since 1854, one of the most successful piano manufacturers in the United States, born in York, Maine, in 1816; died in Montclair, N. J., January 7, 1868. Both his parents were well known as excellent singers, and from them he inherited that musical taste, the development of which has rendered his name a household word. Before he was fourteen, he had mastered every instrument that came in his way; but until 1830 he had never seen an organ or a piano. In that year he moved to Boston, where he formed the acquaintance of Dr. Lowell Mason and his coadjutor, George J. Webb, who at that time stood at the head of the musical celebrities of New England. In 1834 he was known as a practical organist, and six years later began teaching in New York under the most flattering auspices. His free singing-schools in this city and Brooklyn became very popular, and, on his concert nights, the old Tabernacle, between Franklin and Leonard Streets, on Broadway, was filled to overflowing. On these occasions, his performers, all children, numbered from five hundred to one thousand. These concerts gave Mr. Bradbury great notoriety, and secured him hosts of friends. He had many enemies, too, among members of his profession, and they

affecting the lungs of cattle, which was only stamped out in Massachusetts with so extensive destruction of the animals affected by it, two or three years since, has been, during the past year, endemic in several sections of the country. Several of the dairy districts of New York, especially Long Island and the Dutchess County milk-producing region, and portions of New Jersey, Pennsylvania, Maryland, and Virginia, have suffered seriously from this disease. The contagiousness of this disease is not fully settled, though many of the most eminent veterinarians are inclined to regard it as contagious, but its epidemic tendency is well known. It is more generally fatal in cattle than in horses, and the only safe course to adopt is, to kill at once any animal affected with it, isolating it, on the first appearance of symptoms of the disease, from the rest of the herd, and using disinfectants freely and plentifully.

8. Late in the year, in October and November, a disease of great severity, and speedily fatal, made its appearance, almost simultaneously, at widely-distant points. In Polk County, Iowa, a hundred cattle or more died very suddenly, after manifesting, for a few hours, extreme pain, accompanied with frothing at the mouth, weakness and stupidity, and general torpor, and indisposition to rise or move. In Rhinebeck, Dutchess County, N. Y., six cattle died with similar symptoms, and in West Springfield and North Hadley, Mass., five more died, at intervals of a week or two, after a very brief illness, with the same symptoms. There were no indications of contagion here; the season was too far advanced for Spanish fever, and the symptoms were not those of pleuropneumonia. Professor Gamgee investigated some of the cases with care, and gave it as his opinion that they had been poisoned by eating freely of smutty corn and corn-fodder which had become extensively smutted in the tassels. There was an unusual quantity and size of this fungous growth upon the corn in Iowa, Eastern New York, and Massachusetts, and it is said to be a virulent poison. Many intelligent stock-raisers, however, discard the "smut theory," but offer no satisfactory one in its place.

4. The endemic disease of abortion in cows, which has so seriously affected the dairy interests in New York, New Jersey, and Pennsylvania, still continues, and the protracted and elaborate investigations which have been made seem neither to have discovered its cause nor a remedy for it.

A remarkable and very fatal epidemic has existed among horses in Texas for two winters past, which seems to be of the nature of the cerebro-spinal meningitis which, in 1863, affected both man and beast in North Carolina. Intelligent officers of the Quartermaster's Department report that it first appeared during the winter of 1866-'67, at Camp Verde and Fort Mason, the former sixty-two and the latter one hundred and sixteen miles, in a north-westerly direction, from San Antonio. So far

as could then be learned, it was a disease of the stomach and brain. Horses were seized with apparently great pain, and became very restless, plunging and rearing in a frightful manner, and, after a few hours, died. *Post-mortem* examinations showed an inflamed brain, and the stomach very full of undigested food, greatly distended, and also somewhat inflamed. The disease was very rapid and fatal. The private horses of officers suffered as well as public ones, and also the animals of citizens in the neighborhood. In the fall and winter of 1867-'68, a similar disease broke out at the San Antonio Depot, and extended to Austin, though less prevalent there. The symptoms were much the same as before, perhaps less aggravated, but accompanied by a disease of the throat and neck. At first a good many animals were lost, but in the course of a few weeks the disease was mastered by a skilful veterinary surgeon, after which but few animals were lost. The treatment most successful was, in mild cases, simply blistering the throat, and more or less of the neck, as the severity of the case seemed to require, administering expectorants, and feeding only bran "mash." After the acute form of the disease had passed away, the animal was carefully fed on bran, and quinine was administered. In severe cases, blistering of the throat, neck, and top of the head was resorted to with good success, as also bleeding at the neck. In all cases the animal was "smoked" with a mixture of tar, feathers, and leather, intended to keep open the air-passages of the nose and head. When this was not done, the symptoms of suffocation and suffering were far greater. In no cases were purgatives used, unless the constipation was extreme, as they seemed to have a bad effect. This was the whole treatment, and it was very successful. *Post-mortem* examinations showed great inflammation of the throat, glands of the neck, trachea, stomach, and brain. There were also found very large effusions of serum in the cavity of the brain. On the appearance of the disease at the San Antonio depot the most rigid police of the stables was enforced, and disinfectants were freely used under which, and the treatment already alluded to, it disappeared. The disease manifested itself at other military posts in Texas during the same winter. The cause of the disease, after careful observation and study, could not be conclusively ascertained.

CENTRAL AMERICA. There are at present in Central America five independent republics: Guatemala, San Salvador, Honduras, Nicaragua, and Costa Rica.

1. GUATEMALA.*—President (1865–1869) Vincente Cerna. The State ministry, in 1861, consisted of the following members: Foreign Affairs, Marquis Pedro de Aycinena; Interior, Justice, Instruction, and Worship, Manuel Ech.

* A full account of the movement of commerce from 1867 to 1896 is given in the ANNUAL AMERICAN CYCLOPEDIA for 1897.

verria; Finances and War, Manuel Cerezo. American minister at Guatemala, Fitz-Henry Warren (since 1865). Area, 44,778 square miles. Population, according to the census of 1865, 1,180,000. Population of the capital, Guatemala, about 40,000. The revenue, in 1866, was \$1,359,340; the expenditures, \$1,850,083. The public debt, in 1865, amounted to \$2,461,978. The regular army consists of 3,200, the militia of 13,000 men. The imports, in 1867, amounted to \$1,574,587; the exports to \$1,996,450. The official returns for the port of San José de Guatemala for the months of January, February and March, 1868, show the exportations of produce to amount to about \$600,000 during that period, of which the coffee amounted to 3,759,982 lbs., valued at \$450,955, and sugar 1,601,809 lbs., valued at \$80,098. A telegraph line was completed in 1868, from the capital to Amatitlan.

The House of Representatives opened its regular sessions on the 25th of November. The President of the republic delivered the usual address, in which he says that the relations of the state with the neighboring republics of Salvador, Honduras, and Nicaragua, are of the most friendly nature, as also with the United States and Europe. Peace and tranquillity reign through the interior, and thus the public authorities have been able to devote all their attention to the improvement of the country, the protection of industry, and the development of the rich natural resources of the state. Roads have been opened and improved throughout the department; public edifices have been repaired, and schools have been established as far as the limited means of the population would admit. Steps have been taken to favor the production of indigo—in former times a favorite staple of Guatemala. A new contract for five years has been entered into with the Panama Railroad Company, for continuing their line of steamers semi-monthly between Panama and San José at an annual subsidy of \$8,000, the company agreeing to touch at the ports on the coast of Suchitepequez, during the months of January, February, March, and April, to take off the crops from that part of the republic. The law of the past session, passed with the object of encouraging immigration, has not been without good results, and further steps have been taken to favor the immigrants arriving on the north coast. The cultivation of sugar is increasing rapidly under the liberal law passed by the last Congress, and great hopes are entertained of the progress of its cultivation in the future. Measures are being adopted for the improvement of public prisons, and Sisters of Charity have been employed to look after youthful delinquents and attend in educating them. The financial condition of the country is favorable, the rents being considerably in advance of the expenses.

2. SAN SALVADOR.—President (1865–1869), Francisco Dueñas. Area, 7,335 square miles. Population about 600,000. The budget of 1866

estimates the receipts at \$628,252; and expenditure at \$524,329. According to a report made to Congress in the spring of 1867, the actual surplus of receipts over expenditures, in 1866, amounted to \$59,000. In the budget for 1867, the revenue amounts to \$783,718, the expenditure to \$693,008; in the budget for 1868, the revenue at \$832,150; the expenditure at \$745,875. The consolidated public debt amounts to \$650,000; the nonconsolidated to \$80,000. Imports in 1867 were valued at \$1,680,000; and exports at \$585,000 (the principal articles of export are indigo, sugar, cotton, coffee, etc.). In 1867, 26 American (United States) steamers entered the ports of the republic, and 27 sailing-vessels (6 North American, 7 English, 6 South American, 3 French, 3 German, and 2 Italian. The standing army consists of about 1,000 men; the militia of 5,000.

An election for President was held in 1868, and resulted in the reelection of the present incumbent, Francisco Dueñas, for the term of 1869 to 1873.

The extradition treaty was concluded between San Salvador and Italy.

3. HONDURAS.—President, José Maria Medina (February, 1866, to February, 1870). Area, 47,092 square miles. Population, about 350,000 inhabitants. The republic is divided into seven departments. The capital, Comayagua, has about 18,000 inhabitants. Minister of the United States at Comayagua, R. H. Rousseau (appointed in 1866). Receipts of the Government, about \$200,000; expenditures, \$183,000; annual surplus, about \$17,000. An internal debt of about \$800,000 is paid off by the annual surplus of the revenue. Value of imports (mostly from Great Britain), about \$750,000; exports, \$825,000. Imports now generally come to the port of Amapala, on the island of Tigre, in the bay of Fonseca, which was opened in February 1, 1868; formerly to the port of Omoa. On the Atlantic coast the port of Ruatan has been opened. The legislature of the republic approved a contract made by two of its citizens with some agents in Europe for the establishment of a colony of German and Swiss emigrants. The President of the republic has received the title of Captain-General of the Forces.

4. NICARAGUA.—President (1867–1871), Fernando Guzman. Area (after the reannexation of Greytown and the Mosquito Territory), 58,169 square miles. Population, about 400,000. Capital, Managua, with about 10,000 inhabitants. Imports were valued, in 1865, at about \$1,154,000; exports at about \$722,000. During 1867, the commerce of San Juan del Norte (Greytown) was as follows: Exportation, \$705,731.06; importation, \$487,209.29; balance in favor of the republic, \$218,521.77. On the Pacific side the result is different. The business of Corinto for the same year was: importation, \$284,867.18; exportation, \$188,289.33; balance against the republic, \$96,077.-

85. The revenue, in 1865, amounted to \$632,471; the expenditures to \$630,120; public debt, to about \$4,000,000.

In March, the Legislature of Nicaragua ratified a "treaty of friendship, commerce, and navigation" with the United States, which had previously been sanctioned by the Senate of the United States:

ARTICLE 1 declares that there shall be perpetual amity between the two nations.

ART. 2 declares there shall be reciprocal freedom for the citizens and subjects of both nations to come and go, remain, reside; for their ships to enter all ports; to occupy homes and warehouses, and enjoy the most complete protection and security; also for their ships of war. Such liberty to be subject to the laws of the country in which it is exercised. The coasting trade of each country is reserved to its own citizens or subjects.

ART. 3 puts both nations on the footing of the most favored nation.

ART. 4 forbids other and higher duties on imports. ART. 5 forbids other and higher duties on account of tonnage, lights, etc.

ART. 6 makes the duties on United States imports the same, whether made in American or Nicaraguan bottoms, and *vice versa*.

ART. 7. Shipmasters and others to manage their own affairs or employ a broker, factor, agent, or interpreter as they please. Absolute freedom also for buyer and seller. The citizens of both nations to have free access to the courts and enjoy in every matter the same rights and privileges as native citizens.

ART. 8 gives the citizens and subjects of both the right to hold and inherit real estate within the States of the American Union or the republic of Nicaragua, in which foreigners shall be entitled to hold or inherit. But in case real estate situated within the territories of one of the contracting parties should fall to a citizen of the other party, who could not on account of his being an alien be permitted to hold such property in the State in which it may be situated, there shall be accorded to him such time as the laws permit for him to sell it and withdraw and export the proceeds thereof, without paying to the government other charges than would be paid by the inhabitant. In case of intestates, the minister of the country to which the deceased belonged shall take charge of his effects for the benefit of his lawful heirs and creditors.

ART. 9, section 1, permits citizens of both parties to intermarry with natives of the other party, hold and possess, by purchase, marriage, or descent, any estate, real or personal, without thereby changing their national character, subject, however, to the laws which may exist or which may be enacted in this respect.

Section 2 exempts citizens of both countries from forced loans and military service by the other, but obliges them to pay the same lawful taxes as the natives of the country they may reside in.

Sec. 3 provides for full compensation, paid in advance, for all property taken for a public object.

Sec. 4. Citizens of both countries to travel as they please to every part of the country of the other party.

ART. 10 contemplates the appointment of consuls.

ART. 11. In case of interruption of friendly relations, the citizens of the other party who may be residing on the coast shall have six months to close up their business and leave, and, if residing in the interior, twelve months. In case of rupture, citizens who are in settled employment shall have the privilege of continuing such trade so long as they behave peaceably. Debts between individuals, property in public companies, and shares of companies, shall never be confiscated, nor detained, nor sequestered.

ART. 12 gives civil and religious liberty, provided such citizens respect the religion, laws, and constitution of the country in which they may be residing and provides for the burial of the dead.

ART. 13 provides for aid or comfort to vessels of war, driven by stress of weather or chased by pirates or national enemies into the ports, bays, and harbors, of the other party's country.

ART. 14 grants the right of transit between the Atlantic and Pacific Oceans. The republic of Nicaragua reserves the right of sovereignty over the route.

ART. 15. The United States to extend their protection and guarantee the neutrality and innocent use of the same and to use their influence to induce other nations to join in the guarantee of neutrality. The republic of Nicaragua to establish a free port at each end of the route, which United States vessels can frequent free from tonnage dues. The United States, on giving notice, to have liberty to convey troops across the route, provided these troops are not to be used against any Central American nation friendly to Nicaragua. The United States Postmaster-General to be at liberty to transport the mails across the route.

ART. 16. The republic of Nicaragua agrees to employ military force for the protection of persons and property passing over any of the routes, but, upon failure from any cause, the United States may, with the consent or at the request of the republic of Nicaragua, employ force for this and no other purpose. In exceptional cases of unforeseen or imminent danger the United States forces may act without such consent previously obtained—such exercise of force to be subject to the laws of the United States Congress.

ART. 17. The United States protection is conditional on the good faith of the company controlling the route, but protection is not to be withdrawn without six months' notice.

ART. 18 makes article 14 inoperative if there is now in existence any valid concession by the Nicaraguan Government having reference to the interoceanic route, and the protection of the United States stipulated under article 15 is reserved until the owners of such concession recognize the concession made in this treaty to the Government and citizens of the United States.

ART. 19. After ten years from the completion of a railroad or any other route of communication from the Atlantic to the Pacific, the company in possession shall not directly or indirectly divide by the issue of stock more than fifteen per cent. per annum. Whenever the rates produce a greater revenue, they shall be reduced.

ART. 20. The treaty to last fifteen years, and terminate by twelve months' notice on either side at or after that time.

ART. 21. The treaty to be ratified and the ratification exchanged within one year, or sooner if possible, at the city of Nicaragua.

5. COSTA RICA.—The President of the republic for the term of 1866 to 1869, Dr. José María Castro, was overthrown by a revolution in October, 1868, and Jesus Jimenez declared Provisional President. Area, 21,495 square miles. The population, in 1844, amounted to 79,982; in 1864, to 135,000, of whom 12,000 were independent Indians. The capital, San José, has about 80,000 inhabitants. Revenue about \$1,000,000. There is no public debt.

The standing army consists of 1,000 men the militia of 5,000. The imports, in 1866 amounted to \$2,000,000, and the exports to \$1,988,900. The movement of shipping of the port of Punta Arenas, which, until 1867, was the only one open to commerce, was as follows: Arrivals, 71 vessels (18 English, 6 German, 4 French, etc.), of about 72,000 tons

clearances, 67 vessels (8 English, 8 German, 3 French, etc.), of about 69,000 tons. On September 23, 1867, the port of Lomon, on the Atlantic side, was also opened to commerce.

CERIUM. M. Wöhler has published an account of his researches on cerium. He obtained the metal by the following process: A solution of the brown oxide of cerium in hydrochloric acid was mixed with an equivalent quantity of chloride of potassium and of chloride of ammonium, and the whole evaporated to dryness. The mass was then transferred to a platinum crucible, and heated till the whole of the chloride of ammonium was volatilized and fusion obtained. The fused mass was poured out and mixed, while still warm, with fragments of sodium, and introduced into an earthen crucible previously heated to redness. When the contents had again fused, and the excess of sodium volatilized, the crucible was removed from the fire; the deep-gray resulting mass was filled with little metallic globules. In a second experiment a large piece of sodium was thrown into a red-hot crucible containing chloride of potassium, and then the coarsely-powdered chloride used before. In operating in this way, a larger proportion of metallic globules was obtained, some of which weighed 50 to 60 milligrammes. These metallic globules appear to consist principally of cerium. The color of the metal is intermediate between the color of iron and that of lead. The metal is lustrous when polished; it is malleable. Its density is about 5.5 at 12°. Exposed to the air, it loses its lustre, and becomes slightly blue. It feebly decomposes water at 100°. Hydrochloric acid dissolves it with energy; concentrated nitric acid converts it into clear brown oxide, and the dilute acid dissolves it. By evaporation, a white salt is obtained, which leaves, after calcination, a brown oxide, insoluble in nitric acid and in dilute sulphuric acid. Concentrated sulphuric acid slowly dissolves this oxide, forming a yellow solution which shows the reactions of ceric salts. Hydrochloric acid dissolves this oxide with disengagement of chlorine, forming a colorless solution. When a globule of cerium is heated by the blow-pipe to dull redness, the metal inflames and burns vividly, forming brown oxide; but, upon submitting a globule suddenly to a very high temperature, it burns with explosion, sending out bluish sparks. Cerium powder can inflame below 100°. When the saline mass containing the cerium globules is treated with water, a fetid hydrogen gas is evolved, and a brilliant powder of a deep purple color is deposited, which is easily separated by washing. Dilute hydrochloric acid extracts from this powder a small quantity of metal, as well as of oxide. This body is a cerous oxychloride. Concentrated hydrochloric acid attacks it with difficulty; concentrated nitric acid dissolves it, forming a colorless solution.

CHEMISTRY. *The Artificial Formation of Organic Substances.*—Mr. O. G. Williams com-

municated to the Royal Institution of Great Britain in May, 1868, a brief history of the progress made by chemical science in the artificial formation of organic substances. He showed that Wöhler's synthesis of urea was one of the earliest in point of date, and his method was described, and also Kolbe's new process, by the mere heating of ammoniac carbonate to a point just below that at which urea is decomposed. The conversion of carbonic disulphide into carbonic tetrachloride or perchlorinated marsh-gas was another example of true synthesis. So was the production of oxalic acid by the direct union of carbonic anhydride and sodium, recently accomplished by Dr. Drechsel; and it was shown that, as oxalic acid by distillation yields formic acid, the synthesis of the first acid leads directly to a new synthesis of the second. Allusion was made to Berthelot's process of making formic acid by heating potassic hydrate in an atmosphere of carbonic oxide, and Kolbe and Schmidt's method of making the same substance by exposing potassium to a warm atmosphere of carbonic anhydride. The manufacture of acetic acid from carbonic bisulphide and the chlorides of carbon, of acetylene by several processes, of succinic acid, of tartaric acid, and of organic alkaloids, were successively described and illustrated by experiments. The author said that one of the most interesting of the cases of synthesis recently accomplished was that in which Mr. W. H. Perkin had succeeded in producing artificially the odoriferous principle of new hay and the Tonquin bean. The delicious fragrance of new hay is entirely due to the presence of the sweet-scented vernal grass, *Anthoxanthum odoratum*. It is the same substance which is the cause of the sweet smell of the woodruff, *Asperula odorata*; and the melilot, *Melilotus officinalis*. It is also the flavoring ingredient in the *Mauvein* of the Germans, which is perfumed with woodruff. Until lately, nothing was known about coumarin, except that it was a colorless crystalline body, having the formula $\text{C}_9\text{H}_6\text{O}_2$. The crystals of coumarin appear very beautiful under the influence of polarized light. The image of some artificial coumarin, which had been fused and allowed to crystallize in a plate of glass, was then thrown upon the screen, and, the light being polarized by the aid of Nicol's prisms, the crystals assumed the most gorgeous and varying colors as the prisms were rotated. The clue to its constitution was shown to be the circumstance that when heated with potassic hydrate it yields salicylic and acetic acids. The production of salicylic acid from coumarin was then shown experimentally, the presence of the acid being proved by its yielding a deep-purple coloration with ferric chloride. Artificial coumarin was obtained from the hydride of salicyl. By treatment with sodium it yielded hydride of sodium-salicyl; this substance, heated with acetic anhydride, gave hydride of aceto-salicyl.

This last substance was then distilled with acetic anhydride and sodic acetate, and, when the temperature reached 290° , the distillate solidified to a mass of crystals of pure coumarin, having all the fragrance and beauty of that obtained from the Tonquin bean.

Fermentation and the Source of Muscular Power.—At the May meeting of the Bavarian Academy of Sciences the president, Baron von Liebig, delivered a lecture on this subject. He showed that Pasteur's celebrated discovery of the increase and propagation of the yeast-fungi in a mixture of tartrate of ammonia, sugar, and yeast ashes, rested on a palpable error. He explained that, according to his analysis, the chief constituent of the yeast was a substance similar to the caseine of milk, containing nearly 1 per cent. of sulphur, and recognizable when in putrefaction, even by the unprofessional, through the odor of rotten eggs. Pasteur, according to Liebig, overlooked the fact that his mixture contained soluble and insoluble phosphates, due to the yeast-ash, and that, on expelling the ammonia with caustic magnesia, the well-known phosphate of ammonia and magnesia must be formed, and that, hence, the very means he employed to ascertain the amount of ammonia rendered the solution of this question impossible. The ammonia, then, which disappeared, had not been employed in the growth of the fungi, but simply had entered into a chemical combination whose formation Pasteur had overlooked. It has been observed that fresh pure beer-yeast left to itself, in the presence of water, disengages carbonic acid and produces alcohol. Liebig found that the power of yeast to excite fermentation is retained as long as this process is going on; at its close, putrefaction sets in. Liebig regards this process as a vital act in the interior of the cell, and as the immediate cause of the action of yeast in the fermentation. When a solution of sugar comes into contact with the yeast-cell, the inner decomposition of the latter is retarded, and the molecules of sugar in contact with the cell are decomposed. One hundred parts by weight of yeast left to themselves furnished 9.18 per cent. of alcohol. Pasteur has assumed that this alcohol is produced from the cellulose of the yeast, which had changed itself into sugar. If this assumption were true, the cellulose ought to disappear entirely: it remains, however, unaltered behind. During the formation of alcohol no trace of ammonia is generated. As some of the most remarkable products of this vital process, Liebig mentioned leucine and tyrosine, and a nitrogenous substance containing a certain amount of sulphur. With regard to the investigations of Fick, Wislicenus, and Frankland, which have been regarded by many as a proof against Liebig's theory of the mode in which muscular power is generated, Liebig remarked that they rest upon imperfect conceptions of the nature of the organic process involved. It was just as impossible by the combustion of dried mus-

cle to calculate its efficiency in the living body (the assumption of these physicists) as it was by the combustion of a dried bee to estimate the work which it accomplishes in the flight of many hours, carrying the weight of its own body several miles. The muscle in the living body acts like the apparatus in a watch, which gradually expends the power stored up in it.—(*Chemical News*, vol. xvii., No. 443.)

The Occlusion of Hydrogen Gas by Metals.—This is the subject of an interesting and valuable essay, by Mr. Thomas Graham, Master of the British Mint, read before the Royal Society. Mr. Graham had previously published an account of his experiments on the occlusion of hydrogen by the metals palladium, platinum, and iron, showing that the absorption of the gas was of uncertain occurrence at low temperatures, but was insured by heating the metal, whether in the form of sponge or aggregated by hammering, and allowing it to cool slowly and completely in a hydrogen atmosphere. This fact was referred to the condition of absolute purity of the metallic surface being essential to the absorbing action, as it is to the action of platinum foil or wire in determining the combustion of the gaseous mixture of oxygen and hydrogen, as observed by Faraday. The author then goes on to describe and illustrate a new method of charging metals with hydrogen at low temperatures, as follows:

When a plate of zinc is placed in dilute sulphuric acid, hydrogen is freely evolved from the surface of the metal, but no hydrogen is occluded and retained at the same time. A negative result was indeed to be expected from the crystalline structure of zinc. But a thin plate of palladium immersed in the same acid, and brought into metallic contact with the zinc, soon becomes largely charged with the hydrogen, which is then transferred to its surface. The charge taken up in an hour by a palladium plate, rather thick, at 12° , amounted to one hundred and seventy-three times its volume.

The absorption of hydrogen was still more obvious when the palladium plate was constituted the negative electrode in acidulated water to a Bunsen battery of six cells. The evolution of oxygen gas at the positive electrode continuing copious, the effervescence at the negative electrode was entirely suspended for the first twenty seconds, in consequence of the hydrogen being occluded by the palladium. The final absorption amounted to 200.4 volumes, and was greater in amount than the volume of hydrogen occluded by the same plate heated and cooled in an atmosphere of the gas, which did not exceed ninety volumes.

A thin plate of palladium, charged with hydrogen in the manner described, was washed, dried by a cloth, and then sealed up in an exhausted glass tube. On breaking the tube under mercury after two months, the vacuum was found perfect. No hydrogen had vaporized in the cold (about 12°); but, on the appli-

cation afterward of a heat of 100° and upward, three hundred and thirty-three volumes of gas were evolved from the metal.

It appears that when hydrogen is absorbed by palladium the volatility of the gas may be entirely suppressed; and hydrogen may be largely present in metals without exhibiting any sensible tension at low temperatures. Occluded hydrogen is certainly no longer a gas, whatever may be thought of its physical condition. The same conclusion was indicated by another series of experiments, in which it was found that, to be occluded by palladium, and even by iron, hydrogen does not require to be applied under much pressure, but, on the contrary, when highly rarefied is still freely absorbed by these metals.

Platinum may be charged with hydrogen by voltaic action, as well as palladium, but with the usual inferior proportion of gas. The charge of hydrogen taken up in a decomposing voltaic cell by old platinum in the form of a tube, of the thickness of a small crucible, was 2.19 volumes. This absorbed gas was also readily withdrawn from the platinum and oxidized on reversing the place of the metal in the decomposing cell. The platinum acquired its well-known polarizing power in virtue of the occluded hydrogen. This power was retained by the metal after being washed with pure water and wiped with a cloth, and was brought into action on placing the metal in dilute acid. The temperature required to expel the hydrogen so absorbed by platinum was found to be little short of a red heat, although the gas had entered the metal at a low temperature.

Soft iron, left some time in a dilute acid, occluded 0.57 volume of hydrogen. This charge of gas was also retained at low temperatures, and did not escape into a vacuum till the temperature was raised nearly to redness. This proves that, like platinum, iron is not penetrated through in the cold by hydrogen, the temperature of emission being elevated considerably.

While hydrogen was absorbed freely by palladium and platinum as negative plates, no oxygen whatever was absorbed by plates of the same metals in the position of positive electrodes. Oxygen gas was disengaged freely on the surface of the latter without being condensed. A platinum plate, which had acted for several hours as a positive electrode, gave afterward, when submitted to heat with exhaustion, a small trace of carbonic acid but no oxygen.

The author is inclined to conclude that the passage of hydrogen through a plate of metal is always preceded by the condensation or occlusion of the gas. But it must be admitted that the rapidity of penetration is not in proportion to the volume of gas occluded; otherwise palladium would be much more permeable at a low than at a high temperature. A plate of that metal was sensibly exhausted of hydrogen gas at 267° , but continued permeable,

and in fact increased greatly in permeability at still higher temperatures, and without becoming permeable to other gases at the same time. In a striking experiment, a mixture of equal volumes of hydrogen and carbonic acid was carried through a small palladium tube, of which the internal diameter was three millimetres, and the thickness of the wall 0.3 millimetre. From the outer surface of this tube gas escaped into a vacuum, at a red heat, with the enormous velocity of 1017.54 cubic centimetres per minute for a square metre of surface. This gas did not disturb baryta-water. It was pure hydrogen.

The quantity of hydrogen held by the metal at these high temperatures may become too small to be appreciated; but Mr. Graham presumes it is still present, and travels through the metal by a kind of rapid cementation. This extreme mobility is a singular property of hydrogen, which was involved in the fundamental discovery, by MM. H. Sainte-Claire Deville and Troost, of the passage of that gas through plates of iron and platinum at high temperatures.

Liquid diffusion has also a bearing upon the rapid dissemination of hydrogen through a soft colloid metal, like palladium or platinum, at a high temperature. The liquid diffusion of salts in water is known to be six times as rapid at 100° as at 0° . If the diffusion of liquid hydrogen increases with temperature in an equal ratio, it must become a very rapid movement at a red heat. Although the quantity absorbed may be reduced (or the channel narrowed), the flow of liquid may thus be increased in velocity. The whole phenomena appear to be consistent with the solution of liquid hydrogen in the colloid metal. The "solution affinity" of metals appears to be nearly confined to hydrogen and carbonic oxide, so that metals are not sensibly penetrated by other gases than these.

The Velocity of Chemical Changes.—Mr. A. Vernon Harcourt, Secretary of the Chemical Society, associated with Mr. Esson, arrives at the following conclusions after an investigation of the rates at which chemical action takes place:

1. The rate at which a chemical change proceeds is constant under constant conditions, and is independent of the time that has elapsed since the change commenced.

2. When any substance is undergoing a chemical change, of which no condition varies, excepting the diminution of the changing substance, the amount of change occurring at any moment is directly proportional to the quantity of the substance.

3. When two or more substances act upon one another, the amount of action at any moment is directly proportional to the quantity of each of the substances.

4. When the rate of any chemical change is affected by the presence of a substance which itself takes no part in the change, the acceleration or retardation produced is directly proportional to the quantity of the substance.

5. The relation between the rate of a chemical change occurring in a solution and the temperature of the solution is such, that, for every additional de-

gree, the number expressing the rate is to be multiplied by a constant quantity.

Tyndall on Molecular Force.—Professor Tyndall, in an address delivered before the Mathematical and Physical Science section of the British Association in August, 1868, made the following suggestive remarks:

Every particle that enters into the composition of the muscle, a nerve, or a bone, has been placed in its position by molecular force. And unless the existence of law in these matters be denied, and the element of caprice be introduced, we must conclude that, given the relation of any molecule of the body to its environment, its position in the body might be predicted. Our difficulty is not with the quality of the problem, but with its complexity; and this difficulty might be met by the simple expansion of the faculties which man now possesses. Given this expansion, and given the necessary molecular data, and the chick might be deduced as rigorously and as logically from the egg as the existence of Neptune was deduced from the disturbances of Uranus, or as conical refraction was deduced from the undulatory theory of light.

You see I am not mincing matters, but avowing nakedly what many scientific thinkers more or less distinctly believe. The formation of a crystal, a plant, or an animal, is in their eyes a purely mechanical problem, which differs from the problems of ordinary mechanics in the smallness of the masses and the complexity of the processes involved. Here you have one half of our dual truth; let us now glance at the other half. Associated with this wonderful mechanism of the animal body, we have phenomena no less certain than those of physics, but between which and the mechanism we discern no necessary connection. A man, for example, can say, "I feel, I think, I love;" but how does consciousness infuse itself into the problem? The human brain is said to be the organ of thought and feeling: when we are hurt, the brain feels it; when we ponder, it is the brain that thinks; when our passions or affections are excited, it is through the instrumentality of the brain. Let us endeavor to be a little more precise here. I hardly imagine that any profound scientific thinker who has reflected upon the subject exists, who would not admit the extreme probability of the hypothesis, that for every fact of consciousness, whether in the domain of sense, of thought, or of emotion, a certain definite molecular condition is set up in the brain; that this relation of physics to consciousness is invariable, so that, given the state of the brain, the corresponding thought or feeling might be inferred; or, given the thought or feeling, the corresponding state of the brain might be inferred. But how inferred? It is at bottom not a case of logical inference at all, but of empirical association. You may reply that many of the inferences of science are of this character; the inference, for example, that an electric current of a given direction will deflect a magnetic needle in a definite way; but the cases differ in this, that the passage from the current to the needle, if not demonstrable, is thinkable, and that we entertain no doubt as to the final mechanical solution of the problem; but the passage from the physics of the brain to the corresponding facts of consciousness is unthinkable. Granted that a definite thought and a definite molecular action in the brain occur simultaneously, we do not possess the intellectual organ, nor, apparently, any rudiment of the organ, which would enable us to pass by a process of reasoning from the one phenomenon to the other. They appear together, but we do not know why. Were our minds and senses so expanded, strengthened, and illuminated as to enable us to see and feel the very molecules of the brain; were we capable of following all their motions, all their groupings, all their electric discharges, if such there be; and were we intimately acquainted

with the corresponding states of thought and feeling, we should be as far as ever from the solution of the problem, "How are these physical processes connected with the facts of consciousness?" The chasm between the two classes of phenomena would still remain intellectually impassable. Let the consciousness of love, for example, be associated with a right-handed spiral motion of the molecules of the brain, and the consciousness of hate with a left-handed spiral motion. We should then know when we love that the motion is in one direction, and when we hate that the motion is in the other; but the "why?" would still remain unanswered.

In affirming that the growth of the body is mechanical, and that thought, as exercised by us, has its correlative in the physics of the brain, I think the position of the "Materialist" is stated as far as that position is a tenable one. I think the materialist will be able finally to maintain this position against all attacks; but I do not think, as the human mind is at present constituted, that he can pass beyond it. I do not think he is entitled to say that his molecular groupings and his molecular motions explain everything. In reality they explain nothing. The utmost he can affirm is the association of two classes of phenomena of whose real bond of union he is in absolute ignorance. The problem of the connection of the body and soul is as insoluble in its modern form as it was in the pre-scientific ages. Phosphorus is known to enter into the composition of the human brain, and a courageous writer has exclaimed, in his trenchant German, "Ohne phosphor kein gedanke." That may or may not be the case; but even if we knew it to be the case, the knowledge would not lighten our darkness. On both sides of the zone here assigned to the materialist he is equally helpless. If you ask him whence is this "matter" of which we have been discoursing, who or what divided it into molecules, who or what impressed upon them this necessity of running into organic forms, he has no answer. Science also is mute in reply to these questions. But if the materialist is confounded, and science rendered dumb, who else is entitled to answer? To whom has the secret been revealed? Let us lower our heads, and acknowledge our ignorance, one and all. Perhaps the mystery may resolve itself into knowledge at some future day.

Action of Light.—Professor Tyndall has communicated to the Royal Society the results of experiments made by subjecting the vapors of volatile liquids to the action of concentrated solar or electric light. A tube 2.8 feet long, and 2.5 inches internal diameter, is closed at both ends by glass plates. It may be connected with an air-pump, and with a series of tubes used for the purification of air. A number of test-tubes were converted into Wolf's bottles by means of corks and tubes. Each test-tube was partly filled with the liquid to be examined and introduced into the path of the purified air. When the experimental tube was exhausted, and the air then allowed to bubble through the liquid, a mixture of air and vapor entered the experimental tube together, and was then submitted to the action of light. At one end of the experimental tube was placed an electric lamp transmitting an intense beam of light through the tube parallel to its axis. When the vapor of amyl nitrite was allowed to enter the tube in the dark, and the beam of light was then sent through the tube, the tube appeared for an instant optically empty; then a sudden shower of liquid spherules was precipitated on the

beam. On repeating this experiment with a condensed beam of light forming a cone eight inches long, the cone, which was at first invisible, flashed suddenly like a luminous spear. The rapidity of the condensing action diminished with the density of the light. The same effects were produced when oxygen or hydrogen was employed as a carrier; when the head of the beam was sifted out through a plate of alum, or when the beam was used without sifting. That the amylie nitrite undergoes decomposition is proved by the formation of brown fumes of nitrous acid. Sunlight produces similar effects. The author proves, in the next place, that the decomposition is effected by the more refrangible rays of light, and that liquid amylie nitrite is most potent in arresting the rays which affect its vapor. This seems to show that the absorption takes place in the atoms, and not in the molecules. The author anticipates wide, if not entire, generality for the fact that a liquid and its vapor absorb the same rays. When the tube is filled with a rare and well-mixed vapor, the electric light develops a blue color, which may be pure and deep, or milky, according to the intensity of the light. The author connects this result with that of Brücke's experiments on the colors of the sky. Various other liquids were tried with success. In many cases the condensed vapors formed extremely beautiful and regularly-shaped clouds, the particles rotating around the axes of the tube, or round other axes. The most beautiful forms appear to have been those produced by iodhydric acid.—(*American Journal of Science*, January, 1869.)

White Gunpowder.—The *Mechanics' Magazine*, of August 7, 1868, speaks in terms of approval of white gunpowder, on account of the comparative safety of its manufacture and use, and its superior effectiveness as an explosive material. This substance is a white, impalpable powder, resembling flour, powdered chalk, or magnesia, in its superficial appearance. Its composition is as follows:

Chlorate of potash.....	48
Yellow prussiate of potash.....	29
Finest loaf-sugar.....	23

100

In manufacturing it the yellow prussiate must be dried in an iron ladle until it is as white as the chlorate. The ingredients are ground separately to very fine powder, and then mixed by means of a conical sieve, until they are thoroughly incorporated, but not by trituration. For small quantities a common Wedgwood mortar and pestle may be used, but they must be kept perfectly dry and clean. The operation of mixing does not take many minutes, and with these precautions is absolutely free from danger. In loading, it is treated the same way as ordinary gunpowder, being pressed down by hand, solid, but not hard. The charge is ignited in the usual way, either with a common cap or nipple, or on a rim or

central-fire cartridge. No alteration is required in fire-arms in order to use it, but the cartridge-case must be little more than half its usual length, which will give the same result as double the quantity of ordinary gunpowder, but with greater quickness, penetration, and accuracy. It produces neither smoke nor flash of flame at the muzzle, on discharge, and can be used in a casemate with perfect comfort to the gunners. In actual use it does not appear to possess a bursting so much as a propulsive power. The economy of the powder is apparent when it is stated that its wholesale cost is about 86 s. per cwt., but, as its strength is said to be at least one-third greater than that of ordinary powder, its cost may be comparatively estimated at about 60s. per cwt. Mr. Henry W. Reveley, C. E., the manufacturer of the white gunpowder (unpatented), has not been able to procure a practical trial of it from the Royal Ordnance department. A sample of three dozen rounds of Enfield cartridges, which he sent to the department for trial, were returned to him, in the original package with the seal unbroken, accompanied by a note, stating that the cartridges were not suitable for military purposes. The officials had evidently decided about them without even looking at them.

Nitroglucose.—The *American Journal of Science*, for May, 1868, contains a paper upon this compound from the pen of Mr. M. Carey Lea. He prepares the article in the following way: two ounces of fuming sulphuric acid, two of common sulphuric acid, two of strong nitric acid are mixed. Sugar is stirred into this in the form of powder, to a thin paste. The stirring is kept up, and as fast as the nitroglucose separates in doughy masses, it is removed with a spatula, and thrown into cold water. More sugar being added will give more nitroglucose, but considerably less in proportion than the first addition. As soon as possible the nitroglucose must be kneaded up with cold water to get the acid out; otherwise (in ten or fifteen minutes) it passes to a greenish color, and decomposition commences: The removal of the adhering acid is much more difficult than in the case of peroxylin, and is an extremely disagreeable operation. The acid pervades the whole of the doughy mass so fully, that the fingers are stained and burned by it, nor can the whole of the acid be removed satisfactorily in this way. The best means found by the author was, to dissolve the crude nitroglucose in a mixture of alcohol and ether, and then to pour this into a large quantity of cold water with constant stirring, and violent agitation afterward. The method is not altogether satisfactory, and seems to be attended with some loss of material. Prepared in this way, nitroglucose is a white lustrous body, which may either assume the doughy amorphous condition, or the crystalline, and passes from one to the other with extreme ease. When first formed by the

mixed acids, it always has the doughy form. That obtained by the use of nitric and sulphuric acid was crystalline from the first. When precipitated by water from its solution in alcohol and ether, it is doughy and almost liquid, and remains so for a long time, if there is any considerable quantity of it. The best mode of preserving it appears to be under water. By standing thus it gradually hardens, and passes sometimes to a somewhat hard amorphous mass, and sometimes to a granular crystalline state. It appears to be wholly insoluble in water. A few minute grains of the crystalline form diffused through fifteen or twenty ounces of water, and did not dissolve after many hours' standing. In a mixture of alcohol and ether it dissolves as easily as sugar in water, and in such quantity as to make the liquid syrupy. Its detonating properties are but slight. If it be well dried and a match be applied, it deflagrates with a feeble flash. It has been stated by Dr. V. Monckhover that, when dissolved in alcohol and kept some time in a warm place, it undergoes decomposition, as shown by the fact that the solution then gives an abundant precipitate with nitrate of silver, which at first it did not do. An experiment made in this direction did not give the result thus indicated. A solution of nitroglucose in alcohol, containing about forty grains to the ounce, was placed in a stoppered phial and was kept in the sand-bath at a temperature of about blood-heat for nearly a month. But neither it nor a fresh solution gave a precipitate with alcoholic solution of nitrate of silver.

Ozone and Antozone.—An experiment of M. Schönbein's, illustrating the simultaneous formation of ozone and antozone, is said to be the following: Into a flask of five hundred c. c. capacity, and three or four centimetres in diameter across the neck, a little ether is poured, just enough to cover the bottom, and a spiral of red-hot platinum is plunged into the vapors. It is necessary to avoid heating the flask too strongly. The platinum glows until all the ether has been destroyed. The experiment is repeated two or three times, and now the question is, to demonstrate that both ozone and antozone are formed in this slow oxidation of the ether. The first is, of course, easily shown to be present by means of the iodide of potassium and starch-paper. To show the presence of antozone, the flask is rinsed with a small quantity of ether, which will then be sufficiently charged with peroxide of hydrogen to give clearly the perchromic acid reaction. Some solution of bichromate of potash is placed in a test-tube, and a drop of sulphuric acid added, the ether with which the flask has been rinsed is then poured in, when the ethereal layer becomes colored a beautiful violet blue. The conclusion to be arrived at from this experiment is, that, during the formation of ozone, antozone is also formed—this, in the presence of water, being converted into peroxide of hydrogen.

During the autumn of 1867, when the cholera was felt severely in Turin, Father Denza studied the meteorological condition of the atmosphere; he studied especially the connection between the prevalence of the disease and the absence of ozone. His observations were made at Moncalieri, rather more than half a mile from the town; the electricity was measured as well as the ozone. During the days in August and September, when the cholera was at about its height, the amount of ozone present was variable, but considerable—perhaps about the average. The electricity, however, during these days almost entirely disappeared; it is an interesting observation.

Professor Frankland made this reference to the ozone question in his address to the Chemical Section of the British Association, in August, 1868:

Chemists had long regarded with regret the labor expended by meteorologists on observations made with the intention of estimating ozone in the atmosphere, in the absence of any conclusive evidence of the existence of this substance in the air. It is, therefore, highly satisfactory that Andrews, to whom we were already so much indebted for our knowledge of the properties of ozone, has at length proved that the reaction exhibited by ozone test-papers at a distance from towns is in reality due to ozone. Thus the numerous observations, extending over so many years, now attain a value which they did not before possess.

Microscopic Crystallography.—Mr. H. S. Waddington has read a paper before the British Pharmaceutical Society, on this subject. He says that the formation of perfect crystals depends upon the rapidity with which they are deposited. He has obtained better results, by allowing the crystals to deposit from a hot and concentrated solution, than by placing a few drops of a cold saturated solution on a clean slide and allowing it to evaporate spontaneously. When crystals are quite soluble in water, his mode of procedure is as follows: "A solution is made in hot distilled water, the liquid filtered, and a few drops poured on a clean slide, just before the crystals begin to form in the solution itself, and immediately poured off; sufficient will remain behind for the production of crystals, which will form at once. When of a sufficient size, the remaining liquor, if any, should be drained from them and the slide allowed to dry. The result will generally be a slide, evenly covered with crystals, having well-defined edges, and but few of which are agglomerated. This process answers well for alum, chlorate of potassium, nitrates of barium and strontium, potassio-tartrate of antimony, sulphate of copper, sulphate, acid tartrate, binoxalate, and quadroxalate of potassium, the strength being regulated by experience. If crystals are not very soluble in cold water, they may be allowed to separate in the bulk of the solution itself as it cools; then remove a small quantity of liquid and crystals to a slide, by means of a glass tube.* The slide must be kept moving, to prevent the aggregation of the

crystals, and the superfluous liquid removed by applying blotting-paper to the edges of the slide. For hippuric acid, the solution, when on the point of crystallizing, should be poured on a cold slide, and, when the crystals have formed, the remaining liquid should be poured off, and the slide allowed to dry. Sugar, citric and tartaric acids, and all substances very soluble in water, may be obtained in crystals by making a concentrated solution, filtering it, and then pouring it on a slide, taking care that only a thin layer of liquid remains, which should be allowed to dry in the air. To obtain crystals from sulphate of iodoquinine or 'Herapathite,' the author mixes three drachms of spirits of wine, and one drachm of acetic acid, in which he dissolves ten grains of bisulphate of quinine. He then pours ten or fifteen drops on a slide, and adds a drop of tincture of iodine. When clear he pours it from slide to slide as long as the liquid holds out. The best method of obtaining uric acid in crystals is, to allow eight or ten ounces of urine to stand some hours, after the addition of two or three drachms of acetic acid. In a day or two the crystals will have grown larger, when the bottle should be shaken, to detach them from the sides; then wash them with distilled water, acidulated with acetic acid. To obtain the rarer forms, it is requisite to allow the crystals to deposit quickly, which may be done by making a solution of urate of sodium, by boiling uric acid with solution of caustic soda, until no more is taken up. If one or two drachms of this are put into eight ounces of urine, and a small quantity of acetic acid added, not more than sufficient to neutralize the soda, very perfect crystals will be obtained. Another deposit found in urine is the phosphate of ammonium and magnesium, or triple-phosphate, which may be prepared in prisms by dropping about twenty-five or thirty grains of carbonate of ammonium into eight or ten ounces of urine, and allowing it to remain quiet for some hours. When the crystals are of sufficient size, the bottle may be gently shaken and the urine poured off. This deposit may also be obtained in stellate crystals by adding a drachm and a half to two drachms of carbonate of ammonium to urine, and allowing it to stand. The crystals should be washed with distilled water, to which a little liquor ammoniac has been added. Calcic oxalate may be obtained by dropping a single small crystal of oxalate acid into eight or ten ounces of urine, and leaving it at perfect rest for some hours. Mr. Waddington has also obtained good results from salicin, by pouring a saturated solution in cold water on a slide, holding it over a flame until it is at the boiling-point; then pouring off the slide, when only a viscid film will remain. This must become quite cold, and the under surface held close to the flame of a lamp or gas-jet. The moment it begins to crystallize it must be removed a few inches from the flame, or else it will fuse."

Crystallisation under the Blowpipe.—It sometimes happens in experiments with the blowpipe, when borax, phosphorus, common salt, or soda, is used, that the bead, at first limpid, becomes suddenly opaque. M. G. Rose finds that this is due to the development of crystallized bodies in the interior of the mass. The crystallization is often confused, although sometimes it is very regular, and, on operating with titanium under sufficiently varying circumstances, M. Rose has been able to obtain anatase, and to effect a crystallization of the two allotropic states of the titanous acid. With felspar and phosphorus salt (by the aid of which, as is well known, silicates are reduced to silica and phosphates), he obtained crystallized quartz, confused, but insoluble in alkalies. In order to recognize the crystals, obtained under these conditions, flatten the yet warm bead and observe it under a microscope; or it may be attacked by water or an acid, in which case the residual crystals may be collected on a glass plate.—(*Chemical News*, vol. xvi., No. 421.)

Crystallisation of Sulphur.—M. Schützenberger, of Paris, has made an interesting experiment upon the crystallization of sulphur. He filled a matrass, of a capacity of one hundred and fifty or two hundred grammes, with refined sulphur, commercially pure, so that, when fused, the liquid occupied the whole of the space below the neck; the upper part of the neck was drawn out into a capillary tube, which was twisted several times, but left freely open to the atmosphere. The sulphur being melted in a bath of oil heated to 120°, the flask was placed in water heated to 95°. In these conditions, the sulphur remains perfectly fluid for hours, even when occasionally moved and drawn out of the hot water. If the temperature be made to fall very slowly, transparent crystals, possessing the same density as the melted sulphur, form either on the surface or in the midst of the fluid at about 90°. The mass of crystals gradually augments, but with great slowness; sometimes they are isolated, sometimes united in groups of two, three, four, etc. The amount of crystals being considered sufficient to separate them, the matrass is sharply inverted, so as to cool and solidify the melted sulphur in the neck. Thus the crystals are separated from the rest of the sulphur, and only remain suspended by their peaks. They are transparent and remain so indefinitely; in form they are octahedral and bear close resemblance to natural crystals. Measurement of the angles has confirmed their identity. The experiment is surer when two or three drops of sulphide of carbon are added to the sulphur before fusion; the phenomenon takes place, however, independently of this admixture. By this experiment of M. Schützenberger's it is proved that melted sulphur crystallizes below 100° in octahedra of the fourth system without the aid of any solvent. The facts will probably be turned to account in the study of the formation of natural crystals.

The question of how and under what circumstances sulphur will crystallize from substances containing it, was referred to in a recent murder trial at Versailles. The victim had been poisoned, it was said, by lucifer matches. The chemist stated, that after a scrupulous examination of the exhumed matter (interred two years) he had failed to detect phosphorus, probably volatilized or oxidized long ago, but he had separated several pieces of melted sulphur, which he exhibited. From these facts he concluded that chemical matches must have been present, for these traces of sulphur, though very small, could not occur in culinary or pharmaceutical preparations. The question was then put—did he not know that sulphur similar to that which he had exhibited was found in deposits of fecal matter which had undergone a certain fermentation in the air? and upon this point, the finding of sulphur perfectly crystallized or in concreted masses, in the old deposits in the sewer of Montfaucon, was cited; the specimens of sulphur here referred to are preserved in one of the public museums. Great doubt was thus thrown upon the source of the sulphur; indeed, judging from the chemist's evidence, he would appear to have argued farther than the experimental data justified him in doing. The prisoner was acquitted.

Industrial Preparation of Oxygen.—M. Gondolo has made some improvements in M. Bous-singault's process of extracting oxygen from the air by means of baryta. M. Boussingault, in 1852, found that in passing a current of air over baryta, heated to dull redness, oxygen was subtracted from the air, and binoxide of barium formed, and that, upon then raising the heat to bright redness, the oxygen was set at liberty so easily that the oxygen might be first absorbed and then evolved *ad infinitum*. M. Gondolo has made, in carrying out the details of the process, certain changes which admit of oxygen being prepared upon a manufacturing scale. For the porcelain tubes he substitutes iron ones, which may be made either of wrought or cast iron. Internally a coating of magnesia is applied, and externally asbestos, so as to diminish the porosity of the tube and the consumption of fuel. These tubes are arranged in a brick furnace having dampers, by means of which the temperature may be changed at will, and dull redness and bright redness easily obtained. To the baryta a mixture of lime, magnesia, and a small quantity of manganate of potash is added; this prevents fritting of the material. M. Gondolo says that he has made one hundred and twenty-two alternate operations, and that the atmospheric oxygen and nitrogen are easily separated upon an industrial scale; the apparatus has been at work during six months, and fulfilled its purpose thoroughly. The process is patented.—(*Paris Cor. of Chemical News*.)

Oxychloride of Silicium.—MM. Friedel and Ladenburg have reported to the French Academy their discovery of this compound. In passing chloride of silicium through an empty

porcelain tube, or one filled with fragments of felspar, heated to a temperature approaching the point of fusion for that mineral, and distilling, they observed that the product condensed at the extremity of the apparatus was a liquid less volatile than the chloride. By repeating the operation a great number of times with the more volatile portions, a notable amount of a liquid boiling above 70° is obtained. This product submitted to fractional distillation is easily separated into chloride of silicium and a liquid chiefly boiling between 136° and 139° . Limpid and fuming in the air, this liquid bears great resemblance to chloride of silicium; it is likewise decomposed by water energetically. Analyses were made by introducing weighed bulbs, full of the liquid, into flasks containing a certain quantity of water; breaking the bulbs afterward, almost the whole of the silica, when sufficient water was present, remained in solution. The acid liquid, saturated with ammonia, was evaporated on the water-bath; the residue dissolved in water and filtered gave on the one side silica mixed with the glass of the bulb, on the other a solution in which the chlorine was determined. The numbers obtained lead to the formula Si_2OCl_4 , from which the new body is seen to be an oxychloride of silicium.

Iodide of Silicium.—Mr. M. C. Friedel has given to the *Chemical News* the result of his recent studies of iodide of silicium. He makes it by the following process: In a tube he places crystallized silicium. The tube is heated to redness, and through it is passed the vapor of iodine, along with a completely desiccated carbonic acid. If the distillation of iodine is rapid, or if the silicium does not fill the tube, the product obtained is mixed with much iodine. But with a tube of sufficient length, and the exercise of caution, the crystals sublimed in the cool part of the tube will be white, and the liquid proceeding from their fusion yellowish. The product thus obtained, purified when necessary from iodine, by solution in sulphide of carbon and agitation with mercury, may be distilled in a current of carbonic acid without decomposition. Not so in the air, where its vapor, on being heated, catches fire, and burns with a red flame, emitting much iodine vapor. The product, distilled in carbonic acid, is colorless, or slightly yellowish. Its boiling-point is 290° , and at 120.5° it solidifies and crystallizes into a mass, having a watered appearance (*moiré*) which is nearly always rose-colored, owing to a slight decomposition which takes place at the moment the tube is sealed. In those parts of the vessel which were merely moistened by the liquid, dendrites are formed analogous to those of chlorhydrate of ammonium. The crystalline form of iodide of silicium is cubic, and it may be obtained either by sublimation, evaporation, or refrigeration of its solution, in small regular octahedra or groups of octahedra, which are transparent, colorless, and incapable of action on polarized light.

Iodide of silicium decomposes in water with formation of silica and iodhydric acid, without liberation of hydrogen or precipitation of iodine. This reaction suffices to prove that its composition is analogous to that of the chloride, SiCl_4 . Its analysis is performed by breaking in a stoppered flask, and containing dilute ammonia, a glass bubble filled with the substance. When decomposition ceases, the liquid is evaporated in the same flask over a water-bath, a current of air being passed into it by means of an aspirator, and the liquid produced by evaporation condensed in a cool receiver. Without the latter precaution part of the iodine would be lost. After evaporation to dryness, the residue is taken up by the condensed water, filtered, and washed; and, in order to obtain the weight of the silica, it is merely necessary to deduct, from the weight found, that of the bubble. The iodine is precipitated in the filtering liquid. Thus figures are found agreeing with the formula SiI_4 . Following the excellent process of MM. Sainte-Claire Deville and Troost, the density of its vapor was taken in mercurial vapor. It was found indispensable to fill the globe with carbonic acid, and sundry precautions were used to prevent the reëntrance of air. At the close of the experiment, the globe proved to contain no free iodine. The number obtained for the density was 19.12. The theoretical value corresponding with the formula SiI_4 , and with two volumes of vapor is 18.56. These results complete the analogy of iodide of silicium with the chloride.

Persulphide of Hydrogen.—Dr. A. W. Hofmann has been investigating the constitution of persulphide of hydrogen, taking advantage of the fact that great quantities of the substance are produced in certain technical processes at Dienze. He has succeeded in rendering it certain that there is a persulphide having the formula H_2S_2 . When a cold saturated solution of strychnine in strong alcohol is added to an alcoholic solution of persulphide of ammonium, brilliant crystalline spangles soon appear, and, after twelve hours, beautiful orange-red needles are formed, which, after washing with cold water, are perfectly pure. They are insoluble in water, alcohol, ether, and bisulphide of carbon; in fact the author has found no solvent from which they could be recrystallized. Analysis leads to the formula $\text{C}_{21}\text{H}_{24}\text{N}_2\text{O}_8\text{S}_2 = \text{C}_{21}\text{H}_{22}\text{N}_2\text{O}_8 + \text{H}_2\text{S}_2$. In contact with sulphuric acid the crystals are decolorized, and, on adding water, colorless, transparent oily drops of persulphide of hydrogen are separated, which, after some time, are resolved into sulphur and sulphuretted hydrogen. Quinine, cinchonine, benzine, and some other alkaloids gave no analogous compounds.—(*Proc. Royal Society*, vol. xvi., p. 487.)

New Method of Sugar Manufacture.—M. Leplay's new process of extracting sugar from beet-root juice, as well as syrups and molasses of all descriptions, is thus alluded to in the *Chemical News*:

M. Leplay sought to extract the sugar from the matters in question, by transforming it into insoluble sucrate of lime, which has not yet been made on an industrial scale. This combination is effected in the saccharine fluids treated, less by an addition of ready-formed free lime, than by the aid of solutions of calcareous salts, and particularly of chloride of calcium, and of caustic soda, which precipitates the lime, and this combines and is precipitated with the sugar. The sucrate of lime, after precipitation, is decomposed by means of carbonic acid, the soda in the solution regenerated, and the carbonic acid obtained as a secondary product in the formation of the chloride of calcium. When a solution of sugar in water is saturated with all the lime which it is capable of absorbing, and boiled, there is formed a white precipitate of sucrate of lime, which is redissolved on cooling. The quantity of sugar thus eliminated is only a small proportion of that present, and the greater part remains in solution when the precipitate is separated from the liquid during ebullition. Feebler still is the proportion of sugar that can be extracted from beet-root juice or molasses, and the more impure the saccharine fluid is, the less considerable is the separation obtained by this means. On the contrary, the whole of the sugar may be precipitated in the state of sucrate of lime, when in the solution already saturated with lime, a fresh quantity of lime is separated in the nascent state, then the precipitation is independent of the degree of purity of the saccharine solutions. Besides the juice of the beet-root, the molasses of sugar-refineries are capable of treatment by the process. The quantity of soluble salts of lime present in the syrups, etc., exerts an influence on the proportion of calcareous salt which should be added; as these salts contain organic acids, the soda is no longer found in corresponding quantity, as chloride of sodium, but as carbonate of soda in the ash obtained from the mother liquor—an important advantage. The previous saturation of the liquor submitted to treatment by pure lime, before the addition of the calcareous salt, is then essential, since by this means a portion of the calcareous salt, which would be otherwise required, is replaced by the cheaper material, lime. The sucrate of lime precipitated is separated from the liquor, washed with water, and decomposed by carbonic acid.

Analysis of British Waters.—In an article which was read before the Royal Institution of Great Britain, on the 8d of April, 1868, by Professor Frankland, "On the proposed Water-supply for the Metropolis," he gives the following tables:

Results of Analysis of Welsh, Camberland, and London Waters.

100,000 PARTS OF WATER GAVE—

	WELSH.	CUMBERLAND.	LONDON
	Mean.	Mean.	Mean.
Total solid impurity.....	4.85	4.74	82.66
Organic Carbon.....	.460	.276	.270
Organic Nitrogen.....	.006	.010	.025
Ammonia.....	.908	.002	.008
Nitrogen as Nitrates and Nitrites.....	.017	.009	.323
Total combined Nitrogen...	.025	.021	.354
Previous sewage or manure contamination.....	47	6	2230
Hardness.....	1.4	2.2	20.13

In reference to the sewage which pours into the Thames, and its chemical effect upon the waters, Professor Frankland says:

As average London sewage contains ten parts of combined nitrogen in 100,000 parts, it follows that 100,000 parts of this sewage as it flows into the Thames will contain only two parts of organic nitrogen. Further, if the sewage of the 600,000 persons who drain into the Thames above the point whence the water companies draw their supply have the strength of average London sewage, it will amount to 18,000,000 gallons daily, and if the average flow of the river at Teddington be taken at 800,000,000 gallons daily, it follows that the river will there contain 2,250 parts of sewage in 100,000 parts, or $2\frac{1}{4}$ per cent. This quantity of sewage, if in the condition as delivered at the sewer outfall, would contaminate the whole volume of the river, only to the extent of .045 part of organic nitrogen in 100,000 parts of water. Now, on the 21st of January last the water delivered by the five companies drawing their supplies from the Thames contained the following amounts of organic nitrogen in 100,000 parts:

Chelsea (turbid).....	.058	Grand Junction (clear)	.081
West Middlesex (clear)	.027	Lambeth (turbid)062
Southwark (turbid)....	.061		

It will be seen, therefore, that three out of the five samples of water actually contained more organic nitrogen than would be due to the admixture of the 18,000,000 gallons of sewage which are poured into the Thames above the point from which these samples came. But Thames water holds in solution a certain amount of peaty matter which contains organic nitrogen; a sufficient proportion of this substance, however, to furnish the above larger quantities of organic nitrogen would render the water brownish yellow when viewed in a quart decanter, while these samples of Thames water were, when filtered, colorless or nearly so. I am therefore of opinion that the Thames water delivered in London by the Chelsea, Southwark, and Lambeth companies on the 21st of January last contained unoxidized sewage. This opinion is confirmed by the results of some experiments which I have recently made in my laboratory, and which show that, contrary to the generally received opinion (which is, however, based upon no reliable experimental data), sewage in which the urea is already decomposed undergoes further change with extreme slowness, even when freely exposed to the air, and mixed with large volumes of water. Thus I find that a mixture of weak sewage from one of the London sewers with nine times its volume of water (containing bicarbonate of lime in solution) at a temperature of 20° to 25° C., and well agitated every day by being made to flow in a thin stream through three feet of air, oxidizes but to a slight extent in the course of eight days. Immediately after mixture this sewage-contaminated water contained .267 part

of organic carbon and .081 part of organic nitrogen in 100,000 parts, while after ninety-six hours it still contained .250 part of organic carbon and .058 part of organic nitrogen, and even after the lapse of 192 hours the undecomposed organic matter still contained .200 part of organic carbon, and .054 part of organic nitrogen.

Carbon Tubes and Crucibles.—Mr. G. Gore, having had occasion to use small rods and vessels of carbon free (or nearly so) from silica for experiments with hydrofluoric acid, and with fused fluorides, devised the following method of obtaining them: Articles and vessels of the desired shape, but of sufficient dimensions to allow for shrinkage, were formed of different kinds of wood. The kinds used were lignum vitæ, boxwood, beech, kingwood, ebony, ironwood, mahogany, zebrawood, Mamel oak, rosewood, "bastard rosewood," maple, lancewood, walnut, Norwegian pine, partridge-wood, "Braziletta," cocoa-wood, vegetable ivory, coquilla-nut, and the hard shell of the cocoa-nut. The carbonizing was done in a copper tube retort, provided with two exit tubes for the escape of gas, the tube being placed horizontally between fire-bricks, and heated with extreme slowness at first, and finally to bright redness by means of a row of Bunsen's burners. It was necessary continually to turn the retort, and so to distribute the heat, during the burning process, that none of the evolved tarry matter condensed; otherwise it altered their form and dimensions in a curious and fantastic manner. The red heat was continued until gas ceased to be evolved. If the burning was too rapid, the articles fell to pieces or cracked very much. The articles usually shrank about one-fourth of their original dimensions during the process. The best kinds of these various materials were found to be lignum vitæ, kingwood, ebony, and beech; rods made from most of these had a remarkably clear, metallic sound, when struck. The rods made from lignum vitæ and the other denser materials conducted electricity most admirably. The following were found to be chief conditions of success in carbonizing woods: 1. Vegetable materials of the hardest kinds and closest texture; 2. Wood of the straightest grain, free from knots and splits; 3. Very slowly heated and dried; 4. The heat very uniformly distributed; 5. Prolonged high temperature at the last; 6. Gradual cooling.

CHILDS, HENRY HALSEY, M. D., a distinguished physician and medical professor of Massachusetts, at one time Lieutenant-Governor of the State, born in Pittsfield, Mass., June 7, 1788; died in Boston, March 22, 1868. He was of patriotic Revolutionary ancestry, both on the father's and mother's side. He entered Williams College at the age of fifteen, and graduated with distinction in the class of 1802. His father was an eminent physician, and the son studied with him, and was in partnership with him in his practice, until the death of the father. He introduced into Pittsfield very early, and against much opposition,

the practice of vaccination. In 1822, as indeed for some years previous, Dr. Childs had advocated in the Berkshire Medical Society the establishment of a medical school in Pittsfield, for the benefit of the large number of young men in Western Massachusetts and the adjacent States who desired convenient facilities for obtaining a medical education. He succeeded in 1822 in raising a committee of the Medical Society, of which he was chairman, to petition and make efforts for the incorporation of such a school by the Legislature, and after considerable opposition obtained a charter. In September, 1823, the medical school was organized under the title of Berkshire Medical Institute, and Dr. Childs became professor of the theory and practice of medicine. He gave himself zealously to the work of obtaining an endowment, erecting buildings, and procuring a cabinet and library for the young institution. In 1837 it was detached from Williams College, to which it had hitherto been subject, in the matter of conferring degrees, and Dr. Childs was elected president of the college, as it was thenceforward named. He administered its affairs and retained his professorship until 1868, having been connected with it for forty-one years. He was elected Professor Emeritus, on resigning his active duties. The annual number of students, while it was under his charge, exceeded one hundred. During all this time he had a large medical practice, and for many years was a member of the faculty of the medical colleges at Woodstock, Vermont, and Cleveland and Columbus, Ohio, where he annually gave courses of lectures. He was a Jeffersonian Democrat through life, and as such represented Pittsfield in the Legislatures of 1816 and 1827, Berkshire County in the Constitutional Convention of 1820, and was elected Lieutenant-Governor in 1843. His whole life was characterized by benevolence, kindness, and the most unflinching integrity.

CHILI, a republic in South America. President, for the term from 1866 to 1871, José Joaquín Pérez. Minister of the United States in Chili, Judson Kilpatrick (since November 11, 1865). In the budget for 1866, the revenue amounted to 9,205,627 piastres; expenditures to 9,075,936; the budget for 1867 fixes the revenue at 9,756,838, expenditures at 10,814,000; the budget for 1868, the expenditures at 10,906,986.

The home debt at the close of 1867 amounted to 16,415,673 piastres; and the foreign debt to 21,415,000 piastres: total debt, 37,830,673 piastres. The army is composed of a corps of volunteers (3,700 in 1868), and of the national guards, the number of whom, according to an official document, amounted, at the close of 1865, to 35,600 men. The fleet consisted in May, 1867, of fourteen screw steamers, with one hundred and twenty cannons. Four river steamers which in 1867 were bought in the United States, and sent to Valparaíso, with the object of converting them

into ships-of-war, although thoroughly overhauled and repaired on their arrival, were discovered to be almost utterly worthless in their new capacity, and, after having laid idle for more than a year, were sold at a very great decrease on the original purchase money, the sale causing to the Government a loss of \$188,000.

A new census of Chili was taken in April, 1866, according to which the area of Chili is 182,624 square miles; the population (inclusive of Araucanía, Patagonia, and Terra del Fuego) is 2,084,945; the foreigners resident in the country numbered 28,220 (among whom were 8,876 Germans, 8,092 Englishmen, 2,483 Frenchmen); 882 of the inhabitants are from one hundred to one hundred and forty years of age, and 9,685 are physically or mentally helpless.

The commerce of Chili during the years 1861 to 1866 was as follows:

	Imports.	Exports.
1866.....	\$18,760,000	\$26,680,000
1865.....	21,240,000	24,900,000
1861-'65, annual average	18,900,000	21,690,000

The number of vessels entering the Chilean ports in 1866 was 3,094, making, together, 1,417,000 tons.

The merchant navy in 1865 numbered 257 vessels, together of 67,090 tons.

The national banks, in 1868, asked permission to issue notes to the full extent of their privileges, and obtained authority to do so as follows: National Bank of Chili, 3,800,000 piastres; Valparaíso Bank, 600,000; A. Edwards & Co., 600,000; McClure & Co., 600,000; Ossa & Co., 240,000.

To promote immigration, the Chilean Government entered into a contract with Godeffroy & Son, of Hamburg, for the introduction of Swiss and German colonists. The immigrants will have to be provided with good characters, viséd by the Chilean consul at Hamburg, and on their arrival out they will be sent on to Arauco by the Government and placed in possession of their land according to the terms of the law. The colonists will be furnished with 'tween-deck passages, and they will be allowed one ton of measurement for every adult, and one half ton for each person under twelve years, and they are to be treated on board in conformity with the Hamburg Passenger Act. The Government agrees to pay \$40 for the passage of each adult, and \$20 for each child under twelve years of age. The contract is to last four years, and, if the scheme should meet with favor in Germany, the Government agree to contract for one hundred families for the first year, one hundred and fifty for the second, two hundred for the third, and three hundred for the fourth; with liberty to Godeffroy & Son to exceed this number to the extent of twenty-five per cent.

Early in the year, arrangements were entered into between the representative of Chili in London and Lord Stanley, in order to facilitate

the departure from the Thames of two Chilian corvettes, the *Chacabuco* and the *O'Higgins*, and at the same time balancing the matter by consenting to the sailing of two Spanish iron-clads. The four vessels had suffered detention for some months, owing to the war existing between Spain and the allied republics of the Pacific. After the meeting of Congress, the Minister of Foreign Affairs presented to the Houses all the papers relating to the matter. These throw no new light on the subject, but very bitterly condemn the action of the Peruvian *Chargé d'Affaires* in London, who formally protested against the consummation of the agreement referred to. This protest made to the English Government showed, it is alleged, to the world the little true feeling of friendship and amity existing between the so-called allied republics. The report of the Chilian Government states that the arrangement entered into is highly advantageous to the allied republics, as they have the privilege of buying and exporting from England material of war to the value of £400,000, the difference in the cost of the Spanish and Chilian vessels, and that Government has already given orders to its agents in London to purchase a monitor which will, by the terms of the convention, be allowed to sail immediately on its completion. The House of Deputies, after two days of warm discussion, adopted the following proposition by a vote of 47 to 8: "The House of Deputies having before them the documents, and having heard the explanations given by the minister, approves the proceedings of the Government in the transaction made in London to liberate the corvettes *Chacabuco* and *O'Higgins*."

The Congress of Chili was opened on the 1st of June. The President delivered at the opening the usual message. The main topics upon which it touches are the war with Spain and all relating to it, the affair of the corvettes, and the question of electoral reform. As far as regards the war, the President disbelieves in a renewal of hostilities, and begs that, in consequence, the extraordinary powers granted him by the war statute of 1865 be revoked. The merchants who addressed a protest to the British Government on the subject of the departure of the Chilian corvettes and the Spanish iron-clads may, therefore, rest assured that, so far as Chili is concerned, there is no danger of fresh hostilities. On the question of electoral reform, the President expresses his full adherence to the measures proposed, and recommends them to the consideration of Congress. In August, the Chamber of Deputies accepted, by 42 to 16 votes, a motion by Señor Sanfuentes to impeach the Supreme Court, of which ex-President Montt is president. The impeachment trial created great excitement, the Liberal party sympathizing with the Supreme Court.

The Government had again considerable trouble with the Araucanian Indians. These savages have always been remarkable for their

ferocity, and for a settled determination to repel all advances made by the Government with a view to civilize and improve them. Since the colonization of the country by the Spaniards, the Araucanians have always held their own portion of the republic intact, and only lately has the Government been enabled to take some effectual steps toward opening to commerce and improvement the very valuable territory held by the Indians. On the 25th of April, a small outpost of Chilian troops, numbering one hundred and sixty-nine rank and file, was furiously attacked by six hundred of the savages, the latter armed with their bows, arrows, and spears, and after a sharp combat of some hours the troops were obliged to fly, leaving twenty-five of their number killed and wounded. Among the killed were several officers. The troops, however, inflicted a severe punishment on the Indians before the latter proved too strong for them. As a general movement of the Indians against the frontier settlements was feared, the Government dispatched a column of 1,400 men with a section of artillery to the theatre of war. This division, commanded by Colonel San Martín, an able and experienced soldier, prevented the repetition of disasters.

On August 18th, several places on the coast of Chili, especially Talcahuana, were visited by an earthquake. The damage done was, however, not so great as in Ecuador and Peru (*see EARTHQUAKES*).

On the 18th of May the first steamer of the line which places Chili in direct communication with Europe, by the way of the Straits of Magellan, sailed from Valparaíso. The line receives a government subsidy of \$60,000 annually, which will be increased to \$100,000 as soon as the line shall be permanently established.

In accordance with the notice given in 1867, the Government abolished the free-trade treaty with the Argentine Confederation. This treaty, which established a complete exemption from duties in favor of the overland trade, was concluded in 1856, during Montt's administration in Chili, and Urquiza's in the Argentine Republic. The majority of the Chilian press censured the decree abolishing the treaty as prejudicial to both parties.

CHIMNEY, THE TALLEST.—The chimney at the Port Dundas Works, Glasgow, is the tallest chimney and one of the highest masonry structures in existence. In Europe there are only two church steeples, those of the Strasburg Cathedral and of St. Stephen's Church, in Vienna, which, by a few feet, exceed the height of this chimney, and the great Pyramid of Ghizeh was—but is not at present—the only other human erection exceeding this great chimney in height. The dimensions of the chimney are: total height from foundation, 468 feet; height above ground, 454 feet; outside diameter at the level of ground, 82 feet; outside diameter at the top, 12 feet 8 inches;

thickness at ground level, 7 bricks; thickness at the top, $1\frac{1}{2}$ bricks. From this it will be seen that the portion below ground, which contains not only the foundation proper, but also the flues, with their arches and coverings, occupies a depth of 14 feet. The flues are four in number, placed at right angles to each other, so as to form an equilateral cross in the plan; they are of rectangular section, about 7 feet wide, and 9 feet high each, and arched both at the top and bottom. The foundation below these flues is built up from hard bricks, all placed on edge throughout several superposed layers up to the sides of the flues, which are arched and lined with fire-bricks. The masonry above the flues is built with the bricks laid flat in the usual way. The internal diameter at the base is 20 feet, and it gradually contracts toward the top to 10 feet 4 inches diameter. Up to a height of 50 feet there is an internal lining of fire-brick placed within the chimney proper, with an air-space between it and the outer wall. The outline of the whole structure is of extreme simplicity, viz., the form of a truncated cone, without any deviation, ornamentation, or addition. The "batter" is straight from the bottom to the top, and there is no "cap" or other protruding ornament at the top. The section is circular throughout. Professor Rankine, in his report upon the stability of this chimney, calculated the maximum pressure of wind which this structure is capable to resist at different horizontal joints, and the figures given by him are as follows:

Height of joint above ground.	Greatest safe pressure of wind.
300 ft.	90 lb. per sq. ft.
280 ft.	64 lb. "
200 ft.	63 lb. "
120 ft.	66 lb. "
40 ft.	74 lb. "

From this it appears that with the straight outline the line of weakness, or the point of least stability, is somewhere about 200 feet from the ground, and that at this spot the chimney should be thicker, in order to have an equal stability throughout. Yet, as the capability of resistance at any point is in excess of what it will ever be called on to exert, simplicity of construction is more important than the theoretical outline.

The Port Dundas chimney has, during its erection, undergone one of the most interesting and curious operations known in masonry practice, viz., the straightening by sawing the mortar-joints. The mortar in the newly-built portion of the work being still soft and plastic, the pressure of the wind caused a lateral deflection of the column, amounting to 7 feet 9 inches from the vertical at the top. The whole structure was thereby endangered, and, in order to restore its stability, it was necessary to bring it back to the vertical line. The operation of sawing, which was then resorted to, consists in attacking the mortar-joints at the windward side, and to reduce their thickness, so as to compensate for the compression of the mortar-

joints at the opposite side, effected by the pressure of wind. The sawing was done by first removing a portion of the brickwork inside the chimney, forming a groove about 14 inches wide half round the interior surface of the chimney. Narrow holes were then cut out by means of chisels, the workmen standing upon the internal scaffolding, and working exclusively from the inside. A saw with a single handle—in reality an old carpenter's saw—was the instrument employed. It was passed through one of the holes cut out so as to work through a horizontal mortar-joint, and it was then worked by hand, removing the mortar, as it proceeded through the joint, through part of the half circle on the windward side. Generally two saws were simultaneously employed, working in opposite directions toward each other. The mortar-joint operated upon was kept wet by a jet of water during the whole process, and the removed brickwork in the interior was replaced by fresh bricks as the sawing proceeded. As soon as the greater portion of any one mortar-joint is sawn through, the effect produced upon the superincumbent mass causes the latter to settle, and a considerable pressure is thereby exerted upon the saw, making it difficult to withdraw. If the precaution is taken to commence sawing at the lowest joints, and proceed in succession to the higher cuts, this difficulty is considerably lessened. In the case of the Port Dundas chimney, sawing was commenced at the top, 128 feet below the chimney-cope, and twelve cuts were made in unequal distances, varying from 12 feet to 49 feet. Judging by the effects produced by each incision, the spots were selected for the next cut by proceeding gradually downward until the last cut, 41 feet from the ground, restored the whole chimney to a perfectly perpendicular position. The chimney after sawing stood more correctly perpendicular than it had been before the action of the storm, and it is now more correct in that respect than the majority of well-built chimneys of much smaller sizes. The operation of sawing occupied nine days, from September 21st till October 1st, 1859, and the chimney has from that date remained in its perfect condition, requiring no further strengthenings or repairs.

CHINA, an empire in Eastern Asia. Emperor, Ki-Tsiang (before his accession to the throne, Tsai-Sung), born April 5, 1855; succeeded his father, Hieng-Fund, August 22, 1861. The estimates of the area of China Proper vary from 1,294,000 to 1,548,000 English square miles; and of the area of the dependencies of China, from 3,012,000 to 3,118,000 English square miles. The total area of China and dependencies is given by Behm (*Geograph. Jahrbuch*, vol. ii.) as 4,695,334 square miles. The population of China Proper was in 1812 estimated at 361,993,179; in 1842, at 414,686,994; and in 1866, at 450,000,000. The population of the dependencies of China is estimated as follows: Mantchooria, 3,000,000; Mongolia,

3,000,000; Thian-Shan-nanlu and Thian-Shan-pelu, together, 1,000,000; Thibet, 11,000,000; Corea, 9,000,000; the Loo-Choo Islands 500,000. The total population of China and dependencies would therefore be about 477,500,000. At the head of the department of Foreign Affairs is Prince Kung, an uncle of the Emperor. The empire is divided into eighteen provinces, each of which has a particular administration, army, and finances. The Chinese army, according to a recent statement (Moger, "Recollections of Baron Gross's Embassy to China and Japan," London, 1860), consists of about 600,000 men, scattered throughout the empire. Besides, there are about 200,000 Tartars at the immediate disposition of the government. The soldiers, when not on duty, practise some trade at their residences, so that it may be said that China has no standing army.

The revenue, according to an official report made in 1864, amounted to £68,934,713. The receipts from customs in the ports open to foreign commerce, from 1861 to 1866, were as follows:

	Average Annual Receipts, 1861 to 1865.	Duties paid, 1866.
Duties on Imports.....	£1,297,605	£3,265,852
" Opium.....	1,061,298	
" Exports.....	3,564,018	
Tonnage Duties.....	219,257	217,782
Duties on Coasting Trade	325,992	529,086
" Native Produce	53,726	27,249
Total.....	£6,521,896	£8,685,629
1865.....		8,177,144

The foreign commerce in the year 1867, according to official statements, was as follows (value expressed in taels, one tael = seven shillings):

PORTS.	Imports.	Exports.
Shanghai.....	44,330,000	29,230,000
Canton.....	7,860,000	10,550,000
Swatow.....	4,780,000	220,000
Amoy.....	5,300,000	1,760,000
Foochow.....	3,870,000	14,320,000
Takao.....	160,000	20,000
Tamsui.....	400,000	60,000
Ningpo.....	750,000	10,000
Ching-kiang.....
Kinkiang.....
Hankow.....	10,000	570,000
Chefoo.....	770,000	190,000
Tientsin.....	790,000	950,000
Newchang.....	870,000	10,000
Total.....	69,330,000	57,900,000

The movement of shipping in the years 1864 to 1866 was as follows:

YEARS.	Vessels.	Tonnage.
1866.....	15,672	6,877,582
1865.....	16,628	7,136,301
1864.....	17,966	6,635,485

The appointment of Mr. Anson Burlingame, United States ambassador in Peking, as the first ambassador of China to the United States and

the Governments of Europe, has already been announced in the ANNUAL AMERICAN CYCLOPEDIA for 1867. Information, received too late to be made use of in our former volume, shows how this appointment came to be made and accepted. Mr. Burlingame, as American minister, gave the Chinese Government ample proof of his diplomatic ability, and of his sincere friendliness to China. He took the lead in urging the adoption of what is known as the coöperative policy, by which the autonomy of that country has been guaranteed, and the old method of extorting concessions by menace and force has been discarded. He drew up a paper construing the doubtful passages in the treaties, which was accepted by all the members of the diplomatic body at Peking. He successfully opposed the concession of territory in the neighborhood of the seaports to foreign powers. He procured, with the assistance of Sir Frederick Bruce, the exclusion of confederate pirates from Chinese waters. He induced the Chinese Government to employ Mr. Pumpelly to make a thorough examination of the coal-mines of Northern China. He procured the grant for the submarine telegraph from Canton to Nintsing. He has constantly aided the missionaries in their work, has used all his influence to promote the study of the European languages and the natural sciences in Peking, and has induced the Chinese Government to employ foreigners in its custom-houses, and in other departments of the civil service.

Early in November, Mr. Burlingame informed the Chinese Government that he intended to resign his post and return to his country. It was attempted, unsuccessfully, to dissuade him from this purpose. Finding him resolute, Prince Kung tendered him the compliment of a farewell dinner. All the members of the council of Foreign Affairs were present. Several mandarins spoke of the great service which Mr. Burlingame had done China during his visit to Europe and this country in 1865. Mr. Burlingame answered that he would always be ready to say a good word for their country when the chance should present itself to him.

The idea of the embassy seems to have been suggested by these speeches. The Inspector-General of Customs and the secretary of the British Legation were consulted, and, two days after the dinner, a deputation of high officials waited on Mr. Burlingame, and offered him an appointment as ambassador. He accepted on the single condition that the embassy "should be placed in all respects on a footing of the highest respectability." Mr. Burlingame placed his resignation as American minister in the hands of Dr. Williams, his secretary of legation. A week afterward he received his credentials from the hands of Prince Kung. The document is written on yellow silk, and bears the great seal of the empire. With regard to the Chinese officials

who were selected to accompany Mr. Burlingame, dispatches were addressed to the foreign ministers in Peking, to the effect that the Chinese are novitiates in the art of foreign diplomacy, and that one object in their appointment is to fit them to represent China at the courts of the treaty powers at a future date. The document expresses a strong wish on the part of the Chinese to become better understood by foreign powers, and evinces a desire to enter upon a course of progress.

Mr. Burlingame left Peking on the morning of November 25th. He was escorted to the gates by all the foreign residents, including his colleagues in the diplomatic body. In his suite were the late Secretary of the British Legation, a French gentleman lately holding a high office in the Maritime Customs, two mandarins, six *attachés* selected from the new college at Peking, and some twenty others. The party were compelled to stop at a village about forty-five miles from Peking, and send to that city for an armed escort to protect them from a formidable band of robbers which was scouring the district. Fortunately, they were not attacked.

Mr. Burlingame arrived at Shanghai on December 10, 1867, and sailed from there for Europe on February 25, 1868. Before leaving, he made a visit of courtesy to the Viceroy, resident at Nanking. Prior to and during his absence the official proclamation of the creation of the mission and the appointment of Mr. Burlingame was issued, and, during his stay at Shanghai, the high mandarins and government officials in the region round about Shanghai made official calls upon Mr. Burlingame, and manifested in every way the extreme respect and awe in which they held him in consequence of the position in which he had been confirmed, and the unprecedented dignity conferred upon him. It was found impossible to prevent them from prostrating themselves before Mr. Burlingame, and he could only remain passive and receive their attentions. On March 31st, Mr. Burlingame and the other members of the embassy arrived at San Francisco, where they were received with great honors. After a short stay in San Francisco, Mr. Burlingame proceeded to Washington, and entered at once into negotiations for a treaty, containing additional articles to the treaty of June 18, 1858. On the 4th of July, the treaty was signed in Washington; on the 11th it was transmitted to the Senate, which on the 16th ratified it, with but few and slight modifications. The text of the treaty, as ratified by the Senate, is as follows:

Additional articles to the treaty between the United States of America and the Ta-Tsing Empire, of the 18th of June, 1858.

Whereas, since the conclusion of the treaty between the United States of America and the Ta-Tsing empire (China), of the 18th of June, 1858, circumstances have arisen showing the necessity of additional articles thereto, the President of the United States and the august sovereign of the Ta-Tsing empire having

named for their plenipotentiaries, to wit, the President of the United States of America, Wm. H. Seward, Secretary of State, and his Majesty the Emperor of China, Anson Burlingame, accredited as his Envoy Extraordinary and Minister Plenipotentiary, and Chih-Kang and Sun Chia-Ku, of the second Chinese rank, associated High Envoys and Ministers of his said Majesty, and the said plenipotentiaries, after having exchanged their full powers found to be in due and proper form, have agreed upon the following articles:

ARTICLE 1. His Majesty the Emperor of China, being of the opinion that, in making concessions to the citizens or subjects of foreign powers of the privilege of residing on certain tracts of land, or resorting to certain waters of that empire for the purposes of trade, he has by no means relinquished his right of eminent domain or dominion over the said land and waters, hereby agrees that no such concession or grant shall be construed to give to any power or party which may be at war with or hostile to the United States the right to attack the citizens of the United States or their property within the said lands or waters; and the United States, for themselves, hereby agree to abstain from offensively attacking the citizens or subjects of any power or party, or their property, with which they may be at war, on any such tract of land or waters of the said empire; but nothing in this article shall be construed to prevent the United States from resisting an attack by any hostile power or party upon their citizens or their property. It is further agreed that if any right or interest in any tract of land in China has been or shall hereafter be granted by the Government of China to the United States or their citizens for purposes of trade or commerce, that grant shall in no event be construed to divest the Chinese authorities of their right of jurisdiction over persons and property within said tract of land, except so far as that right may have been expressly relinquished by treaty.

ART. 2. The United States of America and his Majesty the Emperor of China, believing that the safety and prosperity of commerce will thereby best be promoted, agree that any privilege or immunity in respect to trade or navigation within the Chinese dominions, which may not have been stipulated for by treaty, shall be subject to the discretion of the Chinese Government and may be regulated by it accordingly, but not in a manner or spirit incompatible with the treaty stipulations of the parties.

ART. 3. The Emperor of China shall have the right to appoint consuls at ports of the United States, who shall enjoy the same privileges and immunities as those which are enjoyed, by public law and treaty, in the United States by the consuls of Great Britain and Russia, or either of them.

ART. 4. The twenty-ninth article of the treaty of the 18th of June, 1858, having stipulated for the exemption of Christian citizens of the United States and Chinese converts from persecution in China on account of their faith, it is further agreed that citizens of the United States in China of every religious persuasion and Chinese subjects in the United States shall enjoy entire liberty of conscience and shall be exempt from all disability of persecution on account of their religious faith or worship in either country. Cemeteries for the sepulture of the dead, of whatever nativity or nationality, shall be held in respect and free from disturbance or profanation.

ART. 5. The United States of America and the Emperor of China cordially recognize the inherent and inalienable right of man to change his home and allegiance, and also the mutual advantage of the free migration and emigration of their citizens and subjects respectively from the one country to the other for purposes of curiosity, trade, or as permanent residents. The high contracting parties, therefore, join in reprobating any other than an entirely voluntary emigration for these purposes. They consequently agree to pass laws making it a penal offence

for a citizen of the United States or a Chinese subject to take Chinese subjects either to the United States or to any other foreign country, or for a Chinese subject or a citizen of the United States to take citizens of the United States to China or to any other foreign country, without their free and voluntary consent respectively.

ART. 6. Citizens of the United States visiting or residing in China shall enjoy the same privileges, immunities, or exemptions, in respect to travel or residence, as may there be enjoyed by the citizens or subjects of the most favored nation, and, reciprocally, Chinese subjects visiting or residing in the United States shall enjoy the same privileges, immunities, and exemptions, in respect to travel or residence, as may there be enjoyed by the citizens or subjects of the most favored nation; but nothing herein contained shall be held to confer naturalization upon the citizens of the United States in China, nor upon the subjects of China in the United States.

ART. 7. Citizens of the United States shall enjoy all the privileges of the public educational institutions under the control of the government of China, and reciprocally Chinese subjects shall enjoy all the privileges of the public educational institutions under the control of the Government of the United States, which are enjoyed in the respective countries by the citizens or subjects of the most favored nations. The citizens of the United States may freely establish and maintain schools within the empire of China at those places where foreigners are by treaty permitted to reside, and reciprocally Chinese subjects may enjoy the same privileges and immunities in the United States.

ART. 8. The United States, always disclaiming and discouraging all practices of unnecessary dictation and intervention by one nation in the affairs or domestic administration of another, do hereby freely disclaim any intention or right to intervene in the domestic administration of China in regard to the construction of railroads, telegraphs, or other material internal improvements. On the other hand, his Majesty the Emperor of China reserves to himself the right to decide the time and manner and circumstances of introducing such improvements within his dominions. With this mutual understanding, it is agreed by the contracting parties that, if at any time hereafter his Imperial Majesty shall determine to construct or cause to be constructed works of the character mentioned, within the empire, and shall make application to the United States or any other Western Power for facilities to carry out that policy, the United States will, in that case, designate and authorize suitable engineers to be employed by the Chinese Government, and will recommend to other nations an equal compliance with such application, the Chinese Government in that case protecting such engineers in their persons and property, and paying them a reasonable compensation for their service.

In faith whereof the respective Plenipotentiaries have signed this treaty and hereunto affixed the seals of their arms.

Done at Washington the fourth day of July, in the year of our Lord one thousand eight hundred and sixty-eight.

WILLIAM H. SEWARD,
ANSON BURLINGAME,
CHIH-KANG,
SUN CHIA-KU.

The new treaty was received in the United States with general satisfaction, and Mr. Burlingame and his embassy were the recipients of great ovations. The English press, on the other hand, expressed the greatest dissatisfaction with the new treaty, which was represented as a victory of American over English diplomacy, and as altogether made in the interest of Americans. When Mr. Burlingame

arrived in England, he was at first received with studied coldness; but he succeeded in bringing about an understanding with the English statesmen, and in finally concluding a treaty, similar to the one with the United States. As the result of the agreement with China, the *London Times* remarks, that England now openly and formally recognizes the authority and obligations of the Supreme Government of the Chinese empire. England has even insisted on this recognition, and required that it should be mutual. A British minister is now actually resident at the court of Peking, charged with the protection of British interests in China. If these interests are attacked or imperilled, it is the duty of the minister to remonstrate, and of the Chinese Government to attend to his representation. If, however, British representatives in various parts of China could do no more in any exigency than transmit a complaint to Peking, much mischief might be done before the court of Peking could interfere. Reservation is made, therefore, for cases of actual danger to life and property. But on occasions where there is no expectation of violence, and merely a conflict of claims or dispute about rights, then the British consul shall, instead of summoning the captain of the nearest gunboat, put himself directly in communication with his superior at Peking. That minister would succeed in obtaining the desired consideration or redress, failing which, the Home Government might be consulted as to ulterior considerations, and might transmit its decision. At the close of the year, Mr. Burlingame left England for France; where the entire press received him with favorable comments upon the objects of his mission.

The United States steamer *Shenandoah* visited the coast of Corea, but could obtain no satisfactory information of the men on board the steamer *General Sherman*, which was wrecked there in 1867. The *Shenandoah* returned to Chefoo, on May 19, 1868, and reported, that, after spending four days in sounding among the islands which lay off Corea, the vessel anchored inside the river Ping-yang. From this point surveys were continued till the 21st of April, when a point about 25 miles from the mouth, where the natives have established a military station, was arrived at. This was the farthest point reached. The river is upward of a mile wide, and from six to eight fathoms deep. The boat in which the *Shenandoah's* officers were taking soundings was here fired upon, and, as Captain Febiger's instructions did not warrant the use of force, farther progress was abandoned. From all that could be learned, it was believed that none of the ill-fated party on board the *General Sherman* survived. The natives in their statements varied so much, that they betrayed a wish to conceal the real facts of the case, but they fully agreed in stating that all who were on board perished.

A proclamation was issued in May, notifying the disarmament of all Chinese fishing-junks

trading at Hong-Kong. This measure was adopted in order to suppress piracy in those waters, it having been found that, under cover of trading, numerous junkmen yet continue their old practice as freebooters.

The Christian missionaries, as well as foreigners in general, met with more or less of opposition in their labors, both from the people and from provincial authorities. Violent placards against the Christian religion were posted in several places. An anti-foreign riot occurred at Yung Chow, near Chin-Kiang. The mob burned and destroyed some missionary premises, and attempted to murder the inmates. The British consul at Shanghai, in the British ship *Rinaldo*, instituted an inquiry in the matter and demanded reparation. When this was not immediately granted, three British war-vessels went up to Nanking and threatened to enforce the demand. The Chinese authorities then yielded. In reply to the remonstrance of the French consul-general, the following proclamation was issued:

October 7, 1868.

Taotai Ying to the Consul-General of France at Shanghai;

NOBLE CONSUL-GENERAL: I have received your dispatch on the subject of the anonymous proclamation fixed to the Great East Gate, etc.

The laws of the empire strictly forbid these anonymous proclamations, and I have ordered the Che-Hsien to find out and severely punish the offenders. At the same time, I will issue a proclamation, of which I herewith forward a copy:

PROCLAMATION.

The consul-general of France having advised me that an anonymous proclamation has been fixed at the Great East Gate, in which absurd rumors are spread about with audacious effrontery, he begs me to find out and punish the offenders, and at the same time forwards me the proclamation in question.

An anonymous proclamation is in itself a grave violation of the laws of the empire. In addition, the construction of churches and the propagation of the Christian religion, as done by Europeans in the empire of China, are authorized by the treaty; and further, it is optional with every individual to follow or not to follow this religion as he likes. Why, then, should such proclamation be fixed up contrary to law? It is evidently a violation of the laws. I have given orders to the Che-Hsien to find out the authors of this proclamation, and to punish them severely. I also publish this proclamation to inform the inhabitants of this part of the country and those from other provinces residing at Shanghai, that anonymous placards are prohibited, and that the right to propagate religion is contained in the treaty. In future, therefore, all must preserve peace and harmony, and each be allowed to follow his own belief and his liberty of conscience. Those who have the audacity to disobey will be arrested, judged, and punished without remission, and with all the severity of the law. Tremble!

The Government at Peking invariably showed a firm resolution to protect the missionaries and foreigners.

The Island of Formosa suffered greatly from an earthquake which took place on December 18, 1867. The shock pursued almost a direct course over the island from Keelung to Yamsin, at which latter place it was felt very severely, as well in loss of life as in the destruction of prop-

erty and houses, including a temple which had just been completed at a cost of \$30,000. A village on the northern extremity of the island suffered greatly, having lost 1,000 people. The number of lives lost was estimated at 80,000. Shocks of earthquake were also felt at Shanghai and Ningpo.

The Shanghai Steam Navigation Company held its annual meeting in February. The report states that the profits for the year amount to 806,000 taels. They have paid all debts and have 14 first-class steamers running to Hankow, Tientsin, Chefoo, Ningpo, and Hong-Kong. The company have purchased three more steamers—the *Express*, *Manchua*, and *Warrior*. A stock dividend of 50 per cent. upon the old shares of 1,000 taels has been declared. New stock is to be issued at 100 taels per share, and the old stock can be converted into new stock at a pro-rata proportion.

The existence of extensive coal-fields in China has been long known. Recent researches, of persons competent to express opinions, have demonstrated that these fields are distributed over wide districts and are well situated for utility. They may be found near Newchwang, Peking, and Chefoo, in the north; at different points along the Yang-tse-Kiang Rivers, and near Hankow in the centre, and back of Swatow and Canton in the south. Mr. Pumpelly believes that, in respect of the extent of her coal-fields, China is not less favored than the United States; but he, as well as others, is unwilling to say that the coal is of equally good quality.

Important gold-fields were discovered in the neighborhood of Chefoo. Large numbers of foreigners were going to them, notwithstanding the fact that the authorities had forbidden it, and the foreign consuls had warned their respective subjects against it. The Chinese authorities were finally induced to protect the foreign miners.

Some of the northern provinces were again considerably troubled during the early part of the year by the movements of the Nienfei and Mohammedan rebels. At one time they were threatening Tientsin, after winning several victories over the Imperialists. Business in Tientsin was completely paralyzed. The Tientsin authorities enrolled a considerable number of militia, and put the ramparts in a state of defence. The foreigners also formed themselves into a defence corps, to aid the British gunboat *Dove* in protecting foreign lives. The rebels, at this time, consisted of three different factions, which had united: Taepings, from Honan; Nienfei, from Shantung; and Mohammedans, from Shansi. The danger was, however, averted, and in the latter months of the year the operations of the rebels were of little importance.

CLARK, Rev. LABAN, D. D., an eminent and venerable Methodist clergyman, born in Haverhill, N. H., July 19, 1778; died at Middletown, Conn., November 28, 1868. In his childhood his parents removed to Bradford, Vt., where

he obtained a fair academical education. He was not brought into contact with the Methodists until he was nineteen years of age, and the succeeding year (1798) united with a Methodist church, and soon became active as a class-leader and exhorter. He commenced preaching in 1800, and in 1801 joined the New-York Conference, and entered upon the itinerant work, in which he continued with unflagging zeal and great success for fifty years, in New England, New York, and Canada. He attained a high reputation as a successful and able preacher. In 1819 he offered the first resolution in favor of forming the Missionary Society of the Methodist Episcopal Church, and, in conjunction with Nathan Bangs and Freeborn Garretson, prepared its constitution. He was also one of the founders, and most active and zealous patrons, of the Wesleyan University at Middletown, Conn., and when he had passed his half century in the itinerancy, he withdrew from active labor in preaching (in 1851) and settled himself at Middletown, that he might the better watch over the university. He was a man of clear intellect and decided opinions, a voluminous reader and a sound and able thinker, and withal of genial, cheerful nature, winning in a remarkable degree the love and esteem of all with whom he was brought in contact.

COBB, HOWELL, a Southern statesman, born at Cherry Hill, Jefferson County, Ga., September 7, 1815; died suddenly in New York City, October 9, 1868. He was educated at Franklin College, Athens, where he graduated in 1834. He then turned his attention to the study of the law, and was admitted to the bar in 1836. The first office held by him was that of Solicitor-General of the Western Circuit of Georgia, to which position he was elected by the Legislature in 1837. He held the office for three years, and during that period laid the foundations of an extensive and lucrative practice. In 1843 commenced his long and stormy congressional career. He was elected a member of the House of Representatives four times in succession, serving from 1843 to 1851, and distinguished himself by his familiarity with the rules of the House, his skill as a debater, his vehement professions of love for the Union, and his equally earnest advocacy of State rights. His imperiousness, and his bold championship of slavery, naturally made him the leader of the Southern party in the House in the Thirtieth Congress, and at the commencement of the Thirty-first Congress he was their candidate for the speakership. The contest was a long one, sixty-three ballots being cast, and the effort to elect a Speaker under the majority rule proving unsuccessful, a plurality was declared sufficient to elect, and he was chosen, receiving one hundred and two votes, Robert O. Winthrop, of Massachusetts, having ninety-nine, and twenty (Free-Soil) scattering. He demanded the extension of slavery into California and New Mexico by Federal authority,

and advocated the Compromise measures of 1850. An issue being taken on this latter question by the Southern rights extremists of Georgia, he was nominated for Governor by the Union party in 1851, and after a violent contest elected by a large majority. At the expiration of his term of service as Governor, in 1853, he resumed the practice of law, but still took an active part in politics. In 1855 he was again elected to Congress, and in the canvass of 1856 advocated Mr. Buchanan's election throughout the Northern States. Immediately on Mr. Buchanan's accession to the presidency, he nominated Mr. Cobb Secretary of the Treasury. His administration of this important department of the Government was creditable to the administration of which he was a member. He early believed that secession was necessary for the security of the South, and soon began to make preparations for it. He found the Treasury full, and the bonds representing the national debt at a premium of sixteen to eighteen per cent. He used the surplus funds in the Treasury in purchasing this indebtedness at this high premium, but the approach of the struggle so affected the national credit that he was compelled to attempt to borrow at an exorbitant discount the money necessary to defray the ordinary expenses of the Government. On the 10th of December, 1860, he resigned, giving as his reason that the State of Georgia (then about to secede) required his services, and that he regarded it as his duty to give his services first of all to his native State, and, as she was about to separate from the Union, to join his fortunes with hers. Returning to Georgia, he at once entered heart and soul into the contest, addressed the people of the State, and urged forward the secession movement. He was one of the delegates from Georgia to the Congress of the seceded States which met at Montgomery, Alabama, February 4, 1861, and, on its assembling, was chosen President. This Congress (subsequently known as the Provisional Congress) prepared and adopted the constitution of the Confederacy, and continued in power for a year, having four sessions, two at Montgomery and two at Richmond, over all of which Mr. Cobb presided. Of the First Confederate Congress, which assembled February 18, 1862, Mr. Cobb was not a member; but, having done his utmost to organize the opposition, he was withdrawn from civil office, not being a favorite with Mr. Davis. On the demand of the Georgian members, the Confederate Congress appointed him brigadier-general, and subsequently promoted him to a major-generalship, but, though not lacking personal courage, he had but little military experience, and never distinguished himself as an officer, and indeed was not a participator in any very considerable engagement. At the close of the war, he was still strongly opposed and hostile to all the new measures for reconstruction, introduced and adopted by Congress, as calculated to retard the restora-

tion of the South to the Union, keep back its prosperity, and destroy the negro race. He lacked, notwithstanding his intellectual abilities and eloquence, the power of comprehending the true condition of his country, as viewed by the people of the Union States, and the spirit to cooperate with them. His death was the result of disease of the heart.

COLOMBIA, UNITED STATES OF, a republic in South America.* President, for the term of 1868 to 1870, Santos Gutierrez; American minister in Colombia, P. J. Sullivan, appointed in 1867. In the budget for 1866-'67, the revenue and expenditures were each estimated at 2,350,000 piastres. The public debt, in 1861, was reported to amount to 44 million piastres, 34,690,000 of which belonged to English creditors. In the budget for 1866 to 1867, only the sum of 488,204 piastres was set down as interest of the public debt. The federal army, in time of peace, numbers 2,000 men; in the event of war the several States are obliged to offer a contingent of one per cent. of the population. The Colombian Government claims altogether a territory of about 518,000 English square miles, while other statements (not giving to Colombia all the disputed territory) reduce it to 357,000. The population is 2,794,473, not including the uncivilized Indians, whose number is estimated at 126,000. The federal capital at present is Bogota, with a population of 40,000 inhabitants, but many desire to have the seat of the federal Government transferred to Panama. The imports of the ports of Panama and Colon (Aspinwall) were, in 1864, valued at \$85,000,000, and the exports at \$67,000,000. In 1865 there arrived in Panama 353 vessels, of 860,206 tons. The number of arrivals in Colon, in 1864, was 556 vessels, together of 485,044 tons.

The new President, Santos Gutierrez, entered upon his office on the 1st of April. His first acts were received with favor by all political parties. He offered seats in the cabinet to several prominent men of the (Conservative) opposition, who, however, declined. In the later months of the year he became involved in a violent conflict with the Conservative party of several States. The Conservative President of the State of Cundinamarca, Señor Ignacio Gutierrez Vergara, was arrested, and was held a prisoner even after the Supreme Court had declared the arrest and imprisonment unconstitutional. In December, the new (Liberal) Legislative Assembly of Cundinamarca condemned the President of the State to eight years in the chain-gang, and deprived him of all right to ever after hold any office. Afterward the Assembly granted him a pardon, which the Conservatives looked upon as an insult. The Legislatures of the States of Tolima and Antioquia solemnly protested against the removal, by the President of the Republic, of the constitutional government of Cundina-

marca, and demanded a reform in the federal Constitution.

The larger portion of the republic remained free from civil war. Disturbances in Tolima in the early part of the year were soon suppressed. Only the State of Panama suffered severely from internal strife. On the 5th of July, when it had become known that the election for President of the State had gone in favor of the Conservative candidate, Dr. Amador, thus defeating the Government (Liberal) candidate, Arosemena, a revolution broke out in the city of Panama, which resulted in the declaration of General Fernando Ponce as Provisional President. General Ponce at once issued the following proclamation:

PANAMA, July 5, 1868.

Fernando Ponce, General of the Armies of the Union and of the sovereign State of Panama, and Provisional President of this State, to his fellow-citizens:

The people and army of the capital have spontaneously called me to take charge provisionally of the executive government of the State, to save the cause of liberty, which is to-day threatened in this beautiful and important section of Colombia. You know the cause which has given rise to the popular movement that places me at the front of the public administration. Deficient institutions have permitted an unauthorized party to rise up boldly, pretending to subjugate the great liberal majority and check the rapid progress which this State should necessarily pursue. I have accepted the honor with which my fellow-citizens have distinguished me, because a soldier, who from his infancy has stood in the ranks of those who have fought for liberty and right, should not withhold his services when he sees the cause of the true republic threatened. Isthmians, we are possessors of the most important point of the globe, and we ought to see that our territory should not only be the road across which civilized nations should communicate, but also that it should be an asylum for all the oppressed. Let us found institutions capable in their beneficent exercise to open out the prosperity of this country, and give it respectability in the eyes of other governments. Let us confide in the sublime destinies prepared for a free people. Let us be unanimous in assisting that peace may be eternal within the limits which the two oceans have marked out for this country, and plenty will be spread out before us, and will be preserved by such impregnable walls.

Foreigners resident on the isthmus, it gives me pleasure to remember that my modest country has been up to the present time so respected by friendly nations. The conduct of the governors of this republic, always worthy and to be respected in their foreign relations, and the protection of strangers visiting our land, is the true bulwark of the people who enter in the race of civilization. Your houses and property will be respected, and public treaties will be held inviolate during the short period of my administration. Soldiers of the battalion Santander, I entertain the hope that you will always bear with honor the flag of the free, and that you will never be unworthy of the honorable title by which you are distinguished. The name of the hero of Boyaca is the greatest decoration with which you can be adorned, and in the moment of danger you ought to imitate his example.

Fellow-citizens, before a constituted assembly, which should unite soon to regulate the situation of the State, I will lay down my authority and present myself to give an account of my acts.

FERNANDO PONCE.

Another proclamation declared the isthmus in a state of war, suspending constitutional

* For other statistical information, see ANNUAL AMERICAN CYCLOPEDIA for 1867.

guarantees, preventing more than four persons talking together after ten o'clock, P. M., prohibiting any vessel leaving Panama for other parts of the State without special permit, and stopping the transit of the Rio Grande. The administration of Ponce only lasted eight weeks. On the 28th of August, President Ponce and his principal general, Mesa, took a pleasure-trip to Aspinwall. On the morning of the 29th, General Buenaventura Correo, commander of the battalion Panama, during their absence, had an attack made on the barracks. The guard, and afterward the other soldiers, were disarmed, and the militia installed in their stead. There was little show of resistance, except by a Captain Mesa, who was shot dead by a mulatto officer named Aispuru, opposite the barracks. On the return of Ponce and Mesa to Panama, the latter was immediately arrested, and the former, though he issued a proclamation, saying the affair was merely a row among his officers, resigned his position as Provisional President the same evening, and issued another document the next day, saying he was forced to do so, owing to the occurrences of the previous day. His resignation was at once accepted, and General Correo installed as Provisional President. The latter at once formed a new administration. The Conservative party, in the interior, refused to submit to the administration of both Ponce and Correo. After the accession of the latter to power, the people of the Department of Chiriqui established an independent government of their own, with Señor Aristides Obaldia as Commander of the Forces. They had 800 men, well armed, and expected to raise 2,000 in case of need, though they had not arms for so large a force. The soldiers sent there by the State government had an encounter with the men of the department, and were badly beaten, five of their men being killed, as well as the governor's secretary and their commander taken prisoners. They then joined the Obaldia forces. On the receipt of the news of this defeat in Panama, President Correo issued the following proclamation:

ARTICLE 1. The State is declared in a state of war.

ART. 2. The traffic in arms and ammunition is positively prohibited.

ART. 3. Every one, whether a private individual or a merchant, who has fire-arms, side-arms, or other elements of war in his possession, must present or give an account of the same to the respective governor, alcalde, etc.

A second proclamation was as follows:

ARTICLE 1. All Colombians, resident in the State, between the ages of sixteen and sixty, are called to arms.

ART. 2. At the first sound of the trumpet, every person embraced in this decree must present himself to the first police authority, to be placed on the recruiting list.

The members of the battalion Union shall present themselves armed, etc.

President Correo then started for Chiriqui, with three hundred men, some of them conscripts, leaving Juan Mendoza in the presi-

dential chair. A portion of those pressed into the service were Costa Ricans and Nicaraguans who had just arrived in the isthmus on a contract to work on the railroad. The expedition was successful, and the Conservatives had to submit. In December, Correo was formally elected President of the State.

In consequence of the frequent revolutions which have of late taken place, the finances of Panama are in a most deplorable condition. Every cent that could be raised for years past either by taxes, forced loans, or sales of property, has been spent to aid certain political cliques and keep up a large standing army, the only use of which is to assist in overthrowing the government. President Correo, finding himself without money, levied upon the isthmus a commercial tax of \$133,000, of which the city of Panama was to pay \$100,000, and Aspinwall \$20,000. The tax was, in particular, an unbearable burden to the foreign merchants. It appears from the official records that, out of the one hundred and seventy-five tax-payers who are taxed one hundred thousand dollars, sixty-four are foreigners, and pay \$86,520; while one hundred and eleven are native, and pay \$13,480, being an average of \$1,350 per head on the foreign, and \$121 on the native merchants and traders. In the town of Aspinwall the tax averages \$20 per head on the entire population, and of the \$20,000 levied on that place fully \$17,000 were to be paid by foreigners. Taking the entire commercial tax levied on the isthmus, with a population somewhere between 150,000 and 250,000, at \$133,000, the foreign portion of that population would pay \$103,520, while the natives would pay \$29,480, or less than one-third that sum. The right of increasing the commercial tax from the amount originally fixed by the Government of the republic, the law governing which is still in force, namely, \$25 per month as the maximum, to the enormous proportions which it has now assumed, has been annually disputed by the Panama merchants, who, however, in consideration of the poverty of the State, submitted to the imposition rather than take the trouble of testing the matter; and so it went on increasing year after year from ten to twenty per cent., until in 1868 it rose nearly seventy per cent. over 1867. The commercial community therefore resolved to test the question legally; and agreed unanimously to refuse to pay a dollar beyond the legitimate \$25 allowed by law. The fact of the Legislature passing a law to enforce this tax they considered no proof of its legality. The same body years ago passed certain laws regarding tonnage dues and capitation tax on passengers. Thousands on thousands of dollars were exacted from the companies under these laws, until at length they became so onerous that the companies determined to test the question at Bogota of the right of the Legislature to levy such taxes. The General Government at once decided the tax to be a direct violation

of the national laws, and it was in consequence finally put a stop to, though not a dollar of all the thousands fraudulently collected under protest was ever refunded. In the same way the agents of the companies were taxed at first very moderately; by degrees the tax got up to \$75 per month; even this was paid by them rather than complain, but, when the attempt was made to raise it from \$75 to \$350 per month, the agents refused to pay, and on the matter being referred to Bogota it was again decided that there was no law by which the agencies could be taxed a single cent. Notwithstanding these oft-repeated attempts to force money illegally from them, the companies, seeing the poverty of the treasury of the State, voluntarily agreed to contribute a monthly donation of \$100 each, to enable the Government to keep up a police force, and have since continued to pay this sum. At the close of the year the difficulty between the merchants and the Government of Panama was not settled.

In November, the Legislature of the State of Santander approved a proposition presented by Deputy Mantella, relative to the contract of the Panama Railroad, as follows:

"The Legislative Assembly of the State, in use of the power ceded to it in Art. 25 of the national Constitution, gives its vote of nullity:

ARTICLE 1. To the contract reformatory of that of 15th April of 1850, relative to the construction of a railroad from one ocean to another, over the Isthmus of Panama, celebrated 5th July, 1867, between the Secretary of State of the United States of Colombia and George M. Totten, Engineer-in-Chief and general agent of the Panama Railroad.

ART. 2. To the approval given to said contract by the national Executive power.

ART. 3. To the decree of Congress issued 15th August, 1867, approving the said Congress.

ART. 4. To the decree of the Executive of 16th August, 1867, promulgating as a law of the republic the legislative decree approving the contract celebrated 5th July, 1867, reformatory of that of 15th April, 1860, relative to the construction of a railroad from one ocean to another over the Isthmus of Panama.

"The Legislature calls upon the Assemblies of the States of Antioquia, Cauca, Cundinamarca, and Magdalena to issue a resolution of the same nature. This vote is to be communicated to the national Congress, to the Supreme Federal Court, to the national Executive power, and to the Legislative Assemblies of the States."

General Acosta, Provisional President, after the expulsion of President Mosquera in 1867, was, in 1868, sent to the United States as agent for the General Government, to enter into negotiations at Washington in regard to the canal scheme across the isthmus, or rather to conclude the arrangements made at Bogota by Minister Sullivan. The Government of Washington, for the same purpose, sent the Hon. Caleb Cushing to Bogota.

On June 27th, in the Corps Legislatif of France, the contract made with the General

Transatlantic Steamship Company, for the transportation of the mails to Panama and Chili, was approved. This convention proposes that the Government should advance the company four millions of francs to facilitate the construction of three new steamers, and pay an annual subsidy of 750,000 francs as a postal contribution, and further, guarantee from the 1st of July, 1868, an interest of five per cent. on the capital of the company already invested in the present service as well as on that to be employed in carrying out the new line. The entire capital will be nearly sixty millions of francs, and the Government appropriates for the fulfilment of the guarantee the sum of two millions.

COLORADO. (See TERRITORIES.)

COMMERCE OF THE UNITED STATES.

The most remarkable feature of the commerce of the country for the fiscal year ending June 30, 1868, is the continuance of the decline which commenced at the close of the fiscal year 1865. The net imports and domestic exports, including specie and bullion, for a series of years, have been as follows:

YEARS.	Imports.	Exports.
1860.....	\$335,233,232	\$373,180,274
1861.....	332,093,900	382,836,474
1862.....	261,300,966	213,253,560
1863.....	229,513,063	240,407,512
1864.....	310,880,817	241,907,043
1865.....	222,444,879	196,235,455
1866.....	431,645,714	417,142,084
1867.....	391,636,489	334,350,653
1868.....	343,727,258	352,320,639

From this statement it appears that the imports, which in 1860 amounted to \$335,233,232, declined to \$222,444,879 in 1865, when the war closed. During the following year they rose to \$431,645,714, the highest amount which they have ever reached. Since 1866 they have gradually fallen. The decrease of imports was chiefly in textile fabrics, hardware, cutlery, and iron goods. This was ascribed to the repeal of the internal revenue taxes on the home manufacture of these articles, which acted as an increased protection to the American manufacturer by enabling him to make and sell his fabrics at a lower price than the similar articles could be imported for under the existing tariff.

The domestic exports declined from \$382,836,474, in 1861, to \$196,235,455, in 1865; then advanced to \$417,142,084 in 1866, declined in 1867, and again advanced in 1868.

The imports at New York represent a large proportion of the total imports of the country. In the twelve months of 1868 they amounted to \$251,193,834. As compared with the year 1866, this shows a falling off of nearly fifty-five millions, but is larger than any other previous year excepting 1867. The decline from the previous year is about one and a half millions. Nearly all the goods imported were dutiable.

The following table shows the imports at New York during each month of the year for a series of years:

MONTHS.	1862.	1864.	1865.	1866.	1867.	1868.
January	\$15,732,576	\$18,977,394	\$10,620,117	\$20,109,630	\$20,979,087	\$15,419,571
February	18,027,845	21,643,937	11,473,068	20,693,537	25,680,791	20,818,337
March	18,390,695	22,667,119	16,012,872	26,204,940	21,512,974	26,512,334
April	17,835,315	23,168,681	14,174,464	24,840,605	25,632,293	22,369,864
May	14,324,925	23,970,144	12,876,109	23,818,447	21,652,350	22,150,539
June	12,597,515	22,996,814	16,355,831	22,736,652	20,967,903	20,471,568
July	16,002,677	22,333,369	19,161,628	26,551,137	23,096,865	22,987,657
August	15,033,129	18,223,453	24,475,008	23,834,065	24,373,034	22,930,721
September	15,499,940	10,539,459	22,674,495	27,079,099	21,037,309	22,235,396
October	16,894,987	10,088,308	22,124,075	24,322,134	18,439,486	19,994,739
November	16,045,695	8,597,525	27,325,651	20,710,334	15,671,008	18,301,230
December	17,126,098	9,966,068	25,048,099	19,852,174	12,875,580	14,032,087
Total	\$187,014,577	\$218,725,190	\$126,722,119	\$306,612,184	\$252,645,475	\$251,123,294

In the above imports there were \$80,905,834 of dry goods, which, during a series of years, have been classified as follows:

IMPORTS OF DRY GOODS AT NEW YORK.

DESCRIPTION OF GOODS.	1864.	1865.	1866.	1867.	1868.
Manufactures—Wool	\$31,411,965	\$22,052,100	\$50,405,179	\$28,675,601	\$25,732,436
Cotton	8,405,945	15,449,054	21,297,490	15,800,324	12,561,001
Silk	13,194,080	20,476,310	24,857,724	18,565,817	21,708,891
Flax	11,621,831	15,521,190	20,456,870	12,949,561	12,501,137
Miscellaneous Dry Goods	3,956,630	4,561,596	9,235,593	7,599,588	7,221,429
Total Imports	\$71,589,753	\$78,051,149	\$126,222,855	\$93,582,411	\$80,905,834

It will be seen from the foregoing statement that there was a decrease of nearly eight millions from the amount of the previous year. The decrease was principally in woollen goods,

while in silk goods there has been an increased importation.

The receipts for duties at New York during a series of years have been as follows:

RECEIPTS FOR DUTIES AT NEW YORK.

MONTHS.	1864.	1865.	1866.	1867.	1868.
January	\$5,130,596 00	\$4,221,737 47	\$12,487,474 16	\$9,472,343 48	\$7,123,433 42

Total	\$56,037,127 51	\$101,772,905 94	\$126,079,761 60	\$114,065,990 34	\$112,226,712 63

The aggregate of foreign imports at New York during a series of years has been as follows:

FOREIGN IMPORTS AT NEW YORK.

In the above table are included, under the head of dutiable, the duty-paying goods entered directly for consumption, as well as those entered for warehousing; these, with the free

goods and specie, make the total entered at the port. The free list was greatly curtailed six years ago, especially by the transfer of tea and coffee to the list of dutiables, and thus the total of free goods imported remains at about eleven million dollars. All the figures referring to the imports represent only their foreign gold cost, freight and duty unpaid. To show the cost in currency to the consumers, the total should be doubled, and the whole then increased about forty per cent.; this would represent about the selling rates in the market.

The exports from New York are a more imperfect representation of the trade of the country than the imports. The exports from the South have been large in each year since the close of the war. California has also in the last two years exported an unusual amount of breadstuffs. The shipments of cotton from the South direct to foreign countries, during 1867 and 1868 each, was about one million bales, while the total amount of naval stores,

tobacco, etc., sent from those States was also large. The close of the fiscal year on June 30, 1869, will probably show a more equal balance in the exports and imports of the whole country than appears from the trade of New York alone:

TOTAL EXPORTS FROM NEW YORK.

MONTHS.	1862.	1864.	1866.	1868.	1867.	1869.
January.....	\$1 53	\$1 5	\$1 51	\$22,814,543	\$1 53	\$21,736,162

The following is a statement of the imports of a few leading articles of general merchandise at New York, from foreign ports for four years :

The following statistics of Congregationalism, in the United States and British colonies, were reported in the *Congregational Quarterly*, for January, 1869 :

YEAR.	Churches.	Members.	Sunday-school Scholars.
1869.....	2,676	257,634	206,441
1860.....	2,784	260,889	250,690
1861.....	2,756	259,119	246,547
1862.....	2,774	261,474	255,257
1863.....	2,828	264,813	260,492
1864.....	2,865	268,015	266,793
1865.....	2,840	269,062	272,059
1866.....	2,900	272,975	298,333
1867.....	2,941	283,933	320,961
1868.....	3,069	296,674	346,766

CONGREGATIONALISTS. This religious denomination prevails most extensively in the New-England States. They derive their name chiefly from the form of their church organization, which embraces the whole body, and is strictly congregational.

I. AMERICA.—The following table exhibits the growth of the Congregationalists in churches, members, and Sunday-school scholars in the last ten years:

YEAR.	Churches.	Members.	Sunday-school Scholars.
1869.....	2,676	257,634	206,441
1860.....	2,784	260,889	250,690
1861.....	2,756	259,119	246,547
1862.....	2,774	261,474	255,257

Total in America..... 3,069 296,674 346,766

The number of churches not supplied with ministers was six hundred and fifty-three in the United States, and six hundred and ninety in all America.

II. ENGLAND.—The *Congregational Year-book* for 1869 reports the following statistics of Congregationalism in Great Britain and the British dependencies :

COUNTRIES.	Country Am'ns and Unions.	Churches.	Ministers and Ministers.
England.....	42	2,008	1,915
Wales.....	16	866	893
Scotland.....	9	109	103
Ireland.....	1	27	25
Colonies.....	1	195	227
Continent of Europe.....	7
Channel Islands.....
Foreign lands (incl. of native ordained missionaries in foreign lands)....	..	133	229

* Three churches, but no ministers or members reported.

The following table gives the list of Congregational colleges in the British possessions, with the date of foundation :

	Date.
1. Western College, Plymouth.....	1752
2. Rotherham Independent College.....	1756
3. Cheshunt College.....	1768
4. Airdale College.....	1800
5. Hackney Theological Seminary.....	1803
6. Lancashire Independent College.....	1806
7. Spring Hill College, Moseley, Birmingham.	1838
8. New College, London.....	1850
9. Theological Hall of Congregational Churches of Scotland.....	1811
10. Brecon Independent College.....	1760
11. Independent College, Bala.....	1842
12. Congregational Institute, Bristol.....	1863
13. Congregational Institute, Nottingham.....	1863
14. Congregational College of British North America, Montreal.....	1863
15. Congregational College of Victoria, Mel- bourne.....	1863
16. Camden College, Sydney.....	1863
17. Mission College, High Gate.....	1864
18. Cotton End.....	1840

The total number of colleges and institutes in the British possessions was 30; number of students in colleges, 69; number of native students in heathen lands, about 170; total of students, 553; number of deceased ministers, 60.

The London Missionary Society, which, although originally undenominational, is now chiefly supported by Congregationalists, reported in 1868 an income of £111,806 19s. 4d., and an expenditure of £92,464 18s. It supported 159 English missionaries, 5,968 native ordained pastors, 660 native preachers, 29,847 church-members; native population about 159,650,614; schools, 30,960.

The revenue and expenditures of the principal Congregational societies, in 1868, was as follows:

SOCIETIES, ETC.	Income.	Expenditure.
English Cong'l Chapel Building So- ciety.....(estab'd 1853)	£3,939	£3,803
London do.	9,764	6,537
Scottish do.	300
Victoria do. ..(estab'd 1866.)
Irish Evangelical Society and Con- gregational Home Mission..(1814)	3,177	2,667
Home Missionary Society.....(1819)	7,037	6,431
Colonial Missionary Society....(1836)	3,091	2,360
Congregational Board of Education..	1,485	1,483

III. CONTINENT OF EUROPE.—Most of the independent churches of France are united in the "*Union of Evangelical Churches of France*" (*L'Union des Eglises Evangéliques de France*), formed in August, 1849. The constitution of the Union provides that "each church which enters the Union preserves the liberty of determining for itself its own constitution, according to its convictions and necessities. It regulates, accordingly, its own discipline and the form of its internal government." "Every church, in order to enter the Union, must be constituted on the principle of individual profession of faith, with a guarantee of discipline being exercised by the church itself—no mere Christian instruction, on arrival at a certain age, of those so instructed, giving any right to

church-membership." A general assembly of the pastors and delegates of the associated churches is held every two years. The last meeting of the synod was held at Bergerac, in September, 1868. The next will take place in Mazamet, October, 1870. At the Synod of Bergerac, 47 churches reported a membership of 2,735, averaging upward of sixty to each church. The largest church is that of Taif-bouf, Paris, with 210 members. The churches are distributed into seven associations, which hold frequent meetings for fellowship and for local business, namely: 1. Group of the West. 2. Southwest. 3. Tarn et Ariège. 4. Southeast. 5. East. 6. Centre. 7. Seine. Numerous small congregations are scattered all over France. In Algeria, the Union has six stations. Seven independent churches are not in connection with the Evangelical Union. The "Evangelical Society of France," which was established in 1838, for the diffusion of evangelical truth without regard to the differences of ecclesiastical polity, but has gradually become identified with the independent churches, supports 11 pastors, 8 evangelists, and 27 teachers. The expenditures of the society during the year ending May, 1868, were £5,240. The "Evangelical Church of Lyons," which was founded in 1832, is an entirely independent church, which carries on missionary operations in the surrounding districts, extending to the Departments of Isère, Ain, and Rhone. The united church has more than 700 members, and Sunday-schools containing about 250 children. Altogether the independent (free) churches of France number 182 temples or chapels, occupied by 104 pastors.

The "Free Evangelical Church," in the Canton of Geneva, has seven pastors and ministers, and a theological school, with M. Merle d'Aubigné as president. The "free churches" in Vaud, 45 in number, are united together on a basis which, though Presbyterian in form, secures the independence of each. They have a theological faculty at Lausanne. There are eight independent churches in the Canton of Neuchâtel, and five in the Canton of Berne.

An "Alliance of Free or Independent Evangelical Churches" was founded in 1860. All churches free of state control are admissible which adopt the simple evangelical confession of faith adopted by the Alliance, practise a Scripture discipline, recognize the ministry as a divine institution, and engage in the propagation of the gospel. The question of baptism is left unopened. The object of the Alliance is sought to be obtained by the holding of conferences for mutual edification and encouragement, and by the establishment of institutions likely to favor the true idea of a church. The Alliance has been joined by the Free Evangelical Churches of France, Geneva, Vaud, Neuchâtel, Berne, Belgium, Eberfeld (Prussia), Ermelo and Middleburg (Holland), and the Baptist Church of the north of France.

CONGRESS, UNITED STATES. The second session of the Fortieth Congress* convened at Washington on December 2, 1867. For the President's Message, see PUBLIC DOCUMENTS, ANNUAL CYCLOPÆDIA, 1867.

* The following is a list of the members of Congress:

SENATE.

Alabama—Willard Warner, George E. Spencer.
Arkansas—Alexander McDonald, Benjamin F. Rice.*
California—Cornelius Cole, John Conness.
Connecticut—James Dixon, Orrin S. Terry.
Delaware—James A. Bayard, Willard Saulsbury.
Florida—Adonijah S. Welch, July 2d, Thomas W. Osborn, June 30, 1868.
Georgia—
Illinois—Lyman Trumbull, Richard Yates.
Indiana—Oliver P. Morton, Thomas A. Hendricks.
Iowa—James W. Grimes, James Harlan.
Kansas—Samuel C. Pomeroy, Edmund C. Ross.
Kentucky—Garret Davis, Thomas C. McCreery.†
Louisiana—John S. Harris, William P. Kellogg.
Maine—Lot M. Morrill, William Pitt Fessenden.
Maryland—Reverdy Johnson, George Vickers.‡
Massachusetts—Charles Sumner, Henry Wilson.
Michigan—Zachariah Chandler, Jacob M. Howard.
Minnesota—Alexander Ramsey, Daniel S. Norton.
Missouri—Charles D. Drake, John B. Henderson.
Nebraska—John M. Thayer, Thomas W. Tipton.
Nevada—William M. Stewart, James W. Nye.
New Hampshire—James W. Patterson, Aaron H. Cragin.
New Jersey—Alexander G. Cattell, Frederick T. Frelinghuysen.
New York—Roscoe Conkling, Edwin D. Morgan.
North Carolina—Joseph C. Abbott, John Poor.
Ohio—John Sherman, Benjamin F. Wade.
Oregon—Henry W. Corbett, George H. Williams.
Pennsylvania—Simeon Cameron, Charles R. Buckalew.
Rhode Island—William Sprague, Henry B. Anthony.
South Carolina—Thomas J. Robertson, Frederick A. Sawyer.
Tennessee—David D. Patterson, J. S. Fowler.
Vermont—Justin S. Morrill, George F. Edmunds.
West Virginia—Peter G. Van Winkle, Waitman T. Willey.
Wisconsin—Timothy O. Howe, James R. Doolittle.

Not admitted at this session.

Mississippi—William L. Sharkey, J. L. Alcorn.
Virginia—John C. Underwood, Joseph Segar.
Texas—David G. Burnett, O. M. Roberts.

HOUSE.

Alabama—Francis W. Kellogg, Charles W. Buckley, Benjamin W. Norris, Charles W. Pierce, John B. Callis, Thomas Haughey.
Arkansas—Eagan W. Roots, J. F. Elliott, Thomas Boles.
California—Samuel B. Axtell, William Higby, James A. Johnson.
Connecticut—Richard D. Hubbard, Julius Hotchkiss, Henry H. Starkweather, William H. Barnum.
Delaware—John A. Nicholson.
Florida—Charles M. Hamilton.
Georgia—J. W. Clift, Nelson Tift, William P. Edwards, Samuel F. Gove, Charles H. Prince, John H. Christy, P. M. B. Young.
Illinois—Norman B. Judd, John F. Farnsworth, Elihu B. Washburne, Abner C. Harding, Ebon C. Ingersoll, Burton C. Cook, Henry P. H. Bromwell, Shelby M. Culom, Lewis W. Ross, Albert G. Burr, Samuel S. Marshall, Jehu Baker, Green B. Baum; at large, John A. Logan.
Indiana—William E. Niblack, Michael C. Kerr, Morton C. Hunter, William S. Holman, George W. Julian, John Coburn, Henry D. Washburn, Godlove S. Orth, Schuyler Colfax, William Williams, John P. C. Shanks.
Iowa—James F. Wilson, Hiram Price, William B. Allison, William Loughridge, Granville M. Dodge, Asahel W. Hubbard.
Kansas—Sidney Clarke.
Kentucky—Lawrence S. Trimble (vacancy), Jacob S. Golladay, J. Proctor Knott, Asa P. Grover, Thomas L. Jones, James B. Beck, George M. Adams, Samuel McKee.

* June 23, 1868.

† In place of James Guthrie, resigned.

‡ In place of Philip Francis Thomas, not allowed to take a seat, February 19, 1868—years 21, says 23.

Benjamin Wade, of Ohio, was President *pro tem.* of the Senate, and Schuyler Colfax, of Indiana, Speaker of the House.

In the Senate, on December 4th, the following resolution was considered:

Louisiana—J. Hale Sypher, (vacancy) Joseph P. Newsham, Michael Vidal, W. Jasper Blackburn.
Maine—John Lynch, Sidney Perham, James G. Blaine, John A. Peters, Frederick A. Pike.
Maryland—Hiram McCullough, Stevenson Archer, Charles E. Phelps, Francis Thomas, Frederick Stone.
Massachusetts—Thomas D. Eliot, Oakes Ames, Ginery Twichell, Samuel Hooper, Benjamin F. Butler, Nathaniel P. Banks, George S. Boutwell, John D. Baldwin, William B. Washburn, Henry L. Dawes.
Michigan—Fernando C. Beaman, Charles Upson, Austin Blair, Thomas W. Ferry, Rowland E. Trowbridge, John F. Driggs.
Minnesota—William Windom, Ignatius Donnelly.
Missouri—William A. Pile, Carman A. Newcomb, James R. McCormick, Joseph J. Gravelly, Joseph W. McClurg, Robert T. Van Horn, Benjamin F. Loan, John F. Benjamin, George W. Anderson.
Nebraska—John Taffe.
Nevada—Delos R. Ashley.
New Hampshire—Jacob H. Ela, Aaron F. Stevens, Jacob Benton.
New Jersey—William Moore, Charles Haight, Charles Sitgreaves, John Hill, George A. Halsey.
New York—Stephen Taber, Demas Barnes, William E. Robinson, John Fox, John Morrissey, Thomas E. Stewart, John W. Chanler, James Brooks, Fernando Wood, William H. Robertson, Charles H. Van Wyck, John H. Ketcham, Thomas Cornell, John V. L. Pruyn, John A. Griswold, Orange Ferris, Calvin T. Hulburd, James M. Marvin, William C. Fields, Addison H. Lavin, Alexander H. Bailey, John O. Churchill, Dennis McCarthy, Theodore M. Pomeroy, William H. Kelsey, William S. Lincoln, Hamilton Ward, Lewis Selye, Burt Van Horn, James M. Humphrey, Henry Van Aernam.
North Carolina—J. R. French, David Heaton, O. H. Dockery, J. T. Dewees, Israel G. Leash, Nathaniel Boyden, A. H. Jones.
Ohio—Benjamin Eggleston, Samuel F. Carey, Robert C. Schenck, William Lawrence, William Mungen, Reader W. Clarke, Samuel Shellabarger, John Beatty, Ralph P. Buckland, James M. Ashley, John T. Wilson, Philadelph Van Trump, Columbus Delano, Martin Walker, Tobias A. Plants, John A. Bingham, Ephraim R. Eckley, Rufus P. Spalding, James A. Garfield.
Oregon—Rufus Mallory.
Pennsylvania—Samuel J. Randall, Charles O'Neill, Leonard Myers, William D. Kelley, Caleb N. Taylor, Benjamin M. Boyer, John M. Broomall, J. Lawrence Getz, Thaddeus Stevens, Henry L. Calk, Daniel M. Van Auken, George W. Woodward, Ulysses Mercur, George F. Miller, Adam J. Glossbrenner, William H. Koontz, Daniel J. Morrell, Stephen F. Wilson, Glenn W. Scofield, Darwin A. Finney, John Covode, James K. Moorhead, Thomas Williams, George V. Lawrence.
Rhode Island—Thomas A. Jenckes, Nathan F. Dixon.
South Carolina—B. F. Whittemore, C. C. Bowen, Simon Corley, James H. Goss, J. P. M. Epping, E. H. Dickson.
Tennessee—Robert R. Butler, Horace Maynard, William B. Stokes, James Mullins, John Trimble, Samuel M. Arnell, Isaac R. Hawkins, David A. Nunn.
Vermont—Frederick E. Woodbridge, Luke P. Poland, Worthington C. Smith.
West Virginia—Chester D. Hubbard, Bethuel M. Kitchen, Daniel Polsley.
Wisconsin—Halbert E. Paine, Benjamin F. Hopkins, Amasa Cobb, Charles A. Eldridge, Philotus Sawyer, Cadwalader C. Washburn.

Not admitted at this session.

Mississippi—
Texas—
Virginia—

Delegates from the Territories.

Arizona—Coles Bashford.
Colorado—George M. Chilcott.
Dakota—Walter A. Burleigh.
Idaho—E. D. Holbrook.
Montana—James M. Cavanaugh.
New Mexico—Charles P. Clever.
Utah—William H. Hooper.
Washington—Alvan Flanders.

Resolved, That the message of the President of the United States, with the reports of the heads of departments, without the accompanying documents, be printed, and that three thousand additional copies be printed for the use of the Senate.

Mr. Sumner, of Massachusetts, said: "I move to strike out the words relating to the President's message, so that if there are extra copies printed they may be the reports of the departments, to which, so far as I know, there is no objection. There is really a reason, independent of economy, why we should not circulate extra copies of the President's message. It has already been characterized as a libel; unquestionably it is a libel; it is an incendiary document, calculated to stimulate the rebellion once more and to provoke civil war. It is a direct appeal to the worst passions and the worst prejudices of those rebels who, being subdued on the battle-field, still resist through the aid of the President of the United States. It is the evidence of a direct coalition between the President and the former rebels. If Jefferson Davis were President of the United States, he could not send to this chamber a message different in character. I have often said that Andrew Johnson was the successor of Jefferson Davis, and this message is a complete confirmation of all that I have heretofore said. I hope the Senate will not put its hands in the public Treasury in order to circulate over the country a document which is so offensive to Congress, and which, just in proportion to its influence, is calculated to arouse the worst sentiments throughout the rebel States."

Mr. Wilson, of Massachusetts, said: "I go quite as far as any one in condemnation of the tone, temper, and doctrines of the message, but I think we are not justified in departing from the ordinary practice of this body. The message is an assault of the President of the United States upon the Congress of the United States for attempting by legislation to take the governments of the rebel States out of the control of traitors into whose keeping he had placed these governments. The writer of this message seems to have forgotten altogether the action of the President in 1865, and as the Senator from Vermont (Mr. Edmunds) suggests to me, he seems almost to have forgotten that we ever had any rebellion at all. The message remembers to forget that President Johnson in the summer and autumn of 1865 assumed and exercised constitutional powers for the exercise of which he now condemns the legislative branch of the Government. If the President's reconstruction policy was within the provisions of the Constitution, surely the reconstruction policy of Congress is within the provisions of the Constitution. If the President without the authority of law could fix the terms and conditions for the reconstruction of the rebel States, surely Congress, the law-making power of the Government, could determine the terms and conditions of reconstruction."

Mr. Dixon, of Connecticut, followed, saying: "Mr. President, if it were possible to suppress the message entirely, to keep it out of sight, to prevent its being read by the American people, I should not be surprised at the motion which has been made. Standing here now as the advocate of a system of measures condemned by the people, confessedly in a minority, as those Senators now are—in a minority of the people of the United States, as shown by their latest verdict, rebuked, repudiated by the people—my friend (Mr. Conness) smiles; I shall soon come to his case—I am not surprised in the least that there should be a desire to suppress arguments and information of the character contained in this message. If the question were only whether it should be printed, I should be willing to leave it where the Senator from Massachusetts who last spoke has left it, for the Senate to decide. I think that entirely immaterial. The public have read it; it has been spread before the people of the United States, and I should be satisfied to leave it there if the other Senator from Massachusetts and the Senator from Michigan had not denounced the document in language which, to my mind, I will not say is improper in this body—that is not for me to say—but denounced it in a manner which I think it does not deserve."

"Now, what have they said? The Senator from Michigan (Mr. Howard) begins by saying it is a libel, and I think he said an insult to the Congress of the United States. The Senator from Massachusetts said he had often said, had been in the habit of saying, that the President of the United States was a traitor equally guilty with Jefferson Davis."

Mr. Sumner: "That is not what I said. I said the successor of Jefferson Davis."

Mr. Dixon: "The successor of Jefferson Davis—how? In his principles, of course. The Senator does not claim that he is the successor in office. He says the President is the successor of Jefferson Davis and equally guilty, and still he complains that the President has been guilty of a libel. It struck me at the time, that, if there was any competition of vehement language between the President and that Senator it would be very easy to decide who in vituperation had the advantage. He who denounces the President as a traitor and the successor of Jefferson Davis is not the man to complain of any severity of language on the part of the President of the United States."

"Now, sir, what is this message? Is it deserving of the severe attacks which have been made upon it by these two distinguished Senators? Is it a libel? Is it violent in language? Does it show, as the Senator from Massachusetts says, bad temper? In the first place, what is the duty of the President? The Constitution says that he shall from time to time give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge

necessary and expedient. It has always been customary for the President of the United States at the opening of a session of Congress to send in a formal message, to give that information annually, or at each session, with that formality and solemnity which attaches to this document. He has now done it. I confess that I can see nothing of violence or ill temper, much less of a libellous character, in this message. He expresses strong opinions—with regard to what? With regard to the constitutionality of certain laws now on the statute-book."

After further debate, the motion of Mr. Sumner to amend was rejected by the following vote:

YEAS—Messrs. Cameron, Chandler, Howard, Howe, Pomeroy, Ramsey, Sumner, Thayer, and Wade—9.

NAYS—Messrs. Anthony, Buckalew, Cole, Conkling, Conness, Corbett, Cragin, Davis, Dixon, Doolittle, Drake, Edmunds, Ferry, Fessenden, Frelinghuysen, Grimes, Harlan, Henderson, Hendricks, Johnson, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Norton, Patterson of New Hampshire, Patterson of Tennessee, Ross, Sherman, Stewart, Tipton, Trumbull, Van Winkle, Willey, Williams, and Wilson—86.

ABSENT—Messrs. Bayard, Cattell, Fowler, Guthrie, Nye, Saulsbury, Sprague, and Yates—8.

On December 18th the President sent to both Houses of Congress the following message:

Gentlemen of the Senate and of the House of Representatives:

An official copy of the order issued by Major-General Winfield S. Hancock, commander of the fifth military district, dated headquarters in New Orleans, Louisiana, on the 29th day of November, has reached me through the regular channels of the War Department, and I herewith communicate it to Congress for such action as may seem to be proper in view of all the circumstances.

It will be perceived that General Hancock announces that he will make the law the rule of his conduct; that he will uphold the courts and other civil authorities in the performance of their proper duties; and that he will use his military power only to preserve the peace and enforce the law. He declares very explicitly that the sacred right of the trial by jury and the privilege of the writ of *habeas corpus* shall not be crushed out or trodden under foot. He goes further, and, in one comprehensive sentence, asserts that the principles of American liberty are still the inheritance of this people, and ever should be.

When a great soldier with unrestricted power in his hands to oppress his fellow-men voluntarily foregoes the chance of gratifying his selfish ambition and devotes himself to the duty of building up the liberties and strengthening the laws of his country, he presents an example of the highest public virtue that human nature is capable of practising. The strongest claim of Washington to be "first in war, first in peace, and first in the hearts of his countrymen," is founded on the great fact that in all his illustrious career he scrupulously abstained from violating the legal and constitutional rights of his fellow-citizens. When he surrendered his commission to Congress the President of that body spoke his highest praise in saying that he had "always regarded the rights of the civil authorities through all dangers and disasters." Whenever power above the law courted his acceptance, he calmly put the temptation aside. By such magnanimous acts of forbearance he won the universal admiration of mankind, and left a name which has no rival in the history of the world.

I am far from saying that General Hancock is the only officer of the American Army who is influenced by the example of Washington. Doubtless thousands of them are faithfully devoted to the principles for which the men of the Revolution laid down their lives. But the distinguished honor belongs to him of being the first officer in high command south of the Potomac, since the close of the civil war, who has given utterance to these noble sentiments in the form of a military order.

I respectfully suggest to Congress that some public recognition of General Hancock's patriotic conduct is due, if not to him, to the friends of law and justice throughout the country. Of such an act as his, at such a time, it is but fit that the dignity should be vindicated and the virtue proclaimed, so that its value as an example may not be lost to the nation.

ANDREW JOHNSON.

WASHINGTON, D. C., December 18, 1867.

In the Senate, on December 5th, Mr. Sumner, of Massachusetts, moved to take up the bill for the further security of equal rights in the District of Columbia. It provided that the word "white," wherever it occurred in the laws relating to the District of Columbia, or in the charter or ordinances of the cities of Washington or Georgetown, and operated as a limitation on the right of any elector of the District, or of either of those cities, to hold any office, or to be selected and to serve as a juror, should be repealed, and that it should be unlawful for any person or officer to enforce, or attempt to enforce, that limitation after the passage of the act.

Mr. Sumner said: "This bill is in the precise terms of a bill that passed both Houses of Congress on the last day of the last meeting in July, and which, after being duly engrossed, was sent to the President. It was not returned by him before the rising of Congress, and I introduced this precise copy on the first day of our late meeting. At the suggestion of the Senator from Illinois, I forebore calling it up for consideration in order to await the expiration of eleven consecutive days of meeting of the Senate, to see if within that time the bill would be returned to Congress with or without his objections. It was not returned. As that act failed for the want of the President's signature, I propose now simply to review what was done at the last session, and to present the act again for the signature of the President."

The bill was reported without amendment, ordered to be engrossed for a reading, and read.

Mr. Hendricks, of Indiana, said: "Mr. President, in voting upon laws for the District of Columbia, I have always felt it obligatory upon me to vote for such laws as I would be willing to vote for my own people at home for their government. The Congress of the United States, under the Constitution, enacts the laws for this District; but inasmuch as the people of the District have no voice in our selection, I think we ought only to vote for such laws as we know to be agreeable to our own folks, to say the least of it. If the people of a State have rejected a proposition by a decided majority, and we know that the white population

of the District agree with the people of that State, I do not well see how a Senator can impose such a law upon the people of the District.

"It is not my purpose to discuss the question, but simply to call attention to the fact that the expression of opinion in the Northern States in the recent elections has been very emphatic against this policy. Notwithstanding the bill passed at the last session, it is not necessary that we should now pass it, for the pleasure of the people had not then been so emphatically made known as it now has been."

Mr. Johnson, of Maryland, followed, saying: "But the objections to the measure upon your table, sir, in my view, are much stronger than those which were applicable to the other question of granting them the right of suffrage. From the consequences of the exercise of that right there is comparatively, as far as the general public is concerned, little to be apprehended. The large numerical majority of white people in the United States is perhaps a security against any serious disadvantage which might happen to the country at large. But that is not the case as far as concerns the measure upon your table. In that we and all our constituents of the white race have a very direct interest. We are to be tried civilly and criminally, we and our constituents, if we are charged with having violated any right, private or public; and the question for the Senate to decide is whether we are willing to have ourselves tried by a jury of black men for the most part just emerged from slavery, without the capacity absolutely necessary to a faithful and intelligent discharge of that duty. And it is more especially important in relation to criminal cases, because in cases of that description the jury may, in the exercise of its power, decide conclusively for itself, disregarding the opinion of the court; and thus our citizens and ourselves may be subjected to a judgment over which there is no revising power, practically pronounced by twelve ignorant black men.

"But that is not all. The number of the black race in this District is very large and promises to become larger. It may be able to elect out of its own numbers to every office, judicial or otherwise, that is not now to be filled by the Executive with the consent of the Senate. We may give them the authority to elect their magistrates; we may give them the authority to elect their judges; there is nothing to prevent it; and then we should be placed in the condition of having a tribunal to decide upon our rights, civil and criminal, constituted of persons of that race alone. Now, for one, although, as I said in the beginning, I would secure them in the possession of every right which a man has the authority to claim as a right, I am against giving to them a privilege which may be exercised to the detriment of the rest of the public, and which is not at all necessary to the vindication of all of their own rights."

Mr. Pomeroy, of Kansas, in reply, said: "Mr. President, I only wish to remark that if what has been said be true, as I think it is, that the colored people are very numerous in this District, it is worthy of consideration that they, too, have rights. They are to be tried by somebody, and it may be quite as objectionable to them to have their rights adjudicated by twelve ignorant white men as it is for white men to have their rights adjudicated by twelve ignorant black men. If this argument is good for any thing as against the negro, it is equally so as against the white man, because intelligence, loyalty, or patriotism, is not confined in this District, nor anywhere, to any class or any color. If a Senator is in favor of giving to this class of persons all the rights that are given to white men, then this is one of the rights certainly to be given. There is no State in the Union where a man has the right to be an elector, where he has a right to vote, that he cannot be voted for. In the nature of the case the man who carries the ballot, in all the States of this Union outside of this District, has the right himself to be elected. This is one of the facts that stare us in the face, that under our own legislation we have made electors of a class, and yet they are not allowed to hold office themselves. This bill remedies that defect."

The bill was subsequently passed by the following vote:

YEAS—Messrs. Anthony, Cameron, Cattell, Chandler, Conkling, Corbett, Cragin, Drake, Edmunds, Ferry, Fessenden, Fowler, Harlan, Henderson, Howard, Howe, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Ramsey, Ross, Sherman, Stewart, Sumner, Thayer, Tipton, Trumbull, Wade, Willey, Williams, and Wilson—32.

NAYS—Messrs. Buckalew, Davis, Dixon, Doolittle, Hendricks, Johnson, Norton, and Patterson of Tennessee—8.

ABSENT—Messrs. Bayard, Cole, Conness, Frelinghuysen, Grimes, Guthrie, Nye, Patterson of New Hampshire, Pomeroy, Saulsbury, Sprague, Van Winkle, and Yates—13.

On December 9th, the bill was passed in the House, without debate, by the following vote:

YEAS—Messrs. Allison, Ames, Arnell, James M. Ashley, Bailey, Baker, Baldwin, Banks, Beaman, Benjamin, Benton, Bingham, Blaine, Boutwell, Bromwell, Broomall, Buckland, Butler, Churchill, Reader W. Clarke, Cobb, Coburn, Cook, Cullom, Dawes, Dixon, Dodge, Donnelly, Driggs, Eckley, Eggleston, Ela, Eliot, Farnsworth, Ferriss, Ferry, Fields, Garfield, Halsey, Hamilton, Harding, Hawkins, Holman, Hooper, Hopkins, Chester D. Hubbard, Hulburd, Hunter, Ingersoll, Jenckes, Judd, Julian, Kelley, Kelsey, Ketcham, Koontz, Lafin, William Lawrence, Lincoln, Logan, Loughridge, Lynch, Maynard, McClurg, Mercur, Moorhead, Mullins, Myers, Newcomb, Nunn, O'Neill, Orth, Paine, Perham, Peters, Pike, Plants, Poland, Polsley, Price, Robertson, Sawyer, Schenck, Shanks, Smith, Starkweather, Aaron F. Stevens, Thaddeus Stevens, Stewart, Stokes, Thomas, Trimble, Trowbridge, Upson, Van Aernam, Robert T. Van Horn, Cadwalader C. Washburn, Henry D. Washburn, William B. Washburn, Welker, Thomas Williams, William Williams, James F. Wilson, John T. Wilson, and Windom—105.

NAYS—Messrs. Adams, Archer, Axtell, Barnes, Beck, Boyer, Brooks, Burr, Chanler, Eldridge, Getz,

Glossbrenner, Golladay, Grover, Haight, Richard D. Hubbard, Humphrey, Johnson, Jones, Kerr, Knott, Mallory, Marshall, Morgan, Mungen, Niblack, Nicholson, Phelps, Prunz, Randall, Robinson, Ross, Sitgreaves, Taber, Van Auker, Van Trump, Wood, and Woodward—38.

Nor Voting—Messrs. Anderson, Delos R. Ashley, Barnum, Blair, Cake, Cary, Sidney Clarke, Cornell, Covode, Finney, Fox, Gravelly, Griswold, Hill, Higby, Hotchkiss, Asahel W. Hubbard, Kitchen, George V. Lawrence, Loan, Marvin, McCarthy, McCullough, Miller, Moore, Morrell, Morrissey, Pile, Pomeroy, Raum, Scofield, Selye, Shellabarger, Spalding, Stone, Taffe, Taylor, Twichell, Burt Van Horn, Van Wyck, Ward, Elihu B. Washburne, Stephen F. Wilson, and Woodbridge—44.

In the Senate, on January 8th, Mr. Edmunds, of Vermont, offered the following resolution:

Whereas Senate bill No. 141, entitled "An act for the further security of equal rights in the District of Columbia," having at this present session passed both Houses of Congress, was afterward, on the 11th day of December, 1867, duly presented to the President of the United States for his approval and signature; and whereas more than ten days, exclusive of Sundays, have since elapsed in this session without said bill having been returned either approved or disapproved: Therefore,

Resolved, That the President of the United States be requested to inform the Senate whether said bill has been delivered to and received by the Secretary of State as provided by the second section of the act of the 27th day of July, 1789.

The resolution was considered by unanimous consent, and agreed to.

On January 23d, the President sent the following message to the Senate:

To the Senate of the United States:

I have received the following preamble and resolution, adopted by the Senate on the 8th instant:

As the act which the resolution mentions has no relevancy to the subject under inquiry, it is presumed that it was the intention of the Senate to refer to the law of the 15th September, 1789, the second section of which prescribes—

That whenever a bill, order, resolution, or vote of the Senate and House of Representatives, having been approved and signed by the President of the United States, or not having been returned by him with his objections, shall become a law or take effect, it shall forthwith thereafter be received by the said Secretary from the President; and whenever a bill, order, resolution, or vote shall be returned by the President, with his objections, and shall, on being reconsidered, be agreed to, be passed, and be approved by two-thirds of both Houses of Congress, and thereby become a law or take effect, it shall, in such case, be received by the said Secretary from the President of the Senate or the Speaker of the House of Representatives, in whichever House it shall last have been so approved.

Inasmuch as the bill "for the further security of equal rights in the District of Columbia" has not become a law in either of the modes designated in the section above quoted, it has not been delivered to the Secretary of State for record and promulgation. The Constitution expressly declares that "if any bill shall not be returned by the President within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law in like manner as if he has signed it, unless the Congress by their adjournment prevent its return, in which case it shall not be a law." As stated in the preamble to the resolution, the bill to which it refers was presented for my approval on the 11th day of December, 1867. On the 20th of the same month, and before the expiration of the ten days after the presentation of the bill to the President, the two Houses, in accordance with a concurrent resolution adopted on the 3d of December, adjourned until the 6th of January, 1868. Congress by their adjournment thus prevented the

return of the bill within the time prescribed by the Constitution, and it was therefore left in the precise condition in which that instrument positively declares a bill "shall not be a law."

If the adjournment in December did not cause the failure of this bill because not such an adjournment as is contemplated by the Constitution in the clause which I have cited, it must follow that such was the nature of the adjournments during the past year, on the 30th day of March until the first Wednesday in July, and from the 20th of July until the 21st of November. Other bills will, therefore, be affected by the decision which may be rendered in this case, among them one having the same title as that named in the resolution, and containing similar provisions, which, passed by both Houses in the month of July last, failed to become a law by reason of the adjournment of Congress before ten days for its consideration had been allowed the Executive.

ANDREW JOHNSON.

WASHINGTON, January 23, 1868.

Mr. Edmunds, of Vermont, said: "I move that that communication be referred to the Committee on the Judiciary, and on its reference I have simply a word to say. It is perfectly manifest to me, from an examination that I have made of the subject since the resolution calling for that information was introduced, that the construction which the President puts upon the Constitution is altogether wrong, and that the transaction of public business would be vastly impeded if Congress were to acquiesce in such a construction; and I hope that we shall be able to adopt some measures which will put all the departments of the Government upon a common understanding upon that subject. Of course, this is in no sense a party question. Although it happens to arise now upon a bill which passed upon a division of parties, after all, the question has no political idea involved in it whatever; and I shall hope, therefore, when the matter comes to be considered in committee and reported upon, that we may consider it in a spirit which has no connection with and no incitement from the fact that this particular bill happens to be the subject of a difference of opinion. The same question exactly arose in the State of New Hampshire in 1863, under a constitution which, like most of our constitutions, contains the same provision, as was stated the other day by the honorable Senator from Maryland. I have examined the opinion in that case. It was an opinion pronounced by the court at the request of the Legislature of that State, under a provision of their constitution and laws for obtaining such opinions. The subject is carefully and elaborately discussed, evidently without any feeling about it, and I think any gentleman who will read that opinion, to be found in the forty-fifth volume, I think, of New-Hampshire Reports, cannot fail to be satisfied that this construction of the Constitution now held by the Executive is altogether erroneous, and would in practice lead to very serious inconveniences."

Mr. Johnson, of Maryland, said: "I am inclined to concur with the honorable member from Vermont. It is a question that I have

more than once considered, and I arrived at the same conclusion to which the court of New Hampshire arrived. The language of their constitution is precisely the same with that of the Constitution of the United States, except that the time is less than ten days. I think the time is three days."

Mr. Edmunds: "Five."

Mr. Johnson: "But the other words are identical. I also concur with the honorable member in thinking—and I suppose as to that all departments of the Government will concur—that it is very desirable that the question should be settled. I suppose there will be no difficulty in the Judiciary Committee coming to a conclusion, and I have every reason to suppose, without any actual knowledge, that whatever that conclusion may be it will be one in which the Executive will acquiesce."

Mr. Buckalew, of Pennsylvania, said: "It may be observed that Congress have already given the same construction to the Constitution which is stated by the President in his message. They have given it by their action upon a bill exactly similar to the present one. If there were any force in the reasoning now stated by the Senator from Vermont, it would have been appropriate for him to raise the point at the session in November. Instead of that being done, that session passed by, and a new bill was introduced and passed in the month of November.

"The language of the Constitution is very peculiar, different from that of most of the States. It says that if Congress by their adjournment prevent the return of a bill within ten days the bill shall not become a law. The language is positive. The phraseology is very different ordinarily in the State constitutions. Of course where either House of Congress adjourns during a period not exceeding three days no question would arise. Either House can adjourn for three days without the consent of the other. Such a partial or casual adjournment, which constantly takes place in practice, would not be such an adjournment as is intended by the clause in the Constitution; but where an adjournment for more than three days takes place by the joint action of both Houses, it seems to me it falls within the express letter of the Constitution, and that it is impossible to give any other construction to it. Now, sir, it seems to me, in view of the clearness of that provision, and the fact that Congress has already twice acted upon that construction, it would be best for the Committee on the Judiciary and for the Senate to acquiesce in what has already been established so far as congressional and executive action is concerned, and not raise this point."

Mr. Edmunds, of Vermont, said: "I think my friend from Pennsylvania is mistaken in supposing that Congress has given the same construction to the Constitution that the President does. It is true that in one instance it appears we have passed a bill a second time

which contained the same phraseology that the first did; but I am sure he will not claim that that should have the controlling weight of a precedent when we all know that it passed without this question being considered or adverted to at all, as a mere way of hastening the accomplishment of the thing that Congress had in view in that particular bill without waiting to leave it to be settled by the Departments or the courts, whether the previous bill was a law or not, because it would only be a piece of unnecessary legislation to pass the second bill if the first one had become law. So we have done nothing to commit ourselves to the view of the President.

"Now, one word (and I do not want to occupy the morning hour with extended debate) as to the other branch of my friend's proposition. He says that Congress is adjourned, in the language of the Constitution, when each body with the consent of the other adjourns for more than three days, and the bill is therefore prevented, in the language of the Constitution, from being returned. I wish to submit it to him whether the true construction of that phrase is not an adjournment of Congress as the legislative body, the practical termination of its legislative functions as such? whereas the language of the Constitution, touching the adjournment of each House, is simply a limitation upon the power of each House to adjourn itself for more than three days without the consent of the other; and, therefore, under the Constitution it would be perfectly lawful, I think, for the Senate, with the consent of the House of Representatives, to adjourn for a week, or two weeks, or two months, although the House might continue in session all the time. That would not be an adjournment of Congress. Now, suppose that the same resolution contains a mutual consent, which is the effect of these concurrent resolutions, how does that alter the case? It, therefore, appears to me to be far from an adjournment of Congress, because it happens that each House, consenting to the adjournment of the other, adjourns at the same time for the same length of time. That is the view on the other side. I merely state it now, that both views may be considered together."

Mr. Buckalew: "Mr. President, I suppose that in case one House only adjourns, after having asked the consent of the other, if the House in which the bill originated still continues in session the bill would have to be returned within ten days."

The motion to refer was agreed to.

In the House, on December 5th, the following resolution, reported from the Committee on the Judiciary, was taken up:

Resolved, That Andrew Johnson, President of the United States, be impeached of high crimes and misdemeanors."

The Speaker said: "On this question the gentleman from Massachusetts (Mr. Boutwell) has

the floor. Before the gentleman proceeds with his remarks, the Chair desires to make an announcement to the House and the spectators in the gallery.

"In view of the disorderly manifestations made last week when the report of the committee on this subject was presented, the Chair desires now to say that if such demonstrations be repeated in the galleries he shall order them to be cleared, although he knows that thereby the innocent will suffer with the guilty. He is determined that the order of this House shall be maintained, and a proper respect be paid to this body by those who are allowed to witness its deliberations. If, therefore, any manifestation of approbation or disapprobation be made in the galleries, the Chair will order to be cleared that part where it occurs, or the whole of the galleries. And the Chair will state further, that if, as was the case last week, members upon the floor indulge in manifestations of approval or disapproval, either during the debate or its termination, however the question may be decided, the Chair, if he can ascertain what gentlemen are guilty of such violation of the rules, will state their names to the House, the effect of which will be to bring the matter before the House for such action as it may see fit to adopt in view of the contempt of its rules."

Mr. Boutwell, of Massachusetts, from the majority of the committee, urged the adoption of the resolution, saying: "If the position I have taken is sound, that the meaning of the phrase 'high crimes and misdemeanors' is to be ascertained by reference to the principles of the English common law of crimes, Blackstone's definition, 'that a crime or misdemeanor is an act committed or omitted in violation of a public law either forbidding or commanding it,' becomes important. I stand upon this definition of the great writer upon English law as the connecting link between the theory of the law that I maintain and the facts which in this case are proved.

"It is to be observed in connection with Blackstone's definition that in our system the Constitution and the statutes are the 'public law' of which he speaks, and any act done by the President which is forbidden by the law or by the Constitution, or the omission by him to do what is by the law or the Constitution commanded, is a 'high crime and misdemeanor,' and renders him liable to impeachment and removal from office.

"He is amenable to the House and the Senate in accordance with the great principles of public law of which the Constitution of the United States is the foundation. And it is true, in a higher and better sense than it is true of the statutes, that the President of the United States is bound to support the Constitution, the vital part of which, in reference to the public affairs of the country, is that he shall take care that the laws be faithfully executed, and he violates that great provision of the Consti-

tution, especially when he himself disregards the law either by doing that which is forbidden or neglecting that which he is commanded to do.

"Sir, in approaching the discussion of the transactions of which we complain, I labor under great difficulties, such as are incident to the case. The President has in his hands the immense patronage of the Government. Its influence is all-pervading. The country was disappointed, no doubt, in the report of the committee, and very likely this House participated in the disappointment, that there was no specific, heinous, novel offence charged upon and proved against the President of the United States. It is in the very nature of the case that no such heinous offence could be proved. If we understand the teachings of the successive acts which are developed in the voluminous report of the testimony, and if we understand the facts which are there developed, they all point to one conclusion, and that is that the offence with which the President is charged, and of which I believe by history he will ultimately be convicted, is that he used as he had the opportunity, and misused as necessity and circumstances dictated, the great powers of the nation with which he was intrusted, for the purpose of reconstructing this Government in the interest of the rebellion, so that henceforth this Union, in its legitimate connection, in its relations, in its powers, in its historical character, should be merely the continuation of the Government which was organized at Montgomery and transferred to Richmond.

"If, sir, this statement unfolds the nature of the case, there would not be found any particular specific act which would disclose the whole of the transaction. It was only by a series of acts, by a succession of events, by participation direct or indirect in numerous transactions, some of them open and some of them secret, that this great scheme was carried on and far on toward its final consummation. Hence it happens that when we present a particular charge, it is one which for a long time has been before the public. The country has heard of it again and again. Men do not see in that particular offence any great enormity. Then we are told that this particular act was advised by this Cabinet officer, and that act assented to another Cabinet officer. This matter was discussed in Cabinet meeting, the other was considered in a side-chamber, and therefore the President is not alone responsible for any thing that has been done. But, sir, I assert that whoever else may be responsible with him, he is responsible for himself. Any other theory is destructive to public liberty. We understand the relations which subsisted between the President and his Cabinet officers. The tenure-of-office act gave the latter a degree of independence. But, whatever were the subsisting relations, the President cannot shield himself by their counsel, and claim immunity for open, known, and wilful violations of the

laws of the land. I do not speak now of errors of judgment, but of open and avowed illegal acts personally done or authorized by himself. But he has not always had even the countenance of his Cabinet officers. The test-oath was suspended by the President against the opinion of Attorney-General Speed. If Cabinet officers have been concerned in these illegal transactions, I have for them, to a large extent, the same excuse that I have for myself, the same that I have for the members of this House and for the people of this country. In the beginning they did not understand the President's character, capacity, and purposes.

"His capacity has not been comprehended by the country. Violent sometimes in language, indiscreet in manner, impulsive in action, unwise often in declamation, he is still animated by a persistency of purpose which never yields under any circumstances, but seeks by means covert and tortuous as well as open and direct the accomplishment of the purpose of his life.

"I care not to go into an examination—indeed, I have neither the time nor the taste for it now—of the tortuous ways by which he has controlled men who in the public estimation are superior to himself. But my excuse for Cabinet officers, for members of Congress, for the country, is that in 1865, when he issued his proclamation for the reorganization of North Carolina, no one understood him. General Grant in his testimony says that he considered the plan temporary, to be approved or annulled when Congress should meet in December. But when Congress assembled the President told us that the work was ended; that the rebellious States were restored to the Union. He then planted himself firmly upon the proposition laid down in his North Carolina proclamation in defiance of the Constitution; in defiance of the decision of the Supreme Court of the United States that the power was in Congress to decide whether the government of a State was republican or not; in defiance of the cardinal principle of the sovereignty of the people through Congress. He ratified substantially in his message that which he had assumed merely in the proclamation of the 29th of May, that he was the United States for the purpose of deciding whether the government of a State was republican or not.

"Sir, if this whole case rested merely upon that assumption, that exercise of power, I maintain that it would bring him specifically and exactly within the control of this House, for the purpose of arraigning him before the Senate upon the charge of seizing and usurping the greatest power of the legislative department of the Government, unless it be that of taxation, which he has also usurped and exercised in defiance of the Constitution. But even then the nature of the proceeding was not fully understood, and his motives were only partially disclosed. The public mind did not comprehend the character and extent of the usurpation.

"Thus it was that his motive was concealed. He was not understood, and the charity of the country silenced suspicions of evil. But he moved on step by step. The country in the mean while was under the influence of his bold declarations, made frequently from the 14th of April to about the 1st of July, 1865; declarations which, even in the coldest of us, made the blood kindle in our veins, as he set forth the punishment to which the rebels were entitled. Even the most violent of the Northern people, they who had suffered from the war, those who had offered their sons, their brothers, and their husbands in sacrifice for the Republic, shuddered when they listened to his declamation as to the power and duty of this Government to punish those who had been engaged in the rebellion. But from July, 1865, his conduct and his policy have been entirely opposed to the declarations made in the spring and early summer of that year. I see in those declarations only this: that they were designed and intended, when they were uttered, to conceal from the public the great purpose he had in view, which was, to wrest this Government from the power of the loyal people of the North and turn it over to the tender mercies of those who had brought upon the country all the horrors of civil war.

"I pass, sir, to the testimony of Judge Mathews, of Ohio, a person whom I never saw but once, and of whom I know nothing except what the record discloses. He was an officer of the Northern Army, and he has been a judge of some of the courts in Cincinnati or vicinity. He says that in the month of February, 1865, when Mr. Johnson was passing from Tennessee to Washington to take the oath of office as Vice-President, he called upon him at the Burnett House. The conversation was apparently unimportant, but it discloses a purpose on the part of Mr. Johnson. He said to Judge Mathews, 'You and I were old Democrats.' 'Yes,' replied Judge Mathews. Says Mr. Johnson, 'I will tell you what it is: if the country is ever to be saved it is to be done through the old Democratic party.' That was in February, 1865. He had then received the suffrages of a free and generous people. They had taken him from Tennessee, where he would have had no abiding-place but for the armies of the Republic that protected him in his person and property. He was then entering upon the second office in the gift of the people, chosen by the great party of power and of progress in the country, which had saved the Union in its days of peril. No act had been by them done which could possibly have alienated him from them. Jefferson Davis was still at Richmond. The armies of Lee menaced the capital of his country. Andrew Johnson was approaching that capital for the purpose of taking the oath of office. That capital was merely a fortified garrison. He then declares that the country cannot be saved except by the old Democratic party.

"What was the old Democratic party? It was the party of the South; it was made up of those men in the Southern country who entered into the rebellion. That casual expression, dropped at the Burnett House in Cincinnati in February, 1865, discloses his mysterious course from that day to this. I do not speak now of those Democrats of the North who stood by the flag of the country, who maintained the cause of the Union, but I speak of that old Democratic party of which he spoke, whose inspiring principle was devotion to slavery, hatred to republican institutions and the cause of the Union and of liberty. It was to them that Mr. Johnson, in February, 1865, turned his eyes for the salvation of the country. He was then Vice-President only, but his career as President illustrates his devotion to the purpose he then entertained.

"I come now to a brief statement of those acts of the President which disclose his motives and establish his guilt. First, he and his friends sedulously promulgated the idea that what he did in the year 1865 was temporary.

"Then came his message of December, 1865, which disclosed more fully his ulterior purpose.

"Then came the speech of February 22, 1866, in which he arraigned the Congress of the United States collectively and individually, and, as I believe, made use of expressions which, uttered by a sovereign of Great Britain in reference to Parliament, and to individual members of Parliament, would have led to most serious consequences, if not to the overthrow of the Government.

"Then came his vetoes of the various reconstruction measures. I know very well that it will be said that the President has the veto power in his hands. To be sure he has; but it is a power to be exercised, like the discretion of a court, in good faith, for proper purposes, in honest judgment and good conscience, and not persistently in the execution of a scheme which is in contravention of the just authority of the legislative branch of the Government. It was exercised, however, by the President for the purpose of preventing reconstruction by congressional agency and by authority of law.

"Then came his interference by his message of the 22d of June, 1866, and by other acts, all disclosing and furthering a purpose to prevent the ratification of the pending constitutional amendment, a matter with which, as the Executive of the country, he had no concern whatever. The Constitution provides that the House and the Senate, by specified means, may propose amendments to the Constitution; and if any subject is wholly separated from executive authority or control, it is this power to amend the Constitution of the United States. The Constitution reserves this power to Congress, and to the people, excluding the President. In the same year he suspended the test-oath, against the advice of the Attorney-

General, and appointed men to office who, as he well knew, could not take that oath. The oath was prescribed for the purpose of protecting the country against the presence of disloyal persons in office—a measure necessary to the public safety. Can any act be more reprehensible? Can any act be more criminal? Can any act be more clearly within Blackstone's definition of 'crimes and misdemeanors.'

"Then follows his surrender of abandoned lands. In 1865 we passed the first Freedmen's Bureau bill, in which we set apart the abandoned lands for the negroes and refugees of the South. In violation of law and without authority of law he has restored them to their former rebel owners. This class of property was of the value of many millions of money.

"We had captured in the South vast amounts of railway property. All these millions of property he has turned over to their former rebel proprietors. In many instances, as in the case of one railway, the Government itself, under his special direction and control, in the State of Tennessee, constructed fifty-four miles of railway at an expense of more than two million dollars. This railway, with others, was turned over without consideration, without power to make reclamation, or to obtain compensation, and all without authority of law.

"We possessed a vast amount of rolling-stock used on Southern roads during the war, some of it captured from the enemy. The rolling-stock captured he restored without money and without price. Other portions of it, constructed by the Government of the United States, or purchased of manufacturers or of railroad companies, he sold without authority of law to corporations that, according to the principles of law, were insolvent. When the time arrived for payment to the Government, many of them neglected to comply with the conditions of sale. One of those corporations, the Nashville and Chattanooga Railroad, Tennessee, made an exhibit by which it appeared they had money on hand to pay the Government what they owed it. The officers of the Government demanded payment, and threatened to take possession of the road in case of further neglect. President Johnson, by his simple order, and that, as far as is known, without consultation with any member of the Cabinet, authorized, or rather directed, a delay or postponement in the collection of this debt. Agreeably to a previous order which he had issued, the interest on the bonds guaranteed by the State of Tennessee to this road, which had been due three or four years, were then paid out of money which, upon every principle of reason, equity, and law, belonged to the Government. The money had been earned by the use of the rolling-stock which the Government had furnished.

"Mr. Johnson's order was in utter disregard of the great principle that of all creditors the Government is to be first paid. Under no circumstances does the law concede to the citizen

the right of payment until the claim of the sovereign is satisfied.

"One important fact in connection with this transaction is, that the President himself was the holder of these Tennessee State bonds, issued for the benefit of this road, to the amount of either nineteen thousand or thirty thousand dollars; and that of that money, which upon the contract and by every principle of law was due to the United States, he received past interest for about four years. A small matter, you may say; a small matter, the country may say; but in a public trust he had no right, in the first place, to make sale of this property; secondly, he had no right to postpone payment; and, above all, he had no right to delay payment for the purpose of receiving to himself that which belonged to the Government. Nor is it any excuse for him that there were other holders, whether loyal or rebel, who shared the benefits of this transaction.

"Then there are connected with these proceedings other public acts, such as the appointment of provisional governors for North Carolina and the other nine States without any authority of law. Not only that, but he authorized the payment of salaries without authority of law. Not only that, he ordered payment from the War Department of those salaries, notwithstanding there had been no appropriation by law, and notwithstanding the Constitution of the United States says that no money shall be drawn from the Treasury but in consequence of an appropriation by law.

"When you bring all these acts together; when you consider what he has said; when you consider what he has done; when you consider that he has appropriated the public property for the benefit of the rebels; when you consider that in every public act, as far as we can learn, from May, 1865, to the present time, all has tended to this great result, the restoration of the rebels to power under and in the Government of the country; when you consider all these things, can there be any doubt as to his purpose, or doubt as to the criminality of his purpose, and his responsibility under the Constitution?

"It may not be possible, by specific charge, to arraign him for this great crime, but is he therefore to escape? These offences which I have enumerated, which are impeachable—and I have enumerated but a part of them—are the acts, the individual acts, the subordinate crimes, the tributary offences to the accomplishment of the great object which he had in view. But if, upon the body of the testimony, you are satisfied of his purpose, and if you are satisfied that these tributary offences were committed as the means of enabling him to accomplish this great crime, will you hesitate to try him and convict him upon those charges of which he is manifestly guilty, even if they appear to be of inferior importance, knowing that they were in themselves misdemeanors, that they

were tributary offences, and that in this way, and in this way only, can you protect the State against the final consummation of his crime? We have not yet seen the end of this contest.

"I am not disposed to enter into the region of prophecy, but we can understand the logic of propositions. The propositions which the President has laid down in his last message, and elsewhere, will lead to certain difficulty if they are acted upon. Whether they will be acted upon I cannot say. The first proposition is, that under some circumstances an act of Congress may be in his judgment so unconstitutional that he will violate the law and utterly disregard legislative authority. This is an assumption of power which strikes at the foundation of the Government. The Constitution authorizes Congress to pass bills. When they have been passed, they are presented to the President for his approval or objection. If he objects to a bill for constitutional or other reason, he returns it to the House in which it originated; and then and there his power over the subject is exhausted. If the House and Senate by a two-thirds vote pass a bill, it becomes a law, and, until it is repealed by the same authority or annulled by the Supreme Court, the President has but one duty, and that is to obey it; and no consideration or opinion of his as to its constitutionality will defend or protect him in any degree. The opposite doctrine is fraught with evils of the most alarming character to the country. If the President may refuse to execute or may violate a law because he thinks it unconstitutional in a certain particular, another President may disregard it for another reason; and thus the Government becomes not a Government of laws, but a Government of men. Every civil officer has the same right in this respect as the President. If the latter has the right to disregard a law because he thinks it unconstitutional, the Secretary of the Treasury and every subordinate have the same right. Is that doctrine to prevail in this country?

"But coupled with that declaration is another declaration, that the negroes of the South have no right whatever to vote. Our whole plan of reconstruction is based upon the doctrine that the loyal people of the South, black and white, are to vote. Now, while there is no evidence conclusively establishing the fact, it is still undoubtedly true that thousands and tens of thousands of white men in the States recently in rebellion have abstained from participation in the work of calling the conventions, because they have been stimulated by the conduct of the President to believe that they will ultimately be able to secure governments from which the negro population will be excluded. What is our condition to-day? Governments are being set up in the ten States largely by the black people, and without the concurrence of the whites, that concurrence being refused, to a large extent, through the

influence of the President. Are we to leave this officer, if we judge him to be guilty of high crimes and misdemeanors, in control of the Army and the Navy, with his declaration upon the record that under certain circumstances he will not execute the laws? He has the control of the Army. Do you not suppose that next November a single soldier at each polling-place in the Southern country, aided by the whites, could prevent the entire negro population from voting? And, if it is for the interest of the President to do so, have we any reason to anticipate a different course of conduct? At any rate, such is the logic of the propositions which he has presented to us. If that logic be followed, the next presidential election will be heralded by civil war, or the next inauguration of a President of the United States will be the occasion for the renewal of fratricidal strife.

"Mr. Speaker, we are at present involved in financial difficulties. I see no way of escape while Mr. Johnson is President of the United States. I assent to much of what he has said in his message concerning the effects of the Tenure-of-Office Act. From my experience in the internal revenue office, I reach the conclusion that it is substantially impossible to collect the taxes while the Tenure-of-Office Act is in force; and I have no doubt that whenever a new Administration is organized, of whatever party it may be, some of the essential provisions of that act will be changed. The reason, Mr. Speaker, of the present difficulty is due to the fact that the persons engaged in plundering the revenues of the country are more or less associated criminally with public officers. The character of those public officers can be substantially known in the internal revenue office and in the Treasury Department; but if the Secretary of the Treasury and the President, before they can remove officers against whom probable cause exists, are obliged to wait until they have evidence which will satisfy the Senate of their guilt, the very process of waiting for that evidence to be procured exhausts the public revenues. There is but one way of overcoming this difficulty. When the President, the Secretary of the Treasury, and the Commissioner of Internal Revenue, are in harmony, and the Commissioner is satisfied from the circumstances existing that an officer is in collusion with thieves, he can ask the President for the removal of that man; and then there should exist the power of removal by a stroke of the pen. Neither the official nor his friends should know the reason therefor. Nothing so inspires officials with zeal in the discharge of their duties as to feel that if they are derelict their commissions may at any moment be taken from them.

"But what is our position to-day? Can this House and the Senate, with the knowledge that they have of the President's purposes and of the character of the men who surround

him, give him the necessary power? Do they not feel that, if he be allowed such power, these places will be given to worse men? Hence I say that with Mr. Johnson in office from this time until the 4th of March, 1869, there is no remedy for these grievances. These are considerations only why we should not hesitate to do that which justice authorizes us to do if we believe that the President has been guilty of impeachable offences.

"Mr. Speaker, all rests here. To this House is given under the Constitution the sole power of impeachment; and this power of impeachment furnishes the only means by which we can secure the execution of the laws. And those of our fellow-citizens who desire the administration of the law ought to sustain this House while it executes that great law which is in its hands and which is nowhere else, while it performs a high and solemn duty resting upon it by which that man who has been the chief violator of law shall be removed, and without which there can be no execution of the law anywhere. Therefore the whole responsibility, whatever it may be, for the non-execution of the laws of the country is, in the presence of these great facts, upon this House. If this House believes that the President has executed the laws of the country, that he has obeyed the provision of the Constitution to take care that the laws be faithfully executed, then it is our duty to sustain him, to lift up his hands, to strengthen his arms; but if we believe, as upon this record I think we cannot do otherwise than believe, that he has disregarded that great injunction of the Constitution to take care that the laws be faithfully executed, there is but one remedy. The remedy is with this House, and it is nowhere else. If we neglect or refuse to use our powers when the case arises demanding decisive action, the Government ceases to be a Government of laws and becomes a Government of men."

Mr. Wilson, of Iowa, from the minority of the committee, said: "The position which the minority of the committee occupy in this case may be summed up in these words: that no civil officer of the United States can be lawfully impeached except for a crime or misdemeanor known to the law; that this body must be guided by the law, and not by that indefinite something called its conscience, which may be one thing to-day and quite a different one to-morrow. If the case now before us, tested by the principles of criminal law, discloses high crimes or misdemeanors coming within the rule I have stated, then the gentleman is right in demanding that the President of the United States be impeached; and I here throw open to the gentleman the range of both statutory and common law impeachable crimes. If these cannot be found in the record of this case, then no amount of conscience in House and Senate can justify us in proceeding further with it.

"Briefly I will refer to some of the facts to which the gentleman from Massachusetts has

directed our attention, for, after all, upon these must depend mainly the termination of this case. The first things to which the gentleman refers us are the acts of the President having reference to the reconstruction of the rebel States.

"He excuses to some extent some of the advisers of the President on the ground that they, at the inauguration of the executive plan of reconstruction, did not understand his motives nor comprehend his wicked designs. How did the plan originate and by whom was it prepared? The North Carolina proclamation, which was followed in every other case, seems mainly to have been the work of Mr. Stanton, and I am sure we will not question his patriotism. The President certainly did not use him as an instrument to carry out his wicked designs. He could not use him for any such purpose. But it is said that the President's real motive was to turn over the power of the Government to the possession of the rebels who had made war upon it, and that this was not discovered until his first annual message was communicated to Congress in December, 1865, when the motive was disclosed and the plot became apparent. Soon after this message had been delivered to Congress, the contest between the executive and legislative departments of the Government commenced. Presidential vetoes came in upon us. The Freedmen's Bureau Bill and the Civil Rights Bill fell under his hand. The notorious presidential speech of the 22d of February, 1866, proclaimed the breach between us and the President irreparable. The official heads of our friends fell into the Executive basket with astonishing rapidity. We were outraged by this conduct of the man who had been elevated to power by our votes. We appealed to a deceived people, and they sustained us, as, I doubt not, they will continue to do.

"More than six months after the date when the gentleman from Massachusetts says he discovered the real motive and criminal design of the President in this matter of reconstruction, the report of the joint committee which had been charged with that subject was made to the two Houses of Congress. This report was made on the 18th day of June, 1866, and in it our agents told us of the wretched results of the President's policy. They had carefully surveyed the entire field, but gave us no notice of the motive and design of the President, which my friend from Massachusetts has just told us he had discovered in December, 1865. On the contrary, they said in that report:

While your committee do not for a moment impute to the President any such design [to destroy the constitutional form of Government, and absorb its powers in the Executive], but cheerfully concede to him the most patriotic motives, they cannot but look with alarm upon a precedent so fraught with danger to the Republic.

"And to that report the name of my friend from Massachusetts is signed. This was months

after the December discovery, and in the midst of the bitter political contest which resulted from the President's unjustifiable desertion of the party which had trusted him and elevated him to the second office in the Government.

"Sir, I am not here to defend the President. He must be a bold man who will undertake that task. I have not boldness sufficient for it, even if I had the inclination, which in the remotest degree does not exist in my mind; for I believe him to be the worst of the Presidents. But it does seem strange to me that any member of that able, thorough, pertinacious Committee on Reconstruction should now demand an impeachment of the President for doing the acts which they reported to us he had done from patriotic motives. Such motives, if they did exist, will not support an allegation of criminal intent.

"It is affirmed that the testimony of Stanley Mathews discloses that the President, from the very date of his first association with the Republican party, designed treachery. The testimony of this witness and that of Hon. Jeremiah S. Black show that the President never was in earnest accord with the Republican party. This will account for much of his strange and reprehensible conduct. But it does not establish a crime. It discloses a trait of character bad almost beyond precedent, and shows how cautious political parties should be in selecting candidates for official positions. We committed a terrible blunder, not to say a political crime, when we selected Andrew Johnson as our candidate for the vice-presidential office. We trusted too much to his oft-repeated utterances of devotion to the progressive principles of the Republican organization, and unfortunately forgot, for the time being, his antecedents as a public man, and the influences and associations which had moulded his character, and would be likely to direct his action as a public officer. His offences in this regard, sad and grave as they are, must be tried by the suffrages of the people, and not on impeachment before the Senate.

"The next grand charge which is advanced in support of the demand for an impeachment of the President, is the surrender of property of which the Government and its agents held possession. In this charge the surrender of railroads in the insurgent States occupies a conspicuous position. But the policy which led to this did not originate with the President. Secretary Stanton's testimony shows that with himself and the Quartermaster-General this policy originated. He regarded his action in the premises as in consonance with the requirements of a great public policy, which demanded the opening of these great channels of commerce to the trade and business of the country, as tending to a renewal of prosperity and as an effective means of reconstruction."

Mr. Dawes: "And stands by it now."

Mr. Wilson, of Iowa: "Yes, sir—so far as I have any information—adheres to it yet.

Whatever may be the rule of public law with reference to property seized in time of war, and which may have been occupied or used by the public enemy, this Government established its own rule, as it had a right to do, by enacting the Confiscation Act of 1862. None of the railroads surrendered had been seized, condemned, and sold under the provisions of that act, nor had the stock which represented the title of the stockholders to the property been confiscated in pursuance of its provisions. The Government had not acquired title to this property by either of these modes. The Government held possession of the roads for military purposes, and when the war closed surrendered that possession to the corporations owning them, which action was in accord with the opinions of Attorneys-General Speed and Stanbery, that the property of corporations did not come within the Confiscation Act of 1862; and that, if it did, said act, being a war measure, could not properly be enforced after the rebellion had been suppressed and the war had ceased. It does not occur to me that this branch of the case affords evidence of criminal conduct.

"The surrender of property to individuals is covered to a great extent by this view of the President's legal advisers, and in a larger degree by the well-established principle that a full pardon restores to the recipient all of his rights which have not become vested in third parties. The construction given to the Confiscation Act of 1862, and the effect of a full pardon, may be said to cover all of these cases of surrender of property. If the pardons, whether by special act of grace or by general amnesty, were in any case corruptly granted, the record submitted to this House by the committee does not disclose the fact.

"The sale of movable property to railway corporations is complained of. In all cases where this character came within the rule already stated respecting the property of corporations, all sums realized by such sale were gains to the Government. In other cases, as when the Government owned the same by virtue of purchase or manufacture, the sales were not authorized by law, but it does not appear that they were made from corrupt or criminal motives, or for the purpose of private gain.

"The first plan adopted for the regulation of these sales seems to have been the work of the Quartermaster-General, approved by the Secretary of War. This was subsequently changed by the President, and the sales proceeded. How has the President been profited by this? The sales inured to the benefit of the Government. The President derived no benefit therefrom.

"But it is alleged that he did derive a benefit by extending the time for the payment of the amount due to the Government from the Nashville and Chattanooga Railway Company; that he held bonds of this company, and, by extending the time in which the company had agreed to pay the same, he secured the payment of the

interest due on his own bonds. The interest on these bonds was guaranteed by the State of Tennessee, and the utmost amount he could save thereby would be the interest on the amount of interest due which might accrue between the date of the extension or final payment. This would be at most an inconsiderable sum. Still this action of the President might afford some color to the argument of the gentleman from Massachusetts, if it stood alone amid the demands of Southern railway companies for extensions of time in which payments were to be made by them to the Government. But it does not stand alone—it is not an exceptional case. The first extensions were granted by order of Major-General Thomas, others by order of the Secretary of War (Mr. Stanton), until nearly, if not quite, all of the Southern companies became the recipients of the benefits of a system which seems to have become general. If these acts of the Secretary of War and of General Thomas were illegal and criminal (which I presume no one will claim they were), the President cannot be charged criminally with them, unless it appear that they were done by his subordinates with his consent, or at least with his knowledge, and it will hardly be claimed that this is established by the testimony in this case.

"Mr. Speaker, I will not detain the House much longer by commenting on this case. If I were to refer to all of the facts of the case, in reply to the gentleman from Massachusetts, I could accomplish no more than has already been achieved by the minority report, and I am content to leave it with the House upon the argument and review presented by that document. It would be an unprofitable consumption of time for me to go beyond it. A few minutes more, and I will have done.

"The gentleman from Massachusetts has expressed his fears that a failure to impeach and remove the President from office will result in a total defeat of the congressional plan of reconstruction. How can this be? The constitutional life of this Congress will measure the full limit of the President's official term. We most assuredly will not surrender our plan. No power can turn us from this determination. Before the expiration of this Congress we hope to have every State restored on the just and equitable principles of our plan. If this result be not realized, to our successors will be left the task of completing our labors, unless the people in the next congressional elections determine to reverse our resolve by returning a majority to this House hostile to the system of reconstruction which we have adopted. I am willing to trust the people in this regard, without fear as to the judgment they will pronounce. A failure of our plan of reconstruction can be secured only by the voice of the people at the ballot-box. I cannot believe that it will thus fail, but if it should it will be the act of the people and not of the President. We may not impeach for this.

"The gentleman from Massachusetts has remarked that the President may interfere with the next presidential election in the Southern States; that he may station soldiers at the voting-places and overawe the loyal vote of those States, especially the colored vote; and we must, I suppose, guard against the possibility of this by his impeachment and removal from office. This position, if I state it correctly, is startling. Are we to impeach the President for what he may do in the future? Do our fears constitute in the President high crimes and misdemeanors? Are we to wander beyond the record of this case and found our judgment of it on the possibilities of the future? This would lead us even beyond the conscience of this House.

"Sir, we must be guided by some rule in this grave proceeding—something more certain than an impossibility to arraign the President for a specific crime. And when the gentleman from Massachusetts, in commenting on one of the alleged offences of the President, stated that we could not "arraign him for the specific crime," he disclosed the weakness of the case we are now considering. If we cannot arraign the President for a specific crime, for what are we to proceed against him? For a bundle of generalities such as we have in the volume of testimony reported by the committee to the House in this case? If we cannot state upon paper a specific crime, how are we to carry this case to the Senate for trial? Mr. Speaker, I have done."

Mr. Wilson concluded his remarks with a motion to lay the subject on the table. This was finally withdrawn, and the question taken on the resolution, which was rejected by the following vote:

YEAS—Messrs. Anderson, Arnell, James M. Ashley, Boutwell, Bromwell, Broomall, Butler, Churchill, Reader W. Clarke, Sidney Clarke, Cobb, Coburn, Covode, Cullom, Donnelly, Eckley, Els, Farnsworth, Gravely, Harding, Higby, Hopkins, Hunter, Judd, Julian, Kelley, Kelsey, William Lawrence, Loan, Logan, Loughridge, Lynch, Maynard, McClurg, Mercur, Mullins, Myers, Newcomb, Nunn, O'Neill, Orth, Paine, Pile, Price, Schenck, Shanks, Aaron F. Stevens, Thaddeus Stevens, Stokes, Thomas, Trimble, Trowbridge, Robert T. Van Horn, Ward, Thomas Williams, William Williams, and Stephen F. Wilson—57.

NAYS—Messrs. Adams, Allison, Ames, Archer, Delos R. Ashley, Axtell, Bailey, Baker, Baldwin, Banks, Barnum, Beaman, Beck, Benjamin, Benton, Bingham, Blaine, Boyer, Brooks, Buckland, Burr, Cary, Chanler, Cook, Dawes, Dixon, Dodge, Driggs, Eggleston, Eldridge, Eliot, Ferriss, Ferry, Fields, Garfield, Getz, Glossbrenner, Golladay, Griswold, Grover, Haight, Halsey, Hamilton, Hawkins, Hill, Holman, Hooper, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, Richard D. Hubbard, Hubbard, Humphrey, Ingersoll, Johnson, Jones, Kerr, Ketcham, Knott, Koontz, Laflin, George V. Lawrence, Lincoln, Marshall, Marvin, McCarthy, McCullough, Miller, Moorhead, Morgan, Mungen, Niblack, Nicholson, Perham, Peters, Phelps, Pike, Plants, Poland, Polsley, Pruyn, Randall, Robertson, Robinson, Ross, Sawyer, Sitgreaves, Smith, Spalding, Starkweather, Stewart, Stone, Taber, Taylor, Upson, Van Aernam, Van Auken, Van Trump, Van Wyck, Cadwalader C.

Washburn, Elihu B. Washburne, Henry D. Washburn, William B. Washburn, Welker, James F. Wilson, John T. Wilson, Woodbridge, and Woodward—108.
NOT VOTING—Messrs. Barnes, Blair, Cake, Cornell, Finney, Fox, Jenckes, Kitchen, Mallory, Moore, Morrell, Morrissey, Pomeroy, Raum, Scofield, Selye, Shellabarger, Taffe, Twichell, Burt Van Horn, Windom, and Wood—22.

In the House, on February 22d, Mr. Covode, of Pennsylvania, moved the following resolution:

Resolved, That Andrew Johnson, President of the United States, be impeached of high crimes and misdemeanors.

It was referred, without debate, to the Committee on Reconstruction.

On the same day, the committee made a report, through Mr. Stevens, as follows:

The Committee on Reconstruction, to whom was referred, on the 27th day of January last, the following resolution:

Resolved, That the Committee on Reconstruction be authorized to inquire what combinations have been made or attempted to be made to obstruct the due execution of the laws; and to that end the committee have power to send for persons and papers, and to examine witnesses on oath, and report to this House what action, if any, they may deem necessary; and that said committee have leave to report at any time.

And to whom was also referred, on the 21st day of February, instant, a communication from Hon. Edwin M. Stanton, Secretary of War, dated on said 21st day of February, together with the copy of a letter from Andrew Johnson, President of the United States, to the said Edwin M. Stanton, as follows:

EXECUTIVE MANSION,
 WASHINGTON, D. C., February 21, 1868.

SIR: By virtue of the power and authority vested in me, as President, by the Constitution and laws of the United States, you are hereby removed from office as Secretary for the Department of War, and your functions as such will terminate upon the receipt of this communication.

You will transfer to Brevet Major-General Lorenzo Thomas, Adjutant-General of the Army, who has this day been authorized and empowered to act as Secretary of War *ad interim*, all records, books, papers, and other public property now in your custody and charge.

Respectfully yours,

ANDREW JOHNSON.

Hon. EDWIN M. STANTON, Washington, D. C.

And to whom was also referred by the House of Representatives the following resolution, namely:

Resolved, That Andrew Johnson, President of the United States, be impeached of high crimes and misdemeanors.

Have considered the several subjects referred to them, and submit the following report:

That in addition to the papers referred to the committee, the committee find that the President, on the 21st day of February, 1868, signed and issued a commission or letter of authority to one Lorenzo Thomas, directing and authorizing said Thomas to act as Secretary of War *ad interim*, and to take possession of the books, records, and papers, and other public property in the War Department, of which the following is a copy:

EXECUTIVE MANSION,
 WASHINGTON, February 21, 1868.

SIR: Hon. Edwin M. Stanton having been this day removed from office as Secretary for the Department of War, you are hereby authorized and empowered to act as Secretary of War *ad interim*, and will immediately enter upon the discharge of the duties pertaining to that office. Mr. Stanton has been instructed to transfer to you all the records, books, papers, and other public property now in his custody and charge.

Respectfully yours,

ANDREW JOHNSON.

To Brevet Major-General LORENZO THOMAS, Adjt.-Gen. U. S. A., Washington, D. C.

Official copy respectfully furnished to Hon. Edwin M. Stanton.

L. THOMAS,
Secretary of War *ad interim*.

Upon the evidence collected by the committee, which is herewith presented, and in virtue of the powers with which they have been invested by the House, they are of the opinion that Andrew Johnson, President of the United States, be impeached of high crimes and misdemeanors. They therefore recommend to the House the adoption of the accompanying resolution.

THADDEUS STEVENS,
GEORGE S. BOUTWELL,
JOHN A. BINGHAM,
C. T. HULBURD,
JOHN F. FARNSWORTH,
F. C. BEAMAN,
H. E. PAINE.

Resolution providing for the impeachment of Andrew Johnson, President of the United States.

Resolved, That Andrew Johnson, President of the United States, be impeached of high crimes and misdemeanors in office.

Mr. Stevens said: "Mr. Speaker, it is not my intention in the first instance to discuss this question; and if there be no desire on the other side to discuss it we are willing that the question should be taken upon the knowledge which the House already has. Indeed, the fact of removing a man from office while the Senate was in session, without the consent of the Senate, if there were nothing else, is of itself, and always has been considered, a high crime and misdemeanor, and was never before practised."

Mr. Brooks, of New York, said: "Why is this attempted? Because it is believed that the Northern people of this country are now with the Democratic party; because it is believed now, previous to a presidential election, it is necessary so to manipulate and control the executive and judicial departments of the Government, by the annexation of some African States of the South, that the so-called Republicans of the North, in spite of the majority of the Northern people, shall obtain control and possession of this Government. The sacrifice of two of the three branches of Government is deemed indispensably necessary to keep the Republican party in power."

Mr. Spalding, of Ohio, said: "It has seemed to me, sir, for weeks, that this high officer of our Government was inviting the very ordeal which, I am sorry to say, is now upon us, and the dread consequences of which will speedily be upon him. He has thrown himself violently in contact with an act of Congress passed on the 2d day of March last by the votes of the constitutional two-thirds of the Senate, and two-thirds of the House of Representatives, over his veto assigning his reasons for withholding his assent. Now, it matters not how many acts can be found upon the statute-books in years gone by that would sanction the removal of a Cabinet officer by the President; the gentleman from New York numbers three. He may reckon up thirty or three hundred, and still, if, within the last six or nine months, Congress has, in a constitutional manner, made an enactment that prohibits such removal, and the Executive wantonly disregards such enact-

ment, and attempts to remove the officer, he incurs the penalty as clearly and as certainly as if there never had been any legislation to the contrary. That subsequent enactment, if it be constitutional, repeals, by its own force, all other prior enactments with which it may conflict; and in nothing is that enactment more significant than in this, that the President shall not remove any civil officer who has been appointed by and with the advice and consent of the Senate, without the concurrence of that body when it is itself in session. It is true that the right of suspension was given to the Executive during the recess of the Senate; but that poor right of suspension ceased so soon as the Senate convened.

"But now, not only in face of the decision of the Senate saying that the suspension of the Secretary of War, made during the late recess, was without good cause; and in the face of the penalties of the act of March 2, 1867, entitled 'An act regulating the tenure of certain civil offices,' the President, on yesterday, sent into the Senate a message declaring, in terms, that he had removed Edwin M. Stanton, Secretary of War, and that, too, in defiance of the sixth section of the act which declares—

That every removal, appointment, or employment made, had, or exercised contrary to the provisions of this act, shall be deemed, and are hereby declared, to be 'high misdemeanors;' and, upon trial and conviction, every person guilty thereof shall be punished by a fine not exceeding \$10,000, and by imprisonment not exceeding five years, or by both said punishments, in the discretion of the court."

Mr. Farnsworth, of Illinois, said: "What is there of this question? A great deal. It is a vast question, and I trust that I come to the discussion of it with a proper spirit, fully realizing the importance of the issues involved. It is not merely whether Andrew Johnson shall be removed from the office of President of the United States. There are other and greater and deeper questions depending upon it—the question whether the Union sentiment in the ten disorganized States of this country shall be crushed out; whether the rebel power shall be restored in these States, and shall be given the supremacy for all time to come; whether the Government shall be maintained, and whether the fruits which we gathered and earned so richly and so well during four years of bloody war shall be wrested from the hands of the liberty-loving people of this country, or whether they shall be kept and enjoyed. I care little for Andrew Johnson. I have never had a doubt, for a month past, that he would yet be impeached; that the evil which was in the man would come out, would develop itself, and from step to step it has been developing itself, until he caps the climax by these most flagrant and palpable violations, not only of the law, but of the supreme law, the Constitution of the United States."

Mr. Kelley, of Pennsylvania, said: "The mere violation of law does not, I repeat, constitute my arraignment against the acting Pres-

ident of the nation. But the suggestion has been made on this floor that his conduct involves a mere question of the construction of a law. Sir, it is the question of the construction of vital provisions of that which is antecedent to and underlies the law—the Constitution of our country and of its express provisions. Nor, even if the arraignment depended upon the provisions of the Tenure-of-Office Act, would the issue be a mere question of the construction of law. That question was referred to the Senate yesterday, and that body advised the President that they regarded his action as unconstitutional. It was again referred to-day to the courts of the country, and is marked for adjudication for Wednesday next, and the offender, who, I fear, will hereafter be known as the St. Arnaud of our army and country, is under \$5,000 bail to respond to the demands of the law and abide its peaceable determination. And yet, sir, after the action of the Senate and the reference of the question to the judicial tribunals of the country—and let me say, in passing, that I speak not from the report of the honorable gentleman from Ohio (Mr. Bingham), who referred to the fact, but from my own observation—escaping from the magistrate's office, and coming, as I am informed, through the office of the President and his Attorney-General, Adjutant-General Lorenzo Thomas appeared in the War Department at noon to-day, and, in my presence, demanded to exercise the functions of Secretary of War; and when ordered courteously, but positively, to take his place in the office of the Adjutant-General, and attend to his duties, he protested that he was Secretary of War *ad interim*, and was there in obedience to the orders of the President of the United States, and, in his name, demanded possession of the mails of the department, with all its books and papers.

"Sir, this extraordinary procedure on the part of the President is not necessary for the adjudication of a legal question. The question gentlemen attempt to raise can be decided very speedily. These proceedings are necessary only for a usurper whom the people have repulsed and thwarted time and again, but who hopes, by the absolute possession of the War Department, to use the army, and thus overcome the contumacy of the people, and who attempts, on the 22d of February, 1868, to execute by cunning that which he hoped mob violence would execute for him on the 22d of February, 1866.

"It is not well, Mr. Speaker, that the institutions of this broad but infant nation should depend upon the virtue or life of one or two of its citizens. Lincoln was murdered, and other distinguished patriots may be. It is known that men ascend to power over bloody steps, and that they may do it in this country and yet be tolerated. Therefore, the hour has come when Congress owes it not only to itself, but to the safety of the country, to warn Mr. Johnson that he cannot perpetuate his power, and

bring him, as hastily as the forms and spirit of law will permit, to trial and degradation. The army of France obeyed the orders of St. Arnaud as Minister of War, and the army of the United States owe obedience to the orders of the President, issued by the Secretary of War. On the integrity of that officer in this crisis depend the peace and life of the nation!"

Mr. Beck, of Kentucky, followed, saying: "Mr. Speaker, disguise it as we may, and call this proceeding by what name we will, it is at last apparent that the leaders of this Congress are prepared to take the fatal plunge into the sea of revolution, and, fearing that the more timid or conservative of the members of the majority may halt before they leap, the leaders are determined to dash them on while they are yet blind with rage, lest the sight of the frightful precipice should make them shudder and retrace their steps. Defeated twice in their impeachment schemes since this session began, once in the House, after all the acts, public and private, of the President had been ferreted out for six months, through perjured spies and informers, and again before the Reconstruction Committee, with all the acts and correspondence between General Grant and the President (*see PUBLIC DOCUMENTS*) before it, the foiled and baffled leaders, desperate and reckless, have now taken advantage of the insane *furor* created by a legitimate effort of the President to test, before the courts of the country, his constitutional and legal right to remove an obnoxious, and, as he asserts, faithless subordinate, who is a spy upon his actions, and an obstacle in the way of the faithful performance of his constitutional obligation to 'see that the laws are faithfully executed'—to remove him from his high position and place there a pliant tool of the dominant faction; and this, too, is to be done with an indecent haste that would be disgraceful to the proceedings in the lowest and most insignificant magistrate's court in the country. The matter was referred to the Reconstruction Committee late yesterday evening. A sub-committee of three, all of whom were known to favor the scheme, were to-day charged by that committee to take proof and prepare the report, carefully excluding therefrom either of the members who were known to oppose it. Sitting after this House met, in violation of the rules of the House, and against the protest of the minority of the committee, the articles of impeachment are now hurried before this body."

Mr. Logan, of Illinois, followed, saying: "Now, Mr. Speaker, let us examine this question for a moment. It seems to me very plain and easy of solution. It is not necessary, in order to decide whether this action of the President of the United States comes within the purview and meaning of this statute, for us to talk about revolutions, or what this man or that man has said or decided. What has been the act of the President is the question? The law is plain. If the President shall appoint,

or shall give a letter of authority, or issue a commission, to any person without the consent of the Senate, he is guilty of—what? The law says of a high misdemeanor. And, under and by virtue of the Constitution, the President can be impeached for—what? For high crimes or misdemeanors. This law declares the issuing a commission to, or giving a letter of authority to, or appointing to or removing from office, any person without the advice and consent of the Senate of the United States, shall be a high misdemeanor, which is within the meaning and within the pale of the Constitution of the United States.

“Now, what is the evidence presented to this body by one of its committees? It is of this character: The Secretary of War, Edwin M. Stanton, has been declared by a solemn vote of the Senate to be the Secretary of War, by virtue of—what? By virtue of an appointment to that office; by reason of the fact that Andrew Johnson did not relieve him from office when he had the right to present the name of somebody else—soon after his taking the presidential chair—not the right to turn him out, but the right to nominate some one else to the Senate and ask them to confirm him to that office. That the President failed to do. Then, acting under the provisions of this statute, the President suspended Mr. Stanton as Secretary of War, but the Senate passed upon that act, and decided that the reasons given by the President for suspending Mr. Stanton were not satisfactory; and, accordingly, by virtue of this law, Mr. Stanton was confirmed and reinstated in his position as Secretary of War.

“Now, all this having been done, it cannot certainly be claimed that the President, in his recent course in regard to Mr. Stanton, has acted without any intention of violating the law. Nor can it be claimed that the President is ignorant of the law. The gentleman from Kentucky (Mr. Beck) is too good a lawyer not to be aware of the fact that the law presumes every man to be acquainted with the laws. That may be a violent presumption in the case of Andrew Johnson, yet that is an axiom of the law.

“That being, then, the presumption, that the President knows the law, having been notified by the Senate of its action, and of the consequent operation of the law, then if, in violation of that same law, Andrew Johnson did issue an order removing Secretary Stanton from the War Office, and, in the language of this statute, did ‘issue a letter of authority’ to Lorenzo Thomas to take possession of that office, and act as Secretary of War *ad interim*, I ask the gentleman from Kentucky, or any other lawyer in this House, to tell me, under this statute, what has the President done? Sir, he has violated its provisions, he has committed a high misdemeanor. Look at the evidence and then read the law.”

Mr. Holman, of Indiana, said: “What are the relations of the President of the United

States to the executive powers of the Government, and especially, sir, what are his relations to the members of his Cabinet? The Constitution itself clearly defines these relations and renders him directly responsible for the manner in which the executive power of the Government is exercised. In the language of the Constitution, ‘the executive power shall be vested in a President of the United States of America.’ ‘Before he enters on the execution of his office he shall take the following oath or affirmation: I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States;’ and ‘he shall take care that the laws be faithfully executed.’ And again, ‘he shall nominate, and, by and with the advice and consent of the Senate, shall appoint ambassadors and other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States whose appointments are not herein otherwise provided for.’ Is it possible, after these eighty years of experience, that any gentleman can believe that the President of the United States can well execute the duties of his high office, and properly ‘take care that the laws be faithfully executed,’ without any control of the chief agencies—the heads of departments—by which the executive power is to be exercised?

“Can the country justly hold the Chief Executive responsible and yet render him powerless by filling the high offices of his department with persons hostile to the success of his Administration? During these eighty years of our history, through all these Administrations, has it ever been dreamed, sir, that the President of the United States could properly exercise his high functions and successfully administer the Government without a Cabinet in harmony with himself? No matter what party has been in power, Democrat or Federalist, Whig or Republican, and no matter whether the Congress and the Executive were in harmony or not, the common interests of the country have secured to the President a body of friendly counsellors, who as heads of departments have given unity and efficiency to the Administration. The public good demanded it, and hitherto party spirit has never been so intense or vindictive as to seek partisan advantages at the expense of the interests of the country. The framers of the Constitution could not have intended, while imposing such high responsibilities on the President, that the very duties imposed upon him might be defeated by the unfriendly officers executing high official trusts. Mr. Madison, therefore, claimed the power of removal of an executive officer. The appointing power is in the President, with the right of the Senate to reject or confirm, but if the Senate refuses to confirm the nomination the powers of the office have been uniformly performed by some other offi-

cer of the Government. The first section of the Tenure-of-Office Law, which was passed on the 2d day of March, 1867, and manifestly intended to embarrass the administration of Mr. Johnson, is as follows :

SEC. 1. Every person holding any official office to which he has been appointed by and with the advice and consent of the Senate, and every person who shall hereafter be appointed to such office, and shall become duly qualified to act therein, is and shall be entitled to hold such office until a successor shall have been in like manner appointed and duly qualified, except as herein otherwise provided: *Provided*, That the Secretaries of State, of the Treasury, of War, of the Navy, and of the Interior, the Postmaster-General, and the Attorney-General, shall hold their offices respectively for and during the term of the President by whom they may have been appointed and for one month thereafter, subject to removal by and with the advice and consent of the Senate.

"Edwin M. Stanton was appointed Secretary of War and the appointment confirmed by the Senate during the first term of Mr. Lincoln. He was never reappointed either by Mr. Lincoln or by Mr. Johnson. If the Tenure-of-Office Law had been enforced when Mr. Lincoln's first term expired, it is manifest that the term of Mr. Stanton, as Secretary of War, would have expired one month after Mr. Lincoln's second term commenced, and would have expired one month after Mr. Lincoln ceased to be President.

"This whole question, as I have already remarked, is therefore a question of construction. The proviso of the first section of this Tenure-of-Office Law certainly involves the very point here in dispute; the very question involved in this attempt at impeachment."

Mr. Ingersoll, of Illinois, sent the following telegram to the Clerk to be read :

SPRINGFIELD, ILLINOIS, }

EXECUTIVE DEPARTMENT, February 22, 1868. }

The usurpations of Andrew Johnson have created a profound sensation in this State. His last act is the act of a traitor. His treason must be checked. The duty of Congress seems plain. The people of Illinois attached to the Union, I firmly believe, demand his impeachment, and will heartily sustain such action by our Congress. The peace of the country is not to be trifled with by this presumptuous demagogue. We know the national Congress will proceed wisely and cautiously, but let it proceed. Millions of loyal hearts are panting to stand by the stars and stripes. Have no fear. All will be well. Liberty and order will again triumph.

R. J. OGLESBY, Governor.

Mr. Washburne, of Illinois, said: "In my judgment the safety of the country, the cause of good government, the preservation of constitutional right and of public liberty depend upon the prompt impeachment of the President of the United States. Let him be impeached for his last great crime that he has committed against the Constitution and laws of his country. Let him be promptly tried, and, if found guilty, let him be removed from the office he has disgraced. His longer retention in office is a perpetual and enduring menace against the peace and happiness and pros-

perity of the nation. His whole official career as President has been marked by a wicked disregard of all the obligations of public duty and by a degree of perfidy and treachery and turpitude unheard of in the history of the rulers of a free people; his personal and official character has made him the opprobrium of both hemispheres, and brought ineffable disgrace on the American name. As mendacious as he is malignant, he has used his high position in attempting to break down and destroy the noblest, the bravest, the best in the land. His administration has been a constant and prolonged warfare against all the material interests of the country; it has prostrated business; it has oppressed labor; it has destroyed values; it has impaired the public credit and sapped the public morals. Surrounded by red-handed rebels, advised and counselled by the worst men that ever crawled, like filthy reptiles, at the footstool of power, the President has used all the vast authority of the Government to prevent a reunion of the States, the restoration of harmony and peace and happiness to the country. He has brought the loyal men in the unreconstructed States to a condition from the contemplation of which all men must recoil with horror. Sustained and supported by the Administration, murder, rapine, incendiarism, robbery, and all the crimes stalk through that whole land with a bloody step; and every day he remains in office adds to the long list of victims of rebel vengeance, cruelty, and hate.

"Under such a President nearly every department of the Government has become demoralized and corrupt to an extent which can find no parallel in the history of any country in any age. The Attorney-General, not satisfied with being the medium through which so many counterfeiters, mail-robbers, and public plunderers have been pardoned and turned loose upon the country, has, with ostentations and boastful audacity, proclaimed in the very presence of the highest judicial tribunal of the land that he will not vindicate the laws of the country passed by a vote of two-thirds of both branches of Congress. Look, sir, at the Navy Department attempting, in the first instance, to impose upon this House fraudulent estimates of nearly twenty-five million dollars in order to render a Republican Congress amenable to the charge of extravagance; look at its imbecile management, its profligacy, its extravagance, its jobberies, and its corruptions and persecutions, under color of law, of some of our bravest and most distinguished naval officers. Look at the administration of the Treasury Department, characterized by the most monstrous and appalling frauds, with countless millions of revenue stolen to go into the pockets of thieves, partisans, and plunderers, or to make up a vast political fund to demoralize and corrupt the people, and to secure the election of a Democratic and semi-rebel President. Look at the Interior Department, with its land

and railroad jobbing, its profligate Indian expenditures, and its fraudulent and corrupt extensions of patents; and the Post-Office Department, arraigned before the House by a committee of the House on charges of corruption; and the State Department, arraigned before the nations of the world for not vindicating the rights of the nation and of the citizens of the nation!

"Confronted as we are this day, Mr. Speaker, by this state of things, so threatening to our national existence and so destructive of all that is held dear by all good citizens, can there be any patriotic man of any political organization who does not call upon Congress to sternly do its whole duty, and purge this capitol of the crimes which defile the nation?"

Mr. Woodward, of Pennsylvania, said: "I take it upon me to deny your right to impeach anybody, and the present Senate's right to try any impeachment. Says the Constitution: 'The House of Representatives shall have the sole power of impeachment,' and the 'House of Representatives shall be composed of members chosen every second year by the people of the several States.' This House of Representatives is not so composed; but, on the contrary, the Representatives chosen from ten of the 'several States' have been and are excluded from these Halls. I do not say if they were absent voluntarily they could prevent your exercise of the impeaching power; for then they would form, though personally absent, a part of the composition of the House; but, so long as you prevent their entering into its composition, you are not the House of Representatives to whom the Constitution commits the 'sole power of impeachment.' Our functions in this regard have been likened to those of a grand jury which consists of twenty-three men. And suppose, sir, a majority of a grand jury should get possession of the jury-room and bar the door against a minority of their fellows, as well entitled to be there as the majority, would the findings of such a jury be respected? By no court in Christendom. On the contrary, their acts would be set aside, and very likely themselves punished for their contempt of the law.

"Then, as to the Senate, the Constitution says 'the Senate shall have the sole power to try all impeachments,' and that the 'Senate of the United States shall be composed of two Senators from each State.' The ten excluded States are entitled to twenty Senators upon that floor, and, until they are admitted and incorporated into the body, I deny that it is the Senate to whom the Constitution commits the power to try impeachments. What criminal was ever before arraigned before a court from which twenty of his legal triers had been excluded? Yet you propose to arraign the man who represents in his person thirty-five millions of freemen before just such a dismembered bench. You have no right to do it. Your might makes it not right. A giant's strength is good, but it is tyrannous to use it as a giant.

"The flippant reply to this grave suggestion is that we pass laws, and therefore we are a House and Senate to impeach. But the answer is, your legislative powers have not been questioned, your impeaching powers are. I am not bound to take even a valid objection to the jurisdiction of a court which sits to adjudicate my civil rights, nor is my objection to its jurisdiction to try me for crimes and misdemeanors impaired by my failure to make timely objection in behalf of my civil rights. The question of jurisdiction is raised now, and now is the time to decide it. It was never raised as to our legislative powers, and the time has gone by for that. But this is the very time to raise it as to our criminal jurisdiction. It could not be decided before it was raised, and hence I conclude all the legislation we have done does not constitute us the court to originate and try impeachments which the Constitution contemplates."

Mr. Judd, of Illinois, presented the following telegram, which was read by the Clerk:

CHICAGO, ILLINOIS, February 24, 1868.

The Republican press and party of the city of Chicago unanimously demand the impeachment of Andrew Johnson. A mass meeting is called for tomorrow evening, to give expression to this feeling.

L. B. OTIS, Chairman Preliminary Meeting.
HENRY M. SMITH, Secretary.

Mr. Eldridge, of Wisconsin, said: "Who believes that this is the movement of the lovers of the Constitution, and the laws made in pursuance thereof, for their defence and protection? Who believes that it is for the purpose of keeping the President in his legitimate executive sphere?"

"If any one doubts upon this point, let me ask him why it is that Mr. Stanton, who pronounces this Tenure-of-Office Bill unconstitutional, is so anxious to hold on to this office? Why is it, when distinguished Senators declared that no gentleman, no man of honor, could hold on to a Cabinet office after an intimation from the President that he was not wanted, that his resignation was desired? Why is it, when the personal and official relations of the Secretary and the President are admittedly such that they can have no intercourse or communication with each other? Is it, I repeat, to strengthen and aid the Executive in the legitimate and proper exercise of the executive power?"

"It is admitted upon all hands that the party for impeachment desire to keep Mr. Stanton there to oppose and circumvent the President. He is kept there in the interest of the legislative and not the executive power. He is kept in the interest of Congress and not the President. He is expected to execute the will of Congress, to do its bidding, to strengthen its power, to oppose and not to aid the President.

"Now, I put it to the gentlemen upon the other side of this House, if they expect or believe that it is possible for this Government of several and coequal departments to exist

while not only warring with each other, but while the one has not only a spy, a common informer, in the confidential counsels of the other, but a known and determined enemy; holding his position against his own pronounced convictions of constitutional right and duty?"

Mr. Stevens, of Pennsylvania, said: "Mr. Speaker, I agree with those gentlemen who have gone before me, that this is a grave subject and should be gravely treated. It is important to the high official who is the subject of these charges, and it is important to a nation of forty million people, now free, and rapidly increasing to hundreds of millions. The official character of the Chief Executive of this great nation being thus involved, the charge, if falsely made, is a cruel wrong; if, on the other hand, the usurpations and misdemeanors charged against him are true, he is guilty of as atrocious attempts to usurp the liberty and destroy the happiness of this nation as were ever perpetrated by the most detestable tyrant who ever oppressed his fellow-men. Let us, therefore, discuss these questions in no partisan spirit, but with legal accuracy and impartial justice. The people desire no victim, and they will endure no usurper.

"The charges, so far as I shall discuss them, are few and distinct. Andrew Johnson is charged with attempting to usurp the powers of other branches of the Government; with attempting to obstruct and resist the execution of the law; with misprision of bribery; and with the open violation of laws which declare his acts misdemeanors and subject him to fine and imprisonment; and with removing from office the Secretary of War during the session of the Senate without the advice or consent of the Senate; and with violating the sixth section of the act entitled 'An act regulating the tenure of certain civil offices.' There are other offences charged in the papers referred to the committee, which I may consider more by themselves.

"In order to sustain impeachment under our Constitution I do not hold that it is necessary to prove a crime as an indictable offence, or any act *malum in se*. I agree with the distinguished gentleman from Pennsylvania, on the other side of the House, who holds this to be a purely political proceeding. It is intended as a remedy for malfeasance in office, and to prevent the continuance thereof. Beyond that, it is not intended as a personal punishment for past offences or for future example.

"What, then, are the official misdemeanors of Andrew Johnson disclosed by the evidence? On the 2d day of March, 1867, Congress passed an act entitled 'An act regulating the tenure of certain civil offices.' Among other provisions it enacted that no officer who had been appointed by and with the advice and consent of the Senate should be removed from office without the consent of the Senate, and that, if during vacation a suspension should be made

for cause, such cause should be reported to the Senate within twenty days after their next meeting. If the Senate should deem the reason of the suspension sufficient, then the officer should be removed and another appointed in his stead; but if the Senate should refuse to concur with the President, and declare the reasons insufficient, then the officer suspended should forthwith resume the functions of his office and the powers of the person performing its duties should cease. It is especially provided that the Secretary of War shall hold his office during the term of the President by whom he may have been appointed, and for one month thereafter, unless removed by and with the consent of the Senate as aforesaid. On the 12th day of August, 1867, during the recess of the Senate, the President removed the Secretary of War, whose term of office had not expired, requiring him to surrender the office with the public property, and appointed General U. S. Grant Secretary of War *ad interim*.

"When Andrew Johnson assumed the office of President, he took the oath to obey the Constitution of the United States and to take care that the laws be faithfully executed. This was a solemn and enduring obligation, nor can he plead exemption from it on account of his condition at the time it was administered to him. An attempt to obstruct the execution of the law, not a mere omission amounting to negligence which would have been a misdemeanor, but a daring and bold conspiracy was attempted by him to induce the General of the Army to aid him in defeating the operation of this law; and, when he had suspended the Secretary of War, he appointed General Grant Secretary *ad interim*, with the avowed purpose of preventing the operation of that law, if the Senate should decide in favor of the Secretary; and he says that the General did enter into such conspiracy to aid him in obstructing the return of the rejected Secretary, notwithstanding the Senate might decide in his favor. This is denied by the General, and a question of veracity, rather angrily discussed, has arisen between them. Those gentlemen seem to consider that that question is one of importance to the public. In this they are mistaken. Which is the man of truth, and which the man of falsehood, is of no more public importance than if it arose between two obscure individuals. If Andrew Johnson tells the truth, then he is guilty of a high official misdemeanor, for he avows his effort to prevent the execution of the law. If the General commanding tells the truth, then the President is guilty of a high misdemeanor, for he declares the same thing of the President, denying only his own complicity. No argument can make this point plainer than the statement of the culprit. If he and the General told the truth, then he committed wilful perjury by refusing to take care that the laws should be duly executed.

"To show the *animus* and guilty knowledge with which this law was violated, we have only

to turn to the proceedings of the Senate notifying him of his illegal and void conduct, and then to consider that he has since persevered in attempting to enforce it. Indeed, to show his utter disregard of the laws of his country, we have only to turn to his last annual message, in which he proclaims to the public that the laws of Congress are unconstitutional and not binding on the people. Who, after that, can say that such a man is fit to occupy the executive chair, whose duty it is to inculcate obedience to those very laws, and see that they are faithfully obeyed? Then the great beauty of this remedial and preventive process is clearly demonstrated. He is dull and blind who cannot see its necessity, and the beneficial purposes of the trial by impeachment.

"Now, in defiance of this law, Andrew Johnson, on the 21st day of February, 1868, issued his commission or letter of authority to one Lorenzo Thomas, appointing him Secretary of War *ad interim*, and commanded him to take possession of the Department of War, and to eject the incumbent, E. M. Stanton, then in lawful possession of said office. Here, if this act stood alone, would be an undeniable official misdemeanor—not only a misdemeanor *per se*, but declared to be so by the act itself, and the party made indictable and punishable in a criminal proceeding. If Andrew Johnson escapes with bare removal from office, if he be not fined and incarcerated in the penitentiary afterward under criminal proceedings, he may thank the weakness or the clemency of Congress, and not his own innocence.

"We shall propose to prove on the trial that Andrew Johnson was guilty of misprision of bribery by offering to General Grant, if he would unite with him in his lawless violence, to assume in his stead the penalties and to endure the imprisonment denounced by the law. Bribery is one of the offences specifically enumerated for which the President may be impeached and removed from office. By the Constitution, article two, section two, the President has power to nominate and, by and with the advice and consent of the Senate, to appoint all officers of the United States whose appointments are not therein otherwise provided for, and which shall be established by law, and to fill up all vacancies that may happen during the recess of the Senate, by granting commissions which shall expire at the end of their next session. Nowhere, either in the Constitution or by statute, has the President power to create a vacancy during the session of the Senate, and fill it without the advice and consent of the Senate; and yet, on the 21st day of February, 1868, while the Senate was in session, he notified the head of the War Department that he was removed from office, and his successor *ad interim* appointed. Here is a plain recorded violation of the Constitution and laws, which, if it stood alone, would make every honest and intelligent man give his vote for impeachment. The President had perse-

vered in his lawless course through a long series of unjustifiable acts. When the so-called Confederate States of America were conquered, and had laid down their arms and surrendered their territory to the victorious Union, the government and final disposition of the conquered country belonged to Congress alone, according to every principle of the law of nations.

"Neither the Executive nor the judiciary had any right to interfere with it except so far as was necessary to control it by military rule until the sovereign power of the nation had provided for its civil administration. No power but Congress had any right to say whether ever or when they should be admitted to the Union as States, and entitled to the privileges of the Constitution of the United States. And yet Andrew Johnson, with unblushing hardihood, undertook to rule them by his own power alone; to lead them into full communion with the Union; direct them what governments to erect and what constitutions to adopt, and to send Representatives and Senators to Congress according to his instructions. When admonished by express act of Congress, more than once repeated, he disregarded the warning and continued his lawless usurpation. He is since known to have obstructed the reestablishment of those governments by the authority of Congress, and has advised the inhabitants to resist the legislation of Congress. In my judgment his conduct with regard to that transaction was a high-handed usurpation of power, which ought long ago to have brought him to impeachment and trial, and to have removed him from his position of great mischief. He has been lucky in thus far escaping through false logic and false law. But his then acts, which will on the trial be shown to be atrocious, are open evidence of his wicked determination to subvert the laws of his country.

"I trust that, when we come to vote upon this question, we shall remember that, although it is the duty of the President to see that the laws be executed, the sovereign power of the nation rests in Congress, who have been placed around the Executive as muniments to defend his rights, and as watchmen to enforce his obedience to the law and the Constitution. His oath to obey the Constitution and our duty to compel him to do it are a tremendous obligation, heavier than was ever assumed by mortal rulers. We are to protect or to destroy the liberty and happiness of a mighty people, and to take care that they progress in civilization, and defend themselves against every kind of tyranny. As we deal with the first great political malefactor, so will be the result of our efforts to perpetuate the happiness and good government of the human race. The God of our fathers, who inspired them with the thought of universal freedom, will hold us responsible for the noble institutions which they projected and expected us to carry out. This is not to be the temporary triumph of a political party,

but is to endure in its consequences until this whole continent shall be filled with a free and untrammelled people, or shall be a nest of shrinking, cowardly slaves."

The Speaker: "If there be no objection, the Clerk will read the resolution upon which the House is about to vote."

There being no objection, the Clerk read, as follows:

Resolution providing for the impeachment of Andrew Johnson, President of the United States.

Resolved, That Andrew Johnson, President of the United States, be impeached of high crimes and misdemeanors in office.

The question was taken; and it was decided, as follows:

YEAS—Messrs. Allison, Ames, Anderson, Arnell, Delos R. Ashley, James M. Ashley, Bailey, Baker, Baldwin, Banks, Beaman, Beatty, Benton, Bingham, Blaine, Blair, Boutwell, Bromwell, Broomall, Buckland, Butler, Cake, Churchill, Reader W. Clarke, Sidney Clarke, Cobb, Coburn, Cook, Cornell, Covode, Cullom, Dawes, Dodge, Driggs, Eckley, Eggleston, Eliot, Farnsworth, Ferriss, Ferry, Fields, Gravely, Griswold, Halsey, Harding, Higby, Hill, Hooper, Hopkins, Asahel W. Hubbard, Chester D. Hubbard, Hulburd, Hunter, Ingersoll, Jenckes, Judd, Julian, Kelley, Kelsey, Ketcham, Kitchen, Laflin, George V. Lawrence, William Lawrence, Lincoln, Loan, Logan, Loughridge, Lynch, Mallory, Marvin, McCarthy, McClurg, Mercur, Miller, Moore, Moorhead, Morrell, Mullins, Myers, Newcomb, Nunn, O'Neill, Orth, Paine, Perham, Peters, Pike, Pile, Plants, Poland, Polale, Price, Raum, Robertson, Sawyer, Schenck, Scofield, Selye, Shanks, Smith, Spalding, Starkweather, Aaron F. Stevens, Thaddeus Stevens, Stokes, Taffe, Taylor, Trowbridge, Twichell, Upson, Van Aernam, Burt Van Horn, Van Wyck, Ward, Cadwalader C. Washburn, Elihu B. Washburne, William B. Washburn, Welker, Thomas Williams, James F. Wilson, John T. Wilson, Stephen F. Wilson, Windom, Woodbridge, and the Speaker—126.

NAYES—Messrs. Adams, Archer, Axtell, Barnes, Barnum, Beck, Boyer, Brooks, Burr, Cary, Chanler, Eldridge, Fox, Getz, Glossbrenner, Golladay, Grover, Haight, Holman, Hotchkiss, Richard D. Hubbard, Humphrey, Johnson, Jones, Kerr, Knott, Marshall, McCormick, McCullough, Morgan, Morrissey, Mungen, Niblack, Nicholson, Phelps, Pruyn, Randall, Ross, Sitgreaves, Stewart, Stone, Taber, Lawrence S. Trimble, Van Auken, Van Trump, Wood, and Woodward—47.

NOT VOTING—Messrs. Benjamin, Dixon, Donnelly, Ela, Finney, Garfield, Hawkins, Koontz, Maynard, Pomeroy, Robinson, Shellabarger, Thomas, John Trimble, Robert T. Van Horn, Henry D. Washburn, and William Williams—17.

The Speaker said: "The occupant of the Chair cannot consent that his constituents should be silent on so grave a question, and therefore, as a member of this House, he votes 'ay.' On agreeing to the resolution, there are—yeas 126, nays 47. So the resolution is adopted."

Mr. Stevens, of Pennsylvania: "Mr. Speaker, I submit the following resolutions, on which I demand the previous question:"

Resolved, That a committee of two be appointed to go to the Senate, and, at the bar thereof, in the name of the House of Representatives and of all the people of the United States, to impeach Andrew Johnson, President of the United States, of high crimes and

misdemeanors in office, and acquaint the Senate that the House of Representatives will, in due time, exhibit particular articles of impeachment against him and make good the same; and that the committee do demand that the Senate take order for the appearance of said Andrew Johnson to answer to said impeachment.

2. *Resolved*, That a committee of seven be appointed to prepare and report articles of impeachment against Andrew Johnson, President of the United States, with power to send for persons, papers, and records, and to take testimony under oath.

The resolutions were adopted, yeas 124, nays 42, not voting 28.

The Speaker announced the following committees under the resolutions just adopted:

Committee to communicate to the Senate the action of the House ordering an impeachment of the President of the United States: Thaddeus Stevens, of Pennsylvania, and John A. Bingham, of Ohio.

Committee to declare Articles of Impeachment against the President of the United States: George S. Boutwell, of Massachusetts; Thaddeus Stevens, of Pennsylvania; John A. Bingham, of Ohio; James F. Wilson, of Iowa; John A. Logan, of Illinois; George W. Julian, of Indiana; and Hamilton Ward, of New York.

In the Senate, on February 25th, Mr. Representative Stevens and Mr. Representative Bingham appeared below the bar, and were announced as the committee from the House of Representatives.

Mr. Stevens said: "Mr. President—"

The President *pro tempore*: "The committee from the House of Representatives."

Mr. Stevens: "Mr. President, in obedience to the order of the House of Representatives, we appear before you, and in the name of the House of Representatives and of all the people of the United States we do impeach Andrew Johnson, President of the United States, of high crimes and misdemeanors in office; and we further inform the Senate that the House of Representatives will in due time exhibit particular articles of impeachment against him and make good the same; and in their name we demand that the Senate take order for the appearance of the said Andrew Johnson to answer said impeachment."

The President *pro tempore*: "The Senate will take order in the premises."

The committee of the House thereupon withdrew.

Mr. Howard, of Michigan, said: "I move the adoption of the following resolution—"

Mr. Davis, of Kentucky, said: "I believe I have the floor."

The President *pro tempore*: "The Senator from Kentucky has the floor."

Mr. Davis: "I simply yielded the floor to allow a message to be received from the House of Representatives."

Mr. Howard: "I ask the Chair whether this be not a question of privilege, to which all other proceedings must give way?"

The President *pro tempore*: "There is a question of order raised which the Chair will

submit to the Senate for decision. The question is, has the Senator from Kentucky the right to the floor? The Chair will put the question to the Senate in that form, and as many as agree that he has the right will say ay, and those opposed will say no."

The question being put, it was determined in the affirmative.

The President *pro tempore*: "The Senator from Kentucky is entitled to the floor, and will proceed."

Mr. Davis: "Mr. President, now, with much cheerfulness, I yield the floor for the purpose indicated by the Senator from Michigan."

Mr. Howard: "Then, Mr. President, with the leave of the Senate, I beg to present the following resolution:"

Resolved, That the message of the House of Representatives relating to the impeachment of Andrew Johnson, President of the United States, be referred to a select committee of seven, to consider and report thereon.

Mr. Conkling, of New York, said: "Having before me the proceedings of the Senate in 1862 on the impeachment of Judge Humphreys, of Tennessee, I suggest to the Senator who offers this resolution, for convenience' sake, that he include the words 'to be appointed by the Chair,' so that the resolution will read 'a select committee of seven, to be appointed by the Chair,' etc. It will save time to insert these words, and be within the precedents."

Mr. Howard: "I accept the suggestion."

The President *pro tempore*: "The resolution is so modified."

The resolution was agreed to; and the President *pro tempore* subsequently announced the committee to consist of the following Senators: Mr. Howard, Mr. Trumbull, Mr. Conkling, Mr. Edmunds, Mr. Morton, Mr. Pomeroy, and Mr. Johnson.

In the Senate, on February 29th, Mr. Davis, of Kentucky, offered the following as instructions to the committee on impeachment rules:

That the committee report, as a substitute for the rules just read, the following:

That the Constitution of the United States having appointed the Senate to be the court to try all impeachments; and having provided that the Senate shall be composed of two Senators from each State; and the States of Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Arkansas, Texas, Louisiana, and Florida having each chosen two Senators; and those Senators not having been admitted to their seats in the Senate, while they continue to be excluded the Senate cannot be formed into a constitutional and valid court of impeachment for the trial of articles of impeachment preferred against Andrew Johnson, President of the United States.

The motion to recommit with instructions, after some debate, was lost by the following vote:

YEAS—Messrs. Davis and McCreery—2.

NAYS—Messrs. Anthony, Cameron, Cattell, Chandler, Cole, Conkling, Conness, Corbett, Dixon, Drake, Edmunds, Ferry, Fessenden, Fowler, Frelinghuysen, Hendricks, Howard, Howe, Johnson, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Norton, Nye,

Patterson of Tennessee, Pomeroy, Ramsey, Ross, Sherman, Sumner, Thayer, Tipton, Trumbull, Van Winkle, Wade, Willey, Williams, and Yates—39.

ABSENT—Messrs. Bayard, Buckalew, Cragin, Doolittle, Grimes, Harlan, Henderson, Patterson of New Hampshire, Saulsbury, Sprague, Stewart, and Wilson—12.—(See IMPEACHMENT.)

In the Senate, on June 28d, Mr. Sumner, of Massachusetts, offered the following resolutions, which were read and ordered to be printed:

Resolutions declaring the constitutional responsibility of Senators for their votes on impeachment.

Whereas, a pretension has been put forth to the effect that the vote of a Senator on an impeachment is so far different in character from his vote on any other question that the people have no right to criticize or consider it; and whereas such pretension, if not discountenanced, is calculated to impair that freedom of judgment which belongs to the people on all that is done by their Representatives: Therefore, in order to remove all doubts on this question, and to declare the constitutional right of the people in cases of impeachment—

1. *Resolved*, That, even assuming that the Senate is a court in the exercise of judicial power, Senators cannot claim that their votes are exempt from the judgment of the people; that the Supreme Court, when it has undertaken to act on questions essentially political in character, has not escaped this judgment; that the decisions of this high tribunal in support of slavery have been openly condemned; that the memorable utterance known as the Dred Scott decision was indignantly denounced and repudiated, while the Chief Justice who pronounced it became a mark for censure and rebuke; and that plainly the votes of Senators on an impeachment cannot enjoy an immunity from popular judgment which has been denied to the Supreme Court, with Taney as Chief Justice.

2. *Resolved*, That the Senate is not at any time a court invested with judicial power, but that it is always a Senate with specific functions, declared by the Constitution; that, according to express words, "the judicial power of the United States is vested in one Supreme Court, and such inferior courts as Congress may from time to time ordain and establish," while it is further provided that "the Senate shall have the sole power to try all impeachments," thus positively making a distinction between the judicial power and the power to try impeachments; that the Senate, on an impeachment, does not exercise any portion of the judicial power, but another and different power, exclusively delegated to the Senate, having for its sole object removal from office and disqualification therefor; that, by the terms of the Constitution, there may be, after conviction on impeachment, a further trial and punishment, "according to law," thus making a discrimination between a proceeding by impeachment and a proceeding "according to law;" that the proceeding by impeachment is not "according to law," and is not attended by legal punishment, but is of an opposite character, and from beginning to end political, being instituted by a political body on account of political offences, being conducted before another political body having political power only, and ending in a judgment which is political only; and therefore the vote of a Senator on impeachment, though different in form, is not different in responsibility from his vote on any other political question; nor can any Senator on such an occasion claim immunity from that just accountability which the representative at all times owes to his constituents.

3. *Resolved*, That Senators, in all that they do, are under the constant obligation of an oath, binding them to the strictest rectitude; that on an impeachment they take a further oath, according to the requirement of the Constitution, which says, "Senators, when sitting to try impeachment, shall be on

oath or affirmation;" that this simple requirement was never intended to change the character of the Senate as a political body, and cannot have any such operation; and therefore, Senators, whether before or after the supplementary oath, are equally responsible to the people for their votes, it being the constitutional right of the people at all times to sit in judgment on their representatives.

In the Senate, on December 4th, Mr. Wilson, of Massachusetts, asked, and by unanimous consent obtained, leave to introduce a bill to amend an act entitled "An act to provide for the more efficient government of the rebel States," passed March 2, 1867, and the several acts amendatory thereto; which was read twice by its title.

He said: "I will simply say that this bill is to change that provision of the law which requires that a majority of all the registered voters should vote at an election in order to effect a result, and to provide that a majority of all the votes actually cast shall determine the result. The effect of the present provision has been precisely what I supposed it would be when we passed the original act, and what I and others then predicted. I propose to change the law so that a majority of the votes cast shall determine the result in adopting the constitutions that have been formed. I move that the bill be printed and referred to the Committee on the Judiciary."

The motion was agreed to.

On December 10th, Mr. Doolittle, of Wisconsin, offered an amendment to the bill. He said: "The bill to which the amendment which I now present is proposed was introduced by the honorable Senator from Massachusetts (Mr. Wilson). I wish to have this amendment referred to the Committee on the Judiciary, and printed. It is very short, but it contains a very important proposition."

"In making this motion to refer, I desire simply to state that the bill introduced by the Senator from Massachusetts is probably one of the most important bills which has been presented at the present session, and it is perhaps the most important bill that will come before Congress for consideration at the present session: a bill to amend the acts of reconstruction as they are applicable to the States of the South. The proposition offered by the Senator from Massachusetts is a very important one, providing that the constitutions to be adopted in those States shall be adopted, not by a majority of the registered voters, but by a majority of the actual voters. To that bill I propose an amendment in the shape of a proviso, providing that the persons who do not possess the qualifications required by the laws and constitutions of the several States previous to the rebellion, in order to be permitted to vote at any election for the ratification of a constitution or of officers under it, shall be possessed of one of the following qualifications: first, shall have served in the Army of the United States for the period of one

year or more; or second, shall be possessed of sufficient education to enable him to read the Constitution of the United States, and to subscribe his name to an oath to support the same; or third, shall be possessed of a freehold estate, in his own right or the right of his wife, of the value of \$250.

"Mr. President, if the measure of the Senator from Massachusetts is to be pressed upon the consideration of Congress, as I have no doubt it is, this proviso is a very important one to be adopted, which possibly might bring peace to that distracted country if Congress should be disposed to adopt it. I shall not now go into the consideration of the question, but I simply state that I believe the bill offered by him is very important. It anticipates a fact which is undoubtedly likely to occur, that the constitutions being formed are not to be adopted by a majority of the registered voters. It is opening the question anew, and as a matter of course when that question is reopened it is all-important that Congress should take a position which the people of the country will be able to sustain. I move that my proposed amendment be printed."

The President *pro tempore*: "That order will be made, if there be no objection."

Mr. Wilson: "Before the matter passes from the Senate I wish simply to say that the amendment I moved to the law, by the bill referred to by the Senator from Wisconsin, was merely to strike out that very strange provision we put into the law requiring a majority of all the voters registered to vote at the elections. I thought then it was a provision which must operate against the friends of reconstruction, and it looked at one time as though it would be fatal to immediate reconstruction in some of the States. There are, however, nine States that have voted for conventions and have elected their delegates.

"I am satisfied that every thing pertaining to reconstruction has gone on exceedingly well, far better than any member of either House had a right to expect; that the elections have been fair and orderly, as much so as in the other States; that as a general rule the conventions are conducting themselves quite as well as other conventions do, and I have undoubting faith that they will make good constitutions, and that those constitutions will be adopted, whether we pass the amendatory bill introduced by me or not. It is possible that in one or two of the States the friends of reconstruction may fail, but I doubt whether they will fail in any."

Mr. Davis: "If it was my theory of morals that evil should be done that good might come of it, I would want the bill to which the Senators have referred to pass. The great issue, and the greatest issue that has ever been before the people of the United States, is now looming up in all of its grand proportions, and that is, whether the Government of the United

States shall be a white man's Government or a negro Government, and the thunders of the vast majority of the American people pronounced in the recent elections have already decided that question. Sir, the Government of this country was made by white men, it has always continued to be a white man's Government from the beginning, and will be to the end; and those who seek to establish a contrary power of government in this country will find themselves crushed into dust. If the honorable Senator from Massachusetts and the advocates of negro government want that question to be decided by the people unmistakably let them bring out their Fred. Douglass as their next candidate for the presidency; and where would he and his followers, negroes or whites, be? Driven like chaff before the whirlwind of American indignation.

"Sir, the people of America have already decided that a miserable white minority of less than one-fifth of the people of the United States, with all their negroes in it, shall never appoint a President for the white men of the United States. The white men of the United States will rally in the proportion of three-fourths or four-fifths of the white people of America to decide this important point: that a negro electoral vote, appointed by negro governments, forced by usurped power upon the people of the Southern States, shall never appoint for them a President of the United States. When the time comes and that grand issue is to be met from North to South, from East to West, in every part of the United States will gather the white people, the hosts of the Caucasian race, and they will put this mushroom negro power, that has loomed up in such large and monstrous proportions in the last year or two, under their feet, and its allies will be driven into political and social nonentity. Sir, if my desire for the overthrow of the Republican-Radical party, which is the strongest desire that ever nestled in my bosom, was now to guide my decisions, I would wish that this bill and every other atrocity to foist the negroes into the mastery of our country and of our Government should be brought up and passed by the forms of law through Congress."

Mr. Stewart: "Mr. President, from the remarks that have just fallen from the Senator from Kentucky, one would suppose he did not know any thing about the fact that the Union party had undertaken to govern this country by the negro vote. I have heard this before. I have heard it from the stump. I have heard this effort for the last year to frighten the American people and to make them believe that they would be governed by the negroes; that if the negroes voted at all they would govern this entire country. I suppose that in the United States there is one person in ten that is of African descent, rather a small minority to control this great Government! I do not suppose that anybody in his senses has really any sincere alarm about negro government. I

think stating the issue in that form manifests a very strong desire to avoid the real issue. The real issue before the country, the real issue that will be before the country next fall, is whether this country shall be governed by loyal men, by its friends, by those who stood by it in the hour of its peril, or whether it shall be turned over to traitors and its enemies, that they may go on with the work of destruction; that they may visit punishment upon the friends of the Government. That is the real issue, and yet we hear from every source that the issue is to be whether one-tenth of the American people, being colored, shall tyrannize over nine-tenths!"

"It is said that a great sin has been committed by the Union party in conferring the franchise upon the negro. I have nothing to say of the justice or humanity of the law; but how was it brought about? Who brought it about? Who forced the necessity upon Congress and upon the Union party? I believe that every Union man had settled this proposition in his mind, and I believe that every man who loves his country still adheres to the proposition that it is unsafe to place the power of this Government in rebel hands while they are still unrepentant.

"I repudiate altogether the charge that Congress has attempted to set up negro governments. I affirm that they, as they were in duty bound to do, have undertaken to inaugurate loyal governments, governments that will be friendly to our institutions. They have undertaken to preserve our institutions in the hands of their friends. That is all. Who is to be alarmed by the cry that one negro in ten of our population is to govern this country? That is a pretty watchword with which to go before the people. It only needs to be stated to show how absurd it is. It is an appeal to a low prejudice for the purpose of placing the Government in the hands of rebels. And what purpose have they in view? Have we ever thought of that? Is it certain that they will not avenge their supposed wrongs on your loyal soldiers? Is it certain that they will not refuse to pay the pensions due to your widows and orphans? Is it certain that they will not repudiate your national debt? Is it certain that they will not claim pay for the slaves we have emancipated? I have heard the Democratic theory stated by a good many Democrats, many of whom in private conversation say that the mission of the Democratic party is to place every thing back where it was before the war, wipe out the debt, reenslave the negroes, and pay for what damages have occurred. Until they get some of these theories out of their heads, it seems to me it is but right and proper that we should enfranchise the men who are friendly to the Government, who will sustain our institutions, who have been tried and true. I wish it distinctly understood that I have no fear of the American people being frightened out of their wits on

account of a few colored people being allowed to vote. I do not think the people of the South will be much frightened about it."

No further action was taken on the subject of reconstruction by the Senate until January 22d. Meantime the House considered and passed a bill relative thereto.

In the House, on December 9th, Mr. Stevens, of Pennsylvania, moved the following resolution:

Resolved, That so much of the President's message and accompanying documents as relates to the subject of reconstruction be referred to a select committee of nine on reconstruction.

It was adopted by the following vote:

YEAS—Messrs. Allison, Ames, Anderson, Arnell, Baker, Baldwin, Banks, Beaman, Benjamin, Benton, Bingham, Boutwell, Bromwell, Broomall, Buckland, Butler, Cake, Churchill, Reader W. Clarke, Sidney Clarke, Cobb, Coburn, Cook, Cullom, Dawes, Dixon, Dodge, Donnelly, Eckley, Eggleston, Ela, Eliot, Farnsworth, Ferriss, Ferry, Fields, Finney, Garfield, Gravely, Halsey, Hamilton, Harding, Hawkins, Hill, Higby, Hooper, Hopkins, Chester D. Hubbard, Hulburd, Hunter, Ingersoll, Judd, Julian, Kelley, Kelsey, Ketcham, Koontz, Laffin, George V. Lawrence, William Lawrence, Lincoln, Loan, Logan, Loughridge, Lynch, Mallory, Marvin, Maynard, McCarthy, McClurg, Mercur, Moorhead, Mullins, Myers, Newcomb, Nunn, O'Neill, Orth, Paine, Perham, Peters, Pike, Pile, Plants, Polsley, Price, Robertson, Sawyer, Schenck, Shanks, Smith, Spalding, Starkweather, Thaddeus Stevens, Stokes, Thomas, Trimble, Trowbridge, Upson, Van Aernam, Robert T. Van Horn, Van Wyck, Cadwalader C. Washburn, Elihu B. Washburne, Henry D. Washburn, William B. Washburn, Welker, Thomas Williams, William Williams, James F. Wilson, John T. Wilson, and Stephen F. Wilson—112.

NAYS—Messrs. Adams, Archer, Axtell, Bailey, Barnes, Barnum, Beck, Boyer, Brooks, Burr, Cary, Chanler, Eldridge, Getz, Glossbrenner, Golladay, Grover, Haight, Holman, Hotchkiss, Richard D. Hubbard, Humphrey, Johnson, Jones, Kerr, Knott, Marshall, Morgan, Mungen, Niblack, Nicholson, Phelps, Pruyn, Randall, Robinson, Ross, Sitgreaves, Taber, Van Auken, Van Trump, Wood, and Woodward—43.

NOT VOTING—Messrs. Delos B. Ashley, James M. Ashley, Blaine, Blair, Cornell, Covode, Driggs, Fox, Griswold, Asahel W. Hubbard, Jenckes, Kitchen, McCullough, Miller, Moore, Morrell, Morrissey, Poland, Pomeroy, Raum, Scofield, Selye, Shellabarger, Aaron F. Stevens, Stewart, Stone, Taffe, Taylor, Twichell, Burt Van Horn, Ward, Windom, and Woodbridge—32.

The Speaker subsequently announced the following persons as members of the committee: Thaddeus Stevens, of Pennsylvania; George S. Boutwell, of Massachusetts; John A. Bingham, of Ohio; John F. Farnsworth, of Illinois; Calvin T. Hulburd, of New York; Fernando C. Beaman, of Michigan; Halbert E. Paine, of Wisconsin; James Brooks, of New York; and James B. Beck, of Kentucky.

In the House, on December 16th, Mr. Benjamin, of Missouri, submitted the following preamble and resolutions:

Whereas, the President of the United States in his annual message has seen fit, in utter disregard of the popular will, as expressed in the election of members of the Fortieth Congress, to recommend the repeal of the laws heretofore passed for the purpose of facili-

tating reconstruction in the rebellious States, the effect of which would be to remit the governments of said States to rebel hands, and abandon the entire loyal element therein to the will of traitors; and whereas it is eminently proper that this House should respond in emphatic terms to so extraordinary a proposition: Therefore,

Be it resolved, That the House of Representatives will never consent to take one retrograde step from its advanced position in promoting the cause of equal rights, nor deviate from its fixed purpose of protecting all men as equals before the law.

Resolved, That, from the success that has hitherto attended the administration of the reconstruction acts, there is no reason to doubt that under their provisions the restoration of the rebellious States is being successfully accomplished on a firm and enduring basis, and in a manner that will fully meet the expectations of the loyal men of the country, and therefore, in the judgment of this House, no good reason exists why said acts should be repealed.

They were adopted by the following vote:

YEAS—Messrs. Allison, Ames, Anderson, Arnell, Delos B. Ashley, James M. Ashley, Bailey, Baker, Baldwin, Beaman, Benjamin, Benton, Blaine, Bromwell, Broomall, Buckland, Butler, Cary, Churchill, Reader W. Clarke, Sidney Clarke, Cobb, Coburn, Covode, Cullom, Dawes, Dixon, Dodge, Donnelly, Driggs, Eggleston, Ela, Eliot, Farnsworth, Ferris, Fields, Griswold, Halsey, Harding, Hawkins, Higby, Hooper, Hopkins, Asahel W. Hubbard, Chester D. Hubbard, Hulburd, Hunter, Ingersoll, Jenckes, Judd, Julian, Kelley, Ketcham, Koontz, Laffin, George V. Lawrence, William Lawrence, Loan, Logan, Loughridge, Lynch, Mallory, Marvin, Maynard, McCarthy, McClurg, Mercur, Moore, Moorhead, Morrell, Mullins, Myers, Newcomb, Nunn, O'Neill, Orth, Perham, Peters, Pile, Plants, Poland, Polsley, Price, Robertson, Sawyer, Schenck, Scofield, Shanks, Smith, Spalding, Starkweather, Aaron F. Stevens, Thaddeus Stevens, Stokes, Taylor, Thomas, Trimble, Trowbridge, Van Aernam, Burt Van Horn, Robert T. Van Horn, Ward, Cadwalader C. Washburn, Elihu B. Washburne, Henry D. Washburn, William B. Washburn, Welker, Thomas Williams, William Williams, James F. Wilson, John T. Wilson, and Stephen F. Wilson—112.

NAYS—Messrs. Adams, Archer, Axtell, Barnes, Barnum, Beck, Boyer, Brooks, Burr, Eldridge, Getz, Glossbrenner, Golladay, Grover, Hotchkiss, Richard D. Hubbard, Johnson, Jones, Kerr, Knott, Mungen, Niblack, Nicholson, Phelps, Pruyn, Robinson, Ross, Sitgreaves, Van Auken, Van Trump, Wood, and Woodward—32.

NOT VOTING—Messrs. Banks, Bingham, Blair, Boutwell, Cake, Chanler, Cook, Cornell, Eckley, Ferry, Finney, Fox, Garfield, Gravely, Haight, Hamilton, Hill, Holman, Humphrey, Kelsey, Kitchen, Lincoln, Marshall, McCullough, Miller, Morgan, Morrissey, Paine, Pike, Pomeroy, Randall, Raum, Selye, Shellabarger, Stewart, Stone, Taber, Taffe, Twichell, Upson, Van Wyck, Windom, and Woodbridge—43.

In the House, on December 18th, on motion of Mr. Ashley, of Ohio, the House reconsidered the vote referring the bill to facilitate reconstruction to the Judiciary Committee.

Mr. Stevens, of Pennsylvania, then moved to strike out all after the enacting clause, and in lieu thereof to insert the following:

SECTION 1. *Be it enacted*, That so much of the fifth section of an act passed March 23, 1867, entitled "An act supplementary to an act to provide for the more efficient government of the rebel States, passed March 2, 1867, and to facilitate their restoration," as requires that a majority of all the registered votes of the district shall be cast in favor of the ratification of

the constitution before it becomes valid, be, and the same is hereby, so far modified that a majority of the votes cast at the election for the ratification or rejection of the constitution shall be considered as valid, and as affirming or rejecting the constitution.

Sec. 2. *And be it further enacted*, That the several States which may be reconstructed under the act of March 2, 1867, and its supplements, may, at the time of voting upon the ratification of the constitution, vote also for members of Congress, who shall be entitled to take their seats in the next session of Congress after their several States shall have been admitted into the Union; and, until a new apportionment, the election for said members shall be according to the districts as they existed in 1858 and 1859, except when otherwise provided for; and the same elective officers who make the return of the votes cast on the ratification or rejection of the constitution shall enumerate and certify the votes cast for the members of Congress, and give certificates of election to those having the largest number of votes and whom they may deem entitled thereto.

Sec. 3. *And be it further enacted*, That, until a new apportionment shall be made of Representatives, South Carolina shall be entitled to six Representatives, two of whom shall be elected by general ticket; North Carolina, eight Representatives, one of whom shall be elected by general ticket; Georgia, eight Representatives, one of whom shall be elected by general ticket; Florida shall have one Representative; Alabama eight, two of whom shall be elected by general ticket; Mississippi six, one of whom shall be elected by general ticket; Louisiana six, one of whom shall be elected by general ticket; Texas five, one of whom shall be elected by general ticket; Arkansas three; and Virginia —.

Mr. Stevens, of Pennsylvania, said: "Sir, here is a bill which we have been petitioned to pass before the vacation, and it is the simplest thing in the world. The bill has been printed and is on our files, and every gentleman has had a fair opportunity of reading it and understanding it. It is simple enough, and I can explain it in five minutes so that no man can misunderstand it.

"In the first place, it restores the majority principle in voting on the constitution of the reconstructed States. In the second place, it provides for the election of Representatives in Congress by those States at the same time the constitutions are voted on, and provides further that when the constitutions are ratified and declared valid, and these States are declared entitled to representation, those Representatives so elected shall be admitted into this House upon taking the legal oath, and not before.

"Well, now, sir, that is the whole of my bill, except that which my friend from Ohio (Mr. Bingham) proposes to strike out. And here, by-the-by, let me modify my substitute by putting the number of Representatives from Virginia at eight. The third section leaves the apportionment as it was in 1860, only adding the additional number to which the States are entitled in consequence of the liberation of the negroes and the consequent change in the basis of representation. If any gentleman objects to that, he can vote to strike out that section. For my own part, I think the States are entitled to the proposed representation here.

"Now, sir, that is the whole bill. I do not know if there is any thing in it to which any gentleman can object; I cannot perceive it myself."

Mr. Bingham, of Ohio, said: "Mr. Speaker, I find no objection to the first and second sections of the bill reported by the gentleman from Pennsylvania (Mr. Stevens), from the Committee on Reconstruction. The first section, as the gentleman has very well said, simply restores the majority principle to the States lately in insurrection. The House will remember that I made an endeavor, when the Reconstruction Bill was being pressed upon this House, to exclude from it the terms which now embarrass the people in their action. This first section, therefore, is to put into the law that which I sought to have placed in it in the first place—the right of the majority voting to determine the result. That I believe to be the general if not the universal rule in the several States of the Union.

"The second section may be deemed by many gentlemen to be altogether unnecessary, for it may be held that the people of the late insurrectionary States, in the event of their ratifying forms of constitutional government, have the right, under the Constitution and existing laws, to proceed to the election of Representatives in Congress in accordance with the provisions of the existing law apportioning Representatives among the several States of the Union. The second section, therefore, is only in aid of the law, and those who desire to see those States speedily represented in Congress cannot well object to it.

"The third section which the gentleman reports is that which I desire to have stricken from this bill, as violative alike of the spirit of the Constitution and of the existing legislation of Congress. The Congress of the United States, in the apportionment of Representatives among the several States of this Union, is limited, in my judgment, to each decennial period after the first census taken under the Constitution. That is my first objection to the third section of this bill. I do not recognize the power implied by the proposed legislation in this third section, in every succeeding Congress, after the apportionment of representation in the mode prescribed by the Constitution of the United States, to change the basis of that apportionment. With me that objection would be all-sufficient to control the vote which I shall give on the pending motion to strike the third section from this bill; and, if that motion fails, to control as well the vote which I shall give against the bill with that section in it. Under no conceivable circumstances will I consent to record my vote in favor of this bill with that section retained, either in the interest of the insurrectionary States or of the States not in insurrection."

Mr. Stevens, of Pennsylvania: "If the gentleman from Ohio (Mr. Bingham) will allow me one moment, I would like to say that I do not

want to insist on any thing which may interfere with the passage of the bill. I withdraw the third section."

Mr. Farnsworth, of Illinois, said: "The object of this bill is to facilitate reconstruction and restoration. The first section, as the gentleman from Pennsylvania (Mr. Stevens) has already told the House, restores the principle of majorities in elections, which should never have been departed from in the original legislation of Congress upon this subject.

"Now, I will say this much to the House, that in all probability, unless the first section of this bill is enacted into law, the constitutions adopted by the several States in the South will not be ratified by the people, if there is required to vote for their ratification a majority of all the voters registered. It is undoubtedly known to the members of this House that a great many of the voters in these unreconstructed States have changed their residences since they were registered. Poor men are constantly being hired to go here or there to work upon plantations or in other places, thus losing their residences.

"Then, too, as will be readily seen, every vote that is not polled upon the ratification of the constitution counts against it. It therefore seems to me to be not at all likely that a majority of all the voters registered will be polled in favor of these constitutions.

"The second section provides that, at the same time the people in the States lately in insurrection vote upon the question of the ratification or rejection of their constitutions, they shall also vote for Representatives in Congress. The object of that section is to facilitate the representation of those States in Congress, so that they may not be kept out after these States shall have been reconstructed, and their constitutions duly ratified and adopted, until another election is held for members of Congress, but that, as soon as any one of these States shall have been declared by Congress to be entitled to representation, their members, who may be standing at the doors of the House of Representatives, may take their seats as such Representatives."

Mr. Stevens, of Pennsylvania, demanded the previous question, which was seconded, and the substitute agreed to. He then demanded the previous question on the passage of the bill, and it was passed by the following vote:

YEAS—Messrs. Allison, Ames, Anderson, Arnell, Delos R. Ashley, James M. Ashley, Bailey, Baker, Baldwin, Banks, Beaman, Benjamin, Bingham, Broomall, Buckland, Cary, Churchill, Reader W. Clarke, Sidney Clarke, Cobb, Coburn, Cook, Covode, Cullom, Dawes, Dixon, Donnelly, Driggs, Eckley, Eliot, Farnsworth, Ferriss, Fields, Garfield, Griswold, Halsey, Harding, Hawkins, Higby, Hooper, Hopkins, Chester D. Hubbard, Hulburd, Hunter, Ingersoll, Jenckes, Judd, Julian, Kelley, Ketcham, Koontz, Laffin, William Lawrence, Loan, Logan, Loughridge, Lynch, Mallory, Maynard, McCarthy, McClurg, Mercur, Moore, Moorhead, Morrell, Mullins, Myers, Nunn, O'Neill, Orth, Paine, Perham, Peters, Pike, Pile, Poland, Price, Robertson, Saw-

yer, Schenck, Scofield, Shanks, Smith, Spalding, Starkweather, Aaron F. Stevens, Thaddeus Stevens, Stewart, Stokes, Taylor, Thomas, Upson, Van Aernam, Burt Van Horn, Robert T. Van Horn, Ward, Cadwalader C. Washburn, Elihu B. Washburne, William B. Washburn, Welker, William Williams, John T. Wilson, Stephen F. Wilson, and Windom—104.

NAYS—Messrs. Adams, Archer, Axtell, Barnes, Barnum, Beck, Boyer, Brooks, Burr, Eldridge, Fox, Getts, Glossbrenner, Golladay, Grover, Holman, Hotchkiss, Richard D. Hubbard, Johnson, Jones, Kerr, Knott, Marshall, McCormick, Morgan, Mungen, Niblack, Nicholson, Phelps, Pruyn, Randall, Ross, Taber, Van Auken, Van Trump, Wood, and Woodward—87.

NOT VOTING—Messrs. Benton, Blaine, Blair, Boutwell, Bromwell, Butler, Cake, Chanler, Cornell, Dodge, Eggleston, Ela, Ferry, Finney, Gravely, Haight, Hamilton, Hill, Asahel W. Hubbard, Humphrey, Kelsey, Kitchen, George V. Lawrence, Lincoln, Marvin, McCullough, Miller, Morrissey, Newcomb, Plants, Polsley, Pomeroy, Raum, Robinson, Selye, Shellabarger, Sitgreaves, Stone, Taffe, Trimble, Trowbridge, Twichell, Van Wyck, Henry D. Washburn, Thomas Williams, James F. Wilson, and Woodbridge—47.

In the Senate, on January 22d, the bill of the House was considered:

Mr. Doolittle, of Wisconsin, moved to refer the bill to the Committee on the Judiciary, with the following instructions:

That, the said committee be instructed in said bill, or in any other bill which may be reported by them having reference to the question of reconstruction, so called, in any of the States not represented in the present Congress, to insert the following proviso:

Provided, nevertheless, That upon an election for the ratification of any constitution, or of officers under the same, previous to its adoption in any State, no persons not having the qualifications of an elector under the constitution and laws of such State previous to the late rebellion shall be allowed to vote, unless he shall possess one of the following qualifications, namely:

1. He shall have served as a soldier in the Federal Army for one year or more.
2. He shall have sufficient education to read the Constitution of the United States, and to subscribe his name to an oath to support the same; or,
3. He shall be seized, in his own right or in the right of his wife, of a freehold to the value of \$250.

Mr. Doolittle said: "Mr. President, the question presented in the instructions proposed by me is, whether Congress is still resolved to subject the white people of the Southern States to the dominion of the negro race at the point of the bayonet, or whether Congress, in deference to the recently expressed will of the American people, will now so far modify their policy as to leave the governments in those States in the hands of the white race and of the more civilized portion of the blacks? That is the naked question. Strip it of all useless verbiage and specious arguments about sustaining loyal men and punishing rebels, it is nothing more nor less than this: shall the General of the Army put the negro in power over the white race in all the States of the South and keep him there? That purpose is boldly avowed by some, and that will be the effect of this Radical reconstruction now as it stands, or as it will stand if this bill shall become a law. On

the other hand, the amendment which I offer, if adopted, would leave the governments in those States where they belong, and where they ought always to remain—in the hands of our own race—while, at the same time, it would allow the right of suffrage to all those negroes who have any claim to it by reason of intelligence or patriotic services or estate subject to taxation, namely:

"1. To those who have served in the Federal Army:

"2. To those who have sufficient education to read the Constitution of the United States and to subscribe their names to an oath to support the same; or

"3. To those who have acquired and hold real property to the value of \$250.

"But the question may be asked, why not apply the same tests to the white men of the South? The answer is plain and twofold. First, by the constitutions and laws of those States the right of suffrage is already secured to them, and we have no rightful power to take it away. To do so would trample under our feet one of the most sacred rights reserved to the States. It is by extending suffrage to the negroes that Congress is overturning the constitutions of those States. In my opinion, this is a usurpation, which its advocates justify upon the ground of necessity alone. I neither admit the power nor the necessity; but, granting both, no reason can be given, and no necessity but that of party ascendancy can be urged, for going any further in this revolutionary work than to admit to suffrage the classes of negroes named in this amendment.

"The second answer is, that white men have for centuries been accustomed to vote. They have borne all the responsibilities and discharged all the duties of freemen among freemen; and it is a very different thing to take away from a freeman a privilege long exercised by him and by his ancestors, from what it is to confer one never before enjoyed upon ignorant, half-civilized Africans just released from slavery. Three generations back many of them were cannibals and savages of the lowest type of human kind. The only civilization they have is that which they have received during their slavery in America.

"To confer this great privilege upon the more enlightened negroes might tend to elevate the mass in the end. But to confer it now upon their ignorant hordes can only degrade the ballot and the republican institutions which rest upon it."

Mr. Trumbull, of Illinois, in reply, said: "A great portion of the Senator's argument is based upon the assumption that there is an intention on the part of Congress to place the governments of the South under negro control. The answer to this is, it is not true in point of fact; it is a false assumption; and of course the whole argument based upon it falls. What is the truth? Why, sir, in all the Southern States to which the Reconstruction Act applies,

with the exception of Mississippi and South Carolina, the white population largely preponderates. In the State of Alabama, in 1860, the date of the last census, there were five hundred and twenty-six thousand whites, in round numbers, and only four hundred and thirty-five thousand slaves, and two thousand six hundred and ninety free colored people. There were nearly one hundred thousand more whites than blacks in Alabama. In Arkansas the whites predominated nearly three to one. In Florida a large majority of the population were whites. In Georgia there are one hundred thousand more whites than blacks. In North Carolina the white population preponderates nearly two to one. In Texas more than two to one. In Virginia more than two to one. Now, sir, what becomes of this assertion that there is an attempt to place the governments in the rebel States in the hands of negroes? If you will look at the registration you will find more whites than blacks registered in most of the States; but if the whites have not registered whose fault is it? The fault of the Senator from Wisconsin, and just such speeches as he has made to-day, to prevent the white population from taking part in this work of reconstruction.

"But, the Senator says, you have disfranchised the whites. How many? Why, sir, only those who led in the rebellion have been disfranchised. The number is comparatively small. But he says it embraces the brains and talent of the South. Is it true that the brains and the talent of the white population of the great State of Virginia, amounting to nearly a million, were all concentrated in the few persons who held office in that State prior to the rebellion? All of us who know any thing about Southern society and Southern politics know that offices run in families in that section and always have. Men once in office there frequently hold office for life. We all know that when a member was sent to the House of Representatives or to this body from any of the Southern States in former years he was very likely to be continued as long as he lived or was willing to come. They were not in the habit of changing their officers in that section as we are in the North, and hence the disqualifying clause affects but few. And who are they that are disqualified? Why, sir, they are the leaders of the rebellion. The Senator had the frankness to tell us that the people of the South were not in favor of rebellion; that a majority of the white people of the South were opposed to it. How, then, came they to go into rebellion? He says they afterward united in it. How did that happen? Why, sir, they were forced into it by these very leaders, according to his statement, whom he now seeks to place again in power. They are the last men to be intrusted with authority after having, as he would have us understand, overawed and forced an unwilling people into rebellion.

"There is, then, no truth in the allegation that there is any attempt to place the Southern States under negro supremacy; and if the white people of those States are subjected to any such supremacy, it is because they chose it. They have in nearly every one of those States a majority of votes. In all the conventions which have been held, with the exception of perhaps South Carolina, a large majority of the members have been white. So that this accusation of the Senator not being true in point of fact, there is no need of replying to the horrid condition of affairs which he has painted as resulting from negro supremacy."

Mr. Morton, of Indiana, said: "The issue here to-day is the same which prevails throughout the country, and which will be the issue of this canvass, and perhaps for years to come. To repeat what I have had occasion to say elsewhere, it is between two paramount ideas, each struggling for the supremacy. One is, that the war to suppress the rebellion was right and just on our part; that the rebels forfeited their civil and political rights, and can only be restored to them upon such conditions as the nation may prescribe for its future safety and prosperity. The other idea is, that the rebellion was not sinful, but was right; that those engaged in it forfeited no rights, civil or political, and have a right to take charge of their State governments, and be restored to their representation in Congress, just as if there had been no rebellion and nothing had occurred. The immediate issue before the Senate now is between the existing State governments, established under the policy of the President of the United States in the rebel States, and the plan of reconstruction presented by Congress.

"When a surveyor first enters a new territory, he endeavors to ascertain the exact latitude and longitude of a given spot, and from that can safely begin his survey; and so I will endeavor to ascertain a proposition in this debate, upon which both parties are agreed, and start from that proposition. That proposition is, that at the end of the war, in the spring of 1865, the rebel States were without State governments of any kind. The loyal State governments existing at the beginning of the war had been overturned by the rebels; the rebel State governments erected during the war had been overturned by our armies, and at the end of the war there were no governments of any kind existing in those States. This fact was recognized distinctly by the President of the United States, in his proclamation, under which the work of reconstruction was commenced in North Carolina in 1865, to which I beg leave to refer. The others were mere copies of this proclamation. In that proclamation, he says:

And whereas the rebellion which has been waged by a portion of the people of the United States against the properly constituted authorities of the Govern-

ment thereof, in the most violent and revolting form, but whose organized and armed forces have now been almost entirely overcome, has in its revolutionary progress deprived the people of the State of North Carolina of all civil government.

"Here the President must be allowed to speak for his party, and I shall accept this as a proposition agreed upon on both sides: that at the end of the war there were no governments of any kind existing in those States.

"The fourth section of the fourth article of the Constitution declares that 'the United States shall guarantee to every State in this Union a republican form of government.' This provision contains a vast, undefined power that has never yet been ascertained—a great supervisory power given to the United States to enable them to keep the States in their orbits, to preserve them from anarchy, revolution, and rebellion. The measure of power thus conferred upon the Government of the United States can only be determined by that which is requisite to guarantee or maintain in each State a legal and republican form of government. Whatever power, therefore, may be necessary to enable the Government of the United States thus to maintain in each State a republican form of government is conveyed by this provision.

"Now, Mr. President, when the war ended and these States were found without governments of any kind, the jurisdiction of the United States under this provision of the Constitution, at once attached; the power to reorganize State governments, to use the common word, to reconstruct, to maintain and guarantee republican State governments in those States, at once attached under this provision. Upon this proposition there is also a concurrence of the two parties. The President has distinctly recognized the application of this clause of the Constitution. He has recognized the fact that its jurisdiction attached when those States were found without republican State governments, and he himself claimed to act under this clause of the Constitution.

"It is true he recites in his proclamation that he is the Commander-in-Chief of the Army of the United States; but at the same time he puts his plan of reconstruction, not upon the exercise of the military power which is called to its aid, but on the execution of the guarantee provided by the clause of the Constitution to which I have referred. He appoints a Governor for North Carolina and for these other States, the office being civil in its character, but military in its effects. This Governor has all the power of one of the district commanders, and, in fact, far greater power than was conferred upon General Pope or General Sheridan, or any general in command of a district; for it is further provided:

That the military commander of the department, and all officers and persons in the military and naval service, aid and assist the said provisional governor in carrying into effect this proclamation.

"We are, then, agreed upon the second prop-

osition, that the power of the United States to reconstruct and guarantee republican forms of government, at once applied when these States were found in the condition in which they were at the end of the war. Then, sir, being agreed upon these two propositions, we are brought to the question as to the proper form of exercising this power, and by whom it shall be exercised. The Constitution says that 'the United States shall guarantee to every State in this Union a republican form of government.' By the phrase 'United States' here is meant the Government of the United States. The United States can only act through the Government, and the clause would mean precisely the same thing if it read 'the Government of the United States shall guarantee to every State in this Union a republican form of government.'

"Then, as the Government of the United States is to execute this guarantee, the question arises, what constitutes the Government of the United States? The President does not constitute the Government; the Congress does not constitute the Government; the judiciary does not constitute the Government; but all three together constitute the Government; and as this guarantee is to be executed by the Government of the United States, it follows necessarily that it must be a legislative act. The President could not assume to execute the guarantee, without assuming that he was the United States within the meaning of that provision, without assuming that he was the Government of the United States. Congress could not of itself assume to execute the guarantee without assuming that it was the Government of the United States; nor could the judiciary without a like assumption. The act must be the act of the Government, and therefore it must be a legislative act, a law passed by Congress, submitted to the President for his approval, and perhaps, in a proper case, subject to be reviewed by the judiciary.

"Mr. President, that this is necessarily the case from the simple reading of the Constitution seems to me cannot be for a moment denied. The President, in assuming to execute this guarantee himself, is assuming to be the Government of the United States, which he clearly is not, but only one of its coördinate branches; and, therefore, as this guarantee must be a legislative act, it follows that the attempt on the part of the President to execute the guarantee was without authority, and that the guarantee can only be executed in the form of a law, first to be passed by Congress, and then to be submitted to the President for his approval, and, if he does not approve it, then to be passed over his head by a majority of two-thirds in each House. That law, then, becomes the execution of the guarantee and is the act of the Government of the United States.

"Mr. President, this is not an open question. I send to the Secretary and ask him to read a part of the decision of the Supreme Court of

the United States, in the case of Luther Borden, as reported in 7 Howard."

The Secretary read as follows:

Moreover, the Constitution of the United States as far as it has provided for an emergency of this kind, and authorized the General Government to interfere in the domestic concerns of a State, has treated the subject as political in its nature and placed the power in the hands of that department.

The fourth section of the fourth article of the Constitution of the United States provides that the United States shall guarantee to every State in the Union a republican form of government, and shall protect each of them against invasions; and, upon the application of the Legislature or of the Executive (when the Legislature cannot be convened), against domestic violence.

Under this article of the Constitution it rests with Congress to decide what government is the established one in a State. For, as the United States guarantees to each State a republican government, Congress must necessarily decide what government is established in the State before it can determine whether it is republican or not. And when the Senators and Representatives of a State are admitted into the councils of the Union, the authority of the government under which they are appointed, as well as its republican character, is recognized by the proper constitutional authority. And its decision is binding upon every other department of the Government, and could not be questioned in a judicial tribunal. It is true that the contest in this case did not last long enough to bring the matter to this issue; and, as no Senators or Representatives were elected under the authority of the Government of which Mr. Dorr was the head, Congress was not called upon to decide the controversy. Yet the right to decide is placed there, and not in the courts.

Mr. Morton: "In this opinion of the Supreme Court of the United States, delivered many years ago, the right to execute the guarantee provided for in this clause of the Constitution is placed in Congress, and nowhere else, and therefore the necessary reading of the Constitution is confirmed by the highest judicial authority which we have.

"I therefore, Mr. President, take the proposition as conclusively established, both by reason and authority, that this clause of the Constitution can be executed only by Congress; and taking that as established, I now proceed to consider what are the powers of Congress in the execution of the guarantee, how it shall be executed, and what means may be employed for that purpose. The Constitution does not define the means. It does not say how the guarantee shall be executed. All that is left to the determination of Congress. As to the particular character of the means that must be employed, that, I take it, will depend upon the peculiar circumstances of each case; and the extent of the power will depend upon the other question as to what may be required for the purpose of maintaining or guaranteeing a loyal republican form of government in each State. I use the word 'loyal,' although it is not used in the Constitution, because loyalty is an inhering qualification not only in regard to persons who are to fill public offices, but in regard to State governments, and we have no right to recognize

State government that is not loyal to the Government of the United States. Now, sir, as to the use of means that are not prescribed in the Constitution, I call the attention of the Senate to the eighteenth clause of section eight of the first article of the Constitution of the United States, which declares that—

The Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the foregoing powers and all other powers vested by this Constitution in the Government of the United States or any department or officer thereof.

“Here is a declaration of what would otherwise be a general principle anyhow, that Congress shall have the power to pass all laws necessary to carry into execution all powers that are vested in the Government under the Constitution. As Congress has the power to guarantee or maintain a loyal republican government in each State, it has the right to use whatever means may be necessary for that purpose. As I before remarked, the character of the means will depend upon the character of the case. In one case it may be the use of an army; in another case perhaps it may be simply presenting a question to the courts, and having it tested in that way; in another case it may go to the very foundation of the Government itself. And I now propound this proposition: that if Congress, after deliberation, after long and bloody experience, shall come to the conclusion that loyal republican State governments cannot be erected and maintained in the rebel States upon the basis of the white population, it has a right to raise up and make voters of a class of men who had no right to vote under the State laws. This is simply the use of the necessary means in the execution of the guarantee. If we have found after repeated trials that loyal republican State governments, governments that shall answer the purpose that such governments are intended to answer, cannot be successfully founded upon the basis of the white population, because the great majority of that population are disloyal, then Congress has a right to raise up a new loyal voting population for the purpose of establishing these governments in the execution of the guarantee. I think, sir, this proposition is so clear that it is not necessary to elaborate it. We are not required to find in the Constitution a particular grant of power for this purpose; but we find a general grant of power, and we find also another grant of power authorizing us to use whatever means may be necessary to execute the first; and we find that the Supreme Court of the United States has said that the judgment of Congress upon this question shall be conclusive, that it cannot be reviewed by the courts, that it is a purely political matter; and therefore the determination of Congress, that raising up colored men to the right of suffrage is a means necessary to the execution of that power, is a determination which cannot be reviewed by the courts, and is conclusive upon the people of this country.

“But, Mr. President, time passed on. At last, in 1866, the constitutional amendment, the fourteenth article, was brought forward as a basis of settlement and reconstruction; and there was a tacit understanding, though it was not embraced in any law or resolution, that if the Southern people should ratify and agree to that amendment, then their State governments would be accepted. But that amendment was rejected, contemptuously rejected. The Southern people, counselled and inspired by the Democracy of the North, rejected that amendment. They were told that they were not bound to submit to any conditions whatever; that they had forfeited no rights by rebellion. Why, sir, what did we propose by this amendment? By the first section we declared that all men born upon our soil were citizens of the United States—a thing that had long been recognized by every department of this Government until the Dred Scott decision was made in 1857. The second section provided that where a class or race of men were excluded from the right of suffrage they should not be counted in the basis of representation—an obvious justice that no reasonable man for a moment could deny; that if four million people down South were to have no suffrage, the men living in their midst and surrounding them, and depriving them of all political rights, should not have members of Congress on their account. I say the justice of the second clause has never been successfully impugned by any argument, I care not how ingenious it may be. What was the third clause? It was that the leaders of the South, those men who had once taken an official oath to support the Constitution of the United States and had afterward committed perjury by going into the rebellion, should be made ineligible to any office under the Government of the United States or of a State. It was a very small disfranchisement. It was intended to withhold power from those leaders by whose instrumentality we had lost nearly half a million lives and untold treasure. The justice of that disfranchisement could not be disproved. And what was the fourth clause of the amendment? That this Government should never assume and pay any part of the rebel debt; that it should never pay the rebels for their slaves. This was bitterly opposed in the North as well as in the South. How could any man oppose that amendment unless he was in favor of this Government assuming a portion or all of the rebel debt and in favor of paying the rebels for their slaves? When the Democratic party North and South opposed that most important and perhaps hereafter to be regarded as vital amendment, they were committing themselves in principle, as they had been before by declaration, to the doctrine that this Government was bound to pay for the slaves, and that it was just and right that we should assume and pay the rebel debt.

“This amendment, as I have before said, was rejected, and when Congress assembled in

submit to the Senate for decision. The question is, has the Senator from Kentucky the right to the floor? The Chair will put the question to the Senate in that form, and as many as agree that he has the right will say ay, and those opposed will say no."

The question being put, it was determined in the affirmative.

The President *pro tempore*: "The Senator from Kentucky is entitled to the floor, and will proceed."

Mr. Davis: "Mr. President, now, with much cheerfulness, I yield the floor for the purpose indicated by the Senator from Michigan."

Mr. Howard: "Then, Mr. President, with the leave of the Senate, I beg to present the following resolution:"

Resolved, That the message of the House of Representatives relating to the impeachment of Andrew Johnson, President of the United States, be referred to a select committee of seven, to consider and report thereon.

Mr. Conkling, of New York, said: "Having before me the proceedings of the Senate in 1862 on the impeachment of Judge Humphreys, of Tennessee, I suggest to the Senator who offers this resolution, for convenience' sake, that he include the words 'to be appointed by the Chair,' so that the resolution will read 'a select committee of seven, to be appointed by the Chair,' etc. It will save time to insert these words, and be within the precedents."

Mr. Howard: "I accept the suggestion."

The President *pro tempore*: "The resolution is so modified."

The resolution was agreed to; and the President *pro tempore* subsequently announced the committee to consist of the following Senators: Mr. Howard, Mr. Trumbull, Mr. Conkling, Mr. Edmunds, Mr. Morton, Mr. Pomeroy, and Mr. Johnson.

In the Senate, on February 29th, Mr. Davis, of Kentucky, offered the following as instructions to the committee on impeachment rules:

That the committee report, as a substitute for the rules just read, the following:

That the Constitution of the United States having appointed the Senate to be the court to try all impeachments; and having provided that the Senate shall be composed of two Senators from each State; and the States of Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Arkansas, Texas, Louisiana, and Florida having each chosen two Senators; and those Senators not having been admitted to their seats in the Senate, while they continue to be excluded the Senate cannot be formed into a constitutional and valid court of impeachment for the trial of articles of impeachment preferred against Andrew Johnson, President of the United States.

The motion to recommit with instructions, after some debate, was lost by the following vote:

YEAS—Messrs. Davis and McCreery—2.

NAYS—Messrs. Anthony, Cameron, Cattell, Chandler, Cole, Conkling, Conness, Corbett, Dixon, Drake, Edmunds, Ferry, Fessenden, Fowler, Frelinghuysen, Hendricks, Howard, Howe, Johnson, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Norton, Nye,

Patterson of Tennessee, Pomeroy, Ramsey, Ross, Sherman, Sumner, Thayer, Tipton, Trumbull, Van Winkle, Wade, Willey, Williams, and Yates—39.

ABSENT—Messrs. Bayard, Buckalew, Cragin, Doolittle, Grimes, Harlan, Henderson, Patterson of New Hampshire, Saulsbury, Sprague, Stewart, and Wilson—12.—(See IMPEACHMENT.)

In the Senate, on June 28d, Mr. Sumner, of Massachusetts, offered the following resolutions, which were read and ordered to be printed:

Resolutions declaring the constitutional responsibility of Senators for their votes on impeachment.

Whereas, a pretension has been put forth to the effect that the vote of a Senator on an impeachment is so far different in character from his vote on any other question that the people have no right to criticize or consider it; and whereas such pretension, if not discountenanced, is calculated to impair that freedom of judgment which belongs to the people on all that is done by their Representatives: Therefore, in order to remove all doubts on this question, and to declare the constitutional right of the people in cases of impeachment—

1. *Resolved*, That, even assuming that the Senate is a court in the exercise of judicial power, Senators cannot claim that their votes are exempt from the judgment of the people; that the Supreme Court, when it has undertaken to act on questions essentially political in character, has not escaped this judgment; that the decisions of this high tribunal in support of slavery have been openly condemned; that the memorable utterance known as the Dred Scott decision was indignantly denounced and repudiated, while the Chief Justice who pronounced it became a mark for censure and rebuke; and that plainly the votes of Senators on an impeachment cannot enjoy an immunity from popular judgment which has been denied to the Supreme Court, with Taney as Chief Justice.

2. *Resolved*, That the Senate is not at any time a court invested with judicial power, but that it is always a Senate with specific functions, declared by the Constitution; that, according to express words, "the judicial power of the United States is vested in one Supreme Court, and such inferior courts as Congress may from time to time ordain and establish," while it is further provided that "the Senate shall have the sole power to try all impeachments," thus positively making a distinction between the judicial power and the power to try impeachments; that the Senate, on an impeachment, does not exercise any portion of the judicial power, but another and different power, exclusively delegated to the Senate, having for its sole object removal from office and disqualification therefor; that, by the terms of the Constitution, there may be, after conviction on impeachment, a further trial and punishment, "according to law," thus making a discrimination between a proceeding by impeachment and a proceeding "according to law;" that the proceeding by impeachment is not "according to law," and is not attended by legal punishment, but is of an opposite character, and from beginning to end political, being instituted by a political body on account of political offences, being conducted before another political body having political power only, and ending in a judgment which is political only; and therefore the vote of a Senator on impeachment, though different in form, is not different in responsibility from his vote on any other political question; nor can any Senator on such an occasion claim immunity from that just accountability which the representative at all times owes to his constituents.

3. *Resolved*, That Senators, in all that they do, are under the constant obligation of an oath, binding them to the strictest rectitude; that on an impeachment they take a further oath, according to the requirement of the Constitution, which says, "Senators, when sitting to try impeachment, shall be on

oath or affirmation;" that this simple requirement was never intended to change the character of the Senate as a political body, and cannot have any such operation; and therefore, Senators, whether before or after the supplementary oath, are equally responsible to the people for their votes, it being the constitutional right of the people at all times to sit in judgment on their representatives.

In the Senate, on December 4th, Mr. Wilson, of Massachusetts, asked, and by unanimous consent obtained, leave to introduce a bill to amend an act entitled "An act to provide for the more efficient government of the rebel States," passed March 2, 1867, and the several acts amendatory thereto; which was read twice by its title.

He said: "I will simply say that this bill is to change that provision of the law which requires that a majority of all the registered voters should vote at an election in order to effect a result, and to provide that a majority of all the votes actually cast shall determine the result. The effect of the present provision has been precisely what I supposed it would be when we passed the original act, and what I and others then predicted. I propose to change the law so that a majority of the votes cast shall determine the result in adopting the constitutions that have been formed. I move that the bill be printed and referred to the Committee on the Judiciary."

The motion was agreed to.

On December 10th, Mr. Doolittle, of Wisconsin, offered an amendment to the bill. He said: "The bill to which the amendment which I now present is proposed was introduced by the honorable Senator from Massachusetts (Mr. Wilson). I wish to have this amendment referred to the Committee on the Judiciary, and printed. It is very short, but it contains a very important proposition."

"In making this motion to refer, I desire simply to state that the bill introduced by the Senator from Massachusetts is probably one of the most important bills which has been presented at the present session, and it is perhaps the most important bill that will come before Congress for consideration at the present session: a bill to amend the acts of reconstruction as they are applicable to the States of the South. The proposition offered by the Senator from Massachusetts is a very important one, providing that the constitutions to be adopted in those States shall be adopted, not by a majority of the registered voters, but by a majority of the actual voters. To that bill I propose an amendment in the shape of a proviso, providing that the persons who do not possess the qualifications required by the laws and constitutions of the several States previous to the rebellion, in order to be permitted to vote at any election for the ratification of a constitution or of officers under it, shall be possessed of one of the following qualifications: first, shall have served in the Army of the United States for the period of one

year or more; or second, shall be possessed of sufficient education to enable him to read the Constitution of the United States, and to subscribe his name to an oath to support the same; or third, shall be possessed of a freehold estate, in his own right or the right of his wife, of the value of \$250.

"Mr. President, if the measure of the Senator from Massachusetts is to be pressed upon the consideration of Congress, as I have no doubt it is, this proviso is a very important one to be adopted, which possibly might bring peace to that distracted country if Congress should be disposed to adopt it. I shall not now go into the consideration of the question, but I simply state that I believe the bill offered by him is very important. It anticipates a fact which is undoubtedly likely to occur, that the constitutions being formed are not to be adopted by a majority of the registered voters. It is opening the question anew, and as a matter of course when that question is reopened it is all-important that Congress should take a position which the people of the country will be able to sustain. I move that my proposed amendment be printed."

The President *pro tempore*: "That order will be made, if there be no objection."

Mr. Wilson: "Before the matter passes from the Senate I wish simply to say that the amendment I moved to the law, by the bill referred to by the Senator from Wisconsin, was merely to strike out that very strange provision we put into the law requiring a majority of all the voters registered to vote at the elections. I thought then it was a provision which must operate against the friends of reconstruction, and it looked at one time as though it would be fatal to immediate reconstruction in some of the States. There are, however, nine States that have voted for conventions and have elected their delegates.

"I am satisfied that every thing pertaining to reconstruction has gone on exceedingly well, far better than any member of either House had a right to expect; that the elections have been fair and orderly, as much so as in the other States; that as a general rule the conventions are conducting themselves quite as well as other conventions do, and I have undoubting faith that they will make good constitutions, and that those constitutions will be adopted, whether we pass the amendatory bill introduced by me or not. It is possible that in one or two of the States the friends of reconstruction may fail, but I doubt whether they will fail in any."

Mr. Davis: "If it was my theory of morals that evil should be done that good might come of it, I would want the bill to which the Senators have referred to pass. The great issue, and the greatest issue that has ever been before the people of the United States, is now looming up in all of its grand proportions, and that is, whether the Government of the United

stitution, limitations placed upon the power of Congress for the purpose not only of protecting the States against the invasion of State power, but for the purpose of protecting the individual citizen against the violation of the guarantees of personal liberty to be found in the same Constitution? Is that disloyalty? The honorable member will hardly say that it is. It may be, and in his judgment, no doubt, is an error of opinion; it may be, and in his judgment, no doubt, it is an error attended with mischief to the country at large; but differences of opinion do not make him who holds one loyal and him who holds the opposite opinion disloyal.

"Mr. President, if I may be permitted to illustrate by referring to my own case, if I can do so without any violation of good taste, as I hope I may, am I disloyal because I differ with the majority in this House? Am I disloyal because I have differed, and no doubt shall continue to differ, with some of the doctrines of the Executive of the United States? Am I disloyal because I have occasionally differed, and no doubt shall continue to differ, from some of the opinions pronounced by the Supreme Court of the United States? I hope not. In the exercise of my own honest judgment, and having at heart the prosperity and safety of my country, I did, from the commencement of the rebellion, and before, denounce it as resting upon a doctrine finding no support in the Constitution of our country, but, on the contrary, at war with many of its express provisions. I had, however, the charity to believe, and I believe now, that the opposite doctrine to my own was maintained with equal sincerity by hundreds and thousands of citizens to be found in every State of the Union. It had for its support, or was supposed to have had for its support, the name of Jefferson, the apostle of liberty, according to our view of his character, the author of the Declaration of Independence.

"The immediate cause of the apprehension under which he labored was the passage of the Alien and Sedition Laws. He found no authority for such legislation in any power conferred upon the Congress of the United States. He believed that they trampled upon the guaranteed rights of the citizens and of the States, and he, in advance, told the country, by the resolutions to which I have referred, which came from his pen, and which he knew would be adopted by Kentucky, and which were adopted by the unanimous voice of the Legislature of that State, that the country would come into a condition which would justify Kentucky or any other State in the Union in abandoning what he considered as a confederacy. On more occasions than one I have, with the little ability I may possess, controverted the doctrine. It is, in my judgment, as antagonistic to the true spirit of the Constitution of the United States as it is fatal to the continuing existence of a Government formed, as ours is, of States as

well as of people; but in 1799, if I had been old enough then to form an opinion upon the subject, I never should have dreamed of imputing to Jefferson disloyalty, in the sense in which the honorable member from Indiana evidently uses the term when he reads it in connection with this clause. I never should have thought, and certainly the Congress of the United States at that time never dreamed, that there existed in this clause, or in any other clause of the Constitution, a power to interfere with the government of Kentucky upon the ground that her citizens were not, according to their judgment, loyal to the Government of the United States.

"Look to my own State; look to the State so ably represented by my friend who now sits next to me (Mr. Conkling), New York. Are these States to be brought within the grasp of that large mass of undefined powers which are supposed to lurk within a clause that professes to give no power, but to guarantee an existing government? The honorable member from Indiana says the Southern States can be brought within that clause, because, in his opinion, they are not loyal; because, in his view, republican forms of government in those States cannot be secured unless the Congress of the United States shall form State governments and State constitutions for them, or prescribe the conditions upon which they shall come into the Union as States.

"The honorable member from Indiana, not I am sure, meaning to cast any reflection upon me in what he said in regard to my State, stated in substance, in the speech to which I am now replying, and in one made a few days before upon the right of my colleague to take his seat in this body, that the government of that State was now in the hands of persons who sympathized with the late rebellion. *It is not for me to comment with any unkindness upon the character of the men in whose hands the destinies of the State are now placed. In my judgment they are in the possession of the government rightfully, as far as the laws and constitution of the State are concerned, and as far as the Constitution of the United States is concerned. That they erred in the past in sympathizing with the South nobody is more satisfied than I am; and they are satisfied, more than satisfied, that if wiser counsels had not prevailed during the rebellion, by which the State was retained within the orbit of her duty, and she had attempted secession, she would have been the battle-ground of the war, and her own great city, in all human probability, would have been laid in ashes; every house, now the abode of happiness and of freedom, might have shared the same fate; her children would have fallen in the idle, and, as I believe, unconstitutional attempt to destroy the Government to which she, as every State in the Union, is indebted for all the power and all the prosperity which she possesses.

"But many of them, no doubt, thought dif

ferent. Now, however, the war is over, the rebellion is at an end. No man dreams of reviving it, as I think. For centuries no man but a madman will think of reviving it. It was insane as well as unconstitutional in its origin, in my judgment. It was fatal, as I was sure from the first it would be, to the very institution which its authors thought to preserve by it—fatal to slavery. In my view, great as have been the losses of the war, terrible as has been the loss of life North and South, there is to be found in the fact that slavery no longer exists, and is no longer a blot upon the fair fame of this nation, compensation almost entire for all that has occurred. There is another compensation: it has ended, and, as I believe, forever, the doctrine of secession; and that doctrine terminated and slavery forever terminated, I cannot for the soul of me imagine why it is that we are not at once to become more prosperous than before, and possess the security that, happen what will, if we move within the respective orbits to which the State governments and the Government of the United States are limited, we shall continue to exist forever a free and a powerful nation.

"Mr. President, there is another error into which the honorable member has fallen in his argument. He reads the clause of guarantee as if there were no other clauses in the Constitution. Now, nobody knows better than my friend from Indiana that it is a familiar principle of construction, of universal application, that when you desire to ascertain the meaning of any particular clause, whether it be in a constitution or in any other written agreement, you are to read it in connection with the other clauses. But the honorable member's reading of it, and his application of it to the measure now before the Senate, in my judgment, disregard many of the other clauses which were designed not only to be restrictions upon the particular clause, but upon every other clause bearing on the subject to be found in the Constitution. What are they? In the Constitution, as it was originally framed, it is provided that 'no bill of attainder or *ex post facto* law shall be passed'—a positive, commanding inhibition intended to be in force throughout all time, specially provided, as the terms show, as a restriction upon the legislative department of the Government. Rebellions have existed the world over under every form of government. During their existence and subsequent to their termination bills of attainder and *ex post facto* laws have been passed. The men who framed the Constitution, imbued as they were with the pure spirit of freedom, deemed it their duty, for the security of freedom, not only to denounce but to prohibit such legislation, and they did it by the provision to which I am adverting.

—But there is another provision. The scaffolds of the Old World had for ages been soaked with the blood of political offenders under the doctrine of constructive treason. The courts,

in those days, when, as it was said by some political writer, the winter of ages upon ages had settled on the cause of human freedom, were so much under the influence of the Government that they held almost every act of resistance to the authority of the Government to be treason. This our fathers knew, and they therefore provided that 'treason against the United States shall consist only'—the word 'only' is pregnant with the meaning they had in view—'shall consist only of levying war against them, or in adhering to their enemies, giving them aid and comfort.' There was another security they wished to afford: it is the security of a grand jury, and the further security of a petit jury. These securities had, by their operation for ages, however inefficient they were in the beginning, made England the freest Government in the world until we emerged from her dominion and became ourselves freer even than she was. Every man is to be indicted and tried by his neighbors; and finally, and above all, no man either in peace or war is to be subjected to any other mode of trial, unless he belongs to the land or naval forces of the United States, or the militia, when called into the service of the United States in time of war or public danger. The men of that day feared, as well they might—the history of the world furnished instances enough to cause the apprehension—that there was danger to liberty from military power. They wished, therefore, if possible, to guard the citizen against its exercise, and with that view they protected him, by providing, that unless he was in the army or in the navy, when, of course, he would be subject to such laws as Congress might pass for the government of the army and the navy, he had a right to stand upon the Constitution and demand his trial by indictment and by a petit jury, and with all the other securities the Constitution affords; the right to confront his witnesses, the right to a speedy trial, the right to have counsel for his defence.

"Now, Mr. President, what is the bill upon the table which the honorable member from Indiana supposes to be constitutional by virtue of the guarantee clause and by virtue of that clause alone? To place ten of the States of the Union—whether they are States or not I will inquire in a moment—entirely under the dominion of the military of the United States. It is not necessary for the purpose I have in view now to examine into the right to place the power of the Army of the United States into the hands exclusively of the present General-in-Chief, or whoever may be its chief commander other than the President; but assuming that power to exist, he is for the time being made a military despot. He may not use the power despotically. That is immaterial to the principle. That he will not, I believe. I have confidence in him as a man, and I feel, in common with all the country, a grateful sense of the debt which we owe to him for having led our armies to victory, and having, by so doing,

crushed the rebellion. But if he were Washington himself I would not intrust to him such power as you propose to intrust to him by one of the sections of the bill upon the table—the power to arrest, the power to imprison, the power to execute, the power to disregard all the securities of the rights of the people of the South, which it was the object of the Constitution expressly to provide against.

"If that clause stood alone, if it was the only constitution of the Government which we have, if such a thing could be supposed, in my judgment it would not authorize any such interpretation; but when it is found in a constitution which contains special and positive guarantees intended to be limitations upon the power of Congress, it is warring with any rule of construction with which I am acquainted to suppose that it can be used so as entirely to disregard all the restrictions upon the power of Congress. May Congress pass laws, now that the war is over, providing for the attainder of the people of the South? May it pass laws making matters criminal which were not criminal before, when they were perpetrated; in other words, *ex post facto* laws? He might as well claim it; and yet, as the Senate know, Congress is restrained from passing acts of that description in very positive terms."

The motion of Mr. Doolittle was lost by the following vote:

YEAS—Messrs. Dixon, Doolittle, Hendricks—3.

NAYS—Messrs. Buckalew, Chandler, Cole, Conkling, Corbett, Cragin, Davis, Drake, Ferry, Fowler, Harlan, Henderson, Howe, Morgan, Morrill of Me., Morrill of Vt., Nye, Patterson of N. H., Pomeroy, Ramsey, Ross, Sherman, Stewart, Sumner, Thayer, Tipton, Trumbull, Van Winkle, Wade, Willey, Williams, Wilson, and Yates—33.

The Judiciary Committee, to whom the bill of the House was referred, reported in favor of striking out all after the enacting clause, and inserting the following:

That hereafter any election authorized by the act, passed March 23, 1867, entitled "An act supplementary to an act to provide for the more efficient government of the rebel States, passed March 2, 1867, and to facilitate restoration," shall be decided by a majority of the votes actually cast; and, at the election in which the question of the adoption or rejection of any constitution is submitted, any person duly registered in the State may vote in the election district where he offers to vote, when he has resided therein for ten days next preceding such election, upon presentation of his certificate of registration, his affidavit, or other satisfactory evidence, under such regulations as the district commanders may prescribe.

SEC. 2. *And be it further enacted*, That the constitutional convention of any of the States mentioned in the acts to which this is amendatory may provide that, at the time of voting upon the ratification of the constitution, the registered voters may vote also for members of the House of Representatives of the United States and for all elective officers provided for by the said constitution; and the same election officers who shall make the return of the votes cast on the ratification or rejection of the constitution shall enumerate and certify the votes cast for members of Congress.

The report was agreed to, and the bill passed by the following vote:

YEAS—Messrs. Cameron, Chandler, Cole, Conkling, Corbett, Cragin, Ferry, Harlan, Howe, Morrill of Me., Morrill of Vt., Nye, Patterson of N. H., Pomeroy, Ramsey, Ross, Sherman, Stewart, Sumner, Thayer, Tipton, Trumbull, Van Winkle, Wade, Willey, Williams, Wilson, and Yates—28.

NAYS—Messrs. Buckalew, Davis, Doolittle, Hendricks, Patterson of Tenn., and Saulsbury—8.

ABSENT—Messrs. Anthony, Bayard, Cattell, Conness, Dixon, Drake, Edmunds, Fessenden, Fowler, Frelinghuysen, Grimes, Guthrie, Henderson, Howard, Johnson, Morgan, Morton, Norton, and Sprague—19.

In the House, on February 26th, the amendment of the Senate was concurred in by the following vote:

YEAS—Messrs. Allison, Ames, Arnell, Delos B. Ashley, James M. Ashley, Baker, Baldwin, Banks, Beaman, Bingham, Blaine, Blair, Beldwell, Bromwell, Broomall, Buckland, Butler, Cary, Churchill, Reader W. Clarke, Sidney Clarke, Cobb, Cornell, Covode, Cullom, Dixon, Dodge, Driggs, Eckley, Eggleston, Eliot, Ferriss, Ferry, Fields, Gravely, Griswold, Harding, Hill, Hooper, Hopkins, Hunter, Jenckes, Judd, Julian, Kelsey, Ketcham, Koontz, Laflin, George V. Lawrence, William Lawrence, Lincoln, Logan, Loughridge, Lynch, Marvin, McCarthy, McClurg, Mercier, Moore, Moorhead, Morrill, Mullins, Myers, Newcomb, O'Neill, Orth, Payne, Perham, Peters, Polaley, Price, Baum, Sawyer, Schenck, Scofield, Starkweather, Aaron F. Stevens, Thaddeus Stevens, Stokes, Taffe, Taylor, Thomas, John Trimble, Trowbridge, Twichell, Upson, Van Aernam, Burt Van Horn, Robert T. Van Horn, Van Wyck, Ward, Cadwalader C. Washburn, Elihu B. Washburne, William B. Washburn, James F. Wilson, and John T. Wilson—96.

NAYS—Messrs. Adams, Artell, Barnes, Barnum, Boyer, Brooks, Chanler, Fox, Getz, Glossbrenner, Golladay, Grover, Holman, Hotchkiss, Johnson, Kerr, Knott, Loan, Marshall, McCormick, Morgan, Niblack, Pruyn, Randall, Ross, Sitgreaves, Stone, Lawrence S. Trimble, Van Auken, Van Trump, Thomas Williams, and Woodward—83.

NOT VOTING—Messrs. Anderson, Archer, Bailey, Beatty, Beck, Benjamin, Benton, Burr, Cake, Coburn, Cook, Dawes, Donnelly, Ela, Eldridge, Farnsworth, Finney, Garfield, Haight, Halsey, Hawkins, Higby, Asahel W. Hubbard, Chester D. Hubbard, Richard D. Hubbard, Hulburd, Humphrey, Ingersoll, Jones, Kelley, Kitchen, Mallory, Maynard, McCullough, Miller, Morrissey, Mungen, Nicholson, Nunn, Phelps, Pike, Pile, Plants, Poland, Pomeroy, Robertson, Robinson, Selye, Shanks, Shellabarger, Smith, Spalding, Stewart, Taber, Henry D. Washburn, Welker, William Williams, Stephen F. Wilson, Windom, Wood, and Woodbridge—61.

In the House, on January 18th, Mr. Bingham, of Ohio, moved to suspend the rules, to make a report from the Committee on Reconstruction. The motion having been passed, Mr. Bingham reported the following bill:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Texas, Florida, and Arkansas there are no civil State governments republican in form, and that the so-called civil governments in said States, respectively, shall not be recognized as valid or legal State governments either by the executive or judicial power or authority of the United States.

SEC. 2. *And be it further enacted*, That for the speedy enforcement of the act entitled "An act to provide for the more efficient government of the rebel States," passed March 2, 1867, and the several acts supplementary thereto, the General of the Army of

the United States is hereby authorized and required to enjoin, by special orders upon all officers in command within the several military departments within said several States, the performance of all acts authorized by said several laws above recited, and to remove by his order from command any or all of said commanders and detail other officers of the United States Army, not below the rank of colonel, to perform all the duties and exercise all the powers authorized by said several acts, to the end that the people of said several States may speedily reorganize civil government, republican in form, in said several States, and be restored to political power in the Union.

Sec. 3. *And be it further enacted*, That the General of the Army may remove any or all civil officers now acting under the several provisional governments within said several disorganized States and appoint others to discharge the duties pertaining to their respective offices, and may do any and all acts which by said several laws above mentioned are authorized to be done by the several commanders of the military departments within said States; and so much of said acts, or of any acts as authorize the President to detail the military commanders to said military departments, or to remove any officers which may be detailed as herein provided, is hereby repealed.

Sec. 4. *And be it further enacted*, That it shall be unlawful for the President of the United States to order any part of the Army or Navy of the United States to assist by force of arms the authority of either of said provisional governments in said disorganized States, to oppose or obstruct the authority of the United States as provided in this act and the acts to which this is supplementary.

Sec. 5. *And be it further enacted*, That any interference by any person, with intent to prevent by force the execution of the orders of the General of the Army made in pursuance of this act and of the acts aforesaid, shall be held to be a high misdemeanor, and the party guilty thereof shall, upon conviction, be fined not exceeding \$5,000, and imprisoned not exceeding two years.

Sec. 6. *And be it further enacted*, That so much of all acts and parts of acts as conflict or are inconsistent with the provisions of this act are hereby repealed.

Mr. Brooks, of New York, said: "I desire to submit a report of the views of the minority of the committee, signed by the gentleman from Kentucky (Mr. Beck) and myself, in opposition to this bill. And as the injunction of secrecy upon the action of the committee has been removed, as will be seen by any one who will refer to the daily papers, I may avail myself of this opportunity to add that the honorable gentleman from Pennsylvania (Mr. Stevens) was also opposed to the bill as reported, though upon entirely different grounds; our opposition being to the principle of the bill, and he, as I understand him, being opposed to the bill because it was not effective enough, but was rather a bill to make a President of the United States than to carry out the objects stated in the bill.

I now present the report of the minority.

The report was as follows:

The undersigned, a minority of the Committee on Reconstruction, submit, among others, the following as some of their reasons for opposition to this bill:

1. That a Congress *ex parte* is asked (first section) to abrogate and destroy all civil State governments in ten States, four of them, namely, Virginia, North Carolina, South Carolina, and Georgia, being of the original thirteen that started the Government and created the Constitution, while four others of that

thirteen (making eight in all) have just been demonstrating through their popular elections that they recognize their civil State governments, and guarantee, as far as the popular voice there can, their preservation (not destruction) as legal State governments. Self-government and representation are cardinal principles of a republic, and solemnly ordained in our Federal Constitution; but this section ignores both, and robs ten States of the Union and their twelve million inhabitants of all protection from the judiciary or executive branches of the Government, while dooming them to a military despotism.

2. That a Congress thus representing but a part of the people, and that part now in a minority, even if a full Congress, in the proper parliamentary sense of that word, could be but one of the three great branches of the Government, with no right nor power to invalidate or to deny the recognition of the judicial or executive power, as asserted in this bill. The executive or judiciary has as much right to proclaim or adjudicate that Congress shall not be recognized as Congress has thus to enact; for the executive and the judiciary both are as much the Government and the creature of the Constitution as the House of Representatives or Senate; and the Executive elected by the whole people better represents the principles of popular government than a Senate, the mere arbitrary creature of the States without regard to population.

3. That this invalidation or nullification of the executive and judicial power in ten States is not only an abolition of the Federal Constitution, but, without a direct repeal of, in conflict with the great military act of 1792, 1795, and of March 3, 1807, putting the Army and Navy and militia of the United States in certain cases at the disposal of the President; also in conflict with the fundamental judiciary act of 1789, and also in conflict with article four, section five, of the Constitution, which, while guaranteeing to every State a republican form of government, also guarantees, on application of the civil authorities of the State, protection against domestic violence or invasion, such as is contemplated in this bill.

4. That the second and third sections are in utter violation of the Constitution—Article 2, section 2—which declares "the President" to be Commander-in-Chief of the Army of the United States, inasmuch as only the General of the Army is there authorized to be that Commander-in-Chief, and to remove by his order alone any or all officers of the Army of the United States, independent of the constitutional and people's elected Commander-in-Chief, and this investiture of a General of the Army with the supreme dictatorship is, as if in solemn mockery, set forth to be to reorganize civil government republican in form!

5. That the whole act is revolutionary and incendiary in arraying Congress, but one branch of the Government, against two coördinate branches, in all respects the constitutional equals of Congress, and in some respects the constitutional superiors of that Congress, and thereby calculated, if not intended, to involve the whole country in commotion and civil strife, the end of which no human eye can foresee.

JAMES BROOKS, of New York.
JAMES B. BECK, of Kentucky.

Mr. Brooks said: "Sir, it seems to me, with all due respect to the committee that reported it, that this bill is mainly a bill to elect a President of the United States, and to so organize the Southern States as to elect a particular person to the presidency of the United States. In order to give that particular person a sufficiency of power to become President of the United States, he is made supreme dictator over the ten Southern States, a vast extent of territory, stretching from the Potomac to the Rio Grande.

"Now, if that be the object of this bill, I can well understand it. And yet I do not see why it is necessary, in order to do that, to violate the Constitution of the United States, as this bill does violate it, as I have shown in the minority report which I have just presented. In this purpose of settling the question of the presidency of the United States and to settle the conflict which is now going on in the Southern States, for the control of the national convention, it is proposed to invest the General of the Army or his friends with such supreme power over the Southern States of this Union in order that they can control the nomination in the national convention by electing delegates to that convention of their own preference and creed. This seems to me to be the great object of the bill.

"The opponents of the nomination of the General-in-Chief of the Army for the presidency are doubtless willing to concur in the passage of this bill, reasoning in their own minds that, by giving him the dictatorship of the country, by making him supreme over the rights of property and of life, of civil and municipal law, by clothing him with such high prerogatives and power, like those given to Roman generals of old, he will be certain in the exercise of them to commit suicide and destroy himself. Thus both the friends and the opponents of the nomination of the General-in-Chief have united in presenting this bill here, though with purposes entirely different. The latter favor it in order to secure his destruction; the former in order to enable his friends to control the national convention and thus secure his nomination.

"But this bill presents a few immediate practical results beyond that of a mere presidential nomination, though in all other respects it overrides the Constitution and laws of the country in every and in any form. And if I am correct in that suspicion, or in that allegation, I put it to this House, I put it to the country, whether it becomes our dignity, the dignity and the honor of the House of Representatives, upon a bill so solemn in its form as this, thus to engage in a presidential election and settle the political difference between the Chief Justice of the United States and the General of the Army of the United States."

Mr. Bingham, of Ohio, replied: "The object of this bill is not to deprive the people of those States of protection. The object of it is to hasten the day when the people of those States, under the protection of a law, obeyed by the President and carried into effect by the officers of the Army, to whom it becomes a rule of official conduct, will reorganize governments republican in form, to the satisfaction of the Congress of the United States, and, in the words of the bill, 'be restored to political power in the Union.'

"Now, what objection is there to that? There can be but one objection; and that is the argument that the people of those States

already have republican forms of government. How did they come by them? Did their former governments survive the rebellion of over four years? There can be no republican government in a State without an organized body of officers qualified in accordance with the requirements of the national Constitution. There was no such organization in any one of those States on the day that Lee surrendered to Grant.

"What sort of governments have they had since then? An organization made by the authority of the President of the United States, who, in my judgment, had no right to determine the question at all. I lay nothing to his charge for having interposed to aid the people who might voluntarily have organized governments. But did they do it? Have they laid their constitutions of government before this body? Has the Congress of the United States approved them? The Congress has the right to determine the fact whether there be republican governments there before the Congress shall enforce the guarantee. Has Congress approved them? Not at all. For four long years the Congress disapproved their illegal and void governments in a mode and manner which any man can understand.

"Will any gentleman rise in his place here and say that the government of Mississippi, for example, organized under the direction of the President of the United States, with Governor Sharkey appointed by him to that end, is a republican government springing from the people and resting upon the consent of a majority of the free male citizens of the United States resident within its limits? Not at all.

"Sir, I will venture to say that there never was a State government recognized as republican in form, in any period of the Republic, which deprived a majority of the free male citizens of the United States, resident within its limits and charged with no crime, of all voice or power in its administration. If there ever was any thing that approached it, I want to know when and where it was. I say this only in vindication of the action of Congress. All the past traditions of the Republic are against recognizing as republican in form any of the governments in those ten disorganized States as they now stand before the country.

"The party that maintains the unity of the Republic, the party opposed to State secession, that party has declared, in more solemn form than the people ever declared any thing before in our history, that those States lately in insurrection, and filled with the tempest and conflict of battle, shall not again be admitted to political power in this country, until, in the most explicit and binding form of law, they shall have given a new and irrevocable guarantee for the future safety of the Republic. That is the issue which underlies this legislation. We say to those States: 'Before you send Representatives to this Hall, you must

accept the decree which twenty-three States of this Union have already solemnly ratified, declaring that no State of this Union shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States, nor shall any State deny to any person the equal protection of the laws.'

"That, sir, is the first proposition involved in this contest, that this limitation shall be placed by irrepealable amendment in the Constitution. There is not an intelligent man in America but knows that to secure the rights of all citizens and free persons in every State was the spirit and intent of the Constitution in the beginning. There is not an intelligent man in America but knows that this spirit and intent of the Constitution was most flagrantly violated long anterior to the rebellion, and that the Government was powerless to remedy it by law. That amendment proposes hereafter that this great wrong shall be remedied by putting a limitation expressly into the Constitution, coupled with a grant of power to enforce it by law, so that when either Ohio or South Carolina or any other State shall in its madness or its folly refuse to the gentleman or his children, or to me or to mine, any of the rights which pertain to American citizenship or to a common humanity, there will be redress for the wrong through the power and majesty of American law.

"That is the first issue; and it is as essential to the life of this Republic as is the light of God in which we live.

"What is the next? That representation shall be apportioned among the people of all the States according to the whole number of representative population. What is the next? That those who added to the great crime of treason the additional crime of perjury, clothing themselves with perjury as with a garment, to enact this great drama of armed revolt and blood, shall never again exercise official trust, State or national, until their disability shall be removed by an act of Congress.

"What next? That the national debt contracted in defence of the nation's life shall be forever inviolate and shall never be challenged by congressional or by State legislation; that the plighted faith of this nation to its dead and its living defenders shall be inviolate; that the pledge which the nation gave to the one hundred thousand childless mothers in this land, when in the day of battle they gave their sons a beautiful and holy sacrifice for the life of the nation, lifting their hands and invoking God's blessing on their going, shall never be broken."

Mr. Beck, of Kentucky, said: "Mr. Speaker, the minority of the Committee on Reconstruction felt it to be their duty to differ with the majority of that committee in regard to the presentation of the bill now before the House, and to give our reasons for that difference of opinion in the form of a minority report which is now before the House and the

country. The question before the House is whether the majority or the minority of that committee are right. The majority maintain that the bill presented by them is constitutional, and that its constitutionality can be maintained here and everywhere. We of the minority in our report contend that that bill is unconstitutional. That, sir, is the question before us, and I intend to confine myself as strictly as possible to this question. I will not follow the lead of the gentleman from Ohio (Mr. Bingham) in giving the history of previous parties or the past conduct of men. I am not aware that the fact how any man voted seven years ago, or how any man felt ten years ago, or how he feels now, will tend to elucidate the question under consideration.

"The question is simply this: Is this a bill which we ought to pass; is it a bill which we have the right to pass, according to the Constitution? I say it is not.

"While I believe that the interference by the present Executive was of a character that cannot on principle be successfully defended, because it infringed to some extent the right of the States to control their own domestic affairs, yet these people had accepted this plan of restoration proposed by President Johnson, and had acted upon it. The Republican Congress and Mr. Lincoln himself were committed to the proposition, and the people of the South were content with it. The President knew the exigency in which he was placed, and that the only chance he had was some plan which should be approved by the Republican party, and, as they were committed to Mr. Lincoln's plan, he, doubtless, thought it the best means of speedy and harmonious settlement. The people of the South acted under it, whether they liked it or not. They organized State conventions, elected Legislatures, adopted the thirteenth amendment to the Constitution, and sent members to these Halls asking for admission. What did Congress do then? Did it tell them they had no civil governments? Not at all. It sanctioned the proclamation by the Secretary of State of the adoption of the thirteenth amendment by the Legislatures of the Southern States; it passed the Freedmen's Bureau Bill and the Civil Rights Bill without saying a word against their State governments. But what further did it do? Taking advantage of the action of those State governments, recognizing them as valid for the purpose of acting upon that constitutional amendment and of passing laws, it proposed for submission to the Legislatures of those States a further constitutional amendment, thus recognizing their State governments as valid all the time. And, when Tennessee adopted the fourteenth amendment, the gentleman from Ohio (Mr. Bingham) became the champion of the measure to admit that State to representation in Congress, a resolution for their admission was passed, as shown above, and her Senators and Representatives took their seats

in these Halls. If she had not a legal State government, how could she ratify that amendment?

"But that is not all. It is charged here that the people have repudiated this action of the President. Now, the gentlemen never dared to let their constituents know, till after the late elections in the northern States, that they intended to take any such ground as they have now taken. Why did not they pass the military bill at the first session of the Thirty-ninth Congress? They knew that these States had not civil governments just as well then as they know it now. The elections were coming on, and had to be bridged over, and therefore all this action was postponed until the last session of the Thirty-ninth Congress, when all the members, except from a few Democratic States, had been elected to the Fortieth Congress, and they had a two years' lease of power. That, in my humble judgment, was the reason that influenced many gentlemen, and perhaps a majority, to hold it back until after that time. I ask, then, in view of all these things, whether the majority of the Reconstruction Committee are right in claiming that there are no civil governments in these States, and therefore that they have a right to take them and hold them as conquered provinces, to remove the protection of the President and the protection of the Supreme Court from them, put the negro above the white man, and place an officer of the Army over all, whose will shall be law and who shall have the lives, liberties, and property of the people at his absolute disposal?

"Sir, I can understand how the gentleman from Pennsylvania (Mr. Stevens) and those who agree with him that the Constitution is thrown aside, and that we are acting outside of it, can take this ground; but I cannot understand how a gentleman like the gentleman from Ohio (Mr. Bingham), who claims to be acting under and in accordance with the Constitution, can do it. If there are no regularly organized governments in these States, does not the Constitution of the United States extend over these people? Does not that Constitution extend as far as the power of the United States extends, and protect every human being within their limits, no matter where situated? Beyond all question it does.

The Constitution of the United States is a law for rulers and people equally in war and in peace, and covers with the shield of its protection all classes of men at all times and under all circumstances.

"So said the Supreme Court in the Milligan case.

"Where, then, I ask, are the powers, now sought to be assumed, granted to this Congress? The gentleman from Ohio asserts that Congress has a right to exercise every power not expressly taken away from Congress by the Constitution. Just the reverse is the fact. This Constitution was made by thirteen free, equal, and independent States. They put lim-

itations upon the Federal Government, and they expressly declared that all powers not specially granted to the Government or necessarily inferable therefrom were reserved to the States and the people thereof; and when the gentleman declares, as he did in his speech, that all power is in the Congress of the United States unless expressly prohibited, he commits a fatal error, an error which I would not have supposed a gentleman of his acumen would have fallen into."

Mr. Eldridge, of Wisconsin, followed, saying: "I insist, Mr. Speaker, that that clause of the Constitution does require by necessary import a preëxisting government to be guaranteed. I say that the United States are bound to guarantee in each of those States a republican form of government, and that the republican form of government which they are to guarantee is the government existing before or at the time when these States went into the rebellion. But even if the term guarantee imports an original independent power to make or create, if that position could by any possibility be correct, 'guarantee' does not, cannot mean to destroy or overthrow; it does not mean to subvert or tear down; it cannot mean to take away from the people republican governments and give them military governments in their stead. It cannot authorize Congress to take from them all civil governments and subject them to rule of the sword. And by what logic or reasoning it can be claimed that this bill is an execution of the power to guarantee to those States a republican form of government, by declaring that all the civil governments existing in those States shall be overthrown, destroyed, subverted, and the people put under the control of the military power of a military despot, is beyond my comprehension, beyond my ability to understand. Is it guaranteeing republican form of government to those States to prohibit the Executive and the judiciary from recognizing any of their civil rights, from protecting them in the right to their State governments, in the rights of life, liberty, and property? Is military government, is the government by the bayonet, the republican government to be guaranteed to the States?

"But, sir, when I drove the gentleman by the question which I put to him when he was making his speech from this clause of the Constitution, he attempted to take refuge under another, and that one where all men who would exercise ungranted power, who are not content with the powers granted by the Constitution, flee when driven from more solid ground; he took refuge under that clause of the Constitution which provides that the Congress shall have power 'to make all laws which shall be necessary and proper for carrying into execution the foregoing powers.'

"But, sir, I insist that he cannot find power for this bill under that clause of the Constitution. That provision must of necessity be con-

strued with reference to the powers actually delegated, expressly given by some express power of the Constitution, and upon that point I refer to the very authority which the gentleman himself cited in his speech. He undertook to show that, because Congress is authorized to guarantee republican forms of government, it may under this general clause do any thing original in its effect, original in its purpose, which shall in the end or may by possibility restore republican governments. In other words, the power which the gentleman claims under this provision is that he may create a republican form of government, and upon that hang his guarantee—upon that exercise the power of guaranteeing republican form of government.

"But the gentleman devoted most of his time to the first section of this bill. What is that section? It declares that 'the so-called civil governments in those States respectively shall not be recognized as valid or legal State governments either by the executive or judicial power or authority of the United States.'

"Sir, I insist that that section is in direct conflict with more than one provision of the Constitution of the United States. The Constitution provides that 'the executive power is vested in the President.' It also provides that 'the judicial power is vested in one Supreme Court' and such inferior courts as may be established. Now, what does this bill provide? It provides that these States shall not be recognized as having valid and legal State governments either by the executive or the judicial power of the Government.

"That is an injunction upon 'the exercise of the power.' It is not that the President shall not do a certain act, nor that the judges of the court shall not perform certain specified acts, but it is that 'the power' shall not be exercised. It is a prohibitory injunction against the exercise of a power granted by the Constitution. If it merely prohibited the President from doing some act not within the scope of executive power, it might not, then, prohibit the exercise of 'the executive power' conferred upon him by the Constitution. If it was to prevent the court from doing some particular act, it might not, then, restrict or prohibit the exercise of 'the judicial power.'

"But there is a power vested in the executive and the judiciary coming from the same source from which Congress derives all its power, the original source of all governmental power, the people. This bill attempts to circumscribe and limit the exercise of 'the power' itself, a power not conferred upon Congress, not subject to its control. The executive and judicial power is as much above and beyond the control of Congress as is the legislative power vested in Congress by the Constitution above the control of the executive and the judiciary. And yet this bill by its terms expressly declares that these powers of the executive and the judiciary shall not in a given case be exercised.

What is this but the exercise of these powers by the Congress? If it may say when and when not the powers shall move, if its discretion and not theirs is to determine when they shall be put in force, they are both overthrown and destroyed."

Mr. Boutwell, of Massachusetts, followed, saying: "I desire to call the attention of the House to the provision of the Constitution which provides that the Government of the United States shall guarantee to each State a government republican in form, and also to the nature of the guarantee which the Government of the United States are bound to furnish. The word 'guarantee' in the Constitution has a larger meaning than is given to it when used in reference to the individual relations of men. The Constitution guarantees to each State a government republican in form. Suppose in a given State we find on observation that there is no government, what, then, is the force and effect of our guarantee? To create for them a government republican in form? No, sir; because on our theory a republican form of government cannot be constructed in that way. The effect of our guarantee is this: we provide the ways and means and furnish incidental security by which the people themselves set up a republican form of government, and which, when set up, we inspect; and, if, in the judgment of the Congress of the United States, it is republican in form, we then guarantee that government to the State. In the next place, if we find a government not republican in form, then the United States are bound in some way to remove it and to give the people an opportunity to establish a republican form of government. We must perform this service, or otherwise the provision of the Constitution is utterly ineffectual. If in a State you find there is no government, is not your obligation under the Constitution binding upon you to guarantee to them a government republican in form? And is not the guarantee entirely inoperative unless you furnish ways and means and security through which they may form a government? If in another State you find a government manifestly not republican in form, a monarchy, an aristocracy, a military government, are you obliged to be silent, to be inactive, to allow that government to continue, as inevitably you must if the doctrine maintained on the other side of the House be true, that it is only when there is a republican government that this provision of the Constitution becomes operative? You must remove these governments and give the people an opportunity to set up a republican government. And this was the doctrine of the Supreme Court in the case of *Luther vs. Borden*, to which reference has so often been made. The court say:

Unquestionably a military government, established as the permanent government of a State, would not be a republican government, and it would be the duty of Congress to overthrow it.

And again, in the same case, the court say:

Under this article of the Constitution it rests with Congress to decide what government is the established one in a State: for, as the United States guarantee to each State a republican form of government, Congress must necessarily decide what government is established in a State before it can determine whether it is republican or not. * * *

And its decision is binding on every other Department of the Government, and could not be questioned in a judicial tribunal."—*Luther vs. Borden*, 7 Howard, p. 142.

"Can any thing be clearer than that the whole subject of observation, of inquiry, of judgment, is open to the United States, which means, for purposes of political action, Congress and the President coöperating; and upon such inspection, observation, and judgment to decide, first, whether there is any government. If they find that there is a government, then next to inquire whether it is republican or not, and if Congress finds either that there is no government or that the government is not republican, it is a duty to provide ways and means for the establishment of a republican government. Otherwise, in the only cases where the provision would be of any service, it would be utterly ineffectual and worthless to the country."

Mr. Butler, of Massachusetts, said: "I have no difficulty with the great question which has been argued here as to the constitutionality of our acts in this regard. There are at least three several provisions of the Constitution of the United States under which all we have done may be well maintained.

"But if I had ever had any such difficulty, the time for stating it has long since passed. I understand that the constitutional objection urged upon the other side is that this bill tends to take away from the President of the United States his power as Commander-in-Chief of the Army of the United States. I find by reference to the law that when the grade of General was revived he was authorized to command only during the pleasure of the President of the United States. I have before me the law establishing the grade of General. It provides for the appointment of 'a person of courage, skill, and ability, who, being commissioned as General, may be authorized, under the direction and during the pleasure of the President, to command the armies of the United States.' This is the only authority for having any General at all.

"But in March, 1867, tacked on to the appropriation bill there is a provision—

That the headquarters of the General of the Army shall be at the city of Washington; and all orders and instructions relating to military operations issued by the President and Secretary of War shall be issued through the General of the Army, and, in case of his disability, through the next in rank. The General of the Army shall not be removed, suspended, or relieved from command, or assigned to duty elsewhere than at his headquarters, unless at his own request, without the previous approval of the Senate; and any orders or instructions relating to military operations issued contrary to the requirements of this section shall be null and void.

"And I find this legislation printed as having been approved by the President of the United States; therefore, if I had any doubts before, they would be resolved now. Certainly no man has hitherto attempted to interfere with the action of this provision of law.

"While I say it is quite competent for Congress to put all this matter of reconstruction in the hands of the General of the Army, and I trust it will be so put, at least so much of supervision over it as will require unity of action by the commanders of the several districts, still, in my judgment, the details of the bill require some revision, in order that a system and officers of civil governments in the rebellious States may be set up and appointed at once, which shall afford to loyal men and the friends of the Government security for life, liberty of action, and exemption from outrage, until these States shall be again represented in the Congress of the United States."

The following amendments, reported by the committee, were agreed to:

Amend section two by inserting before the words "to remove" the words "is authorized," and inserting after the words "to remove" the words "at his discretion;" so that portion of the section will read:

The General of the Army of the United States is hereby authorized and required to enjoin, by special orders, upon all officers in command within the several military departments within said several States, the performance of all acts authorized by said several laws above recited, and is authorized to remove, at his discretion, by his order, from command, any or all of said commanders and detail other officers of the United States Army, etc.

Also to insert after the words "of the acts aforesaid" in section five the words "or any refusal or wilful neglect of any person to issue any order or do any act required by this act, or either of the acts to which this act is additional and supplementary, with intent to defeat or delay the due execution of this act, or either of the acts to which this is supplementary;" so that the section will read:

Sec. 5. *And be it further enacted*, That any interference by any person, with intent to prevent by force the execution of the orders of the General of the Army made in pursuance of this act and of the acts aforesaid, or any refusal or wilful neglect of any person to issue any order or do any act required by this act, or either of the acts to which this act is additional and supplementary, with intent to defeat or delay the due execution of this act or either of the acts to which this is supplementary, shall be held to be a high misdemeanor, and the party guilty thereof shall, upon conviction, be fined not exceeding \$5,000, and imprisoned not exceeding two years.

Mr. Butler said: "I move to amend the first section of the bill by striking out all after the enacting clause, and inserting in lieu thereof as follows:

That in Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Texas, Florida, and Arkansas there are no civil State governments republican in form, and that the so-called civil governments in said States, respectively, shall not be recognized as valid or legal State governments either by the executive or judicial power or authority of the United States. In order to supply the place of such governments so declared illegal, the several constitutional conventions of each of said States, as soon as such conventions, respectively, shall have submitted to the people a constitution or

frame of government for their ratification, shall have power and authority to appoint all civil officers heretofore provided by the laws of said States; such officers to have all the powers and shall perform all the duties appertaining by law to such offices respectively. It shall be the duty of the several district commanders to confirm the appointment of such officers by the convention; to install each officer in his office; to cause to be put into the possession and control of each officer the records and archives and other property of the State pertaining to his office, and to do all other acts which may be necessary to enable such State officers, respectively, to perform the functions of their offices. Each of said officers may be removed for cause, to be stated in the order of removal, by said district commanders respectively; and in case of vacancy by death or otherwise, the same may be filled by the appointment of the district commanders respectively. Such State governments so organized shall continue in force and authority until each State, respectively, shall be represented in the Congress of the United States and other State officers shall have been elected and qualified under the constitution thereof.

Mr. Butler said: "Mr. Speaker, I do not propose to trouble the patience of the House further than to state that the only difference between this amendment and the proposition contained in the bill reported by the committee is that the amendment proposes the appointment of the State officers by the several constitutional conventions, after they shall have submitted the respective constitutions to the people, instead of permitting those officers to be appointed by the district commanders. I have offered the amendment in response to a universal demand to this effect coming from every Southern State."

Mr. Stevens, of Pennsylvania, said: "Mr. Speaker, I have no desire to debate this question; but, in view of my position as chairman of the committee, and of the fact that I have not joined in the report, it may be proper that I should give my reasons for dissenting from the conclusions of my colleagues.

"In the first place, I do not perceive that the present bill will add any efficiency to our present legislation. As chairman of the committee, I have, very naturally, been addressed upon subjects of this kind by the several conventions, they not knowing the slight part I take in these matters now. From all the conventions now in session, I believe, with the exception of three, or at most four, there have come to me requests to introduce and advocate a measure similar to the proposition which has been offered by the gentleman from Massachusetts (Mr. Butler). I will state the reasons on which these applications have been based.

"It is thought that, after the military power has so far protected those populations as to enable the conventions to go on quietly in framing constitutions and submitting them to the people, the designation of the officers to carry those constitutions into effect will be much better made by the civil than by the military power. There is naturally some objection down there, as there is everywhere, to the unnecessary prolongation of military rule in this country.

"In addition to this, the men composing the conventions are, as a matter of course, much better acquainted with the proper agents to carry their work into effect than the military authorities can possibly be. It is believed, also, that there will be a much better chance for the success of these constitutions before the people if the conventions have the appointment of the agents than if the appointments be made by the district commanders. I need not say that the former system is also more consonant with our form of Government.

"I believe the loyal people there are nearly unanimous on this subject. Having received the draft of a bill very similar in substance to the amendment of the gentleman from Massachusetts, I have come to the conclusion that the system of appointment thus proposed is vastly more proper and more likely to be effectual in getting these States speedily back again than the system contemplated by the bill now before us. For these reasons I advocate the proposition. I have no desire, of course, to make any factious opposition upon a question of this kind. I support the amendment of the gentleman from Massachusetts because it is in accordance with what I know to be the wishes of the great majority of those who are to be affected by it."

The amendment of Mr. Butler was rejected by the following vote:

YEAS—Messrs. Allison, Anderson, Arnell, Delos R. Ashley, James M. Ashley, Banks, Broomall, Butler, Cake, Cary, Churchill, Reader W. Clarke, Sidney Clarke, Cobb, Coburn, Donnelly, Driggs, Eckley, Ela, Ferry, Fields, Gravely, Harding, Higby, Hunter, Judd, Julian, Kelley, Kelsey, Kitchen, William Lawrence, Logan, Loughridge, Maynard, McClurg, Mercur, Mullins, Newcomb, Nunn, Perham, Raum, Schenck, Shanks, Thaddeus Stevens, Taylor, Thomas, John Trimble, Robert T. Van Horn, Van Wyck, Ward, William Williams, Stephen F. Wilson, and Windom—53.

NAYS—Messrs. Archer, Axtell, Bailey, Baker, Baldwin, Barnes, Barnum, Beaman, Beck, Benjamin, Benton, Bingham, Blaine, Blair, Boutwell, Boyer, Bromwell, Brooks, Buckland, Burr, Chanler, Cook, Cullom, Dawes, Dixon, Dodge, Eggleston, Eldridge, Eliot, Farnsworth, Ferriss, Fox, Garfield, Getz, Glessbrenner, Golladay, Griswold, Grover, Haight, Halsey, Holman, Hooper, Hopkins, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, Richard D. Hubbard, Hulburd, Humphrey, Ingersoll, Jenckes, Johnson, Jones, Kerr, Ketcham, Knott, Koontz, Lincoln, Marshall, Marvin, McCarthy, Miller, Moore, Moorhead, Morrissey, Mungen, Myers, Niblack, Nicholson, O'Neill, Orth, Paine, Peters, Phelps, Pike, Pile, Plants, Poland, Polsey, Pomeroy, Price, Pruyn, Robertson, Ross, Sawyer, Scofield, Sitgreaves, Smith, Spalding, Starkweather, Aaron F. Stevens, Stewart, Stone, Taber, Lawrence S. Trimble, Trowbridge, Twichell, Upson, Van Aernam, Van Auken, Burt Van Horn, Van Trump, Cadwalader C. Washburn, Elihu B. Washburne, Henry D. Washburn, Welker, Thomas Williams, James F. Wilson, John T. Wilson, Wood, Woodbridge, and Woodward—112.

NOT VOTING—Messrs. Adams, Ames, Cornell, Covode, Finney, Hawkins, Hill, Laflin, George V. Lawrence, Loan, Lynch, Mallory, McCormick, McCullough, Morgan, Morrell, Randall, Robinson, Selye, Shellabarger, Stokes, Taffe, and William B. Washburn—23.

So the amendment was rejected.

The bill was then passed by the following vote :

YEAS—Messrs. Allison, Ames, Anderson, Arnell, Delos R. Ashley, James M. Ashley, Bailey, Baker, Baldwin, Banks, Beaman, Benjamin, Benton, Bingham, Blaine, Blair, Boutwell, Bromwell, Broomall, Buckland, Cake, Churchill, Reader W. Clarke, Sidney Clarke, Cobb, Coburn, Cook, Cullom, Dawes, Dixon, Dodge, Donnelly, Driggs, Eckley, Eggleston, Ela, Eliot, Farnsworth, Ferriss, Ferry, Fields, Garfield, Gravely, Griswold, Halsey, Harding, Higby, Hooper, Hopkins, Asahel W. Hubbard, Chester D. Hubbard, Hulburd, Hunter, Ingersoll, Jenckes, Judd, Julian, Kelley, Kelsey, Ketcham, Kitchen, Koontz, William Lawrence, Lincoln, Logan, Loughridge, Marvin, Maynard, McCarthy, McClurg, Mercur, Miller, Moore, Moorhead, Mullins, Myers, Newcomb, Nunn, O'Neill, Orth, Paine, Perham, Peters, Pike, Pile, Plants, Poland, Polsley, Pomeroy, Price, Raum, Robertson, Sawyer, Schenck, Scofield, Selye, Shanks, Smith, Spalding, Starkweather, Aaron F. Stevens, Thaddeus Stevens, Taylor, Thomas, Trowbridge, Twichell, Upson, Van Aernam, Burt Van Horn, Robert T. Van Horn, Van Wyck, Ward, Cadwalader C. Washburn, Henry D. Washburn, William B. Washburn, Welker, Thomas Williams, William Williams, James F. Wilson, John T. Wilson, Stephen F. Wilson, Windom, and Woodbridge.

NAYS—Messrs. Adams, Archer, Axtell, Barnes, Barnum, Beck, Boyer, Brooks, Burr, Cary, Chanler, Eldridge, Fox, Getz, Glossbrenner, Golladay, Grover, Haight, Holman, Hotchkiss, Richard D. Hubbard, Humphrey, Johnson, Jones, Kerr, Knott, Marshall, McCormick, Morrissey, Mungen, Niblack, Nicholson, Phelps, Pruyn, Robinson, Ross, Sitgreaves, Stewart, Stone, Taber, Lawrence S. Trimble, Van Auken, Van Trump, Wood, and Woodward—45.

NOT VOTING—Messrs. Butler, Cornell, Covode, Finney, Hawkins, Hill, Laffin, George V. Lawrence, Loan, Lynch, Mallory, McCullough, Morgan, Morrell, Randall, Shellabarger, Stokes, Taffe, John Trimble, and Elihu B. Washburne—20.

The bill was not taken up in the Senate.

In the House, on March 26th, Mr. Farnsworth, of Illinois, from the Committee on Reconstruction, reported the following bill for the admission of Alabama to representation in Congress :

Whereas, the people of Alabama, in pursuance of the provisions of an act of Congress entitled "An act for the more efficient government of the rebel States," passed March 2, 1867, and the acts supplementary thereto, have framed a constitution of State government which is republican in form; and whereas, at an election commencing on the 4th day of February, A. D. 1868, a large majority of the legal voters of said State, voting at said election, voted for the adoption of said constitution: Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the said State of Alabama shall be entitled to representation in Congress as soon as the Legislature of said state, the members of which were elected at the election mentioned in the preamble of this act, shall have duly ratified the amendment to the Constitution of the United States proposed by the Thirty-ninth Congress, and known as article fourteen.

SEC. 2. *And be it further enacted*, That it shall be the duty of the commanding general of the military district in which Alabama is included to notify the members of the Legislature of said State, chosen at the election held in February, 1868, to assemble at the capital of said State within thirty days after the passage of this act.

SEC. 3. *And be it further enacted*, That said State of Alabama shall be entitled to representation in Congress and reorganized as a State of the Union upon

the following fundamental conditions: that the constitution of Alabama shall never be so amended or changed as to deprive any citizen or any class of citizens of the United States of the right to vote, who are entitled to vote by the constitution herein recognized, nor so amended or changed as to allow any person to vote who is excluded from office by the third section of the fourteenth article of the amendment to the Constitution of the United States, until the disabilities imposed by said section shall have been removed in the manner therein provided; and Congress shall have power to annul any amendment to the constitution of Alabama or any act of the Legislature of said State contrary to the provisions of this section.

Mr. Spalding, of Ohio, offered the following, as an amendment to the bill:

That the constitution framed by the convention of Alabama, which was submitted for ratification by the people at an election commencing on the 4th day of February, 1868, is hereby declared to be the fundamental and organic law for a provisional government for the people of Alabama, so far as the same is not in conflict with the Constitution and laws of the United States. And the officers elected at said election shall, on the 1st day of May, 1868, qualify as provided in said constitution and the ordinances of said convention, and immediately thereafter enter upon the discharge of the duties of their respective offices.

SEC. 2. *And be it further enacted*, That the Governor, at any time after he shall have qualified and entered upon the discharge of the duties of his office, may, by proclamation, convene the Legislature chosen at said election. The Legislature, when so convened, shall possess all the power conferred by said constitution which may not be in conflict with the Constitution and laws of the United States. And the Legislature is hereby further empowered to submit said constitution to the qualified electors of Alabama for ratification at such time or times as it may designate. And said Legislature is also empowered, by a majority vote of each House, to submit the said constitution, as framed by the convention, with or without amendments proposed by the Legislature. And if amendments be proposed by the Legislature, they shall be voted upon separately, and not in connection with the constitution as it came from the convention.

SEC. 3. *And be it further enacted*, That whenever the people by a majority vote of the qualified electors of Alabama, qualified under the act of Congress of March 23, 1867, to vote for delegates to frame a constitution, and actually voting upon such ratification, shall have ratified a constitution submitted as aforesaid, and the Legislature of the proposed State organization shall have adopted the amendment to the Constitution of the United States proposed by the Thirty-ninth Congress, and known as article fourteen, the constitution of Alabama may be presented to Congress for its approval.

SEC. 4. *And be it further enacted*, That the district commanders shall furnish all necessary aid in enforcing this act, and the act of March, 2, 1867, entitled "An act to provide for a more efficient government for the rebel States," and the acts supplemental to and amendatory thereof shall remain in full force in Alabama, except as modified by this act, until Alabama shall be restored to representation in Congress.

The substitute was agreed to by the following vote :

YEAS—Messrs. Ames, Anderson, Delos R. Ashley, James M. Ashley, Baker, Baldwin, Banks, Beatty, Benjamin, Bromwell, Broomall, Churchill, Sidney Clarke, Coburn, Cook, Covode, Cullom, Dawes, Dixon, Dodge, Driggs, Eckley, Eggleston, Eliot, Ferriss, Ferry, Halsey, Hawkins, Hill, Hopkins, Hunter, Ingersoll, Judd, Julian, Kelsey, Ketcham, Koontz, Laffin, William Lawrence, Loan, Loughridge, May-

ard, McClurg, Mercur, Moore, Moorhead, Morrell, Mullins, Myers, Nunn, O'Neill, Orth, Poland, Polsley, Pomeroy, Price, Raum, Sawyer, Scofield, Shanks, Smith, Spalding, Thaddeus Stevens, Taffe, Twichell, Upson, Burt Van Horn, Robert T. Van Horn, Ward, Elihu B. Washburne, William B. Washburn, Welker, Thomas Williams, James F. Wilson, John T. Wilson, Stephen F. Wilson, and Woodbridge—77.

NAYS—Messrs. Adams, Arnell, Bailey, Beaman, Beck, Bingham, Blaine, Boutwell, Brooks, Buckland, Burr, Cary, Eldridge, Farnsworth, Fields, Fox, Glossbrenner, Golladay, Gravely, Haight, Holman, Richard D. Hubbard, Hulburd, Humphrey, Johnson, Jones, Kerr, Knott, Lincoln, Mallory, Marshall, Miller, Mungen, Newcomb, Niblack, Nicholson, Paine, Perham, Peters, Pike, Plants, Pruyn, Ross, Sitgreaves, Taber, Taylor, Thomas, John Trimble, Lawrence S. Trimble, Van Auken, Van Trump, Van Wyck, Windom, and Woodward—54.

NOT VOTING—Messrs. Allison, Archer, Axtell, Barnes, Barnum, Benton, Blair, Boyer, Butler, Cake, Chanler, Reader W. Clarke, Cobb, Cornell, Donnelly, Ela, Finney, Garfield, Getz, Griswold, Grover, Harding, Higby, Hooper, Hotchkiss, Asahel W. Hubbard, Chester D. Hubbard, Jenckes, Kelley, Kitchen, George V. Lawrence, Logan, Lynch, Marvin, McCarthy, McCormick, McCullough, Morgan, Morrissey, Phelps, Pike, Randall, Robertson, Robinson, Schenck, Selye, Shellabarger, Starkweather, Aaron F. Stevens, Stewart, Stokes, Stone, Trowbridge, Van Aernam, Cadwalader C. Washburn, Henry D. Washburn, William Williams, and Wood—58.

The bill was then passed—yeas 102, nays 30. It was not taken up in the Senate.

In the House, on May 7th, Mr. Stevens, from the Committee on Reconstruction, reported a bill for the admission of the State of Arkansas to representation in Congress. The preamble stated that the people of Arkansas, in pursuance of the provisions of an act entitled "An act for the more efficient government of the rebel States," passed March 2, 1867, and the acts supplementary thereto, had framed and adopted a constitution of State government which was republican in form, and the Legislature of said State had duly ratified the amendment to the Constitution of the United States proposed by the Thirty-ninth Congress, and known as article fourteen.

The bill then declared that the State of Arkansas was entitled and admitted to representation in Congress, as one of the States of the Union, upon the following fundamental condition: that the constitution of Arkansas shall never be so amended or changed as to deprive any citizen or class of citizens of the United States of the right to vote who are entitled to vote by the constitution herein recognized, except as a punishment for such crimes as are now felonies at the common law, whereof they shall have been duly convicted.

The bill was passed by the following vote:

YEAS—Messrs. Allison, Ames, Anderson, Arnell, James M. Ashley, Bailey, Baldwin, Banks, Beaman, Beatty, Benjamin, Benton, Blaine, Blair, Boutwell, Bronwell, Broomall, Buckland, Butler, Cake, Churchill, Reader W. Clarke, Sidney Clarke, Cobb, Ceburn, Cook, Covode, Cullom, Dodge, Donnelly, Driggs, Eckley, Eggleston, Ela, Eliot, Farnsworth, Ferriss, Ferry, Garfield, Gravely, Griswold, Halsey, Harding, Higby, Hill, Hooper, Hopkins, Chester D. Hubbard, Hunter, Jenckes, Judd, Julian, Kelsey,

Lafin, George V. Lawrence, William Lawrence, Lincoln, Loughridge, Lynch, Marvin, McCarthy, McClurg, Mercur, Miller, Moore, Moorhead, Morrell, Myers, Newcomb, Nunn, O'Neill, Orth, Paine, Perham, Peters, Pike, Pile, Plants, Poland, Price, Robertson, Sawyer, Schenck, Scofield, Shanks, Smith, Aaron F. Stevens, Thaddeus Stevens, Stewart, Stokes, Taffe, Taylor, Thomas, Trowbridge, Twichell, Upson, Van Aernam, Burt Van Horn, Van Wyck, Ward, Cadwalader C. Washburn, Elihu B. Washburne, Henry D. Washburn, Welker, William Williams, James F. Wilson, Stephen F. Wilson, Windom, Woodbridge, and the Speaker—110.

NAYS—Messrs. Adams, Baker, Beck, Cary, Eldridge, Golladay, Grover, Holman, Hotchkiss, Richard D. Hubbard, Humphrey, Kerr, Knott, Loan, Marshall, McCormick, Morgan, Mungen, Niblack, Phelps, Pruyn, Randall, Robinson, Ross, Sitgreaves, Spalding, Stone, Taber, Van Auken, Van Trump, Thomas Williams, and Woodward—32.

NOT VOTING—Messrs. Archer, Delos R. Ashley, Axtell, Barnes, Barnum, Bingham, Boyer, Brooks, Burr, Chanler, Cornell, Dawes, Dixon, Fields, Finney, Fox, Getz, Glossbrenner, Haight, Hawkins, Asahel W. Hubbard, Hulburd, Ingersoll, Johnson, Jones, Kelley, Ketcham, Kitchen, Koontz, Logan, Mallory, Maynard, McCullough, Morrissey, Mullins, Nicholson, Polsley, Pomeroy, Raum, Selye, Shellabarger, Starkweather, John Trimble, Lawrence S. Trimble, Robert T. Van Horn, William B. Washburn, John T. Wilson, and Wood—47.

In the Senate, on June 1st, Mr. Drake, of Missouri, urged the following as an amendment to the bill, by striking out and inserting it after the fifth line:

That there shall never be in said State any denial or abridgment of the elective franchise, or of any other right, to any person by reason or on account of race or color, excepting Indians not taxed; and that any such denial or abridgment shall authorize the exclusion, while it continues, of said State from representation in either House of Congress.

Mr. Drake said: "Will it be denied that in Congress alone is the right to admit States into the Union? Of course it will not. Will it be denied that Congress is vested with a complete, unquestioned, and unquestionable discretion as to the admission of States? If denied, I ask where is the provision of the Constitution which fetters or limits that discretion? That instrument says nothing on this subject but that 'new States may be admitted by the Congress into the Union.' Who has the right to convert that 'may' into shall, and compel Congress against its will to admit any State? No one here will contend that any such compulsory power exists anywhere, or that any State can come into the Union without the consent of Congress.

"If, then, Congress has the sole, exclusive, and discretionary power over this whole subject, it may prescribe the terms upon which any State may be admitted into the Union; for the Constitution prescribes none; and when that instrument authorizes Congress to act on any subject, without saying when, how, why, or on what terms it shall act, the time, mode, considerations, and terms of its action are as absolutely in the discretion of Congress as if the Constitution so declared in express words. If this be not so, a State might come into the Union when and how it pleased without any

authority or any terms. Once establish such a doctrine, and the control of the nation over this subject vanishes.

"But it may be assumed that the constitutional provision just quoted applies to new States only, and, therefore, not to the case in hand. Let us briefly examine this.

"What is it to admit a State into the Union? In this debate, so far, this has not been considered; but it is, in my judgment, in an important degree worthy of attention. It is not to admit the people of a State into the nation, for they are already a part of the nation. When, therefore, a State is admitted into the Union, it is not into the Union of the people as a nation, but into the Union formed under the Constitution for purposes of government. It is admitted to participate as a body-politic in the Government formed by that Constitution, in which the people composing the State had no previous participation, or whose participation had been broken off. This, I take it, is the meaning of the admission of a State into the Union, except as in the case of Texas, where a foreign people are, by the act of admission into the governmental Union, also admitted into the Union of the people as a nation, which latter Union, let it be remembered, antedates the former, for it has existed since the assembling of the Continental Congress in September, 1774, outside and independent of, as well as anterior to, any Constitution or written form of government whatever.

"If these views be correct, it follows that the word 'new' in this clause of the Constitution does not confine the action of Congress in the premises to the original admission of States into the Union. That word, if it have any special significance there—which I think it has not—applies to all States which are outside of the governmental Union, and dependent on the action of Congress for their admission into that Union. If not, had the rebel States succeeded in establishing themselves as an independent and separate nation, they might have remained such for a hundred years, and then come back, in defiance of Congress, into the governmental Union upon their own terms, or without any terms.

"If, then, it be true that the admission of a State into the Union is merely its admission to a participation in the government of the Union, it disposes of a common error which probably is entertained by many, to wit: that no portion of the people can become a State until they are admitted as a State into the Union. The history of the Government, in my opinion, disproves this. The State of Vermont was the first admitted into the Union after the adoption of the Constitution. She came in in 1791, without any previous authority from Congress for her organization as a State, and the act for her admission had this preamble:

The State of Vermont having petitioned the Congress to be admitted as a member of the United States.

"Here was an express recognition of the pre-existence of that State outside of the governmental Union, while her people were a part of the nation, and as such subject to the authority and power of that Union. Since that time no less than ten States have been admitted, which were formed without the previous authority of Congress, and yet were recognized as existing States by the acts passed for their admission. They were, with the years of their admission, Maine, 1820; Arkansas and Michigan, 1836; Florida and Iowa, 1845; California, 1850; Oregon, 1859; Kansas, 1861; West Virginia, 1862; and Nebraska, 1867. If these facts show any thing, they show that it has not, in all the history of the Government, been held that a State is dependent upon its admission into the Union for its existence as a State. It cannot be admitted into the governmental Union unless it be organized as a State; but it may be so organized and exist without being so admitted. Hence result two important deductions. The first is, that as long as a State is outside of participation in the Government of the Union, from whatever cause, it has, when it seeks admission to that participation, the status and character of a new State. That is, it is just as much out, just as much to be admitted, just as much dependent on the will of Congress for its admission, when it has, by its own act of rebellion, severed its practical relations with the governmental Union, as when it first seeks admission into it as a new-born State, and therefore falls within the scope of the power of Congress to admit 'new States into this Union.' My second deduction is that being a State *de facto*, though not yet in the governmental Union, or with its practical relations thereto severed by its own act, it is capable of acting as a State, and binding itself as such, especially in all matters pertaining to its admission or readmission into the Union. If this be not so, how could conditions be proposed to it by Congress, to be assented to before its admission, as has been heretofore done? To ask the question is to answer it. If a State at all, it may contract as a State; if not a State, with power to contract, to propose conditions for its acceptance would be absurd.

"Sir, I see all this clearly, whether I have succeeded or not in showing it to others. I see that the insurgent States, by their rebellion, severed their practical relations to the governmental Union, but did not sever themselves from the union of the people as a nation. They were out of the Union, and at the same time not out of it; an apparent paradox when you lose sight of the fact that the word Union in the clause of the Constitution now before us means the governmental Union formed by the Constitution, and not the popular Union formed nearly fourteen years before the Constitution took effect, and which the Constitution was avowedly intended to make 'more perfect.' Those practical relations, for all purposes of government under the Consti-

tion, were dissolved by war for four years, and have never yet been restored. Why? Because the terms of restoration prescribed by Congress have never yet been fulfilled. Had not Congress the right to prescribe those terms? Had it not a right to say when and on what conditions those rebel States might again take part in the Government they had renounced, warred against, and attempted to overthrow? If not, then are we conquered by the conquered, and our fathers formed a Government which has no power to keep itself out of the hands of its enemies and destroyers? If this be true, then should our cry be, not '*Vas victis!*' but '*Vas victori!*' Woe to the conqueror! woe to the conqueror! But, sir, I leave the letter of the Constitution, and invoke the decision of this question on higher grounds.

"No nation can live and not have the absolute and unassailable right, through its very existence, as a nation, to say who may and who may not share in its government. To say that rebels, because they constitute States, cannot be for their rebellion debarred from a share in that Government, is to set a part above the whole, to break down constitutions and laws, and to snap every ligament which can bind a people in unity of popular or governmental organization. And as the greater includes the less, if you can debar them you can readmit them on terms, such terms as you please, and the Constitution affords them no remedy. When, therefore, as in this amendment, you say to Arkansas that she may come back upon the condition therein expressed, you exercise a clear and undoubted right, for which you find a warrant not only in the Constitution, but in that primal law of self-preservation, which belongs to nations as well as individuals, and is high above all constitutions.

"But Senators assert that to impose this condition on Arkansas is to deprive her of equality among the States. Sir, what means this much-talked-of equality of States? Does it depend on their internal organization? If one State lets negroes vote, and another does not, is there therefore inequality between them? If one lets women or foreigners, or Indians or Chinamen vote, and others do not, is there for that reason inequality between them? If one requires a property qualification in voters, and another does not, are they therefore unequal? I look in vain for any such inequality. But suppose it to exist, where is there any thing in the Constitution which forbids it? There is not a word there about the equality of the States, except in the single point of representation in this Senate. In every other respect, even in representation in the other branch of Congress, the States were unequal at the adoption of the Constitution, and have been so ever since, and will continue to be so always.

"There is a gross mistake or perversion in all this talk about the equality of the States, which proceeds, doubtless, from the language of the acts admitting new States, declaring that a

State is admitted into the Union 'on an equal footing with the original States.' Does that import that the new State is equal to any other State? By no means; but that it is admitted to take part in the Government of the Union on an equal footing with the others; possessing its relative share of power, subject to its relative quantum of burdens, and enjoying alike with the others the rights, immunities, and privileges secured by the Constitution to the States respectively, as participants in that Government. It therefore follows that when a State is admitted with her two Senators, she is the exact coequal of every other State in this body; and if she have the number of Representatives which her population entitles her to, she is relatively, as nearly as practicable, the coequal of every other State in the House of Representatives; and, therefore, for all purposes of participation in the governmental Union, is on an equal footing with the original States; and this is the whole scope of the vaunted equality of States. Internally they may be, as we all know they are, totally unequal in every material, moral, and political respect, but in their relations to the Government of the Union they are as nearly on an equal footing as they can well be put.

"Sir, in requiring Arkansas never to deny or abridge the elective franchise to any person on account of his color, do we deprive her of that equal footing? Do we thereby take away her equal participation in the Government of the Union? Not in the least degree. If not, we violate no part of the Constitution in exacting from her this guarantee of the rights of citizens of the United States, whose rights we are bound by honor and justice to protect and defend."

Mr. Johnson, of Maryland, followed, saying: "Mr. President, the question which is before the Senate on the bill which is now upon the table is a very interesting one; and although the honorable member from Missouri (Mr. Drake) and those who concur with him think that Congress has the power to impose such conditions as are suggested, I think it very clear that the power does not exist. The condition in the bill as reported by the Judiciary Committee is, that the right of suffrage as it now exists, or will exist under the constitution of the State if the State should be admitted, shall not at any time be changed so as to take from the parties who are entitled to vote under the present constitution that right hereafter. I suppose, if any thing be true, whether we consult the debates in the convention by which the Constitution was framed, or consult the debates in the several conventions by which the Constitution was ratified, or consult the words of the Constitution itself and the interpretation put upon it in the particular in question, nothing is more clear than that the States were left to control the franchise among themselves just as they had the authority to control it before the Constitution was adopted.

"The honorable member from Missouri asked, and I think it was asked again by some one of the other Senators upon the floor, whether there was any thing in the Constitution of the United States which declares that the States shall be equal. The inference involved in the question is true, if it is intended merely to inquire whether there are any express terms to be found in the Constitution declaring the equality of the States; but, although there are no such express terms, it seems to me to be clear, beyond all reasonable doubt, and that the Government could not exist if it was otherwise, that there is absolute equality among the States, as far as a question of this description is concerned. That state of equality is to be gathered from almost every source. First, the Convention itself was called by the people of the States, acting in their separate capacity of people of the several States. The States were represented in the Convention as equals, each having the same voice. The Constitution adopted by the Convention was submitted to the States afterward as equals; and if we look into the Constitution itself we find that all the provisions, which relate to the States as such, show that in the intendment of the Convention they were considered as equal.

"Their representation in the House of Representatives is founded upon the idea of equality; their representation in this Chamber is founded upon that idea; and the Constitution provides that that equality shall not at any time, even by an amendment of the Constitution, be changed. If we look at the nature of a State government, the object of retaining the State government, so to speak, or rather the purpose of creating a general government endowed with only certain specified powers, and the tenth amendment of the Constitution which says in so many words that all the powers not delegated to the General Government are to be considered as expressly reserved to the States, or the people of the States respectively, we are led, as I think, only to one conclusion, and that is, that in the judgment of the framers of the Government of the United States, and of the people by whom it was adopted, the States were esteemed to be equal in all the powers which they had not agreed to transfer to the General Government. That being so, the moment we ascertain in any particular instance whether the power in question has or has not been delegated to the General Government, and the result of the examination is that there has been no such delegation, then the power is in the States, not only from the nature of the General Government, but by force of the tenth amendment of the Constitution which reserves to the States that power.

"If, then, the General Government has not the power to interfere with the franchise so as to take from the States the absolute and uncontrollable power to regulate it directly, it would seem to follow that they cannot do it indirectly. I do not know whether the Judiciary Commit-

tee has made a report upon the several bills or resolutions which from time to time have been referred to that committee, providing for the regulation of suffrage throughout the States by act of Congress; but I suppose that that proposition, if it shall be brought before the Senate by the committee, will never receive the sanction of this body. I think all the indications of the opinions of the members of the body show that they do not believe the General Government has that authority.

"Assuming, then, that it has not the authority to interfere with the States which are now in the Union beyond all dispute, the question immediately before us is (to take the case of Arkansas as the immediate one now pending), assuming that Arkansas is not now a State but is to become a State by our legislation, can we impose it upon her as a condition that she shall surrender the right to regulate her franchise so that at no time hereafter can she interfere with it in contravention of the condition upon which alone we agree to admit her? If we have that power, there is some way, of course, of making its exertion effectual. That must be true. It can never be true that the General Government has a power which it cannot exert practically. A former President of the United States told us that he was of that opinion; that although he believed the States had no authority to secede from the Union, and that it was the duty of the General Government to prevent it, yet that it had no power to enable it to execute that duty. That is not my view. I think that all the powers that are vested in the General Government it has the means by legislation to execute, where they fail to execute themselves by their very nature.

"If it is so, Mr. President, that the power exists in relation to a State which is not now in the Union, but is to be brought into the Union, and we impose it, then what becomes of the equality of the States? Arkansas, that being done, cannot change her franchise as regulated by the Constitution, and made by us a condition of the admission of the State. New York can; and so can every other State now in the Union, not only without the consent of Congress, but against its legislation. In other words, as far as New York is concerned, she is now just as absolutely the mistress of the power to regulate the franchise as she was before the Constitution of the United States was adopted. So is Maryland; so are all the other States; but Arkansas comes in with that power denied her; and that is inequality. If we have the right to exclude her except upon the condition that she will abandon forever the possession of that power which belongs to all the other States, why have we not the right to exclude her if she will not abandon all the other powers that belong to the other States? Why not regulate the number of which her Legislature is to be composed? Why not provide that there shall be only one branch? Why not provide that her judiciary shall be for life,

or for a term of years? Why not say that they shall not be composed of lawyers or professional men? Can any reason be given?

"If the power is in Congress to impose conditions which will limit the power of a State by a condition denying to her the right to regulate the franchise, I cannot see how any such distinction can be made. As the honorable member from Indiana (Mr. Morton) suggested the other day, if the power exists, why can she not agree to abandon her right to be represented upon this floor by two Senators; agree that she shall only have one, or that she shall have none; agree that her representation in the other House shall not be regulated by the rules by which representation in the other House on the part of the remaining States is regulated by the Constitution? Why not provide that her citizens shall not be at liberty to sue in the courts of the United States, or that they shall be compelled to sue alone in the courts of the United States? In a word, upon what ground, logically, reasonably, can it be maintained that Congress has the authority to take from a State the right to regulate the franchise by way of a condition to her admission into the Union, which will not lead to the demonstration of the power in Congress to deny to her any and every other of the sovereign rights which belong to the other States of the Union?

"Now, Mr. President, if we have the power which the condition of the bill assumes that we do possess, and which the condition of my friend from Missouri also assumes us to possess, it is because the subject of the power is with us, and that subject is the franchise. If that is a subject within our control, we may control it just as we may think proper from time to time. If we have the right to impose this condition, we have the right to impose any other condition which may affect that power. We may impose it, therefore, as a condition of the admission that the State will allow women to vote; that she will permit minors to vote; that she will permit aliens to vote. If we have the power to say that she must permit through all time a black man to vote, we have the right to say that she must, at all times, permit everybody else to vote who happens to be within the State at the time of her election. Will anybody pretend that our powers are as extensive as these suppositions imagine? I think not.

"The error of the argument upon the other side, if it be erroneous, as I think it manifestly is, is in supposing that States of this Union can exist if deprived by the legislation of Congress of any right growing out of any power not included within those delegated to the General Government. In the case of Pollard's Lessee *v.* Hagan, in 8 Howard, it was held that whether the navigable waters of Alabama were made free to navigation by the terms of the deed of cession, whether that deed was by Georgia or Virginia, or by any treaty of cession, was immaterial; the waters still (notwithstanding the State was admitted upon the condition that

they were to be navigable) were as much under the control of the State as are the waters within the limits of the older States; and whatever power, therefore, is in its nature, with reference to the waters, municipal, is in the States, not in the Government of the United States."

Mr. Henderson, of Missouri, offered the following amendment to the amendment of Mr. Drake, to be inserted after the word "that."

Said State, in fixing the qualifications of electors therein, shall not be authorized to discriminate against any person on account of race, color, or previous condition; and, also, on the further condition that no person on account of race or color shall be excluded from the benefits of education, or be deprived of an equal share of the moneys or other funds created or used by public authority to promote education in said State.

It was rejected.

YEAS—Messrs. Buckalew, Doolittle, Henderson, Hendricks, and Ross—5.

NAYS—Messrs. Bayard, Cameron, Cattell, Chandler, Cole, Conkling, Corbett, Drake, Ferry, Frelinghuysen, Harlan, Howe, Johnson, McCreery, Morrill of Maine, Morrill of Vermont, Nye, Patterson of Tennessee, Pomeroy, Ramsey, Stewart, Thayer, Tipton, Trumbull, Van Winkle, Vickers, Wade, Willey, Williams, and Yates—20.

ABSENT—Messrs. Anthony, Conness, Cragin, Davis, Dixon, Edmunds, Fessenden, Fowler, Grimes, Howard, Morgan, Morton, Norton, Patterson of New Hampshire, Saulsbury, Sherman, Sprague, Sumner, and Wilson—19.

The amendment was then agreed to, by the following vote:

YEAS—Messrs. Cameron, Cattell, Chandler, Cole, Conkling, Cragin, Drake, Fessenden, Frelinghuysen, Harlan, Henderson, Howe, Johnson, Morrill of Maine, Morrill of Vermont, Nye, Patterson of New Hampshire, Ramsey, Stewart, Sumner, Thayer, Tipton, Trumbull, Wade, Wilson, and Yates—26.

NAYS—Messrs. Bayard, Buckalew, Corbett, Doolittle, Ferry, Fowler, Hendricks, McCreery, Patterson of Tennessee, Ross, Van Winkle, Vickers, Willey, and Williams—14.

ABSENT—Messrs. Anthony, Conness, Davis, Dixon, Edmunds, Grimes, Howard, Morgan, Morton, Norton, Pomeroy, Saulsbury, Sherman, and Sprague—14.

Mr. Hendricks, of Indiana, then moved to strike out all the preamble and all after the enacting clause of the bill, and insert the following:

That the State of Arkansas is hereby declared restored to her former proper practical relations to the Union, and is again entitled to be represented by Senators and Representatives in Congress.

This was rejected, as follows:

YEAS—Messrs. Bayard, Buckalew, Corbett, Doolittle, Ferry, Fowler, Hendricks, Johnson, McCreery, Patterson of New Hampshire, Patterson of Tennessee, Ross, Van Winkle, Vickers, and Willey—16.

NAYS—Messrs. Cameron, Cattell, Chandler, Cole, Conkling, Cragin, Drake, Fessenden, Frelinghuysen, Henderson, Howe, Morrill of Maine, Morrill of Vermont, Nye, Pomeroy, Ramsey, Sherman, Stewart, Sumner, Thayer, Tipton, Trumbull, Wade, Williams, Wilson, and Yates—26.

ABSENT—Messrs. Anthony, Conness, Davis, Dixon, Edmunds, Grimes, Harlan, Howard, Morgan, Morton, Norton, Saulsbury, and Sprague—18.

Mr. Ferry, of Connecticut, when the bill was reported to the Senate, offered the fol-

lowing amendment—to strike out all after the enacting clause, and insert the following:

That the State of Arkansas is entitled and admitted to representation in Congress as one of the States of the Union.

It was rejected, by the following vote:

YEAS—Messrs. Bayard, Buckalew, Conkling, Corbett, Doolittle, Ferry, Fessenden, Hendricks, McCreery, Patterson of New Hampshire, Patterson of Tennessee, Ross, Saulsbury, Trumbull, Van Winkle, Vickers, Willey, and Williams—18.

NAYS—Messrs. Cameron, Cattell, Chandler, Cole, Cragin, Drake, Frelinghuysen, Harlan, Henderson, Howe, Morrill of Vermont, Nye, Pomeroy, Ramsey, Sherman, Stewart, Sumner, Thayer, Tipton, Wade, Wilson, and Yates—22.

ABSENT—Messrs. Anthony, Conness, Davis, Dixon, Edmunds, Fowler, Grimes, Howard, Johnson, Morgan, Morrill of Maine, Morton, Norton, and Sprague—14.

The bill was then passed, by the following vote:

YEAS—Messrs. Anthony, Cameron, Cattell, Chandler, Cole, Conkling, Corbett, Cragin, Drake, Edmunds, Fessenden, Frelinghuysen, Harlan, Henderson, Howe, Morrill of Maine, Morrill of Vermont, Nye, Patterson of New Hampshire, Pomeroy, Ramsey, Ross, Sherman, Stewart, Sumner, Thayer, Tipton, Trumbull, Van Winkle, Wade, Willey, Williams, Wilson, and Yates—34.

NAYS—Messrs. Bayard, Buckalew, Doolittle, Hendricks, McCreery, Patterson of Tennessee, Saulsbury, and Vickers—8.

ABSENT—Messrs. Conness, Davis, Dixon, Ferry, Fowler, Grimes, Howard, Johnson, Morgan, Morton, Norton, and Sprague—12.

The bill was returned, without the President's signature, accompanied with the following message:

To the House of Representatives:

I return without my signature a bill entitled "An Act to admit the State of Arkansas to representation in Congress."

The approval of this bill would be an admission on the part of the Executive that the act for the more efficient government of the rebel States, passed March 2, 1867, and the act supplementary thereto, were proper and constitutional. My opinion, however, in reference to these measures has undergone no change, but, on the contrary, has been strengthened by the results which have attended their execution.

Even were this not the case, I could not consent to a bill which is based upon the assumption either that by an act of rebellion of a portion of its people the State of Arkansas seceded from the Union, or that Congress may, at its pleasure, expel or exclude a State from the Union, or interrupt its relations with the Government by arbitrarily depriving it of representation in the Senate and House of Representatives. If Arkansas is a State not in the Union, this bill does not admit it as a State into the Union. If, on the other hand, Arkansas is a State in the Union, no legislation is necessary to declare it entitled "to representation in Congress as one of the States of the Union." The Constitution already declares that "each State shall have at least one Representative;" "that the Senate shall be composed of two Senators from each State;" and "that no State without its consent shall be deprived of its suffrage in the Senate."

That instrument also makes each House "the judges of the elections, returns, and qualifications of its own members," and therefore all that is now necessary to restore Arkansas in all its constitutional relations to the Government is the decision by each

House upon the eligibility of those who, presenting their credentials, claim seats in the respective House of Congress. This is the plain and simple plan of the Constitution; and, believing that had it been pursued when Congress assembled in the month of December, 1865, the restoration of the States would long since have been completed, I once again recommend that it be adopted by each House in preference to legislation which I respectfully submit is not only of at least doubtful constitutionality, and therefore unwise and dangerous as a precedent, but is unnecessary, not so effective in its operations as the mode prescribed by the Constitution, involves the additional delay, and from its terms may be taken rather as applicable to a Territory about to be admitted as one of the United States than to a State which has occupied a place in the Union for upward of a quarter of a century.

The bill declares the State of Arkansas entitled and admitted to representation in Congress as one of the States of the Union upon the following fundamental condition:

That the Constitution of Arkansas shall never be so amended or changed as to deprive any citizen or class of citizens of the United States of the right to vote who are entitled to vote by the Constitution herein recognized, except as a punishment for such crimes as are now felonies at common law, whereof they shall be duly convicted under laws equally applicable to all the inhabitants of said State: *Provided*, That any alteration of said Constitution, prospective in its effect, may be made in regard to the time and place of residence of voters.

I have been unable to find in the Constitution of the United States any warrant for the exercise of the authority thus claimed by Congress. In assuming the power to impose a "fundamental condition" upon a State which has been duly admitted into the Union on an equal footing with the original States, in all respects whatever, Congress asserts a right to enter a State as it may a Territory, and to regulate the highest prerogative of a free people—the elective franchise. This question is reserved by the Constitution to the States themselves, and to concede to Congress the power to regulate this subject would be to reverse the fundamental principle of the Republic, and to place in the hands of the Federal Government (which is the creature of the States) the sovereignty which justly belongs to the States or the people, to the true source of all political power by whom our Federal system was created, and to whose will all is subordinate.

The bill fails to provide in what manner the State of Arkansas is to signify its acceptance of the "fundamental condition" which Congress endeavors to make unalterable and irrevocable. Nor does it prescribe the penalty to be imposed should the people of the State amend or change the particular portions of the Constitution which it is one of the purposes of the bill to perpetuate, but leaves them in uncertainty and doubt as to the consequences of such action, when the circumstances under which this Constitution has been brought to the attention of Congress are considered. It is not unreasonable to suppose that efforts will be made to modify its provisions, and especially those in respect to which this measure prohibits any alteration. It is seriously questioned whether the Constitution has been ratified by a majority of the persons who, under the act of March 2, 1867, and the acts supplementary thereto were entitled to registration and to vote upon the issue. Section ten of the schedule provides that—

No person disqualified from voting or registering under this constitution shall vote for candidates for any office nor shall be permitted to vote for the ratification or rejection of the constitution at the polls herein authorized.

Assumed to be in force before its adoption, in disregard to the law of Congress, the constitution undertakes to impose upon the elector other and further conditions. The fifth section of the eighth article provides, that "all persons, before registering"

voting," must take and subscribe an oath which, among others, contains the following clause:

That I accept the civil and political equality of all men, and agree not to attempt to deprive any person or persons, on account of race, color, or previous condition, of any political or civil right, privilege, or immunity, enjoyed by any other class of men.

It is well known that a very large portion of the electors in all the States, if not a large majority of all of them, do not believe in or accept the political equality of Indians, Mongolians, or negroes with the race to which they belong. If the voters of any of the States of the North and West were required to take such an oath as a test of their qualification, there is reason to believe that a majority of them would remain from the polls rather than comply with its degrading conditions.

How far and to what extent this test oath prevented the registration of those who were qualified under the laws of Congress, it is not possible to know; but that such was its effect, at least sufficient to overcome them all and give a doubtful majority in favor of this constitution, there can be no reasonable doubt.

Should the people of Arkansas, therefore, desiring to regulate the elective franchise so as to make it conform to the constitutions of a large proportion of the States of the North and West, modify the provisions referred to in the "fundamental condition," what is to be the consequence? Is it intended that a denial of representation shall follow? And if so, may we not dread, at some future day, a recurrence of the troubles which have so long agitated the country? Would it not be the part of wisdom to take for our guide the Federal Constitution, rather than resort to measures which, looking only to the present, may in a few years renew, in an aggravated form, the strife and bitterness caused by legislation which has proved to be ill-timed and unfortunate?

ANDREW JOHNSON.

WASHINGTON, June 20, 1868.

The bill subsequently became a law, by the following vote in the House:

YEAS—Messrs. Allison, Ames, Anderson, Delos R. Ashley, Bailey, Banks, Beaman, Beatty, Benjamin, Benton, Bingham, Blaine, Blair, Boutwell, Buckland, Butler, Cake, Churchill, Reader W. Clarke, Sidney Clarke, Cobb, Coburn, Cook, Cornell, Covoda, Cullom, Delano, Donnelly, Driggs, Eckley, Eggleston, Ela, Eliot, Farnsworth, Ferriss, Ferry, Fields, Garfield, Griswold, Harding, Hawkins, Higby, Hill, Hooper, Chester D. Hubbard, Hulburd, Ingersoll, Jenckes, Judd, Julian, Kelsey, Ketcham, George V. Lawrence, Lincoln, Loan, Logan, Loughbridge, Lynch, Mallory, Marvin, Maynard, McCarthy, McClurg, Mercur, Moore, Moorhead, Morrill, Mullins, Newcomb, O'Neill, Payne, Peters, Pike, Pile, Plants, Poland, Polale, Pomeroy, Price, Robertson, Sawyer, Schenck, Seofield, Shanks, Shellabarger, Smith, Spalding, Starkweather, Aaron F. Stevens, Thaddeus Stevens, Stewart, Stokes, Taffe, Taylor, John Trimble, Trowbridge, Twichell, Upson, Van Aernam, Van Wyck, Ward, Cadwalader C. Washburn, Henry D. Washburn, William B. Washburn, Welker, William Williams, James F. Wilson, John T. Wilson, Windom, Woodbridge, and the Speaker—111.

NAYS—Messrs. Adams, Archer, Axtell, Beck, Boyer, Brooks, Cary, Eldridge, Fox, Getz, Glossbrenner, Golladay, Grover, Haight, Holman, Hotchkiss, Johnson, Jones, Kerr, Knott, McCormick, Morrissey, Mungen, Niblack, Pruyn, Robinson, Sitgreaves, Taber, Lawrence S. Trimble, Van Trump, and Woodward—31.

NOT VOTING—Messrs. Arnell, James M. Ashley, Baker, Baldwin, Barnes, Barnum, Bromwell, Broomall, Burr, Chanler, Dawes, Dixon, Dodge, Finney, Gravely, Halsey, Hopkins, Asahel W. Hubbard, Richard D. Hubbard, Humphrey, Hunter, Kelley, Kitchen, Koonitz, Ladin, William Lawrence, Marshall, McCullough, Miller, Myers, Nicholson, Nunn,

Orth, Perham, Phelps, Randall, Raum, Ross, Selye, Stone, Thomas, Van Auker, Burt Van Horn, Robert T. Van Horn, Elihu B. Washburne, Thomas Williams, Stephen F. Wilson, and Wood—48.

In the Senate, the vote was as follows:

YEAS—Messrs. Chandler, Cole, Conkling, Conness, Corbett, Cragin, Edmunds, Ferry, Fessenden, Harlan, Howard, Morgan, Morrill of Vermont, Nye, Patterson of New Hampshire, Pomeroy, Ramsey, Ross, Sherman, Sprague, Stewart, Sumner, Thayer, Tipton, Trumbull, Van Winkle, Wade, Willey, Wilson, and Yates—80.

NAYS—Messrs. Bayard, Davis, Doolittle, Hendricks, McCreery, Patterson of Tennessee, and Saulsbury—7.

ABSENT—Messrs. Anthony, Buckalew, Cameron, Cattell, Dixon, Drake, Fowler, Frelinghuysen, Grimes, Henderson, Howe, Johnson, Morrill of Maine, Morton, Norton, Vickers, and Williams—17.

Upon the admission of the three members from Arkansas on June 24th, the following protest was presented and entered on the journal:

The recognized presence of three persons on the floor of this House from the State of Arkansas, sent here by military force acting under a brigadier-general of the Army, but nevertheless claiming to be members of this Congress, and to share with us, the Representatives from free States, in the imposition of taxes and customs and other laws upon our people, makes it our imperative duty in this, the first case, to remonstrate most solemnly, and to protest as solemnly, against this perilous and destructive innovation upon the principles and practices of our hitherto constitutional self-government. The so-called Reconstruction Acts, which created the military government in Arkansas and like governments in other Southern States, to share with us in the legislative power of the Northern and Western free people, we have every reason to believe have been held to be unconstitutional by the Supreme Court of the United States, the public declaration of which fact was avoided only by the extraordinary and strange device of this Congress in snatching jurisdiction from the court in the McCordle case when such a public decision was about to be made.

Of the three great branches of the Government it seems, then, that after the Executive vetoed these acts as unconstitutional, the judiciary adjudicated them to be so, while a Congress, the creation of but twenty-seven of the thirty-seven States of the Union, overrides these equal and coordinate branches of that Government, first by voting down the vetoes, next by nullifying the judgments of the court! In an era of profound peace, when not an armed man rises against the Government from the Potomac to the Rio Grande, there, in ten States, our American historical way of creating the organic law has been utterly subverted by the bayonet. Ever since the Declaration of Independence, with scarcely an exception, and even amid the battles of the Revolution, conventions have been convoked through, and constitutions created by, the electors of the States, the only authorized depositaries of the sovereign power of every State without exterior dictation or domination, as well under the old confederation as under the existing Federal Constitution. The hardest and harshest test oath required from 1766 to the peace of 1783 was an abjuration oath of allegiance to George III., while some of the now so-called bayonet-made constitutions from the South propose absurd and cruel tests, absurd as in Arkansas, where is interwoven in the organic law a mere party test between the Radical reconstructionists and the Democratic conservatives, such as would exclude from voting, if living there, the thousands and tens of thousands and hundreds of thousands of Democrats in the free States (art. 8, sec. 4), or cruel, as in Alabama, where no

white man can vote who will not forever forswear his own race and color, and perjure himself by swearing, in defiance of the law of God, that the negro is his equal and forever to be his equal at the ballot-box, in the jury-box, with the cartridge-box; in the school, in the college, in house and home, and by the fire-side; in short, in every way, everywhere (art. 7, sec. 4).

Now, in these and the other Southern States, in the midst of war, President Lincoln, in his proclamation, December 8, 1863, offered amnesty and pardon to rebels then in arms, if they would lay down their arms and take an oath of fidelity, while now, not a Union man in Arkansas or Alabama can vote unless in the first place he swears allegiance to the majesty of this Congress, and in the next swears off his Americanism and Africanizes himself. Hitherto constitutions with us have been the outgrowth of popular life, springing from the exuberance of our enterprise and energy in the settlement of the forests or prairies of our country; but here, before us now, are nine constitutions, with one if not three more yet to come from Texas, which have all been imposed upon the people by five military satraps or pentarchs, in a manner never before known under our law, but borrowed at best from imperial Roman military colonization, or from the worst precedents of the French Revolution. France is then recorded to have had five constitutions in three years, so frequently made and so frequently changed that they were ironically classed by the French people with the periodical literature of the day. Louisiana, a colony of that France, has had four constitutions in four years, and a constitution there has now become periodical literature, as in France, in the agonies and throes of the great Revolution. Laws, mere statute laws, which can never be created by conventions, are appended, more or less, to all these constitutions, and bayonet-created, one-branch governments, with no Executive, no senate, no house of representatives, no judiciary, have ordained irrepealable, irreversible laws in the very organism of the State, such as cannot be thus created by the Executive, the senate, and the house of representatives of legitimate governments when acting in unison and all combined. All this has been done, without regard to preceding constitutions or precedents, or to the common law of the States or the law of nations.

The military, which, under legitimate institutions, can only be used in time of peace to conserve or preserve the State, have here been used to destroy States. The General of the Army, who represents the sword, and only the sword of the Republic, has been exalted by acts of Congress above the constitutional Commander-in-Chief of the Army and Navy, in order to execute those military decrees, and as the surer way to root out every vestige left of constitutional law or liberty. The same General of the Army, in order to prolong or perpetuate his military domination North and West as well as South, has been selected in party convention at Chicago to head the electoral vote for the presidency in ten of our States which are as much under his feet as Turkey is under the Sultan or Poland under the Czar of Russia. But, as if only to add insult to the injury of this military outrage upon popular government in these ten States, either by act of Congress or by these Congress-soldier-made State constitutions, at least two hundred and fifty thousand whites have been disfranchised, while seven hundred and fifty thousand negroes, inexperienced in all law-making, and more ignorant than our children, have been enfranchised in their stead, and have thus been created absolute masters and sovereigns over the whole white population of the South.

Because of all this, and in opposition to all this, we, Representatives of the people from the free States, in behalf of our constituents and of thousands and tens of thousands of others who would be here represented if the popular power without could

now constitutionally act here within, earnestly and solemnly protest against this violence upon our Constitution and upon our people, and do hereby counsel and advise all friends of popular government to submit to this force and fraud only until at the ballot-box, operating through the elections, this great wrong can be put right. There is no law in the land supreme over the constitutional law. There is no government but constitutional government; and hence all bayonet-made, all Congress-imposed constitutions are of no weight, authority, or sanction, save that enforced by arms, an element of power unknown to Americans in peace, and never recognized but as it acts in and under the supreme civil law, the Constitution, and the statutes enacted in pursuance thereof. We protest, then, in behalf of the free people of the North and the West, against the right of this military oligarchy established in Arkansas, or elsewhere in the now reenslaved States of the South, to impose upon us, through Congress, taxes or customs or other laws to maintain this oligarchy or its Freedmen's Bureau. We protest against going into the now proposed copartnership of military dictators and negroes in the administration of this Government. We demand, in the name of the fathers of the Constitution and for the sake of posterity, not its reconstruction, but the restoration of that sacred instrument which has been to us all a pillar of fire from 1787 on to its present overthrow; and in all solemnity before God and man, under a full sense of the responsibility of all we utter, we do hereby affix our names to this protest against the admission of these three persons claiming to be members of Congress from Arkansas.

James Brooks, James B. Beck, P. Van Trump, Chas. A. Eldridge, Samuel J. Randall, W. Munzer, Stephen Taber, Asa P. Grover, L. S. Trimble, Geo. M. Adams, A. J. Glossbrenner, Stevenson Archer, John A. Nicholson, John Morrissey, Thos. Laurens Jones, W. E. Niblack, Julius Hotchkiss, William H. Barnum, John W. Chanler, S. B. Artell, S. S. Marshall, W. S. Holman, Chas. Haight, Chas. Sitgreaves, J. Proctor Knott, J. S. Golladay, J. M. Humphrey, Fernando Wood, J. Lawrence Getz, F. Stone, M. C. Kerr, John Fox, Jas. A. Johnson, John V. L. Pruyn, W. E. Robinson, B. M. Boyer, Geo. W. Woodward, Chas. E. Phelps, A. G. Burr, D. M. Van Auken, J. R. McCormick, Demas Barnes, James M. Cavanaugh, Lewis W. Ross, H. McCulloch.

In the House, on May 14th, the bill to admit the States of North Carolina, South Carolina, Louisiana, Georgia, and Alabama to representation in Congress being under consideration, Mr. Stevens, of Pennsylvania, said: "What is the particular question we are considering? Five or six States have had submitted to them the question of forming constitutions for their own government. They have voluntarily formed such constitutions, under the direction of the Government of the United States. They have sent those constitutions here, backed in every instance, even in that of Alabama, by a majority of all the voters within the State. And when I say 'all the voters' I mean all the voters, black and white, whether they come from New York or South Carolina or elsewhere. They have sent us their constitutions. Those constitutions have been printed and laid before us. We have looked at them; we have pronounced them republican in form; and all we propose to require is that they shall remain so forever. Subject to this requirement, we are willing to admit them into the Union.

"I know that, by delaying thus far the ad-

mission of these States, a great object has been gained. Some gentlemen on the other side were fearful that some of the Senators from those States would be admitted before we had ousted the first military despot of that region. There is not much danger now; and those gentlemen might afford to let these States come in. They know, I suppose, whether that gentleman is to remain longer in the White House; I do not. But, at any rate, we can admit no Senators in time to operate upon that question.

"The gentleman from Ohio (Mr. Bingham) has moved an amendment against which I most earnestly protest. He proposes, against the recommendation of the committee, to leave each of these States free, after its admission, to amend the provisions with reference to the elective franchise, as it may deem proper, with regard to its own citizens. All of those States have now adopted the principle of universal suffrage. This country has adopted that principle so far as it has spoken of late. What we desire is, to secure in these States the maintenance of this principle which they have adopted, so that every person of requisite age within those States shall be entitled to vote. The very amendment which the gentleman from Ohio proposes is what the protestants from South Carolina, who appeared before us, asked should be inserted in the bill. And they did not hesitate to give as their reason, that, if they should be allowed to amend their constitution in this respect, after the State had been admitted they could adopt a property qualification which would exclude from the elective franchise all the poor men; and when I asked them distinctly whether such a provision would not be intended to reach the negroes, they had too much manliness to deny it. If the amendment proposed by the gentleman from Ohio should be adopted, they could adopt a property qualification, applicable to all classes alike, which would reach down to just about the black line, depriving the negroes of the privilege of voting and again subjecting them to oppression. It would not be long before, by means of vagrant laws and other laws of similar character, the colored race would be again reduced to bondage even worse than the patriarchal.

"The amendment of the gentleman from Ohio would be taken advantage of to inflict wrong upon the colored race, just as the constitutional amendment abolishing slavery has been evaded by taking advantage of the clause, 'except as a punishment for crime whereof the party shall have been duly convicted.' In Florida, as I learn from two gentlemen connected with the Freedmen's Bureau, a law has been enacted providing that persons convicted of assault and battery may be sold for twenty years into bondage. If a white man runs against a negro on the pavement, it is called an assault and battery, and the white man takes the negro into the court-house and in fifteen minutes has him convicted and sentenced to bondage for twenty

years. These two gentlemen told me that they had witnessed the sentence of six negroes under just such circumstances. The negroes were sold into slavery for twenty years because white men had jostled them, or, as was said there, they had jostled white men. So, if we leave the door open, these colored people may all be made slaves again. I do not propose to leave any such door open."

The question recurred first on the amendment of Mr. Stevens, of Pennsylvania, as follows:

Add to the end of the first section as follows:

That so much of the seventeenth section of the fifth article of the constitution of the State of Georgia as gives authority to the Legislature or courts to repudiate debts contracted prior to the 1st day of June, 1865, and similar provisions in the other constitutions mentioned in this bill, shall be null and void as against all men who were loyal during the whole time of the rebellion, and who, during that time, supported the Union, and they shall have the same rights in the courts and elsewhere as if no rebellion had existed.

The question was taken; and it was decided as follows:

YEAS—Messrs. Adams, Ames, Anderson, Arnell, James M. Ashley, Beaman, Beatty, Benjamin, Benton, Blair, Bromwell, Broomall, Buckland, Reader W. Clarke, Sidney Clarke, Cobb, Coburn, Donnelly, Driggs, Eckley, Eggleston, Farnsworth, Fields, Gravelly, Harding, Higby, Hill, Holman, Hooper, Hopkins, Chester D. Hubbard, Hunter, Julian, Kelley, Kelsey, Kitchen, Koontz, George V. Lawrence, William Lawrence, Loan, Loughridge, Marvin, McCarthy, McClurg, Miller, Morrell, Myers, Newcomb, Nunn, O'Neill, Orth, Perham, Peters, Plants, Polsley, Price, Raum, Robertson, Sawyer, Shanks, Smith, Thaddeus Stevens, Stewart, Stokes, Taffe, Thomas, John Trimble, Trowbridge, Twichell, Upson, Van Wyck, Ward, Welker, William Williams, Stephen F. Wilson, Windom, Woodbridge, and Woodward—78.

NAYS—Messrs. Allison, Delos R. Ashley, Bailey, Baker, Banks, Bingham, Boutwell, Boyer, Cullom, Ela, Eldridge, Eliot, Ferriss, Ferry, Garfield, Gets, Glossbrenner Golladay, Grover, Ingersoll, Johnson, Judd, Kerr, Ketcham, Knott, Laffin, Lincoln, Logan, Mallory, McCormick, Moore, Morgan, Mungen, Niblack, Nicholson, Paine, Pile, Pruyn, Randall, Ross, Schenck, Sitgreaves, Aaron F. Stevens, Taylor, Van Aiken, Burt Van Horn, Van Trump, Elihu B. Washburne, Henry D. Washburn, and William B. Washburn—50.

NOT VOTING—Messrs. Archer, Axtell, Baldwin, Barnes, Barnum, Beck, Blaine, Brooks, Burr, Butler, Cake, Cary, Chanler, Churchill, Cook, Cornell, Covode, Dawes, Dixon, Dodge, Finney, Fox, Griswold, Haight, Halsey, Hawkins, Hotchkiss, Asahel W. Hubbard, Richard D. Hubbard, Hulburd, Humphrey, Jenckes, Jones, Lynch, Marshall, Maynard, McCullough, Mercur, Moorhead, Morrissey, Mullins, Phelps, Pike, Poland, Pomeroy, Robinson, Scofield, Selye, Shellabarger, Spalding, Starkweather, Stone, Taber, Lawrence S. Trimble, Van Aernam, Robert T. Van Horn, Cadwalader C. Washburn, Thomas Williams, James F. Wilson, John T. Wilson, and Wood—81.

So the amendment was adopted.

The question next recurred on Mr. Bingham's amendment as modified by Mr. Benjamin, as follows:

Strike out the following:

That the constitutions of said States shall never be so amended or changed as to deprive any citizen or

class of citizens of the United States of the right to vote who are now entitled to vote by said constitutions respectively, except as a punishment for such crimes as are now felonies at common law, whereof they shall have been duly convicted; and no person shall ever be held to service or labor as a punishment for crime in said States, except by public officers charged with the custody of convicts by the laws thereof.

And in lieu thereof insert the following:

That the constitutions of said States shall never be amended or changed so as to discriminate in favor of or against any citizen or class of citizens of the United States in the right to vote who are now entitled to vote by said constitutions respectively, except as a punishment for such crimes as are now felonies at common law, whereof they shall have been duly convicted; and no person shall ever be held to service or labor as a punishment for crime in said States, except by public officers charged with the custody of convicts by the laws thereof.

The House divided; and there were—yeas 57, nays 46. So the amendment was adopted.

The bill was ordered to be engrossed and read a third time; and, being engrossed, it was accordingly read the third time.

The question was taken; and it was decided as follows:

YEAS—Messrs. Allison, Ames, Anderson, Arnell, Delos R. Ashley, James M. Ashley, Bailey, Banks, Beaman, Beatty, Benjamin, Benton, Bingham, Blair, Boutwell, Bromwell, Broomall, Buckland, Butler, Cake, Reader W. Clarke, Sidney Clarke, Cobb, Curnburn, Covode, Dodge, Donnell, Driggs, Eckley, Eggleston, Ela, Eliot, Farnsworth, Ferriss, Ferry, Fields, Garfield, Gravely, Harding, Hawkins, Higby, Hill, Hooper, Hopkins, Chester D. Hubbard, Hunter, Ingersoll, Jenckes, Judd, Julian, Kelley, Kelsey, Ketcham, Kitchen, Laflin, George V. Lawrence, William Lawrence, Lincoln, Logan, Loughridge, Mallory, Marvin, McCarthy, McClurg, Miller, Moore, Morrell, Myers, Newcomb, Nunn, O'Neill, Orth, Paine, Perham, Peters, Pike, Pile, Plants, Polsley, Price, Raum, Robertson, Sawyer, Schenck, Scofield, Shanks, Smith, Aaron F. Stevens, Thaddeus Stevens, Stewart, Stokes, Taffe, Taylor, Thomas, John Trimble, Trowbridge, Twichell, Upson, Burt Van Horn, Van Wyck, Ward, Elihu B. Washburne, Henry D. Washburn, William B. Washburn, Welker, William Williams, James F. Wilson, Stephen F. Wilson, and Windom—109.

NAYS—Messrs. Adams, Baker, Beck, Boyer, Brooks, Burr, Eldridge, Getz, Glossbrenner, Golladay, Grover, Holman, Hotchkiss, Humphrey, Johnson, Kerr, Knott, Loan, Marshall, McCormick, Morgan, Mungen, Niblack, Nicholson, Phelps, Pruyn, Randall, Robinson, Ross, Sitgreaves, Stone, Van Aiken, Van Trump, Thomas Williams, and Woodward—35.

NOR VOTING—Messrs. Archer, Axtell, Baldwin, Barnes, Barnum, Blaine, Cary, Chanler, Churchill, Cook, Cornell, Cullom, Dawes, Dixon, Finney, Fox, Griswold, Haight, Halsey, Asahel W. Hubbard, Richard D. Hubbard, Hulburt, Jones, Koontz, Lynch, Maynard, McCullough, Mercur, Moorhead, Morrissey, Mullins, Poland, Pomeroy, Selye, Shellabarger, Spalding, Starkweather, Taber, Lawrence S. Trimble, Van Aernam, Robert T. Van Horn, Cadwalader C. Washburn, John T. Wilson, Wood, and Woodward—45.

The bill was reported to the Senate, with amendments excluding Alabama and adding Florida.

On June 9th, Mr. Wilson, of Massachusetts, said: "I rise, Mr. President, to express the hope that we shall not exclude Alabama from

the benefits of admission with these other States. It seems to me that if there is any one of these States which ought to be welcomed here it is the State of Alabama. That State prepared its constitution earlier than any other State. The vote was taken at an unpropitious season of the year, at a time when storms and floods swept the State. A large percentage of registered electors voted for that constitution than for any one of the constitutions of these States, with the exception of South Carolina; forty-four per cent. of the voters of Alabama voted for the constitution; in Georgia forty-three per cent. voted for the constitution, and in Arkansas thirty-eight per cent. voted for the constitution. In Alabama there was a vote of seventy thousand given for the constitution, and thirteen thousand of the votes registered were in counties where no votes at all were taken, including one county where nearly three thousand votes were taken and destroyed. I saw, when we adopted the provision requiring a majority of the registered voters to vote on the constitution, it would cause the failure of these States, and, if we had adhered to it in these six other States only, think we would have adopted the constitution. If that law had not existed, and the people had been summoned to vote for and against the ratification of the constitution, I have not the shadow of a doubt that the State of Alabama would have adopted her constitution by from thirty to fifty thousand majority.

"I do not think we ought to take advantage of our own mistake, not to say blunder. No body is harmed by the admission of the State. Admit the State with the others; let the State government be organized; let the people be protected; let the State begin a career of peace and prosperity and advancement."

Mr. Sherman, of Ohio, said: "The only subject to which I wish to address myself is the question of the admission of Alabama. I am convinced that in Alabama the people are more in a condition to maintain a State government than they are in any other of the Southern States, without exception. The constitution of Alabama, as presented to us, is very similar in form to the constitutions of the other States. Their proceedings have been regular, and, perhaps, more regular, than those of any other State. They have complied with every stipulation in the law except one, and the question now is, whether, on account of their inability to comply with that stipulation they shall be excluded from restoration to the Union. If that inability grew out of a want of loyalty to the Government, or any cause within their power of correction, I would hold them to strict compliance with the law; but the official papers here on our table show that they did all that was possible for them to do to comply with the law, that they were deterred by physical causes totally beyond their power to overcome, and that they did more and made a greater effort to comply with the

acts of Congress than any State among the Southern States."

The motion of Mr. Wilson was agreed to—yeas 22, nays 21.

YEAS—Messrs. Anthony, Chandler, Conness, Corbett, Ferry, Fowler, Harlan, Morrill of Maine, Morton, Nye, Pomeroy, Ramsey, Sherman, Stewart, Sumner, Thayer, Tipton, Van Winkle, Wade, Willey, Williams, and Wilson—22.

NAYS—Messrs. Bayard, Buckalew, Cole, Conkling, Davis, Doolittle, Edmunds, Fessenden, Frelinghuysen, Hendricks, Howard, Howe, Johnson, McCreery, Morgan, Morrill of Vermont, Patterson of Tennessee, Saulsbury, Trumbull, Vickers, and Yates—21.

ABSENT—Messrs. Cameron, Cattell, Cragin, Dixon, Drake, Grimes, Henderson, Norton, Patterson of New Hampshire, Ross, and Sprague—11.

On June 10th, Mr. Sherman, of Ohio, moved to amend the amendment reported by the committee, by striking out the following words:

And the State of Georgia shall only be entitled and admitted to representation upon this further fundamental condition; that the first and third subdivisions of section seventeen of the fifth article of the constitution of said State, except the proviso to the first subdivision, shall be null and void, and that the General Assembly of said State, by solemn public act, shall declare the assent of the State to the foregoing fundamental condition.

The amendment was rejected by the following vote:

YEAS—Messrs. Cameron, Ferry, Howe, Ramsey, Sherman, Thayer, Williams, and Wilson—8.

NAYS—Messrs. Anthony, Buckalew, Chandler, Cole, Conkling, Conness, Corbett, Cragin, Davis, Drake, Edmunds, Fessenden, Frelinghuysen, Harlan, Hendricks, Howard, Johnson, McCreery, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Patterson of New Hampshire, Patterson of Tennessee, Ross, Saulsbury, Sumner, Tipton, Trumbull, Van Winkle, Vickers, Wade, Willey, and Yates—35.

ABSENT—Messrs. Bayard, Cattell, Dixon, Doolittle, Fowler, Grimes, Henderson, Norton, Pomeroy, Sprague, and Stewart—11.

Mr. Williams, of Oregon, moved to amend the first section of the bill, by inserting the following:

That so much of the seventeenth section of the fifth article of the constitution of the State of Georgia as suspends the collection of debts contracted prior to the 1st day of June, 1865, shall be void as against all persons who were loyal during the late rebellion, and who, during that time, supported the Union.

This amendment was rejected.

Mr. Williams also moved to amend, by inserting the following in the third section:

And thereupon the officers of each State, duly elected and qualified under the constitution thereof, shall be inaugurated without delay; but no person prohibited from holding office under the United States, or under any State, by section three of the proposed amendment to the Constitution of the United States, known as article fourteen, shall be deemed eligible to any office in either of said States.

The first clause of the amendment, extending to the word "delay," was agreed to, as follows:

YEAS—Messrs. Cameron, Chandler, Conness, Corbett, Cragin, Drake, Edmunds, Howard, Morrill of Maine, Morrill of Vermont, Morton, Nye, Patterson of New Hampshire, Pomeroy, Ramsey, Stewart,

Sumner, Thayer, Tipton, Wade, Williams, Wilson, and Yates—23.

NAYS—Messrs. Bayard, Buckalew, Cole, Conkling, Davis, Fowler, Frelinghuysen, Harlan, Hendricks, McCreery, Morgan, Patterson of Tennessee, Ross, Saulsbury, Trumbull, Van Winkle, Vickers, and Willey—18.

ABSENT—Messrs. Anthony, Cattell, Dixon, Doolittle, Ferry, Fessenden, Grimes, Henderson, Howe, Johnson, Norton, Sherman, and Sprague—13.

The remainder was agreed to by the following vote:

YEAS—Messrs. Cameron, Chandler, Cole, Conness, Corbett, Cragin, Drake, Harlan, Howard, Morrill of Maine, Morrill of Vermont, Morton, Nye, Patterson of New Hampshire, Pomeroy, Ramsey, Stewart, Sumner, Thayer, Tipton, Van Winkle, Wade, Willey, Williams, Wilson, and Yates—26.

NAYS—Messrs. Bayard, Buckalew, Conkling, Davis, Edmunds, Fowler, Frelinghuysen, Hendricks, McCreery, Morgan, Patterson of Tennessee, Ross, Saulsbury, Trumbull, and Vickers—15.

ABSENT—Messrs. Anthony, Cattell, Dixon, Doolittle, Ferry, Fessenden, Grimes, Henderson, Howe, Johnson, Norton, Sherman, and Sprague—13.

Mr. Trumbull, of Illinois, moved to amend, by striking out "Alabama," which was disagreed to by the following vote:

YEAS—Messrs. Bayard, Buckalew, Conkling, Davis, Edmunds, Frelinghuysen, Hendricks, Howe, McCreery, Morgan, Morrill of Vermont, Patterson of Tennessee, Saulsbury, Trumbull, Vickers, and Yates—16.

NAYS—Messrs. Cameron, Chandler, Conness, Corbett, Cragin, Drake, Ferry, Harlan, Morrill of Maine, Morton, Nye, Pomeroy, Ramsey, Ross, Sherman, Stewart, Sumner, Thayer, Tipton, Van Winkle, Wade, Willey, Williams, and Wilson—24.

ABSENT—Messrs. Anthony, Cattell, Cole, Dixon, Doolittle, Fessenden, Fowler, Grimes, Henderson, Howard, Johnson, Norton, Patterson of New Hampshire, and Sprague—14.

The amendment of the Committee of the Whole was now concurred in. This was, to strike out the whole of the House bill after the enacting clause, and insert the following:

That each of the States of North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida, shall be entitled and admitted to representation in Congress as a State of the Union when the Legislatures of such States shall have duly ratified the amendment to the Constitution of the United States proposed by the Thirty-ninth Congress, and known as article fourteen, upon the following fundamental condition: that the constitution of neither of said States shall ever be so amended or changed as to deprive any citizen, or class of citizens, of the United States of the right to vote in said State, who are entitled to vote by the constitution thereof, herein recognized, except as a punishment for such crimes as are now felonies at common law, whereof they shall have been duly convicted under laws equally applicable to all the inhabitants of said State: *Provided*, That any alteration of said constitution may be made with regard to the time and place of residence of voters. And the State of Georgia shall only be entitled and admitted to representation upon this further fundamental condition: that the first and third subdivisions of section seventeen of the fifth article of the constitution of said State, except the proviso to the first subdivision, shall be null and void, and that the General Assembly of said State, by solemn public act, shall declare the assent of the State to the foregoing fundamental condition.

SEC. 2. *And be it further enacted*, That if the day fixed for the first meeting of the Legislature of either

of said States, by the constitution or ordinance thereof, shall have passed, or have so nearly arrived before the passage of this act, that there shall not be time for the Legislature to assemble at the period fixed, such Legislature shall convene at the end of twenty days from the time this act takes effect, unless the Governor-elect shall sooner convene the same.

Sec. 3. *And be it further enacted*, That the first section of this act shall take effect as to each State, except Georgia, when such State shall by its Legislature duly ratify article fourteen of the amendments to the Constitution of the United States, proposed by the Thirty-ninth Congress, and as to the State of Georgia, when it shall in addition give the assent of said State to the fundamental condition hereinbefore imposed upon the same; and thereupon the officers of each State, elected and qualified under the constitution thereof, shall be inaugurated without delay; but no person prohibited from holding office under the United States, or under any State, by section three of the proposed amendment to the Constitution of the United States, known as article fourteen, shall be deemed eligible to any office in either of said States, unless relieved from disability, as provided in said amendment; and it is hereby made the duty of the President, within ten days after receiving official information of the ratification of said amendment by the Legislature of either of said States, to issue a proclamation announcing that fact.

The preamble was then adopted, as follows :

Whereas, the people of North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida, have, in pursuance of the provisions of an act entitled "An act for the more efficient government of the rebel States," passed March 2, 1867, and the acts supplementary thereto, framed constitutions of State government which are republican, and have adopted said constitutions by large majorities of the votes cast at the elections held for the ratification or rejection of the same.

Mr. Williams, of Oregon, proposed to add to the amendment, adopted on his motion, the following words: "unless relieved from disability as provided in said amendment," meaning the fourteenth article, which was agreed to.

Mr. Buckalew, of Pennsylvania, said: "We have come to the end of this debate, and I understand that this bill is to be passed, to be sanctioned, at least by a vote of the Senate, and to be sent to the House of Representatives for its concurrence in the amendments which we have adopted. Now, what is this bill? A few words upon that, and I shall close. It is a bill to admit these States to a renewed representation. We have already admitted two of the original eleven engaged in the rebellion. Tennessee was admitted soon after the termination of the great struggle, and recently we have passed a bill for the renewal of representation to Arkansas. Six are now to be added, and I believe there are three with reference to which no action has yet been taken in Congress, but in regard to which action may be expected hereafter.

"What is this bill? It is to sanction a reorganization of the Southern States, or of a majority of them, upon two principles: first, that the entire adult negro population shall vote not only at the first election which shall give the new political institutions of the State their form, but in all subsequent elections so long as the constitution of the State remains un-

changed; and to render this principle permanent and to secure it against any change of public opinion, you incorporate in your law what you call 'fundamental conditions.' You are not content to exercise your powers for the present time alone. You now command the field of action. You hold a vote in the two Houses of Congress which renders you, so far as the enactment of laws in this Government is concerned, supreme. For the time being your will dictates law to the United States. But you are not satisfied with this. You propose to take from the men of future times the power and authority to change your work, at all events, in those States of the South which are concerned in your present legislation. You propose to reach out your hands, from these Halls in which you sit as the Representatives of the people and of the States, into the States of the South, and to stamp upon the constitutions of those States, upon their local frames of government, an impress of your will which shall remain unchangeable in all future time by any voluntary action of the political communities in which these constitutions are established. And why do you do this? You do this, sir, in order to secure to the colored adult men of the South, not the right of suffrage for the moment, nor as an experiment of their capacity in free government, but to secure it to them against the shifting and changing opinions of future times, against the experience of future times, against any possibility that it shall be narrowed and made to conform to the experience and necessities of those States as they may be developed hereafter. This is very extraordinary legislation, the like of it unknown at least in our own history, and I do not know that any example to warrant it is known in the history of any free State.

But what else do you attempt to secure by this and other bills and by prior laws? Apparently apprehensive that your new political bodies so established in the Southern States will receive direction, will be to a great extent controlled by the intelligent population that are resident there of your own race, you have proceeded from time to time to disfranchise them to a great extent, and now by this bill make firm and effectual that disfranchisement which is most proscriptive and intolerant. Such is the character of this measure considered in connection with the measures which have preceded it, and of which it is the culmination.

"Now, sir, can any one doubt your object? Perhaps you have not avowed it to yourselves. You may have shrunk back from the self-acknowledgment of the truth. But what is the truth? It is that to a great extent all this has been done and this crowning measure is to be passed, in order that you may retain that power in the Government of the United States which you now possess, in order that that which you have grasped by the consent of the people and under peculiar circumstances in our political

acts of Congress than any State among the Southern States."

The motion of Mr. Wilson was agreed to—yeas 22, nays 21.

YEAS—Messrs. Anthony, Chandler, Conness, Corbett, Ferry, Fowler, Harlan, Morrill of Maine, Morton, Nye, Pomeroy, Ramsey, Sherman, Stewart, Sumner, Thayer, Tipton, Van Winkle, Wade, Willey, Williams, and Wilson—22.

NAYS—Messrs. Bayard, Buckalew, Cole, Conkling, Davis, Doolittle, Edmunds, Fessenden, Frelinghuysen, Hendricks, Howard, Howe, Johnson, McCreery, Morgan, Morrill of Vermont, Patterson of Tennessee, Saulsbury, Trumbull, Vickers, and Yates—21.

ABSENT—Messrs. Cameron, Cattell, Cragin, Dixon, Drake, Grimes, Henderson, Norton, Patterson of New Hampshire, Ross, and Sprague—11.

On June 10th, Mr. Sherman, of Ohio, moved to amend the amendment reported by the committee, by striking out the following words:

And the State of Georgia shall only be entitled and admitted to representation upon this further fundamental condition; that the first and third subdivisions of section seventeen of the fifth article of the constitution of said State, except the proviso to the first subdivision, shall be null and void, and that the General Assembly of said State, by solemn public act, shall declare the assent of the State to the foregoing fundamental condition.

The amendment was rejected by the following vote:

YEAS—Messrs. Cameron, Ferry, Howe, Ramsey, Sherman, Thayer, Williams, and Wilson—8.

NAYS—Messrs. Anthony, Buckalew, Chandler, Cole, Conkling, Conness, Corbett, Cragin, Davis, Drake, Edmunds, Fessenden, Frelinghuysen, Harlan, Hendricks, Howard, Johnson, McCreery, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Patterson of New Hampshire, Patterson of Tennessee, Ross, Saulsbury, Sumner, Tipton, Trumbull, Van Winkle, Vickers, Wade, Willey, and Yates—35.

ABSENT—Messrs. Bayard, Cattell, Dixon, Doolittle, Fowler, Grimes, Henderson, Norton, Pomeroy, Sprague, and Stewart—11.

Mr. Williams, of Oregon, moved to amend the first section of the bill, by inserting the following:

That so much of the seventeenth section of the fifth article of the constitution of the State of Georgia as suspends the collection of debts contracted prior to the 1st day of June, 1865, shall be void as against all persons who were loyal during the late rebellion, and who, during that time, supported the Union.

This amendment was rejected.

Mr. Williams also moved to amend, by inserting the following in the third section:

And thereupon the officers of each State, duly elected and qualified under the constitution thereof, shall be inaugurated without delay; but no person prohibited from holding office under the United States, or under any State, by section three of the proposed amendment to the Constitution of the United States, known as article fourteen, shall be deemed eligible to any office in either of said States.

The first clause of the amendment, extending to the word "delay," was agreed to, as follows:

YEAS—Messrs. Cameron, Chandler, Conness, Corbett, Cragin, Drake, Edmunds, Howard, Morrill of Maine, Morrill of Vermont, Morton, Nye, Patterson of New Hampshire, Pomeroy, Ramsey, Stewart,

Sumner, Thayer, Tipton, Wade, Williams, Wilson, and Yates—28.

NAYS—Messrs. Bayard, Buckalew, Cole, Conkling, Davis, Fowler, Frelinghuysen, Harlan, Hendricks, McCreery, Morgan, Patterson of Tennessee, Ross, Saulsbury, Trumbull, Van Winkle, Vickers, and Willey—18.

ABSENT—Messrs. Anthony, Cattell, Dixon, Doolittle, Ferry, Fessenden, Grimes, Henderson, Howe, Johnson, Norton, Sherman, and Sprague—18.

The remainder was agreed to by the following vote:

YEAS—Messrs. Cameron, Chandler, Cole, Conness, Corbett, Cragin, Drake, Harlan, Howard, Morrill of Maine, Morrill of Vermont, Morton, Nye, Patterson of New Hampshire, Pomeroy, Ramsey, Stewart, Sumner, Thayer, Tipton, Van Winkle, Wade, Willey, Williams, Wilson, and Yates—26.

NAYS—Messrs. Bayard, Buckalew, Conkling, Davis, Edmunds, Fowler, Frelinghuysen, Hendricks, McCreery, Morgan, Patterson of Tennessee, Ross, Saulsbury, Trumbull, and Vickers—15.

ABSENT—Messrs. Anthony, Cattell, Dixon, Doolittle, Ferry, Fessenden, Grimes, Henderson, Howe, Johnson, Norton, Sherman, and Sprague—18.

Mr. Trumbull, of Illinois, moved to amend, by striking out "Alabama," which was disagreed to by the following vote:

YEAS—Messrs. Bayard, Buckalew, Conkling, Davis, Edmunds, Frelinghuysen, Hendricks, Howe, McCreery, Morgan, Morrill of Vermont, Patterson of Tennessee, Saulsbury, Trumbull, Vickers, and Yates—16.

NAYS—Messrs. Cameron, Chandler, Conness, Corbett, Cragin, Drake, Ferry, Harlan, Morrill of Maine, Morton, Nye, Pomeroy, Ramsey, Ross, Sherman, Stewart, Sumner, Thayer, Tipton, Van Winkle, Wade, Willey, Williams, and Wilson—24.

ABSENT—Messrs. Anthony, Cattell, Cole, Dixon, Doolittle, Fessenden, Fowler, Grimes, Henderson, Howard, Johnson, Norton, Patterson of New Hampshire, and Sprague—14.

The amendment of the Committee of the Whole was now concurred in. This was, to strike out the whole of the House bill after the enacting clause, and insert the following:

That each of the States of North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida, shall be entitled and admitted to representation in Congress as a State of the Union when the Legislatures of such States shall have duly ratified the amendment to the Constitution of the United States proposed by the Thirty-ninth Congress, and known as article fourteen, upon the following fundamental condition: that the constitution of neither of said States shall ever be so amended or changed as to deprive any citizen, or class of citizens, of the United States of the right to vote in said State, who are entitled to vote by the constitution thereof, herein recognized, except as a punishment for such crimes as are now felonies at common law, whereof they shall have been duly convicted under laws equally applicable to all the inhabitants of said State: *Provided*, That any alteration of said constitution may be made with regard to the time and place of residence of voters. And the State of Georgia shall only be entitled and admitted to representation upon this further fundamental condition: that the first and third subdivisions of section seventeen of the fifth article of the constitution of said State, except the proviso to the first subdivision, shall be null and void, and that the General Assembly of said State, by solemn public act, shall declare the assent of the State to the foregoing fundamental condition.

SEC. 2. And be it further enacted, That if the day fixed for the first meeting of the Legislature of either

of said States, by the constitution or ordinance thereof, shall have passed, or have so nearly arrived before the passage of this act, that there shall not be time for the Legislature to assemble at the period fixed, such Legislature shall convene at the end of twenty days from the time this act takes effect, unless the Governor-elect shall sooner convene the same.

Sec. 3. *And be it further enacted*, That the first section of this act shall take effect as to each State, except Georgia, when such State shall by its Legislature duly ratify article fourteen of the amendments to the Constitution of the United States, proposed by the Thirty-ninth Congress, and as to the State of Georgia, when it shall in addition give the assent of said State to the fundamental condition hereinbefore imposed upon the same; and thereupon the officers of each State, elected and qualified under the constitution thereof, shall be inaugurated without delay; but no person prohibited from holding office under the United States, or under any State, by section three of the proposed amendment to the Constitution of the United States, known as article fourteen, shall be deemed eligible to any office in either of said States, unless relieved from disability, as provided in said amendment; and it is hereby made the duty of the President, within ten days after receiving official information of the ratification of said amendment by the Legislature of either of said States, to issue a proclamation announcing that fact.

The preamble was then adopted, as follows :

Whereas, the people of North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida, have, in pursuance of the provisions of an act entitled "An act for the more efficient government of the rebel States," passed March 2, 1867, and the acts supplementary thereto, framed constitutions of State government which are republican, and have adopted said constitutions by large majorities of the votes cast at the elections held for the ratification or rejection of the same.

Mr. Williams, of Oregon, proposed to add to the amendment, adopted on his motion, the following words: "unless relieved from disability as provided in said amendment," meaning the fourteenth article, which was agreed to.

Mr. Buckalew, of Pennsylvania, said: "We have come to the end of this debate, and I understand that this bill is to be passed, to be sanctioned, at least by a vote of the Senate, and to be sent to the House of Representatives for its concurrence in the amendments which we have adopted. Now, what is this bill? A few words upon that, and I shall close. It is a bill to admit these States to a renewed representation. We have already admitted two of the original eleven engaged in the rebellion. Tennessee was admitted soon after the termination of the great struggle, and recently we have passed a bill for the renewal of representation to Arkansas. Six are now to be added, and I believe there are three with reference to which no action has yet been taken in Congress, but in regard to which action may be expected hereafter.

"What is this bill? It is to sanction a reorganization of the Southern States, or of a majority of them, upon two principles: first, that the entire adult negro population shall vote not only at the first election which shall give the new political institutions of the State their form, but in all subsequent elections so long as the constitution of the State remains un-

changed; and to render this principle permanent and to secure it against any change of public opinion, you incorporate in your law what you call 'fundamental conditions.' You are not content to exercise your powers for the present time alone. You now command the field of action. You hold a vote in the two Houses of Congress which renders you, so far as the enactment of laws in this Government is concerned, supreme. For the time being your will dictates law to the United States. But you are not satisfied with this. You propose to take from the men of future times the power and authority to change your work, at all events, in those States of the South which are concerned in your present legislation. You propose to reach out your hands, from these Halls in which you sit as the Representatives of the people and of the States, into the States of the South, and to stamp upon the constitutions of those States, upon their local frames of government, an impress of your will which shall remain unchangeable in all future time by any voluntary action of the political communities in which these constitutions are established. And why do you do this? You do this, sir, in order to secure to the colored adult men of the South, not the right of suffrage for the moment, nor as an experiment of their capacity in free government, but to secure it to them against the shifting and changing opinions of future times, against the experience of future times, against any possibility that it shall be narrowed and made to conform to the experience and necessities of those States as they may be developed hereafter. This is very extraordinary legislation, the like of it unknown at least in our own history, and I do not know that any example to warrant it is known in the history of any free State.

But what else do you attempt to secure by this and other bills and by prior laws? Apparently apprehensive that your new political bodies so established in the Southern States will receive direction, will be to a great extent controlled by the intelligent population that are resident there of your own race, you have proceeded from time to time to disfranchise them to a great extent, and now by this bill make firm and effectual that disfranchisement which is most proscriptive and intolerant. Such is the character of this measure considered in connection with the measures which have preceded it, and of which it is the culmination.

"Now, sir, can any one doubt your object? Perhaps you have not avowed it to yourselves. You may have shrunk back from the self-acknowledgment of the truth. But what is the truth? It is that to a great extent all this has been done and this crowning measure is to be passed, in order that you may retain that power in the Government of the United States which you now possess, in order that that which you have grasped by the consent of the people and under peculiar circumstances in our political

history, you shall hold firm in the future; that your power shall not be torn from you by public disapprobation; that, by majority votes in those States which you represent, you shall not be removed from that position of authority and of dominating influence which you hold in the Government of the United States. Is not that your purpose? Does it not inspire your conduct? Does it not lie behind all these your acts and speak them into being? Does it not infuse into your conduct that energy and zeal by which it is characterized? Does it not touch the tongue of the Senator from Massachusetts as with a coal of fire? Does it not keep us here at an untimely hour of the night to press through its last stages this bill?

"I hold, and at least one-half of the population of the States represented in Congress hold, that your body of reconstruction laws are invalid; that they are without warrant of authority in the fundamental law. You have taken from the Supreme Court the power to pass judgment upon them. You have withdrawn a case which would have elicited the opinion of that court suddenly from its jurisdiction, and prevented a decision upon the validity of your laws.

"Mr. President, what are we to expect in the future? Will this work of yours stand? You say yourselves it will not stand investigation in court and a judicial judgment. You have said so by your conduct. You know that at least half of the people represented in Congress are firmly and strongly against it, for they have said so within the last twelve months in most emphatic language. You cannot question the fact. How is your work to stand in the future, the work of which this bill is supposed to be the guarantee of security and endurance?"

The bill was passed by the following vote:

YEAS—Messrs. Anthony, Cameron, Chandler, Cole, Conkling, Conness, Cragin, Drake, Ferry, Frelinghuysen, Harlan, Howard, Howe, Morgan, Morrill of Maine, Morrill of Vermont, Nye, Patterson of New Hampshire, Pomeroy, Ramsey, Ross, Sherman, Stewart, Sumner, Thayer, Tipton, Trumbull, Wade, Williams, Wilson, and Yates—81.

NAYS—Messrs. Bayard, Buckalew, McCreery, Patterson of Tennessee, and Vickers—5.

ABSENT—Messrs. Cattell, Corbitt, Davis, Dixon, Doolittle, Edmunds, Fessenden, Fowler, Grimes, Henderson, Hendricks, Johnson, Morton, Norton, Saulsbury, Sprague, Van Winkle, and Willey—18.

The title of the bill was amended to read, "A bill to admit the States of North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida, to representation in Congress."

In the House, on June 12th, the Committee on Reconstruction reported in favor of concurring in the amendments of the Senate. The recommendation was agreed to, by the following vote:

YEAS—Messrs. Allison, Ames, Delos R. Ashley, James M. Ashley, Bailey, Banks, Beaman, Beatty, Benjamin, Benton, Bingham, Blaine, Blair, Bromwell, Broomall, Buckland, Butler, Churchill, Reader W. Clarke, Sidney Clarke, Cobb, Coborn, Cook, Cornell, Covode, Cullom, Dawes, Delano, Dixon, Dodge,

Donnelly, Driggs, Eckley, Eggleston, Ela, Eliot, Ferriss, Ferry, Fields, Garfield, Gravely, Griswold, Halsey, Harding, Hawkins, Higby, Hopkins, Chester D. Hubbard, Hulburd, Ingersoll, Judd, Julian, Kelsey, Ketcham, Kitchen, Koontz, Laflin, Lincoln, Loan, Logan, Loughridge, Lynch, Mallory, Marvin, Maynard, McClurg, Mercur, Miller, Moore, Morrell, Mullins, Myers, Newcomb, O'Neill, Paine, Peters, Pike, Pile, Plants, Polsley, Pomeroy, Price, Raum, Robertson, Sawyer, Schenck, Scofield, Selye, Shellabarger, Spalding, Starkweather, Aaron F. Stevens, Stewart, Stokes, Taffe, Taylor, Thomas, John Trimble, Trowbridge, Twichell, Upson, Van Aernam, Robert T. Van Horn, Ward, Elihu B. Washburne, Henry D. Washburn, William B. Washburn, Welker, William Williams, John T. Wilson, and Windom—111.

NAYS—Messrs. Archer, Artell, Barnes, Boyer, Brooks, Burr, Eldridge, Getz, Glossbrenner, Golladay, Grover, Holman, Hotchkiss, Marshall, McCormick, McCullough, Morrissey, Niblack, Nicholson, Phelps, Randall, Robinson, Stone, Taber, Lawrence S. Trimble, Van Auken, Van Trump, and Woodward—28.

NOT VOTING—Messrs. Adams, Anderson, Arnell, Baker, Baldwin, Barnum, Beck, Boutwell, Cake, Cary, Chanler, Farnsworth, Finney, Fox, Haight, Hill, Hooper, Asahel W. Hubbard, Richard D. Hubbard, Humphrey, Hunter, Jenckes, Johnson, Jones, Kelley, Kerr, Knott, George V. Lawrence, William Lawrence, McCarthy, Moorhead, Mungen, Nunn, Orth, Perham, Poland, Pruyn, Ross, Shanks, Sitgreaves, Smith, Thaddeus Stevens, Burt Van Horn, Van Wyck, Cadwalader C. Washburn, Thomas Williams, James F. Wilson, Stephen F. Wilson, Wood, and Woodbridge—50.

In the House, on March 18th, Mr. Broomall, of Pennsylvania, moved to reconsider the vote referring to the Judiciary Committee the bill to guarantee to the several States of the Union a republican form of government. The bill stated that the form of government of several of the States of the Union was not republican in this particular: that by the constitutions and laws of such States political rights were made to depend upon parentage and race, and were hereditary in certain families, to the exclusion of others equally citizens of the United States; and that it was the constitutional duty of the United States to guarantee to every State a republican form of government.

The first section provided that all provisions and enactments in state constitutions and laws which make distinctions in political or civil rights among citizens of the United States, or deny such rights to any such citizens on account of parentage, race, lineage, or color, shall be, and are hereby declared to be, void and of no effect.

The second section provided that if any person should prevent any qualified citizen of the United States from exercising the right of suffrage at any election in any State, under the pretence that such citizen was disqualified by the constitution and laws of such State on account of his parentage, race, lineage, or color, such person should be deemed guilty of misdemeanor, and, on conviction thereof in the proper court, should be sentenced to pay a fine, not exceeding \$5,000, or to undergo imprisonment, not exceeding five years, or both, at the discretion of the court.

Mr. Broomall, of Pennsylvania, said: "The bill under consideration sets out that in certain States of the Union the elective franchise is limited to certain families or races of men, to the exclusion of other families and races equally composed of citizens of the United States. This fact will not be denied, and the only question to be decided is, whether, in this particular, the form of government in those States is republican. If my definition and argument be correct, that question is of easy solution. For the families and races excluded there is neither direct nor indirect representation. In them no sovereignty exists. The government, therefore, is that of a class, and not of the entire citizens. It has all the characteristics of an aristocracy.

"It makes no difference in its favor that the ruling class constitute the majority of the citizens. On the other hand, the case of the class excluded is the harder from the fact that it is the minority. If the body of the citizens were excluded, they might by combinations force a kind of justice from their rulers. But, the condition of a disfranchised minority is hopeless indeed. Even the resource of revolution is denied to them.

"If the majority may lawfully disfranchise the minority on account of race or lineage, then may the citizens of South Carolina of African descent limit the elective franchise to themselves to the exclusion of their white fellow-citizens. If in the form of government now being constituted there such a limitation should be placed, who in this Hall or in the country would maintain that the government is republican? Not a single vote could be obtained in either House of Congress for the admission of a State with such a constitution. Now, if it is not republican in South Carolina, where black men are in the majority, to limit the suffrage to black men, with what consistency shall we maintain that it is republican in Ohio, where white men are in the majority, to limit the suffrage to white men? Let us beware how we advocate the doctrine that the minority may be lawfully disfranchised on account of lineage, lest that doctrine be turned against ourselves, and lest for very shame we be obliged to submit.

"If it be said that the case I am apprehending cannot arise, that such a constitution presented by South Carolina and persisted in would insure and perpetuate her exclusion, I reply that the danger is not to be apprehended in that shape. South Carolina will present no such constitution; she will first secure her admission. But State constitutions are subject to change by a majority of the citizens, under certain forms and regulations. The spirit of rivalry existing between the blacks and Democrats, the war of races which forms so prominent a part of the political creed of our opponents, is very likely, if persisted in, to produce its fruits of retaliation. Thus far the blacks, where in the majority, have behaved with a wonderful degree of forbearance; but who shall

answer for its continuance under continual provocation? It will be from the exercise of virtue more than human, if the black majority of South Carolina do not imitate the white majority elsewhere, and after admission do not change the constitution by inserting the word 'black,' as a qualification for voting, to correspond with the word 'white' in the constitutions of other States. We have no right to expect that they will be better than we are, after all their degradation, after all the oppression they have undergone at our hands. I should be ashamed of the selfishness of my race if I did not believe such an event very likely to occur. Let us be forewarned!

"If it be objected to the bill that it proposes to regulate the right of suffrage in the States by congressional action, and that that entire subject is left by the terms of the Constitution to the States themselves, I answer, nothing is left to the States themselves by the terms of the Constitution except subject to the right and duty of the United States to guarantee them a republican form of government. It follows, then, that wherever the want of a republican form appears there we must legislate. If a State should make her offices hereditary, we would be obliged to legislate upon the term and tenure of State offices. If she should shut her courts against every man who could not trace his descent from Adam, or some other ancient celebrity, we would be obliged to legislate upon the duties of her judges and the rights of suitors in her courts. In like manner if she limit the right of suffrage to a favored part of her citizens and their lineal heirs forever, we can do nothing else than legislate upon the question of State suffrage. I repeat, no power whatever is reserved to the States except subject to the right and duty of the United States to guarantee them a republican form of government.

"The cause of universal suffrage is the cause of the great laboring masses of the community. Wherever suffrage is restricted the restriction falls upon them. Nowhere are the poor and the ignorant gifted with political rights and the wealthy and the learned denied them."

Mr. Woodward, of Pennsylvania, said: "My objection, sir, to this bill is that it proposes a subversion of the fundamental law of every State that does not tolerate negro suffrage. As Pennsylvania, by her constitution, expressly excludes negro suffrage, this bill, brought forward by a Representative of Pennsylvania, and, for aught I know, a son of Pennsylvania, proposes to subvert the constitution of Pennsylvania. Such is the effect of the bill; and the only reason I fear its passage is, that it is supported by precisely the line of argument which I have heard urged in favor of other measures which have been passed.

"The bill begins by reciting what I must say is not true. In using this language I, of course, mean nothing offensive. I say the statement of the bill is an historical mistake.

"The State of Pennsylvania has had a republican form of government from the year 1776, during all of which time it has excluded negro suffrage, and during a part of which time it had negro slavery, because it did not formally abolish slavery till 1790; and it had slavery long after the act of abolition was passed, for it was a gradual abolition. That was a republican form of government.

"And now, sir, I will tell the gentleman another legal historical fact, which is worthy of his attention, that, from the very formation of the confederacy after the Declaration of Independence, the right of suffrage was the conceded right of the States, over which the Articles of Confederation and the Constitution of the United States had no power whatever. I say he will find it written in the chronicles, when he comes to read them aright, that from the Declaration of Independence down to the date of this bill, suffrage, whether white or black, has been a State power with which the Federal Government has nothing under the heavens to do.

"His bill proposes that the Federal Government shall overturn the suffrage in the States and force negro suffrage upon them. The Federal Government has no suffrage to bestow on anybody, black or white. It never had, and it never will have, unless you revolutionize the Government and make it something the fathers did not make it. It never had the control of suffrage, and yet my innocent young student does not seem to be aware of it. He proposes that the Federal Government shall go into the States and dictate who shall be voters. It must have been understood by my friend that he sits in this House by virtue of State suffrage, regulated, conferred, and protected by the State of Pennsylvania, and not by the General Government at all. There is not a man among you who does not sit here by suffrage regulated by the States, and that, too, provided for in the Constitution of the United States. The Constitution declares:

The House of Representatives shall be composed of members chosen every second year by the people of the several States; and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.

"Yet what does their Representative propose by this bill? After reciting that we have no republican government in Pennsylvania, he then goes on in the second section as follows:

SEC. 2. *And be it further enacted*, That if any person shall prevent any qualified citizen of the United States from exercising the right of suffrage at any election in any State under the pretence that such citizen is disqualified by the constitution and laws of such State on account of his parentage, race, lineage, or color, such person shall be deemed guilty of a misdemeanor, and, on conviction thereof in the proper court, shall be sentenced to pay a fine not exceeding \$5,000, or to undergo imprisonment not exceeding five years, or both, at the discretion of the court.

"That is a provision which is proposed to be

enacted by the Federal Government, which never had any suffrage to confer, by a Representative who sits in this House at this moment by virtue of State suffrage, and who, but for that State suffrage, would not have been here, perhaps, to make it. I have heard some strange things since I have had the honor to sit here; but I declare to you I never heard any thing more strange than this. We are told that it is all a mistake to suppose we have been living under a republican government; that the States had the right to regulate suffrage, that you had the right to send members of Congress here to enlighten the nation. We are told that it is all a mistake, and any man hereafter who shall say otherwise is to be subjected to the penalty of \$5,000.

"Mr. Speaker, I maintain that suffrage, be it universal or limited, is a State affair, and not the affair of the Federal Government."

Mr. Stevens, of Pennsylvania, said: "This, Mr. Speaker, is a grave question of argument; it is not a question for demagogues. The world is going on in its progress of human government, and is every day advancing in the great science which is to make man happy or make him miserable. We are either to relapse into a state of barbarism where that infamous doctrine that one man can own another is to be reestablished, or we are to establish the doctrine where every man governs himself and has rights which are inalienable. Among those inalienable rights, I start by saying, is the right of universal suffrage, which no man will dare, after this generation shall have passed away, to dispute. We are not now merely expounding a government; we are building one. We are making a nation. We are correcting the injustice, the errors, the follies which were heaped upon other times by necessity. From the dark ages up, mankind have been ground down by despots and by tyrants whom they could not in any way control. They were unable to form governments such as ought to control the human race and enable us to govern ourselves. Europe, Asia, every country in the world, till within the last century, has been thus held in chains which they could not break, in chains and withes which the world could not snap in its then condition. But a period arrived when the Almighty Governor of the universe placed within the power of our fathers both the knowledge and finally the power to break those chains and give the world an opportunity, if it would, to be free. When the dawn of the Revolution came it broke upon this world as a new, a mighty, a glorious revelation. That which never before had opened the eyes of mankind, and given them a clear insight into the rights of the human race, opened the eyes of our great and glorious fathers and taught them precisely what we have to carry out, and when we have carried it out human government will become perfect and tyrants everywhere must tremble, and demagogues who talk to us about differ-

ence of races must be ashamed and skulk from the face of the world.

"Now, what was that great right that they discovered? It was that 'all men are born equal.' The black man who brushes the boots of my respected friend from the Luzerne district (Mr. Woodward) is, according to that doctrine, as much entitled to every right and every privilege of a free man and a citizen as that gentleman or myself. And whenever he, or I, or any one else, undertakes to make a distinction between the black race and our own, because of the color of the skin or the formation of the body, he forgets his God, and his God will forget him.

"In other words, we now propose to go to universal and impartial suffrage as the only foundation upon which the Government can stand. You must build all your science of government upon that foundation. When you attempt to depart from it you cease to be men and become tyrants, deserving the execration of the human race. There is no other way than by universal suffrage that you and I and every man can protect himself against the injustice and inhumanity and wrongs that would otherwise be inflicted upon us.

"We have reached a point in the history of this nation when we can adopt that great and glorious principle. We have just builded a nation in whose institutions we can incorporate that principle. And my effort shall be to prove to this House, not simply that we have just reached that point, but that we have reached it by means of the Constitution, not by violating it, although our forefathers, who proclaimed that principle and would have adopted it, could not do so without violating the compact which they themselves had made, and which would have destroyed the great Government they were then building and were bound to defend. We have reached that period which our fathers did not reach and could not reach, when, in speaking of universal suffrage, we must speak of it not as a boon, but as an inalienable right, which no man dare take away, and which no man can rightfully surrender. His God has forbidden it; the science of government has forbidden it.

"Henceforth let us understand that universal suffrage, operating in favor of every man who is to be governed by the votes cast, is one of those doctrines planted deep as the foundations upon which our fathers laid the immortal work of universal liberty, which work of theirs will last just so long as that immortal doctrine shall last, and no longer.

"Whatever construction shall be given to the Constitution in its present condition by this Congress and those nearest, the great events which have modified it will be likely to be accepted through future time as its true meaning. It is important, therefore, that the most beneficent interpretation should be given to it, and that it should be most liberally construed, so as to secure all human rights in the changed

condition of our country and of that instrument which, while it, as to the old States, may not be radically changed, is not so inflexible as to be incapable of accommodating itself to the changing necessities of humanity.

"Before the Constitution was amended I could not agree with some of my learned friends that Congress could intermeddle with State laws relative to the elective franchise in the United States. The circumstance of slavery seemed, while it was submitted to, to prevent it. After the amendment abolishing slavery I still doubted, and proposed a constitutional remedy on the 5th of December, 1865, in the following words:

All national laws shall be equally applicable to every citizen, and no discrimination shall be made on account of race and color.

"Since the adoption of the fourteenth amendment, however, I have no doubt of our full power to regulate the elective franchise, so far as it regards the whole nation, in every State of the Union, which, when tried, I hope, will be so formed as to be beneficial to the nation, just to every citizen, and carry out the great designs of the framers of the Government, according to their views expressed in the Declaration of Independence.

"It cannot fail to be beneficial and convenient, when we consider the trouble and inconvenience which a citizen of one State encounters when he travels temporarily into another. Instead of being a brother at home, he is now an alien in his native land. While he participates in all the burdens and anxieties of government, he is forbidden, if a non-resident, to take part in selecting the magistrate who is to rule his destinies for the next four years.

"In this there is no principle of republican justice. The Constitution of 1789 did not carry out the principles of government which were intended by the fathers when in 1776 they laid the foundations of the Government on which this nation was built. Then they had been inspired with such a light from on high as never man was inspired with before in the great work of providing freedom for the human race through a government in which no oppression could find a resting-place.

"They contemplated the erection of a vast empire over the whole continent, which in its national character should be governed by laws of a supreme, unvarying character. While municipal institutions with self-control might be granted for convenience, it was never intended that one half of this nation should be governed by one set of laws and the other half by another and conflicting set on the same subject.

"The laws which were then intended to be universal must now be made universal. The principles which were intended to govern the whole American nationality must now be made to cover and control the whole national action throughout this grand empire. Towns, corporations, and municipalities may be allowed

their separate organizations not inconsistent therewith, but must not incorporate any principles in conflict with those great rights, privileges, and immunities. What are those rights, privileges, and immunities? Without excluding others, three are specifically enumerated—life, liberty, and the pursuit of happiness. These are universal and inalienable. It follows that every thing necessary for their establishment and defence is within those rights. You grant a lot or easement in the midst of your estate; you thereby grant the right of way to it by ingress and egress. Disarm a community and you rob them of the means of defending life. Take away their weapons of defence, and you take away the inalienable right of defending liberty. This brings us now directly to the argument by which we prove that the elective franchise is a right of the Declaration, and not merely a privilege, and is one of the rights and immunities pronounced by that instrument to be 'inalienable.'

"If, as our fathers declared, 'all just government is derived from the assent of the governed;' if in federal republics that assent can be ascertained and established only through the ballot, it follows, that to take away that means of communication is to take away from the citizen his great weapon of defence and reduce him to helpless bondage. It deprives him of an inalienable right. This clearly proves that the elective franchise ranks with 'life' and 'liberty' in its sacred, inalienable character. But, while the Declaration clearly proves what the intention then was, the action of the Convention in framing the Constitution of the United States, it seems to me, bartered away for the time being some of those inalienable rights, and, instigated by the hellish institution of slavery, suspended one of the muniments of liberty. Having thus shown that the elective franchise is one of the inalienable rights of man, without which his liberty cannot be defended, and that it was suspended by the arbitrary Constitution of 1789, let us see if that suspension has been removed, so as to leave our hands unrestrained in restoring its full vigor while still acting under the Constitution. That right appertains to every citizen. But while this suspension existed the natural love of despotism induced communities to hold that each State might fix the qualifications, rights, and deprivations of its own citizens.

"The fourteenth amendment, now so happily adopted, settles the whole question and places every American citizen on a perfect equality, so far as merely national rights and questions are concerned."

Mr. Spalding, of Ohio, said: "Mr. Speaker, I do not wish to occupy much of the time of the House; but I desire to remark that only last October I was called upon as a citizen of Ohio to vote upon a proposition to amend the constitution of that State by inserting a provision giving the right of suffrage to the free

black man equally with the white man. I not only voted cheerfully for that proposition, but I used all my influence with my fellow-citizens in my section of the State to induce them to ingraft that provision upon our State constitution. It was unsuccessful. We were in advance of the sentiment of our people; they voted down the proposition by forty thousand majority. Now, I would like to see the member of Congress from the State of Ohio who would have the boldness to vote for the passage of this bill, which, in my judgment, cuts directly across the Constitution of the United States, and, in fact, derides the action of the people of my State in refusing to insert in their constitution of State government a provision granting this general right of suffrage to the blacks as well as the whites.

"Sir, I believe the day may come when our Constitution, the great charter of our liberties, shall be so amended that all free people may vote. God hasten the day when that right may be so extended! But, sir, so long as the Constitution remains as it is, I will sooner suffer my right arm to drop from its socket than vote for any such bill as that now before us. And, in saying this, I am bold to affirm that I speak the sentiments of a large majority of my colleagues on this floor, irrespective of party. I should regard the passage of this bill at this hour as the death-knell of our hopes as a political party in the approaching Presidential canvass."

Mr. Kelley, of Pennsylvania, said: "Mr. Speaker, I have no hope that this bill will be adopted by this Congress. I will gladly give it my vote when brought to that test, and in doing so will, in my judgment, act strictly within the letter and intent of the Constitution, and but exercise a power which the framers of the Constitution and the members of the State conventions that accepted it knew they had embodied in it.

"The gentleman from Ohio (Mr. Spalding) hastened to announce, as did my colleague from the Washington district (Mr. Lawrence, of Pennsylvania), that the question of colored suffrage is not a party question. I admit and deplore the fact that it is not, for the Republican party is founded upon the theory of the equality of man before the law, and the fact that the consent of the governed is the only legitimate basis for government. Those are accepted party doctrines, and I take it for granted that those members of the Republican party who deny the colored citizens' right to vote, like the leaders of the Democratic party, deny the humanity and the immortality of the great mass of mankind, for the majority of the human race are of those shades of complexion and that character of blood to which, while asserting the equal rights of man, they deny equality before the laws.

"I regret that the Republican party has not risen to the height of applying its principles as a test to all questions, and carrying them into

execution to their last result. There is no difference between my colleague and myself as to its halting on the question of suffrage."

Mr. Kerr, of Indiana, said: "I hold that the bill now under consideration cannot have any shadow of legal authorization under the Constitution of the United States as it stands to-day. I agree with the distinguished gentleman from Ohio (Mr. Spalding), that it runs directly across the Constitution. But it is the fixed and cherished policy of the majority in this House to change the Federal Constitution. It is their deliberate purpose, to-morrow, or next week, or a month hence, or as soon as they can, to make the Federal Constitution a different instrument from what it now is. And then, under the somewhat latitudinarian expressions contained in the proposed fourteenth article of amendments to the Constitution, not only will this bill, but almost every other kind that the party majority here can desire, be introduced into this House and enacted into a law."

No decisive action was taken on this bill, at this session, by either House.

In the Senate, on December 4th, Mr. Trumbull, of Illinois, from the Judiciary Committee, reported a bill declaring what shall constitute a quorum of the Supreme Court, and asked for its present consideration.

The bill was read twice and considered as in Committee of the Whole, by unanimous consent. It provided that any number of the justices of the Supreme Court of the United States, not less than five, and being a majority of the court, shall constitute a quorum.

Mr. Trumbull said: "I will state the reason for the bill. The court formerly consisted of ten members, and at that time the law required six to constitute a quorum. As the law now stands the court is to be reduced to seven, as vacancies occur; it is already reduced to eight; and the justices of the court, I am informed, find a difficulty in making up the quorum of six; and it will be still more difficult when there are but seven on the bench. One or two of the judges at this time are unwell, and of the whole number, eight, it requires six to constitute a quorum. This bill provides that five shall constitute a quorum, there being now but eight judges, and that it shall also require that number even when the court is reduced to seven."

The bill was reported to the Senate without amendment.

Mr. Johnson, of Maryland, said: "It is very desirable it should pass. The court was very near being without a quorum to-day, and the probability is, in the present condition of things, that it may be often without a quorum during the session."

The bill was ordered to be engrossed for a third reading; was read the third time, and passed.

In the House, on January 18th, Mr. Wilson,

of Iowa, from the Committee on the Judiciary, reported back the Senate bill to constitute a quorum in the Supreme Court, with an amendment, as follows:

Sec. 2. *And be it further enacted*, That no cause pending before the Supreme Court of the United States, which involves the action or effect of any law of the United States, shall be decided adversely to the validity of such law without the concurrence of two-thirds of all the members of said court in the decision upon the several points in which said law or any part thereof may be deemed invalid.

Mr. Williams, of Pennsylvania, offered the following as a substitute for the amendment reported by the committee:

That in all cases of writs of error from and appeals to the Supreme Court of the United States, where is drawn in question the validity of a statute of or an authority exercised by the United States, or the construction of any clause of the Constitution of the United States, or the validity of a statute of or an authority exercised under any State, on the ground of repugnance to the Constitution or laws of the United States, the hearing shall be had only before a full bench of the judges of said court, and no judgment shall be rendered or decision made against the validity of any statute or of any authority exercised by the United States, except with the concurrence of all the judges of said court.

He said: "The amendment which I offer requires unanimity on the part of the Supreme Court. The amendment of the committee stops at two-thirds.

"My own judgment is that there is no reason that will apply, no argument that can be offered in favor of the amendment of the committee, which does not apply with equal force to the amendment submitted by myself. Still, I was not prepared to meet this question now. I did not feel that the bill itself, as prepared by myself, was sufficient in its details to meet the exigencies of the case. There is nothing in it to provide for the contingencies that may arise in the decision of causes in the circuit court. It wants further arrangement. It wants to be perfected. It wants full consideration. If I may be allowed to say it, this is a big question. I do not think that the passage of the bill can be facilitated by forcing it through here. Gentlemen seem to be of the opinion that delay would not answer. My opinion is different. I do not think it will pass any sooner by being forced through here to-day or to-morrow. It seems to me that, if it is well argued here, the principle might be so well vindicated as to satisfy, perhaps, the other branch of the Legislature.

"But there is an apprehension that the country will suffer by any delay. It is said that there is a case now depending in the Supreme Court of the United States upon which this question may be ruled to-day or to-morrow. Suppose such be the fact—I do not know that there is any such case—but suppose that such be the fact, that such a case is now depending there, and a decision is made by the court, what harm can it effect? Instead of harm, I think it will do good, because it will awaken

both Houses of Congress to the necessity of some such provision as this, intended, as it is, to defend the legislative power, which is the true sovereign power of the nation. Suppose the Supreme Court do make the decision apprehended, what will be the result? It will be the law in that individual case and no more. And a bill passed by the two Houses, upon full consideration, well matured as it ought to be, and which I take it this is not, can be enacted in time to prevent any further mischief to the country, if any mischief can be inflicted now by a decision of that sort."

Mr. Pruyn, of New York, said: "We have here to-day propositions of a most extraordinary character. First, we have had a proposition to strip ten States of every remaining evidence of their sovereignty, and the Executive of his constitutional power; and now we are startled by another measure calculated virtually to rob the Supreme Court of the United States of the authority which has given it influence, dignity, and strength before the country and before the world, and which has been conceded to that tribunal from the inauguration of the Government to the present time; and this measure is proposed, as the gentleman from Pennsylvania (Mr. Williams) has admitted, in view of the fact that that court may possibly make a decision which will come in conflict with the views and opinions of a majority of the members of this House. I am sure that this open, bold, daring avowal will strike the country with surprise; and I am glad to find that even the gentleman from Pennsylvania falters when he approaches this point, and wishes to have the measure considered with more care and more deliberation than the majority of this House seem disposed to give to it. I cordially agree with him, if any thing is to be done, if any outrage of this kind is to be perpetrated, it should be done at least with that regard to decency of form and time and action which will give its authors at least some pretence for inflicting it upon the country; and I trust, sir, without entering into any extended debate in reference to this matter, because it has come upon me most unexpectedly, that the suggestion of the gentleman from Pennsylvania, (Mr. Williams) to postpone this discussion to a future time, will receive the sanction of the House."

Mr. Spalding, of Ohio, said: "The question with me is, is action of this sort on the part of Congress by itself constitutional? That is, have we a right under the Constitution to provide that, in adjudicating upon constitutional questions, two-thirds of the Supreme Court shall unite in their opinion before an act shall be pronounced unconstitutional? If we have not the constitutional power thus to legislate, our action will be futile, because this same tribunal will scan it closely and pass upon it, and they may pronounce it unconstitutional. Even though it has the concurrence of both branches of Congress and the approval

of the President, the court can still declare it unconstitutional.

"Now, Mr. Speaker, I do not propose to take up much time in discussing this question; but I say that, if I were qualified for a seat upon the supreme bench of the United States, and had by any possibility arrived at that honor, nothing would gratify me more than the passage by Congress of the measure that is here introduced to-day by the chairman of the Judiciary Committee. I do not believe, now, at this moment, that any judge of that high tribunal would object to a requisition on the part of Congress that, in order to declare a act of Congress unconstitutional, it shall require two-thirds of their number to pass upon the question. Why, it relieves them from very great responsibilities. It makes the decision more satisfactory to themselves and far more satisfactory to those whom the decision affects. It is not to be made by a single voice when the court consists of seven, three on one side and three on the other, and one man turns the scale. But it requires the united opinion of two-thirds of all the members of the Supreme Court to pronounce an act of Congress unconstitutional.

"Now, sir, I object to the amendment which requires that every judge shall assent to the decision, because I think that is requiring too much. It will not do to assume that the bench of judges of our country are perfect, any more than that the Senate and the House of Representatives of Congress are perfect. I grant you that there is less likelihood of their giving way to passion and caprice, because they are selected for their wisdom and experience and supposed stability."

Mr. Wilson, of Iowa, moved to amend the amendment of the committee by adding thereto the following:

Provided, however, That if any circuit or district court of the United States shall adjudge any act of Congress to be unconstitutional or invalid, the judgment, before any further proceedings shall be had upon it, shall be certified up to the Supreme Court of the United States and shall be considered therein; and, if, upon the consideration thereof, two-thirds of all the members of the Supreme Court shall not affirm said judgment below, the same shall be declared and held reversed.

Mr. Woodward, of Pennsylvania, said: "The part of the bill to which I object is that part which requires two-thirds of the court, and the amendment the unanimous opinion of the judges, to declare an act of Congress unconstitutional. The amendment, as I once heard it read, requires the unanimous vote of the court, but the bill itself, as moved by the gentleman from Iowa, requires two-thirds. It is to that part of the bill I am here to object. The gentleman from Ohio (Mr. Bingham) may be very adroit in substituting another point, diverting our attention to that, but I am determined to keep my eyes steadily upon what I conceive to be the real objection to this bill. I say, in reply to the amendment and in reply

to the bill itself, so far as a two-thirds vote is concerned, it is an attempt on the part of the legislative department to dictate to the judicial department as to the manner in which they shall exercise their judicial power. That you cannot do. It is as gross an attempt as if the judiciary should dictate to the legislative department how it shall exercise its powers. It is not a question of quorum, it is a question of judicial power. You say it shall not be exercised in the manner in which it is exercised. The Constitution says that it shall be exercised by that body according to its responsibility to the people.

"Now, sir, I maintain, if the majority of the Supreme Court is competent to decide a question of property, a question of liberty, a question of life, it is competent to decide a constitutional question; and it possesses the right to decide it upon the same principles or tenure it decides the others. It holds power in both cases by virtue of the fundamental law of the land, and therefore Congress can neither add to nor subtract from it.

"This is my principal objection to the bill and amendment. Another less important objection is, that it will be found impracticable. I venture to affirm, if the House passes this bill or this amendment, or both the bill with the amendment, it will be found not only difficult but in some cases impossible for the court to mature its judgments on the principles of this bill. Suppose, sir, there are seven judges and seven sections of an act of Assembly or act of Congress—for State as well as Federal law may come before it—and one judge thinks it is unconstitutional for what is contained in one section, another judge for what is contained in another section; you may, if you please, suppose every judge shall declare that law to be unconstitutional for separate and distinct reasons; that for his own reasons he holds the law unconstitutional and for the reasons of the other judges he holds it to be constitutional, under this bill how is that court to decide that question? Is that law unconstitutional under the judgment of that court?"

Mr. Hubbard, of Connecticut, said: "The bill as it was reported requires, as I understand, a majority of two-thirds. The amendment offered by the gentleman from Pennsylvania (Mr. Williams) requires that there shall be unanimity of the bench. I agree with the gentleman who offered that amendment, that, if the bill reported by the committee can be justified, the amendment offered by himself can be justified on just the same grounds.

"Now, how is the Supreme Court constituted? It consists of those judges, and those only, who may be appointed by law to sit on that bench. How many are necessary to render judgment? That question is easily answered. A majority only, by the well-settled principle of the common law, is necessary to action in all public bodies, judicial or otherwise. In a private tribunal, as a board of arbitrators, for

instance, unanimity is required; but in a board composed of public officers a majority only is requisite. Now, when the Constitution provided a Supreme Court, the common law provided that a majority may pronounce the judgment of that court. If this be not so, then I ask, may not this Congress take away from the citizen the right of a jury trial? The Constitution provides that every citizen shall have this right. What constitutes a jury? Can this Congress determine that five, six, eight, or ten, or any number less or more than twelve, shall constitute a jury? By no manner of means. Why? Because the term jury had a common-law meaning when the Constitution was framed and adopted. And as the term jury had a definite common-law meaning which required unanimity in its decision, so the phrase Supreme Court had involved in it a common-law signification and rule which prescribed that as a law of the body a majority only was necessary to an award of judgment. Such being the fact, this Congress cannot alter the rule applicable to the court unless it can alter the rule applicable to the verdict of a jury. I deny, therefore, that the legislative power can determine what number is necessary to render judgment in a case before the Supreme Court.

"And this, I submit, has been the construction that has been put upon this question from the beginning. Among all the acts that have been referred to by the gentlemen who represent the other side of this question, there is not one to be found which is any thing else than a mere declaration of the common law requiring a mere majority to render a judgment of the court. There is not an act to be found that requires more than a majority. And those acts which require majorities are simply declaratory of the common law. I deny, therefore, that this Congress has any authority to say what shall constitute a quorum of the Supreme Court.

"But more than that, I submit that it would be both impolitic and inexpedient, even if this Congress were omnipotent in this regard, to attempt to enact such a rule as is embodied in either the bill reported by the committee or the amendment offered by the gentleman from Pennsylvania (Mr. Williams). It is perfectly well known that it is intended to reach a particular case; and this bill, without being printed, without allowing members of the House an opportunity of ever seeing it, but only of catching it by the ear as it fell from the Clerk, in hot, in indecent haste, is submitted to the House for action, and each one of us is required to pass upon it at the tap of the drum. Why this impetuous haste? Because it happens to be rumored—I know not whether truly or not—that the Supreme Court by a majority, perhaps by a large majority, are adverse to a particular measure upon which the majority of this Congress are disposed to stake their political life. Because they have learned in advance that the judicial mind of the Supreme Court condemns

the act they propose to muzzle, ay, sir, to muzzle the Supreme Court. While that court, from 1789 to the year of grace in which I am now speaking, has been ruling all questions, constitutional and otherwise, by the simple law of a majority which governs all judicial tribunals which are not the creatures of statute law; while it has been ruling all sorts of questions relating to property, relating to life, relating to liberty, relating to the Constitution by the simple law of majority, this Congress now, for purposes which, I submit, are neither honorable nor praiseworthy, proposes to muzzle the Supreme Court to the end that that court may not interfere with the will of this Congress with respect to the reconstruction measures."

Mr. Wilson, of Iowa, said: "Mr. Speaker, I believe the first section of this bill has not been challenged by any gentleman who has addressed the House in opposition to this bill. That being the case, the whole principle of the bill is conceded by them. The first section provides that five judges shall constitute a quorum of the Supreme Court. Has any gentleman challenged that as being in conflict with the Constitution of the United States? If so, I have been unable to detect it in the confusion which has attended this debate.

"And does any gentleman upon the opposite side of the House challenge the constitutionality of the present law determining the number of justices who shall constitute a quorum of the Supreme Court? I have heard no such thing. And yet what is a quorum of the Supreme Court at this time? It is declared by law to consist of six judges. How many judges are there now on the Supreme Bench? Eight. So that the present statute violates the principle for which the gentleman from Pennsylvania (Mr. Woodward) contends, the common-law rule, that a majority shall constitute a quorum. The law as it now exists, making six judges a quorum in a Supreme Court of eight judges, violates that rule. Who questions its constitutionality?

"The gentleman from Pennsylvania (Mr. Woodward) says that we cannot interfere with the judicial power; that we cannot pass any law that shall interfere with that power in any way. The gentleman from Connecticut (Mr. Hubbard) says that the Supreme Court is not the creature of Congress, but it is the creature of the Constitution of the United States. Well, sir, what kind of a creature is it, as declared by the Constitution?

The judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish.

"Can we determine how many judges shall constitute the Supreme Court? The gentleman says that court is a creature of the Constitution. The Constitution declares there shall be a judicial department, and in that judicial department there shall be a Supreme Court. But it leaves entirely to Congress to determine

the number of judges which shall constitute the court. This of itself controls in no inconsiderable degree the question of how many members of the court shall constitute a quorum."

Mr. Hubbard, of Connecticut: "The Constitution of the United States provides that the judges of the Supreme Court shall be nominated and appointed by the President, by and with the advice and consent of the Senate; so that the persons who are to go into that court as judges are not subject to Congress."

Mr. Wilson, of Iowa: "That is all very true, that the persons who are to go into that court as judges shall be selected in a certain way, and that way we cannot interfere with. But will the gentleman say that we cannot determine that the Supreme Court shall consist of one hundred judges, or that it shall consist of only five judges? And if that power is given to us, do we not control the quorum by the exercise of the power to determine how many judges shall be upon the Supreme Bench? If the majority rule is insisted upon and you have one hundred judges, the quorum will consist of fifty-one judges; if, on the other hand, we provide that five judges shall constitute the Supreme Court, the quorum would be composed of three judges.

"Then, as by the action of Congress, by the legislative department of the Government, the number constituting a quorum is changed; by fixing the number of judges we have the whole power so far as that question is concerned undoubtedly, for what we may do indirectly we may do directly in this respect, and I have never heard it questioned before, nor do I believe it has been since the organization of the Government down to this day. Acts have been passed from time to time by Congress, changing the number of judges on the Supreme Bench, and in all such instances the law has declared what shall constitute a quorum of the court.

"Now, sir, if we are to be deprived of this power by the common-law rule as to what should constitute a quorum, and again, by the principle contended for by the gentleman from Pennsylvania (Mr. Woodward), that a quorum constitutes the court, and with which we cannot interfere in any way, by direction or indirection, and that the court thus organized is bound as a court to decide every question presented to it to decide, I want him to harmonize this doctrine with that other principle which he affirms, that a majority of a quorum may exercise this judicial power and decide any question presented to the court. He says a majority constitutes a quorum; that with that we cannot interfere; that the quorum constitutes the court; that it is the duty of the court to decide. How can this be unless a number equal to a quorum concur in the opinion announced? If a quorum is the court, then the quorum is the unit? How can that be divided and a judgment rendered by a part of this unit? How, under the doctrine for which he con-

tends, can any decision be made by a bare majority of a quorum when the quorum is the unit in the constitution of the court? Does not this doctrine necessarily lead to the conclusion that no decision can be made by the court in which there is not a concurrence of the judges equal in number to a clear majority of the court? The principle contended for by the gentleman would render null and void a large number of decisions made by the Supreme Court of the United States, for very many of them have been made by a bare majority of a quorum. This doctrine is far more revolutionary than is any thing contained in this bill or the amendments which have been proposed to it."

The question was taken on Mr. Williams's amendment, and it was rejected,—yeas 25, nays 124.

The question was then taken on the amendment of Mr. Wilson, and it was adopted—yeas 111, nays 38.

The amendment of the committee was then agreed to, and the bill passed by the following vote:

YEAS—Messrs. Ames, Anderson, Arnell, Delos B. Ashley, James M. Ashley, Bailey, Baker, Baldwin, Banks, Beaman, Benjamin, Benton, Bingham, Blair, Boutwell, Bromwell, Broomall, Buckland, Cake, Churchill, Reader W. Clarke, Sidney Clarke, Cobb, Coburn, Covode, Cullom, Dawes, Dixon, Dodge, Donnelly, Driggs, Eggleston, Ela, Eliot, Farnsworth, Ferriss, Ferry, Garfield, Gravely, Griswold, Harding, Higby, Hill, Hooper, Hopkins, Chester D. Hubbard, Hulburd, Hunter, Ingersoll, Jenckes, Judd, Julian, Kelley, Kelsey, Ketcham, Kitchen, Koontz, Laffin, William Lawrence, Lincoln, Loan, Logan, Loughridge, Mallory, Marvin, Maynard, McCarthy, McClurg, Mercur, Miller, Moore, Moorhead, Morrell, Mullins, Myers, Newcomb, Nunn, O'Neill, Orth, Paine, Perham, Peters, Pike, Pile, Pomeroy, Price, Raum, Robertson, Sawyer, Schenck, Scofield, Shanks, Smith, Spalding, Aaron F. Stevens, Stokes, Taylor, Thomas, John Trimble, Trowbridge, Twichell, Upson, Van Aernam, Robert T. Van Horn, Ward, Cadwalader C. Washburn, Elihu B. Washburne, Henry D. Washburn, Welker, Thomas Williams, William Williams, James F. Wilson, John T. Wilson, Stephen F. Wilson, Windom, and Woodbridge—116.

NAYS—Messrs. Adams, Archer, Barnum, Beck, Brooks, Burr, Chanler, Fox, Getz, Glossbrenner, Golladay, Grover, Haight, Hawkins, Holman, Hotchkiss, Richard D. Hubbard, Humphrey, Johnson, Kerr, Knott, Marshall, McCormick, Morrissey, Mungen, Niblack, Nicholson, Phelps, Pruyn, Randall, Robinson, Ross, Sitgreaves, Stone, Taber, Lawrence, S. Trimble, Van Auken, Wood, and Woodward—39.

NOT VOTING—Messrs. Allison, Axtell, Barnes, Blaine, Boyer, Butler, Cary, Cook, Cornell, Eckley, Eldridge, Fields, Finney, Halsey, Asahel W. Hubbard, Jones, George V. Lawrence, Lynch, McCullough, Morgan, Plants, Poland, Polsley, Selye, Shellbarger, Starkweather, Thaddeus Stevens, Stewart, Taffe, Burt Van Horn, Van Trump, Van Wyck, and William B. Washburn—33.

In the Senate this bill was referred to the Judiciary Committee, and not further considered.

In the Senate, on March 11th, a bill to amend the act of 1789 was taken up, and passed.

It provided that final judgments in any circuit court of the United States, in any civil

action against a collector or other officer of the revenue, for any act done by him in the performance of his official duty, or for the recovery of any money exacted by or paid to him, which should have been paid into the Treasury of the United States, might, at the instance of either party, be reexamined and reversed or affirmed, in the Supreme Court of the United States, upon writ of error, without regard to the sum or value in controversy in such action.

In the House, on March 12th, the bill was amended by adding the following section, and passed:

SEC. 2. *And be it further enacted*, That so much of the act approved February 5, 1867, entitled "An act to amend an act to establish the judicial courts of the United States, approved September 24, 1789," as authorizes an appeal from the judgment of the circuit court to the Supreme Court of the United States, or the exercise of any such jurisdiction by said Supreme Court on appeals which have been or may hereafter be taken, be, and the same is hereby, repealed.

On the same day, the Senate concurred in the amendment, by the following vote:

YEAS—Messrs. Anthony, Cameron, Cattell, Chandler, Cole, Conkling, Conness, Drake, Edmunds, Ferry, Fessenden, Frelinghuysen, Grimes, Harlan, Henderson, Howard, Howe, Morgan, Morrill of Maine, Morrill of Vermont, Pomeroy, Ramsey, Ross, Sprague, Stewart, Sumner, Tipton, Trumbull, Van Winkle, Wade, Willey, and Williams—32.

NAYS—Messrs. Buckalew, Fowler, Hendricks, McCreery, Norton, and Vickers—6.

ABSENT—Messrs. Bayard, Corbett, Cragin, Davis, Dixon, Doolittle, Johnson, Morton, Nye, Patterson of New Hampshire, Patterson of Tennessee, Saulsbury, Sherman, Thayer, Wilson, and Yates—16.

On March 25th, the President returned the bill, with his objections, as follows:

To the Senate of the United States:

I have considered, with such care as the pressure of other duties has permitted, a bill entitled "An act to amend an act entitled 'An act to amend the Judiciary Act passed the 24th of September, 1789.'" Not being able to approve all its provisions, I herewith return it to the Senate, in which House it originated, with a brief statement of my objections.

The first section of the bill meets my approbation, as, for the purpose of protecting the rights of property from the erroneous decisions of inferior judicial tribunals, it provides means for obtaining uniformity by appeal to the Supreme Court of the United States in cases which have now become very numerous and of much public interest, and in which such remedy is not now allowed. The second section, however, takes away the right of appeal to that court in cases which involve the life and liberty of the citizen, and leaves them exposed to the judgment of numerous inferior tribunals. It is apparent that the two sections were conceived in a very different spirit, and I regret that my objection to one imposes upon me the necessity of withholding my sanction from the other.

I cannot give my assent to a measure which proposes to deprive any person, "restrained of his or her liberty in violation of the Constitution, or of any treaty or law of the United States," from the right of appeal to the highest judicial authority known to our Government. To "secure the blessings of liberty to ourselves and our posterity" is one of the declared objects of the Federal Constitution. To assure these, guarantees are provided in the same instrument, as well against "unreasonable searches and seizures" as against the suspension of the priv-

ilege of the writ of *habeas corpus*, unless when, in cases of "rebellion or invasion, the public safety may require it." It was, doubtless, to afford the people the means of protecting and enforcing these inestimable privileges that the jurisdiction which this bill proposes to take away was conferred upon the Supreme Court of the Union. The act conferring that jurisdiction was approved on the 5th day of February, 1867, with a full knowledge of the motives that prompted its passage, and because it was believed to be necessary and right. Nothing has since occurred to disapprove the wisdom and justness of the measure; and to modify it as now proposed would be to lessen the protection of the citizen from the exercise of arbitrary power and to weaken the safeguards of life and liberty, which can never be made too secure against illegal encroachments.

The bill not only prohibits the adjudication by the Supreme Court of cases in which appeals may hereafter be taken, but interdicts its jurisdiction on appeals which have already been made to that high judicial body. If, therefore, it should become a law, it will, by its retroactive operation, wrest from the citizen a remedy he enjoyed at the time of his appeal. It will thus operate most harshly upon those who believe that justice has been denied them in the inferior courts.

The legislation proposed in the second section, it seems to me, is not in harmony with the spirit and intention of the Constitution. It cannot fail to affect most injuriously the just equipoise of our system of Government; for it establishes a precedent which, if followed, may eventually sweep away every check on arbitrary and unconstitutional legislation. Thus far during the existence of the Government the Supreme Court of the United States has been viewed by the people as the true expounder of their Constitution, and in the most violent party conflicts its judgments and decrees have always been sought and deferred to with confidence and respect. In public estimation it combines judicial wisdom and impartiality in a greater degree than any other authority known to the Constitution; and any act which may be construed into or mistaken for an attempt to prevent or evade its decisions, on a question which affects the liberty of the citizens and agitates the country, cannot fail to be attended with unpropitious consequences. It will be justly held by a large portion of the people as an admission of the unconstitutionality of the act on which its judgment may be forbidden or forestalled, and may interfere with that willing acquiescence in its provisions which is necessary for the harmonious and efficient execution of any law.

For these reasons, thus briefly and imperfectly stated, and for others, of which want of time forbids the enumeration, I deem it my duty to withhold my assent from this bill, and to return it for the reconsideration of Congress.

ANDREW JOHNSON.

WASHINGTON, D. C., March 25, 1868.

Mr. Hendricks, of Indiana, said: "Mr. President, the objections made by the President of the United States, in his message, to this bill, are based upon the second section. That section alone does not explain or enable us to understand its force and meaning. It is as follows:

That so much of the act approved February 5, 1867, entitled "An act to amend an act to establish the judicial courts of the United States," approved September 24, 1789, as authorizes an appeal from the judgment of the circuit court to the Supreme Court of the United States, or the exercise of any such jurisdiction by said Supreme Court on appeals which have been made or may hereafter be taken, be, and the same is hereby, repealed.

"The section of the law which is thus re-

pealed is in part as follows. In the first place, the act of February 5, 1867, provides:

That the several courts of the United States, and the several justices and judges of such courts, within their respective jurisdictions, in addition to the authority already conferred by law, shall have power to grant writs of *habeas corpus* in all cases where any person may be restrained of his or her liberty in violation of the Constitution, or of any treaty or law of the United States.

"Then, toward the close of the section, it provides that—

From the final decision of any judge, justice, or court, inferior to the circuit court, an appeal may be taken to the circuit court of the United States for the district in which said cause is heard, and from the judgment of said circuit court to the Supreme Court of the United States, on such terms and under such regulations and orders, as well for the custody and appearance of the person alleged to be restrained of his or her liberty, as for sending up to the appellate tribunal a transcript of the petition, writ of *habeas corpus*, return thereto, and other proceedings, as may be prescribed by the Supreme Court, or, in default of such, as the judge hearing said cause may prescribe.

"The effect of this legislation is to give any citizen of the country the right to the writ of *habeas corpus* to be issued by any of the courts of the United States within their jurisdiction or by any judge of such court in the following case; that is:

Where any person may be restrained of his or her liberty in violation of the Constitution, or of any treaty or law of the United States.

"And either party interested in such a case as that may have his appeal from the circuit court of the United States to the Supreme Court; and now the bill which the President sends back with his objections repeals that clause which allows a party in any case an appeal to the Supreme Court of the United States, where his liberty is withheld from him in violation of the Constitution or any law or treaty of the United States. Without reference to any particular case, without reference to any purpose that is to be subserved, why take away from a party an appeal to the Supreme Court in a case like that? Independent of all temporary considerations, independent of all possible party views, independent of the effect upon any pending cause, why is it that a party may not have an appeal to the Supreme Court from the judgment of the circuit court when the question is whether he be restrained of his liberty in violation of the Constitution of the United States or of any law or treaty of the United States? And, sir, in the discussion of this question, I shall be very happy to hear Senators upon the other side give a reason why an appeal ought not in such a case to be allowed to the Supreme Court of the United States. In all civil suits that are tried before the circuit courts of the United States, where the controversy is in regard to property of the amount of \$2,000, either party has his appeal to the Supreme Court. The legislation of the country assumes that where the matter in controversy is of less

value than two thousand dollars the cases are too trivial to bring before that tribunal, but whenever the matter in controversy is of the value of \$2,000 or more, either party shall be allowed his appeal.

"Now, Mr. President, in a case where a man's liberty is involved, ay, sir, under existing laws where his life may be involved, and the question has been brought before a circuit court of the United States, and the decision has been adverse to him, you say that he shall not have his appeal to the Supreme Court. I wish to know why.

"But, Mr. President, waiving that for the present, I wish to call the attention of the Senate to the fact that if a foreigner comes before any judge of a court of the United States, or before any of the Federal courts, and shows to that judge or that court that he is wrongfully restrained of his liberty, and that such restraint of his liberty is in violation and in disregard of a 'right, title, authority, privilege, protection, or exemption' which he sets up and claims 'under any commission or order or sanction of any foreign state or sovereignty, the validity and effect whereof depend upon the laws of nations, or under color thereof,' and the judge or court decides against his case, he has an appeal to the Supreme Court of the United States. Notice the fact, Mr. President, that you give to the foreigner in protection of his liberty an appeal to the Supreme Court when he says that he is entitled to his liberty by virtue of some regulation, order, or authority of his foreign government under the laws of nations; but when a citizen of the country in that same court claims his liberty in express terms under the Constitution, or under any treaty or law of the United States, you say he shall not have an appeal to the Supreme Court. Can Senators reconcile such legislation with the rights which the citizens may claim, and with the duties which we owe to the citizens themselves?

"Mr. President, under the act of the 2d of March, 1867, and the acts amendatory thereof, it is possible for the citizen to be arrested, to be taken before a tribunal unknown to our Constitution and system of laws, a military commission, to be held in custody, to be tried, condemned, and confined in prison or put to death. If, during the progress of these proceedings, he appeals to the circuit court of the United States having jurisdiction in the State, and the court refuses to restore him to liberty, refuses to protect him in his endangered life, you say he cannot come to the Supreme Court with that case. A trial is being had for his life before a court that is unknown to the Constitution, not only a court unknown to the Constitution and the laws, but a court which the Supreme Court of the United States has decided cannot become known to the Constitution and the laws of the United States for the purpose of trying a citizen; and being brought before such a court he seeks the protection of

his liberty, the safety of his life, in the Federal courts; and being denied that protection in the circuit court, he seeks his appeal to the Supreme Court of the United States, and Congress says, 'You shall not have it.' Now, upon general principles, can Senators reconcile that to their sentiments of right, to the security which the Constitution and the laws ought to afford to every citizen?

"Will Senators be good enough to recollect of a single instance in the history of any free Government where, for proper purposes, the jurisdiction of an appellate court has been taken away from a cause after that jurisdiction had attached? I do not mean the criminal courts, where jurisdiction sometimes falls by the repeal of the law defining the crime, but I speak of an appellate court of important jurisdiction, before which a case has come, and the jurisdiction of which has attached under existing law. When, in the history of this Government or of any State of this Union, was that jurisdiction expressly taken away? I know of no such case. It is understood that, when the law gives a man a right to bring his case into a court, he shall have that cause heard; that the Legislature will not come in after he has brought his case according to law, and take away the right to prosecute the case to a final hearing.

"But it is done here; and why? It is to reach the *McCardle* case. I do not know very much of that cause; I had not the opportunity to hear very much of the able argument in the Supreme Court; but I understand the facts to be these: *McCardle* was the publisher of a newspaper in the State of Mississippi, and in the publication of his paper he felt authorized to make criticisms upon the policy Congress had established in his State, and he felt authorized to make criticisms upon the conduct of the military officers who were carrying out this congressional policy in Mississippi, and the military officers caused him to be arrested and to be brought before a military commission to be put upon trial. At that stage of the case he appealed to the circuit court of the United States for that State for the writ of *habeas corpus*. The writ was issued, and when the officer returned to the court that this man was held in custody because he had published these articles in his newspaper, the circuit court held that return to be sufficient, and that the party should be remanded to the custody of the military officers. From that decision *McCardle* appealed to the Supreme Court of the United States. Sir, why should he not be heard in that court? Had not the Supreme Court of the United States, with great unanimity, decided that a military commission could not try a citizen in a time of peace for an ordinary civil offence; that the Constitution had guaranteed to the citizen a trial before a jury, with full opportunities for defence? That was the decision of the Supreme Court of the United States, and *McCardle*, when he was sent back by the cir-

ent court to the dungeons of the military prison, prayed his appeal to the Supreme Court that he might come under the protecting wing of that court in its decision that the civil authority should be preserved in this country. That is the case that came to the Supreme Court. I understood the Senator from Illinois (Mr. Trumbull) to say that that case did not come within the provision of the act of the 5th of February, 1867, but that the right to issue the writ might well rest upon the act of 1789, and I think he occupied the same position in support of his motion in the court. Let us see how it stands."

The President *pro tempore*: "The question is, 'Shall the bill pass, notwithstanding the objections of the President of the United States?'"

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Cameron, Cattell, Chandler, Cole, Conkling, Cragin, Edmunds, Ferry, Frelinghuysen, Harlan, Henderson, Howard, Howe, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Patterson of New Hampshire, Pomeroy, Ramsey, Ross, Stewart, Sumner, Thayer, Tipton, Trumbull, Van Winkle, Wade, Willey, Williams, Wilson, and Yates—33.

NAYS—Messrs. Bayard, Buckalew, Davis, Dixon, Hendricks, McCreery, Norton, Patterson of Tennessee, and Saulsbury—9.

ABSENT—Messrs. Anthony, Conness, Corbett, Doolittle, Drake, Fessenden, Fowler, Grimes, Johnson, Sherman, Sprague, and Vickers—12.

In the House, the veto message was considered, when Mr. Wilson, of Iowa, said: "Now, sir, the House of Representatives has not, in the passage of this bill, moved one step beyond the line of power recognized by the Supreme Court of the United States. In 5 Wallace I find a decision made in the case of Insurance Company *vs.* Ritchie, the opinion being delivered by the Chief Justice, all the judges concurring, in which this doctrine is held:

The case before us is a case under the act of 1864. It is a case of which, because of the fact that the appellants and appellees are citizens of the same State, we have no jurisdiction except under the act of 1833; and the act of 1866 declares that the act of 1833 shall not be construed so as to apply to such a case.

This is equivalent to a repeal of an act giving jurisdiction of a pending suit; it is an express prohibition of the exercise of the jurisdiction conferred by the act of 1833 in cases arising under the internal revenue laws.

It is clear that when the jurisdiction of a cause depends upon a statute the repeal of the statute takes away the jurisdiction; and it is equally clear that where a jurisdiction conferred by statute is prohibited by a subsequent statute the prohibition is so far a repeal of the statute conferring the jurisdiction.

"The principle here recognized, of the power of Congress to divest a court of jurisdiction, and thus arrest the progress of cases pending, supports fully our power to pass this bill; and no one has or will seriously question it. The jurisdiction given to the court by the act of February 5, 1867, is the law of the remedy in and for cases coming within its provisions. We established it and may demolish it; we

passed the act and may repeal it, or any part thereof. If the McCordle case falls, the country may have escaped the danger of another political decision by a majority of the Supreme Court. I do not know how this may be, but I do know that in all this thing we have followed and are following strictly our constitutional power. We have kept within its lines as defined by the Supreme Court. We are exercising no doubtful power whatever, and its exercise in this instance is for a rightful, just, and proper purpose. The passage of this bill will give relief to the court and advance the interests of many waiting suitors, whose causes have been delayed by the persistent efforts which have been made to induce the court to enter upon political questions involved in the reconstruction legislation of Congress. It springs from higher considerations than those of hostility toward the court.

"Mr. Speaker, the gentleman cannot hope that the majority of this House, possessing the legislative power of the Government with the majority in the Senate, will yield, on any misconstruction of law or any political subterfuge, the right to settle into a condition of peace and repose this country, reorganize the rebel States upon just, firm, and abiding foundations, and restore them to the Union."

The bill was then passed by the following vote:

YEAS—Messrs. Ames, Anderson, Arnell, Delos R. Ashley, James M. Ashley, Bailey, Baker, Baldwin, Banks, Beaman, Beatty, Benjamin, Benton, Bingham, Blaine, Boutwell, Bromwell, Broomall, Buckland, Cake, Churchill, Reader W. Clarke, Sidney Clarke, Coburn, Cook, Covode, Cullom, Dawes, Dixon, Dodge, Driggs, Eckley, Eggleston, Eliot, Farnsworth, Ferriss, Ferry, Fields, Gravely, Halsey, Hill, Hooper, Hopkins, Chester D. Hubbard, Hulburd, Hunter, Ingersoll, Jenckes, Judd, Julian, Kelley, Kelsey, Ketcham, Kitchen, Koontz, Laffin, William Lawrence, Lincoln, Loan, Logan, Loughridge, Mallory, Maynard, McClurg, Mercur, Miller, Moore, Moorhead, Morrell, Mullins, Myers, Newcomb, O'Neill, Orth, Paine, Perham, Peters, Pike, Pile, Plants, Poland, Polsley, Pomeroy, Price, Raum, Sawyer, Schenck, Scofield, Selye, Shanks, Smith, Spalding, Aaron F. Stevens, Thaddeus Stevens, Taffe, Taylor, Thomas, John Trimble, Twichell, Upson, Burt Van Horn, Robert T. Van Horn, Van Wyck, Ward, Cadwalader C. Washburn, Elihu B. Washburne, William B. Washburn, Welker, Thomas Williams, James F. Wilson, John T. Wilson, Stephen F. Wilson, Windom, and Woodbridge—114.

NAYS—Messrs. Adams, Archer, Axtell, Barnes, Beck, Brooks, Burr, Cary, Chanler, Eldridge, Fox, Getz, Glossbrenner, Golladay, Holman, Hotchkiss, Richard D. Hubbard, Humphrey, Johnson, Kerr, Knott, Marshall, McCormick, Mungen, Niblack, Nicholson, Pruyn, Ross, Sitgreaves, Stone, Taber, Lawrence S. Trimble, Van Auken, and Woodward—24.

NOT VOTING—Messrs. Allison, Barnum, Blair, Boyer, Butler, Cobb, Cornell, Donnelly, Ela, Finney, Garfield, Griswold, Grover, Haight, Harding, Hawkins, Higby, Asahel W. Hubbard, Jones, George V. Lawrence, Lynch, Marvin, McCarthy, McCullough, Morgan, Morrissey, Nunn, Phelps, Randall, Robertson, Robinson, Shellabarger, Starkweather, Stewart, Stokes, Trowbridge, Van Aernam, Van Trump, Henry D. Washburn, William Williams, and Wood—41.

The Speaker: "Two-thirds having voted in the affirmative, and it having been certified to

the House that the Senate, on a similar reconsideration, have, by a two-thirds vote, agreed to the passage of the bill, I do, by the authority of the Constitution of the United States, declare that, notwithstanding the objections of the President, the bill (S. No. 218) to amend an act entitled 'An act to amend the Judiciary Act, passed the 24th of September, 1789,' has become a law."

In the House, on July 11th, Mr. Boutwell, from the Committee on Reconstruction, reported back a joint resolution from the Senate, which as amended was as follows:

That none of the States whose inhabitants were lately in rebellion shall be entitled to representation in the Electoral College for the choice of President or Vice-President of the United States, nor shall any electoral vote be received or counted from any of such States, unless, at the time prescribed by law for the choice of electors, the people of such States, pursuant to the acts of Congress in that behalf, shall have, since the 4th day of March, 1867, adopted a constitution of State government, under which a State government shall have been organized and shall be in operation, nor unless such election of electors shall have been held under the authority of such constitution and government; and such States shall have also become entitled to representation in Congress, pursuant to the acts of Congress in that behalf:

Provided, That nothing herein contained shall be construed to apply to any State which was represented in Congress on the 4th of March, 1867.

The resolution was adopted—yeas 112, nays 21.

The Senate approved of the amendment, and the resolution was sent to the President, who, on July 20th, returned it with the following message:

To the Senate of the United States:

I have given to the joint resolution, entitled "A resolution excluding from the Electoral College votes of States lately in rebellion, which shall not have been reorganized," as careful examination as I have been able to bestow upon the subject during the few days that have intervened since the measure was submitted for my approval.

Feeling constrained to withhold my assent, I herewith return the resolution to the Senate, in which House it originated, with a brief statement of the reasons which have induced my action.

This joint resolution is based upon the assumption that some of the States whose inhabitants were lately in rebellion are not now entitled to representation in Congress and to participate in the election of President and Vice-President of the United States.

Having heretofore had occasion to give, in detail, my reasons for dissenting from this view, it is not necessary at this time to repeat them. It is sufficient to state that I continue strong in my conviction that the acts of secession, by which a number of the States sought to dissolve their connection with the other States and to subvert the Union, being unauthorized by the Constitution, and in direct violation thereof, were, from the beginning, absolutely null and void. It follows necessarily that, when the rebellion terminated, the several States which had attempted to secede continued to be States in the Union, and all that was required to enable them to resume their relations to the Union was, that they should adopt the measures necessary to their practical restoration as States. Such measures were adopted, and the legitimate result was, that those States, having conformed to all the requirements of the Constitution, resumed their

former relations, and became entitled to the exercise of all the rights guaranteed to them by its provisions.

The joint resolution under consideration, however, seems to assume that, by the insurrectionary acts of their respective inhabitants, those States forfeited their rights as such, and can never again exercise them except upon readmission into the Union on the terms prescribed by Congress. If this position be correct, it follows that they were taken out of the Union by virtue of their acts of secession, and hence that the war waged upon them was illegal and unconstitutional. We would thus be placed in this inconsistent attitude, that while the war was commenced and carried on upon the distinct ground that the Southern States, being component parts of the Union, were in rebellion against the lawful authority of the United States, upon its termination we resort to a policy of reconstruction which assumes that it was not in fact a rebellion, but that the war was waged for the conquest of territories assumed to be outside of the constitutional Union.

The mode and manner of receiving and counting the electoral votes for President and Vice-President of the United States are in plain and simple terms prescribed by the Constitution. That instrument imperatively requires that the President of the Senate "shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted." Congress has, therefore, no power under the Constitution to receive the electoral votes or reject them. The whole power is exhausted when, in the presence of the two Houses, the votes are counted and the result declared. In this respect the power and duty of the President of the Senate are, under the Constitution, purely ministerial. When, therefore, the joint resolution declares that no electoral votes shall be received or counted from States that since the 4th of March, 1867, have not "adopted a constitution of State government under which a State government shall have been organized," a power is assumed which is nowhere delegated to Congress, unless upon the assumption that the State governments organized prior to the 4th of March, 1867, were illegal and void.

The joint resolution, by implication at least, concedes that these States were States by virtue of their organization prior to the 4th of March, 1867, but denies to them the right to vote in the election of President and Vice-President of the United States. It follows either that this assumption of power is wholly unauthorized by the Constitution, or that the States so excluded from voting were out of the Union by reason of the rebellion, and have never been legitimately restored. Being fully satisfied that they were never out of the Union, and that their relations thereto have been legally and constitutionally restored, I am forced to the conclusion that the joint resolution which deprives them of the right to have their vote for President and Vice-President received and counted is in conflict with the Constitution, and that Congress has no more power to reject their votes than those of the States which have been uniformly loyal to the Federal Union.

It is worthy of remark that if the States whose inhabitants were recently in rebellion were legally and constitutionally organized and restored to their rights prior to the 4th of March, 1867, as I am satisfied they were, the only legitimate authority under which the election for President and Vice-President can be held therein must be derived from the governments instituted before that period.

It clearly follows that all the State governments organized in those States under acts of Congress for that purpose, and under military control, are illegitimate and of no validity whatever; and, in that view, the votes cast in those States for President and Vice-President, in pursuance of acts passed since the 4th of March, 1867, and in obedience to the so-called reconstruction acts of Congress, cannot be legally received and counted; while the only votes in those

States that can be legally cast and counted, will be those cast in pursuance of the laws in force in the several States prior to the legislation by Congress upon the subject of reconstruction.

I cannot refrain from directing your special attention, to the declaration contained in the joint resolution, that "none of the States whose inhabitants were lately in rebellion shall be entitled to representation in the Electoral College," etc.

If it is meant by this declaration that no State is to be allowed to vote for President and Vice-President, all of whose inhabitants were engaged in the late rebellion, it is apparent that no one of the States will be excluded from voting, since it is well known that in every Southern State there were many inhabitants who not only did not participate in the rebellion, but who actually took part in its suppression, or refrained from giving it any aid or countenance. I therefore conclude that the true meaning of the joint resolution is, that no State, a portion of whose inhabitants were engaged in the rebellion, shall be permitted to participate in the presidential election, except upon the terms and conditions therein prescribed.

Assuming this to be the true construction of the resolution, the inquiry becomes pertinent, may those Northern States, a portion of whose inhabitants were actually in the rebellion, be prevented at the discretion of Congress from having their electoral votes counted? It is well known that a portion of the inhabitants of New York and a portion of the inhabitants of Virginia were alike engaged in the rebellion, yet it is equally well known that Virginia, as well as New York, was at all times during the war recognized by the Federal Government as a State in the Union—so clearly, that upon the termination of hostilities it was not even deemed necessary for her restoration that a provisional Governor should be appointed. Yet, according to this joint resolution, the people of Virginia, unless they comply with the terms it prescribes, are denied the right of voting for President, while the people of New York, a portion of the inhabitants of which State were also in rebellion, are permitted to have their electoral votes counted without undergoing the process of reconstruction prescribed for Virginia. New York is no more a State than Virginia; the one is as much entitled to be represented in the Electoral College as the other. If Congress has the power to deprive Virginia of this right, it can exercise the same authority with respect to New York or any other of the States. Thus the result of the presidential election may be controlled and determined by Congress, and the people be deprived of their right under the Constitution to choose a President and Vice-President of the United States.

If Congress were to provide by law that the votes of none of the States should be received and counted if cast for a candidate who differed in political sentiment with a majority of the two Houses, such legislation would at once be condemned by the country as an unconstitutional and revolutionary usurpation of power. It would, however, be exceedingly difficult to find in the Constitution any more authority for the passage of the joint resolution under consideration than for an enactment looking directly to the rejection of all votes not in accordance with the political preferences of a majority of Congress. No power exists in the Constitution authorizing the joint resolution or the supposed law, the only difference being that one would be more palpably unconstitutional and revolutionary than the other. Both would rest upon the radical error that Congress has the power to prescribe terms and conditions to the right of the people of the States to cast their votes for President and Vice-President.

For the reasons thus indicated, I am constrained to return the joint resolution to the Senate for such further action thereon as Congress may deem necessary.

ANDREW JOHNSON.

WASHINGTON, July 20, 1868.

In the Senate, the bill was passed by the following vote:

YEAS—Messrs. Abbott, Anthony, Cameron, Cattell, Chandler, Cole, Conklin, Conness, Corbett, Cragin, Drake, Edmunds, Ferry, Fessenden, Frelinghuysen, Harlan, Harris, Henderson, Howard, Howe, Kellogg, McDonald, Morgan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborne, Patterson of New Hampshire, Pomeroy, Rice, Ross, Sherman, Sprague, Stewart, Sumner, Tipton, Trumbull, Van Winkle, Wade, Welch, Willey, Williams, Wilson, and Yates—45.

NAYS—Messrs. Buckalew, Davis, Doolittle, Hendricks, McCreery, Patterson of Tennessee, Vickers, and Whyte—8.

ABSENT—Messrs. Bayard, Dixon, Fowler, Grimes, Norton, Pool, Ramsey, Saulsbury, and Thayer—9.

In the House, the resolution was passed by the following vote:

YEAS—Messrs. Allison, Ames, Anderson, Arnell, Delos B. Ashley, James M. Ashley, Bailey, Baldwin, Banks, Beatty, Benjamin, Benton, Bingham, Blackburn, Blair, Boles, Boutwell, Bowen, Bromwell, Broomall, Buckland, Roderick B. Butler, Cake, Churchill, Reader W. Clarke, Sidney Clarke, Cobb, Coburn, Cook, Covode, Cullom, Dawes, Delano, Dixon, Donnelly, Driggs, Eckley, Eggleston, Eliot, Farnsworth, Ferriss, Ferry, Fields, French, Garfield, Goss, Griswold, Hamilton, Heaton, Higby, Hill, Hinds, Hooper, Hopkins, Chester D. Hubbard, Hulburd, Hunter, Ingersoll, Jenckes, Alexander H. Jones, Judd, Kelley, Kelsey, Ketcham, Koontz, Lafin, Lash, William Lawrence, Lincoln, Loan, Logan, Loughridge, Lynch, Mallory, Maynard, McCarthy, McClurg, McKee, Mercur, Miller, Moore, Moorhead, Morrell, Mullins, Myers, Nunn, O'Neill, Orth, Paine, Perham, Peters, Pike, Pile, Plants, Poland, Polsley, Pomeroy, Raum, Robertson, Sawyer, Schenck, Scofield, Shanks, Smith, Spalding, Starkweather, Thaddeus Stevens, Stewart, Stokes, Sypher, Taffe, Taylor, Thomas, Trowbridge, Twichell, Upson, Van Aernam, Burt Van Horn, Van Wyck, Vidal, Ward, Elihu B. Washburne, Henry D. Washburn, William B. Washburn, Welker, Whittemore, Thomas Williams, William Williams, James F. Wilson, John T. Wilson, Stephen F. Wilson, Windom, and Woodbridge—184.

NAYS—Messrs. Adams, Archer, Axtell, Barnes, Beck, Boyden, Boyer, Brooks, Cary, Eldridge, Fox, Getz, Glossbrenner, Golladay, Grover, Haight, Holman, Hotchkiss, Johnson, Thomas L. Jones, Kerr, Knott, Marshall, McCullough, Niblack, Nicholson, Phelps, Randall, Ross, Sitgreaves, Stone, Taber, Lawrence S. Trimble, Van Auken, Wood, and Woodward—86.

NOT VOTING—Messrs. Baker, Barnum, Beaman, Blaine, Burr, Benjamin F. Butler, Chanler, Cornell, Deweese, Dockery, Dodge, Finney, Gravely, Halsey, Harding, Hawkins, Asahel W. Hubbard, Richard D. Hubbard, Humphrey, Julian, Kitchen, George V. Lawrence, Mann, Marvin, McCormick, Morrissey, Mungen, Newcomb, Newsham, Price, Pruyn, Robinson, Roots, Selye, Shellabarger, Aaron F. Stevens, John Trimble, Robert T. Van Horn, Van Trump, and Cadwalader C. Washburn—40.

The Speaker: "On the question, 'Will the House, on reconsideration, agree to the passage of the joint resolution?' the yeas are 134, and the nays 86. Two-thirds having voted in the affirmative, and it having been certified from the Senate of the United States that upon a similar vote upon reconsideration two-thirds of that body have agreed to the passage of the joint resolution, I do, by the authority of the Constitution of the United States, declare that

the joint resolution, excluding from the Electoral College votes of States lately in rebellion, which shall not have been reorganized, has become a law, notwithstanding the objections of the President."

In the Senate, on January 31st, the resolution of the Legislature of Ohio, withdrawing its assent to the fourteenth article of amendment to the Constitution, was presented.

Mr. Sherman, of Ohio, said: "Mr. President, I cannot allow these resolutions to be entered upon the Journal of the Senate, without making some remarks upon them. They do not speak the voice of the people of Ohio. Of that I am entirely convinced. The people of Ohio, a little more than one year ago, passed on the amendment of the Constitution of the United States proposed by the Thirty-ninth Congress, and adopted it by a popular majority of about forty-three thousand, electing fifteen Republican members of Congress out of nineteen. In the canvass there was a unanimity of sentiment in regard to the constitutional amendment that scarcely ever occurs on a political question. The people of Ohio have never reconsidered that judgment. The resolutions now read are the voice of a partisan majority in the General Assembly of Ohio, elected by a minority of the people of Ohio, on an issue totally different and disconnected from the constitutional amendment. Their proceeding is in violation of the expressed wish of the people of Ohio, who do not desire to rescind their assent to the amendment. These resolutions may not be a usurpation of authority, perhaps, but they are contrary to the only vote ever cast in Ohio when the subject was discussed or considered."

Mr. Sumner, of Massachusetts, said: "The resolutions from the Legislature of Ohio are so important in character, and so without any precedent I believe in our history, that I think they justify remark even by a Senator who has not the honor of any special association with the State.

"It seems to me very clear that the authors of these resolutions have accomplished nothing except to exhibit their own blind prejudices. By the Constitution of the United States a State may give its assent to a constitutional amendment. There is no provision for any withdrawal of such assent when once given. The assent of the State once given is final. A State, I do not hesitate to say, can no more withdraw such assent than it can withdraw from the Union; and on the latter proposition I believe there is now a universal accord. But happily, sir, the extraordinary effort of an accidental Legislature is absolutely impotent. The amendment in question is already a part of the Constitution of the United States, and in full vigor, even without the assent of Ohio."

Mr. Johnson, of Maryland, said: "Mr. President, if the honorable member from Massa-

chusetts is right in saying that the amendment has been adopted by the necessary number of States, it will, of course, result in the proposition that no one State which has assented to it can withdraw that assent. The honorable member is not now to be for the first time informed that that is a question about which there are differences of opinion; and whether the opinion which he pronounces is right or wrong depends upon the proposition which has been more or less discussed in the present debate whether the ten Southern States are not now States, and have not been States, throughout the war. If they are States within the meaning of the Constitution, then the amendment has not been adopted.

"Now, upon the other question, supposing the amendment not to have been adopted, I state, subject to be corrected if I am in error, what my present impression is. The Constitution provides that propositions for amendments of it may be submitted to the States, and that when they are assented to by three-fourths of the States they shall become a part of the Constitution. Now, whether, before the assent of three-fourths, it is not in the power of any one of the States or all of the States assenting to withdraw that assent, is a question upon which I am not to be understood as now expressing any decided opinion; but my impression is that they can withdraw; for, if not, it would remain forever binding upon the States assenting, and when the proposition should be renewed at any subsequent period, or when the States who had not assented, eight or ten or fifteen years after the time, when there was an absence of that assent necessary to give validity to the amendment, they would have no right to reconsider their action.

"As I say, that is my first impression. Now, I look upon what the States do preliminary to a decision of a majority which, when made, makes the amendment proposed a part of the Constitution, as a mere promise or undertaking that each will assent when the others are ready to assent, but that the day after the assent is given, or at any period subsequent to the giving of the assent, if the State assenting thinks that it has made a mistake, and that the Constitution should not be amended in the way proposed, it may withdraw its assent."

The resolution was referred to the Judiciary Committee.

In the House, on March 30th, Mr. Washburne, of Illinois, offered the following resolution:

Resolved, That the resolution of the Legislature of the State of New Jersey, purporting to withdraw the assent of said State to the constitutional amendment known as the fourteenth amendment, be returned by the Speaker of the House to the gentleman who presented it, for the reason that the same is disrespectful to the House and scandalous in character, and that its title only shall be referred to in the Journal of the House and in the Congressional Globe.

The rules were suspended, yeas 80, nays 17, and the resolution was adopted.

In the Senate, on July 21st, the following resolution was adopted without a count:

Whereas, the Legislatures of the States of Connecticut, Tennessee, New Jersey, Oregon, Vermont, West Virginia, Kansas, Missouri, Indiana, Ohio, Illinois, Minnesota, New York, Wisconsin, Pennsylvania, Rhode Island, Michigan, Nevada, New Hampshire, Massachusetts, Nebraska, Maine, Iowa, Arkansas, Florida, North Carolina, Alabama, South Carolina, and Louisiana, being three-fourths and more of the several States of the Union, have ratified the fourteenth article of amendment to the Constitution of the United States duly proposed by two-thirds of each House of the Thirty-ninth Congress: Therefore,

Be it resolved by the Senate (the House of Representatives concurring), That said fourteenth article is hereby declared to be a part of the Constitution of the United States, and it shall be duly promulgated as such by the Secretary of State.

On the same day it passed the House—yeas 126, nays 85.

The amendment was also adopted on the same day by the Legislature of Georgia, by thirty-four majority on joint ballot.

The following announcement was made by the Secretary of State, on July 20th, relative to the same amendment:

WILLIAM H. SEWARD, SECRETARY OF STATE OF THE UNITED STATES—TO ALL TO WHOM THESE PRESENTS MAY COME, GREETING:

Whereas, the Congress of the United States, on or about the sixteenth day of June, in the year one thousand eight hundred and sixty-eight, passed a resolution which is in the words and figures following, to wit:

Joint Resolution proposing an Amendment to the Constitution of the United States.

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid as part of the Constitution, namely:

ARTICLE 14—SEC. 1. All persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

SEC. 2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed; but when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State or the members of the Legislature thereof, is denied to any of the male inhabitants of such State (being twenty-one years of age, and citizens of the United States), or in any way abridged except for participation in rebellion or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in said State.

SEC. 3. No person shall be a Senator or Representative in Congress, or elector, or President or Vice-President, or hold any office, civil or military, under the United States or under any State, who, having previously taken an oath as a member of Congress or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof; but Congress may, by a vote of two-thirds of each House, remove such disabilities.

SEC. 4. The validity of the public debt of the United States authorized by law, including debts incurred for pay-

ment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned; but neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations, and claims shall be held illegal and void.

SEC. 5. The Congress shall have power to enforce by appropriate legislation the provisions of this article.

SCHUYLER COLFAX,

Speaker of the House of Representatives.

LAFAYETTE S. FOSTER,

President of the Senate *pro tempore*.

Attest—EDWARD MCPHERSON, Clerk of the House of Representatives.

J. W. FORNEY, Secretary of the Senate.

And *whereas*, by the second section of the act of Congress, approved the 20th of April, 1818, entitled "An act to provide for the publication of the laws of the United States, and for other purposes," it is made the duty of the Secretary of State forthwith to cause any amendment to the Constitution of the United States which has been adopted according to the provisions of the said Constitution, to be published in the newspapers authorized to promulgate the laws, with his certificate specifying the States by which the same may have been adopted, and that the same has become valid to all intents and purposes as a part of the Constitution of the United States;

And *whereas* neither the act just quoted from nor any other law expressly or by conclusive implication authorizes the Secretary of State to determine and decide doubtful questions as to the authenticity of the organization of State Legislatures or as to the power of any State Legislature to recall a previous act or resolution of ratification of any amendments proposed to the Constitution;

And *whereas* it appears from official documents on file in this department that the amendment to the Constitution of the United States proposed as aforesaid has been ratified by the Legislatures of the States of Connecticut, New Hampshire, Tennessee, New Jersey, Oregon, Vermont, New York, Ohio, Illinois, West Virginia, Kansas, Maine, Nevada, Missouri, Indiana, Minnesota, Rhode Island, Wisconsin, Pennsylvania, Michigan, Massachusetts, Nebraska, and Iowa;

And *whereas* it further appears from documents on file in this department that the amendment to the Constitution of the United States, proposed as aforesaid, has also been ratified by the newly-constituted and newly-established bodies, avowing themselves to be and acting as the Legislatures respectively of the States of Arkansas, Florida, North Carolina, Louisiana, South Carolina, and Alabama;

And *whereas* it further appears from official documents on file in this department that the Legislatures of two of the States first above enumerated, to wit, Ohio and New Jersey, have since passed resolutions respectively withdrawing the consent of each of said States to the aforesaid amendment;

And *whereas* it is deemed a matter of doubt and uncertainty whether such resolutions are not irregular and invalid, and therefore ineffectual for withdrawing the consent of the said two States, or either of them, to the aforesaid amendment;

And *whereas* the whole number of States in the United States is thirty-seven, to wit: New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Vermont, Kentucky, Tennessee, Ohio, Louisiana, Indiana, Mississippi, Illinois, Alabama, Maine, Missouri, Arkansas, Michigan, Florida, Texas, Iowa, Wisconsin, Minnesota, California, Oregon, Kansas, West Virginia, Nevada, and Nebraska;

And *whereas*, the twenty-three States first hereinbefore named whose Legislatures have ratified the said proposed amendment, and the six States next thereafter named as having ratified the said proposed amendment by newly constituted and established

legislative bodies, together constitute three-fourths of the whole number of States in the United States:

Now, therefore, be it known that I, William H. Seward, Secretary of State of the United States, by virtue and in pursuance of the second section of the act of Congress approved the twentieth day of April, eighteen hundred and eighteen, hereinbefore cited, do hereby certify that if the resolutions of the Legislatures of Ohio and New Jersey, ratifying the aforesaid amendment, are to be deemed as remaining of full force and effect, notwithstanding the subsequent resolutions of the Legislatures of these States which purport to withdraw the consent of said States from such ratification, then the aforesaid amendment has been ratified in the manner hereinbefore mentioned and so has become valid to all intents and purposes as a part of the Constitution of the United States.

In testimony whereof, I have hereunto set my hand and caused the seal of the Department of State to be affixed.

Done at the city of Washington, this twentieth day of July, in the year of our Lord one thousand eight hundred and sixty-eight and of the independence of the United States of America the ninety-third.

WILLIAM H. SEWARD, Secretary of State.

Mr. Schenck, of Ohio, from the Committee of Ways and Means, reported a bill to repeal the tax on cotton. He said: "Sir, I will but say, in reference to this tax on cotton, every one knows and understands it to have been an exceptional tax and a departure from the ordinary principle which prevails in our legislation in the United States, not to impose a burden upon an agricultural product. The tax, on the part of those who voted for it, of whom I was one, under the original proposition was considered justified in some degree, perhaps as a war measure, or rather as a measure following upon the heel of the war and relating to matters which had been affected by the disturbance of the country. It was also supported on the ground that there was but little revenue to be derived from the Southern part of the country except through a tax of this kind. And it was justified generally by the anomalous condition of all that was then existing and in a measure exists up to this time in that part of the country. The time has now arrived, I believe, in the general judgment of the country, and certainly in the unanimous judgment of the Ways and Means Committee, to remove that tax. And it will be observed that we propose to remove it prospectively. If this matter had come up for consideration as long ago as September last, when the cotton crop of the present year was just coming into market, and when it had not passed from the hands of the grower, it is not impossible that the committee might have recommended to the House to make the law take immediate effect upon its passage; but the condition of things has very much changed since that date.

Mr. Brooks, of New York, said: "In the main I perfectly concur in the remarks of the chairman of the committee; that is, I insist upon our retracing our steps, because this matter of the taxation of cotton to the extent of \$20,000,000 per annum is a bounty to that ex-

tent for the products of Great Britain in her India possessions and the products of Egypt and Brazil. Indeed, the percentage or premium which we give to the foreign cotton by our tax is computed by the Treasury agent, Mr. Wells, to be over fifty per cent., while by cotton brokers and commercial men it is computed to amount to seventy-five per cent. Hence, admitting this tax to have been a mistake, in which all agree, the only difference is when we shall correct the mistake. In regard to that I differ from the honorable chairman of the committee.

"Now is the accepted time, and now is the day, in my opinion, while in the opinion of the majority of the committee this doing right is to be postponed till the crop of another year, and there is to be a continuance of this wrong for a year from now."

Mr. Niblack, of Pennsylvania, said: "I have always been opposed to it for the reason that influences the gentleman from Ohio. In the first place, it was an exceptional tax, so conceded; in the next place I thought it unjust and impolitic. So long as cotton commanded a high price, this tax was not so much felt. It was not a matter of so much consequence to the producer when this tax was put on as it has assumed to be during the present depressed condition of the cotton interest. Still, it was an impolitic measure. Being opposed, therefore, to this tax from the beginning, my first impulse was to agree to something like the proposition of the gentleman from New York (Mr. Brooks), to take off the tax at once. On examining the question, however, I came to the conclusion that we could not do so justly without refunding to those who have already paid taxes upon the present year's crop. Upon inquiry at the Treasury Department, and at the office of the Commissioner of Internal Revenue, I ascertained further that this act could never be carried out without great trouble and considerable cost, and even then perhaps not very satisfactorily. I also ascertained, upon inquiry of those who are more familiar with the subject of cotton-growing than I am, that by this time the greater portion of the small producers, the poor men who are engaged in growing cotton, have already parted with their crop and paid the tax on it, or at least have sold it at a price corresponding to the addition of the tax. In that view of the case, to adopt the proposition of the gentleman from New York (Mr. Brooks), it seems to me, would have the effect to take from these people the amount they have already paid in taxes. It would be a discrimination against men who are least able to submit to the loss."

Mr. Griswold, of New York, said: "Mr. Speaker, I rise to submit a few remarks on the question now before the House, mainly because of the position I occupied at the time the tax was imposed. When the House considered and decided that matter, I differed with the members of the Committee of Ways and Means in

regard to the policy of imposing a tax upon cotton. It will be remembered, sir, at that time cotton was bringing in market from forty to fifty cents per pound, and had brought that price for at least a year prior to that time. It will be remembered further that it had then the command of the English market; that American cotton was consumed in England to an extent of not less than eighty per cent. of the whole consumption in Great Britain. It was regarded at that time, under all these circumstances, as an interest which could well stand the imposition of a tax of two and a half or three cents per pound. I took the ground upon the floor, differing from the distinguished gentleman from Massachusetts, and from what I considered the best authority, I claimed at a shilling sterling the American cotton would control the market in England and be the cotton of cheap consumption. Now, Mr. Speaker, the condition of things has changed entirely. Cotton, instead of being an exception to the products of the soil which could stand taxation, is really the one exception against imposition; that is to say, there is no product of the soil which to-day will not bear a direct tax better than the article of cotton. And now, sir, instead of supplying eighty per cent. of the whole consumption in England, it has been reduced to forty per cent. According to the able report of Mr. Wells, the special commissioner, it was reduced eight per cent. in 1864. It is evident, at the present rate, cotton cannot be produced except at a loss, and considering that fact and the fact of the importance of that product to this country, there can be no difference in this House, I think, as to the policy of removing that tax. I beg to assure my colleague (Mr. Brooks) that the motive at the time was not to punish the South. Congress was then engaged in searching out avenues by which it could fill its Treasury. As I said before, at the price cotton then brought it could well bear a tax of two and a half cents per pound. I believe there was no member of the Thirty-eighth or Thirty-ninth Congress who was animated at all by a desire to punish the South in imposing that tax."

Mr. McCarthy, of New York, said: "The retention of this tax does in a measure protect the wool-growers; and, while furnishing \$20,000,000 of revenue to the Government, also adds so much to the cost of manufacturing in Europe, and operates as a protection here at home. I am not prepared to criticise the motives of those who advocate this measure; but an examination will prove that it will benefit not so much the cotton-grower as the dealer, the shipper, and the British manufacturer. How far these interests are to have special favors time may tell. Before this \$20,000,000 of revenue is taken off, I want to know how it is to be replaced. Is the remission of this tax to impose additional burdens upon other interests that are equally a necessity and are equally suffering (to which I object), or is

the deficiency of revenue to be made up by economy and retrenchment? Common justice demands that all the necessary interests of our country should share the burdens of taxation equally. I claim that the Committee of Ways and Means should hold this question in abeyance until they can show how this deficit of \$20,000,000 is to be made good."

After a brief debate the bill was ordered to be engrossed, read the third time, and passed, by the following vote:

YEAS—Messrs. Adams, Allison, Ames, Anderson, Archer, Arnell, Delos B. Ashley, James M. Ashley, Bailey, Baker, Baldwin, Barnes, Barnum, Beaman, Beck, Bingham, Blaine, Blair, Boutwell, Boyer, Bromwell, Brooks, Broomall, Buckland, Burr, Cake, Cary, Chanler, Churchill, Reader W. Clarke, Sidney Clarke, Cobb, Coburn, Cook, Cullom, Dawes, Dodge, Donnelly, Driggs, Eckley, Eggleston, Eldridge, Eliot, Farnsworth, Ferry, Fields, Garfield, Getz, Glossbrenner, Gravelly, Griswold, Grover, Haight, Halsey, Hamilton, Hawkins, Hill, Holman, Hooper, Hopkins, Hotchkiss, Chester D. Hubbard, Richard D. Hubbard, Hulburt, Humphrey, Hunter, Ingersoll, Johnson, Jones, Judd, Julian, Kelley, Kerr, Ketcham, Knott, Koontz, Lafin, George V. Lawrence, William Lawrence, Lincoln, Logan, Loughridge, Mallory, Marshall, Marvin, Maynard, McClurg, McCullough, Moore, Moorhead, Morgan, Morrell, Mullins, Mungen, Myers, Newcomb, Niblack, Nicholson, Nunn, O'Neill, Orth, Payne, Perham, Peters, Phelps, Pile, Plants, Polsley, Price, Pruyn, Randall, Robertson, Robinson, Ross, Sawyer, Schenck, Shanks, Sitgreaves, Smith, Spalding, Stewart, Stokes, Stone, Taber, Taylor, Thomas, Trimble, Trowbridge, Upson, Van Aernam, Van Auken, Robert T. Van Horn, Van Trump, Van Wyck, Cadwalader C. Washburn, Elihu B. Washburne, Henry D. Washburn, William B. Washburn, Welker, Thomas Williams, William Williams, James F. Wilson, John T. Wilson, Stephen F. Wilson, Windom, and Woodward—146.

NAYS—Messrs. Benjamin, Benton, Butler, Cornell, Covode, Ela, Ferriss, Harding, Higby, Jenckes, Kelsey, Lynch, McCarthy, Miller, Pike, Poland, Starkweather, Aaron F. Stevens, Thaddeus Stevens, and Ward—20.

NOT VOTING—Messrs. Axtell, Banks, Dixon, Finney, Fox, Asahel W. Hubbard, Kitchen, Loan, Mercur, Morrissey, Pomeroy, Raum, Scofield, Selye, Shellabarger, Taffe, Twichell, Burt Van Horn, Wood, and Woodbridge—20.

In the Senate, on December 18th, the bill was taken up.

Mr. Sherman, of Ohio, said: "It is scarcely necessary for me to explain the necessity or the reasons for this bill, because those reasons are matters of public notoriety known to most Senators. We have an official report from the special commissioner of revenue, Mr. Wells, strongly urging it, and setting forth very cogently the reasons why the tax should be repealed. He recommends its repeal not only for the next year, but for the present year. The bill comes to us from the House of Representatives in its present form, and does not affect the tax on cotton grown during the present year, but only applies to the future crop. As preparations are now being made all over the South for the next year's crop, it is important that the action of Congress on this subject should be definitely fixed before any adjournment for the holidays. It is urged by

many persons in the South, some of whom are here, that the planters should know now, before the holidays, whether or not it is advisable for them to proceed to raise cotton next year or other crops, as during the holidays, or at the beginning of the new year, they make their contracts with their hands with a view to the labor to be employed during the year. I hope, therefore, the subject will be acted upon.

"If Senators desire any further information, I have official documents here, and quite a number of letters on the subject, showing the absolute importance of repealing this tax. The price of cotton has now gone so low, that it is said that even without the tax it will not pay the expense of raising it. I have letters from gentlemen for whom I can vouch, who removed from the State of Ohio and went South, and who have done all they could to develop that region of country by the raising of cotton, who say, that at present prices there is an actual loss of money with the utmost care on their part, and if they are compelled to pay the tax, even for the present year, they will be ruined in some cases. As, however, the House bill does not propose to relieve them from the tax for the present year, the Committee on Finance thought it was scarcely worth while to propose to amend the proposition, as there would probably be great division of opinion upon it here, and there had been a vote already taken on it in the other House. The committee, therefore, reported the bill without amendment."

Mr. Morrill, of Vermont, said: "In this instance I do not coincide with the action either of the House of Representatives or of the Finance Committee. I think it would be much wiser, and it would be a greater relief to the South, to take the tax off manufactured cotton rather than off the raw material. There are quite a number of facts and statistics which, without occupying a great deal of time, I should like to submit to the Senate when the bill comes up for action."

Mr. Pomeroy, of Kansas, said: "I am confident, as I have always been, that this tax discourages production. I have many acquaintances in the South, and I am sure that you cannot get Northern men to go down there and raise cotton while this tax is imposed, and if they cannot raise it I do not suppose any will be raised. I am anxious to come to a vote and strike off the tax. I think, however, it might act injuriously to strike it off from the present crop, because that has got out of the hands of the producers to a great extent, and is in the hands, if not of speculators, of merchants who did not produce it. They have bought it with the tax paid, and I do not think we should interfere with their arrangements. I do not like laws that are retrospective. Let this repeal be prospective and apply only to the crop raised hereafter. If applying it to this year's crop would relieve the producers, I

should not object; but it is beyond that now, it is too late for them; we cannot relieve them. We cannot relieve the men who raised the cotton and lost money in doing it. It has got into other hands."

On December 20th the bill was further considered.

Mr. Sherman, of Ohio, said: "This is not, and cannot be considered, a political question, and it ought not to be affected by political considerations. We claim to be Senators of the United States of America, and we are bound to do that which we would do if all these States were represented by two Senators each on this floor. Would they possibly elect a Senator from any of these Southern States, whether white or black, loyal or rebel, who would not demand as the first act of his official life the repeal of this obnoxious cotton tax? We know that they would demand it, and we should feel a sense of justice that would impel us to grant, at least to a reasonable extent, some relief from this oppressive tax. There is no doubt that if these States were represented here by twenty Senators, this question could not rest in doubt for a moment. The House of Representatives felt the weight of this subject upon them, and promptly, by a very large vote—"

Mr. Morton: "And without debate."

Mr. Sherman: "And without debate felt bound to relieve this suffering interest by prompt and decided action. The same feeling prevailed in the Committee on Finance. We had representations made to us which, if I should read them to this Senate, would move them; it would be impossible for them not to feel the force of these statements as to the condition of the people of the Southern States. Look at it. Now, when their staple is brought into market, one-fourth of all their production is taken by the tax-gatherer; and not only that, but there are very severe and onerous regulations which require them to bring their cotton to one place in a congressional district, making difficulties and delay, and then one-fourth of their product is taken to pay the tax when the other three-fourths will not pay more than one-half of the expense of raising the raw cotton. This was not foreseen when we laid this tax. I voted for the first cotton tax. Then it was a tax of five per cent. Last year the Senate, by a very decided vote, reduced the tax to one cent a pound; and, probably, if it had been left at that there would have been no serious complaint, no demand for immediate action, and we should have collected the one cent per pound without great suffering in the South. But when we impose a tax of two and a half cents per pound, thus taking from the producer of the cotton one-fourth of all his labor, and leaving the rest, totally insufficient to furnish him the necessities of life, I say it makes a case of oppression which the Senate of the United States ought promptly to relieve."

Mr. Morrill, of Vermont, said: "There is

one point which has been referred to in the course of this debate, to which I desire to allude, and that is in regard to the injustice of allowing a drawback on the manufacture of cotton. If we could manufacture the whole of this cotton in this country, as it seems to me we could by the continuance of that policy, would there be any man in the United States unwilling to yield up the amount of the entire tax for the sake of the great gains, and profits, and benefits resulting to this country in employing so large a share of labor in turning that cotton into manufactures, and sending it abroad doubled in value? Is there any objection to doubling the value of the exports of the South? Why should we be unwilling to allow these people an opportunity to double their exports? I think it can be done. We allow the drawback on the manufactured article in order to find a foreign market and to keep our people at work. Do we not allow it in all other instances of manufacture? If foreigners thereby get our cotton manufactures at cheaper rates than our own people, do they not get whiskey, tobacco, and petroleum, also cheaper?

"We had up early a kindred subject, about which, I think, we made a sad mistake, and that was the subject of petroleum. We first levied a duty on the crude petroleum and then on the refined; and we allowed a drawback in both instances. In my judgment it was a great mistake. We have a monopoly of that article. If we had levied a duty upon the crude article, and also on the manufactured, and allowed a drawback on the manufactured article the same as we do upon cotton, we should have largely increased our revenues; and we should have benefited our own country, because we should have allowed our own people to refine all that is now consumed abroad, and the quantity is immense."

Mr. Conkling, of New York, moved to amend, so that the bill should read as follows:

That all raw cotton grown in the United States during the year 1868 shall be exempt from internal tax.

This was agreed to—yeas 24, nays 20.

On motion of Mr. Drake, of Missouri, the following amendment was concurred in:

But nothing herein contained shall be construed to require any additional provisions of law in order to authorize the levy and collection of said tax upon all such cotton grown therein after the said year.

On motion of Mr. Morrill, of Vermont, the following amendment was concurred in:

Provided, That the duty on raw cotton imported from foreign countries on and after April 1, 1868, and until April 1, 1869, shall be suspended.

The bill was then passed, by the following vote:

YEAS—Messrs. Buckalew, Cattell, Cole, Corbett, Cragin, Davis, Dixon, Doolittle, Edmunds, Fowler, Frelinghuysen, Grimes, Henderson, Johnson, Morgan, Morrill of Maine, Norton, Patterson of New Hampshire, Patterson of Tennessee, Ross, Saulsbury, Sherman, Van Winkle, Williams, and Wilson—25.

NAYS—Messrs. Cameron, Chandler, Harlan, How-

ard, Howe, Morrill of Vermont, Pomeroy, Ramsey, Stewart, Thayer, Tipton, and Wade—12.

ABSENT—Messrs. Anthony, Bayard, Conkling, Conness, Drake, Ferry, Fessenden, Guthrie, Hendricks, Morton, Nye, Sprague, Sumner, Trumbull, Willey, and Yates—16.

The House having refused to assent to the amendments of the Senate, and the latter having declined to recede, a committee of conference was appointed on January 20th.

In the Senate, on January 22d, Mr. Sherman, of Ohio, from the committee of conference on the cotton-tax bill, reported that they were unable to agree. He said: "The House of Representatives have asked for another committee of conference. The Senate conferees were not prepared to abandon the position taken by the Senate; and now, in order to relieve us from the difficulty in which we are placed, I will move that the Senate agree to the further conference asked by the House of Representatives, and that the Senate conferees be instructed to recede from the Senate amendments, with some provision allowing imported cotton to be admitted duty free. I will make this motion with a view to relieve the difficulty that exists between the two Houses on the cotton-tax bill. It should be remembered by Senators that the House passed a bill repealing or suspending indefinitely the cotton tax. The Senate amended the bill so as to suspend the tax for a year simply. The House conferees, in the free conference which we had, refused to agree to that amendment, and as things now stand the bill will be lost unless some arrangement is made by which a concurrence may be brought about. For the purpose of doing that I move that we agree to the new conference, and that the second committee of conference on the part of the Senate be instructed to recede from the Senate amendments, with some provision, which the House, I understand, are willing to agree to, that imported cotton shall be admitted duty free, so as to restore the state of the law to the precise condition it was before the war. I make that motion."

Mr. Conkling, of New York, said: I think it fair, before the Senate votes upon this proposition, that it should know one fact in reference to the management of the question in the conference committee. I will venture to state so much of what transpired in committee as this: the managers on the part of the Senate did not stand simply upon the vote of the Senate in what they proposed, but the sense of the managers on the part of the House was taken upon a proposition suspending the tax, in accordance with the vote of the Senate, for a year, and reducing it largely for the future if it should continue. That proposition was rejected, and the managers on the part of the House stood simply, first and last, upon the bill as passed by the House. As the honorable Senator from Ohio (Mr. Sherman) has said, there was no contrariety of opinion in reference to the provision of the Senate amend-

ments touching the import duty upon foreign cotton; but, as to the subject-matter which the conference really met to dispose of, there was no proposition on the part of the managers of the House, except that we should accept the House bill precisely as it stood. In that view of the case, and regardless of the private convictions of the managers on the part of the Senate, it was thought that we were not at liberty to part with the whole question, and sacrifice the position which had been taken by the Senate twice, upon a vote by the yeas and nays, by a decided majority; and, indeed, a third time, by ordering the conference."

The motion was agreed to.

On the 23d the committee of conference reported, and recommended that the Senate recede from their amendment to the bill, and agree to the same with an amendment as follows: Add to the bill the words, "And cotton, imported from foreign countries, on and after July 1, 1868, shall be exempt from duty."

The report was concurred in by the Senate, but rejected by the House.

The Senate, on January 28th, resolved to insist, and agreed to a further conference, to which the House also agreed. On January 30th, the committee made the same report as the previous one, excepting the date of importation, which was changed to November 1st.

The report was concurred in by the Senate and House.

Many measures of less importance than those discussed in the preceding pages, received the attention of Congress, among which were some that became laws.

The reduction of the currency, by retiring or cancelling United States notes, was suspended.

Eight hours was declared to constitute a day's work for all laborers, workmen, and mechanics, in the employ of the Government. By an opinion of Attorney-General Evarts, subsequently expressed, a correspondent reduction of wages was not inconsistent with the provision of the act.

In case of a vacancy in the office of Chief Justice of the Supreme Court of the United States, the senior Associate Justice is directed to discharge the duties until the vacancy is filled.

The Commissioner of the Freedmen's Bureau was requested, on January 1, 1869, to cause the Bureau to be withdrawn from the several States within which it has acted. The educational department of the Bureau, and the collection and payment of money due to soldiers, was continued.

The right of expatriation was declared, and that all naturalized citizens while in foreign states shall receive from the Federal Government the same protection of person and property that is accorded to native-born citizens in like situations and circumstances; and that, when any citizen of the United States has been unjustly deprived of his liberty by any foreign government, it shall be the duty of the President to demand of that government the reasons

for such imprisonment; and, if it appears to be wrongful and in violation of the rights of American citizenship, the President shall demand the release of such citizen, and, if the release is unreasonably delayed or refused, it shall be the duty of the President to use such means, not amounting to acts of war, as he may think necessary to obtain such release.

It was provided that, whenever any person engaged in the late resistance to the authority of the United States, from whom all legal disabilities had been removed by an act of Congress, by a vote of two-thirds of each House, should be elected to any office under the Federal Government, he should take the following oath, or affirmation:

"I, A. B., do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God."

The session of Congress was concluded in August, so far as relates to the transaction of business, and that body adjourned subject to a call of a special committee, to meet, if it appeared to such committee to be expedient, either in September or November; otherwise the adjournment was to continue until the day of a new session in December. No subsequent session was held.

CONNECTICUT. The movement of political parties preparatory to the State election, which is held early in April, commenced soon after the beginning of the year.

The Republican State Convention assembled in Hartford on January 15th, and nominated Marshall Jewell for Governor, and adopted the following series of resolutions:

Resolved, That it is the highest duty of our Government to maintain the integrity of the Union, and to protect to the fullest extent the rights of the citizen; and we do cordially approve the determination of Congress so to guard the interests of the nation in the reconstruction of the States recently in rebellion, as to secure permanent union and enduring peace on the basis of justice, freedom, and equal rights to every citizen of the Republic.

Resolved, That in all public expenditures, both State and national, the most rigid economy should be observed, and that, in collecting the necessary revenue to meet the current expenses of the Government, the industry of the country, engaged in producing staple and necessary commodities, should be left unembarrassed, and all industrial products of prime necessity should, as far as practicable, be exempt, and all taxes should be levied on luxuries and other sources less burdensome to the people; and all the burdens and taxes, both State and national, should be so adjusted as to bear equally and justly on all.

Resolved, That the national faith, pledged for the redemption of the public debt, must be kept inviolate, and we denounce repudiation in every form; and declare that the national debt, created to save the nation, must be fully paid in good faith and according to its tenor.

Resolved, That our Government, recognizing no distinction between native-born and adopted citizens, should demand of other nations the immediate and unconditional release of all citizens of the United States illegally held in military service, or in custody for pretended political offences not committed on their soil; and it is the duty of the Government to enforce that demand, if necessary, with all the power of the nation.

Resolved, That the thanks of the American people are due to the Union soldiers who perilled their lives in defence of their country and in vindication of the honor of its flag; that the nation owes to them, and to the widows and orphan children of those who fell in battle, adequate aid and protection, and that the memories of those who have fallen in its defence shall be held in grateful and everlasting remembrance.

Resolved, That, on behalf of the loyal people of Connecticut, we do hereby present as our and their first choice for next President of the United States, General Ulysses S. Grant; that we recognize in him not only the gallant soldier, who led our armies to victory and maintained the Union in its integrity, but also the wise statesman, true to the interests of the people, daily striving to reduce the public expenditure, more solicitous for the permanent prosperity of the country than for personal or party success, while at the same time he stands pledged, by his recorded sentiments and historic deeds, to secure and maintain on enduring foundations the principles of the loyal men of the nation who sustained the Government and honor of our flag against treason and armed rebellion.

The Democratic State Convention assembled at New Haven on January 29th, and nominated James E. English for Governor; Ephraim H. Hyde, for Lieut.-Governor; Leverett E. Pease, for Secretary of State; Edward S. Mosely, Treasurer; and Jesse Olney, Comptroller.

The following resolutions were then adopted as expressive of the views of the party:

Resolved, That the present so-called Congress, consisting for the most part of men who have perverted the very objects of a Federal Legislature, by refusing representation to ten of the States of the Union, is, by reason of its existence in its present form, a revolutionary body, whose usurpation challenges the opposition of every constitution-loving citizen.

Resolved, That this assemblage have usurped the authority of the Executive, and so have broken down the balance of power established by the fathers. They are now planning to rob the Judiciary of its powers, in order that it may be prevented from deciding in favor of the Constitution; they have deprived the legislative body of its own integrity, by so reducing its numbers as to enable the usurping remainder to carry out their destructive plans; they have denied the sovereign power of all the States, by placing a portion of them under military despotism; they have erected a number of new offices and sent to a portion of the republic a swarm of officers to harass the people, and they are now loading with taxes the citizens of the North for the purpose of enslaving their brethren of the South; they have in many instances abolished the right of trial by jury and the right of *habeas corpus*, and by military force have overthrown the civil power and deprived our people of their liberties; they have made war on the Constitution, on every department of the Government, on the States, and on the people, and have enslaved the white man in order to give the ballot to the negro.

Resolved, That the continued and increasing wickedness and usurpation of this fractional Congress have aroused a popular indignation so just, so deep, and so universal, that the doom of the tyrants is already written, and the prophecy of their destruction is sure to be accomplished at the ballot-box.

Resolved, That the unconstitutional legislation which we denounce, while it is established for the

presumed benefit of the negro, is deranging business, paralyzing industry, ruining the merchant and the manufacturer, and depriving the laborer of employment.

Resolved, That we are in favor of redeeming all our pecuniary obligations and of paying the public debt in the manner provided by law, and that we therefore feel the necessity of reducing a system of taxation more onerous than that of England or France, and organized in part for the destruction of State sovereignty. The Democratic party are not in favor of repudiating either the debt or the Constitution of the country, and would therefore reduce the taxes as well as restore the liberties of the people.

Resolved, That the Democratic party are the friends of equal taxation, and will use all constitutional means to accomplish this desirable result.

Resolved, That the rights of our naturalized citizens, while sojourning in foreign countries, should be defended and maintained against every violation with all the power of the Federal Government; and that, in the language of Governor English, "the Government should indicate in unmistakable terms its purpose to respect the rights of all citizens alike."

Resolved, That we are opposed to forcing negro suffrage on other States, or to establishing it in our own. We are opposed to the first, because we have no right to interfere with the domestic affairs of other sovereignties; we are opposed to the second, because the introduction of this inferior element would only lead to demoralization.

Resolved, That all experience has shown the evil consequences and the futility of passing laws to abolish the social habits of the people; that such laws violate the liberty of private judgment, are essentially tyrannical, impossible to execute, and, so far as they are attempted to be enforced, increase the very evil they pretend to remove.

Resolved, That, for his various vetoes and messages protesting against the illegal acts of a dismembered Congress, and nobly sustaining the organic law of the Republic, Andrew Johnson both merits and receives the sincere thanks of the American people.

Resolved, That in this crisis of the country, when all true patriots should unite their votes and influence, we cordially invite all conservative men to act with us in upholding the rights of the States and the integrity of the Republic.

The election was held on the first Monday in April, with the following result: The whole vote for Governor was 99,325, of which James E. English received 50,541, and Marshall Jewell 48,777. The majority for English was 1,765. The Legislature, which was elected at the same time, was composed of 12 Republicans and 9 Democrats in the Senate, and 129 Republicans and 118 Democrats in the House.

The conventions for the nomination of presidential electors were subsequently held, and at the election in November the Republicans had a majority of votes. The whole vote given was 98,241, of which the Republican electors received 50,641, and the Democratic electors 47,600—Republican majority, 3,041.

The interest in the public schools of the State has been rapidly increasing, as indicated by the amount contributed to their support. This had increased, during the year previous, from \$704,986 to \$983,806, being more than a quarter of a million of dollars. During the past three years, the amount raised in the State for school purposes has more than doubled. In consequence of the action of the Legislature in withholding any funds from the

Normal School, it was suspended during the year. Nearly every State in the Union has established one or more of these schools, and no State, except Rhode Island, had previously abandoned them. The State Board of Education requested the Legislature, if it continued indisposed to maintain the Normal School, to authorize them to establish a Training School for teachers at New Britain. Instead of the former three years' course, they proposed that there should be two or three terms in each year, of three or four months each; and that the course of instruction in each term should be complete in itself, and yet so varied that those who choose to attend the school for two, three, or more terms, may do so profitably, without a mere repetition of the studies of previous terms. A school thus conducted, while it would not give as complete and thorough instruction as the Normal School, would extend its advantages to a larger number of persons; for many, who could not afford to attend the school for two or three years, would gladly do so for a few months or terms. The plan adopted in the State of Vermont is also recommended. This consists in establishing, in some existing academy or high school in each congressional district in the State, a normal department, which is under the control and management of the Board of Education.

The number of towns in the State is 163; each of which made its return for the school year closing previous to the session of the Legislature. The number of school districts is 1,590; the number of public schools is 1,645. The number of children, between four and sixteen years of age, on January 1, 1867, was 120,884; do. on January 1, 1868—123,650; increase during the year, 2,766. The whole number of scholars registered in winter was 80,148, and the average attendance 57,117. The whole number registered in summer was 73,863, and the average attendance 52,299. The number of scholars, over sixteen years, in public schools is 2,181. The capital of the School Fund of the State is \$2,044,035, and the revenue distributed to the towns during the year was \$136,015; which is a dividend of \$1.10 per child. The amount raised by town-tax for schools was \$149,680. The amount raised by district tax for schools was \$466,931. The total amount expended for teachers' wages was \$557,193.

It appears, by the report of the Secretary of the Board of Education, that absenteeism and truancy prevail to an alarming extent. The average attendance in summer is 68,585 less than the whole number of children enumerated, and in winter 63,767 less. The percentage of average attendance in summer is 43½, and in winter only 47½. Less than one-half the children of the State are found on an average in the public schools. In summer there are 47,019 children not registered in the public schools, and in winter 40,736. After a liberal allowance for the patronage of private schools, it is

declared that thousands are growing up in ignorance, or trained in the street-school for vagrancy and vice. The law of the State to prevent this evil is regarded as excellent, and prescribes as follows:

Each town shall make all needful provisions and arrangements concerning habitual truants, and also concerning children wandering about in the streets or public places of any city, or town, having no lawful occupation, or business, nor attending school, and growing up in ignorance, between the ages of seven and sixteen years; and shall also make such by-laws, respecting such children, as shall be most conducive to their welfare, and the good order of such city or town; and suitable penalties shall be annexed to such by-laws, not exceeding twenty dollars for any one breach; but said by-laws shall be approved by the Superior Court sitting in any county in the State.

Any minor, convicted of being an habitual truant, or any child, convicted of wandering about in the streets, or public places, of any city, or town, having no lawful business, nor attending school, and growing up in ignorance, between the ages of seven and sixteen years, may, at the discretion of the justice or the court having jurisdiction of the case, instead of the fine mentioned in the preceding section, be committed to any such institution of instruction, house of reformation, or suitable situation, as may be provided for the purpose by such city or town, under the authority of the preceding sections, for such time, not exceeding two years, as such justice or court may determine.

The several cities and towns shall appoint, at the annual meetings of such towns, or annually, by the mayor and aldermen of such cities, three or more persons, who alone shall be authorized to prosecute for violation of such by-laws.

The debt of the State, after deducting the amount of the sinking funds, bank stock, and cash in hand, was, on March 31st, \$7,324,136. The receipts from all sources during the year were \$2,711,286, and the expenditures \$2,496,895, making, with the amount on hand of the previous year, a balance of \$713,455.

But little change has taken place in the charitable institutions of the State during the year. At the Insane Retreat there were, during the year, admitted 72 males and 101 females; of these there were discharged as recovered, 72; much improved, 86; improved, 28; not improved, 14; died, 17; total discharged during the year, 167. The number remaining the 31st March was 123 males and 123 females.

At the Asylum for the Deaf and Dumb, the number of patients during the year was 266, of whom 155 were males and 111 females. The expenditure of the year was \$104,566.

The State Reform School, located at West Meriden, had, on March 31, 1867, the number of 264 pupils; during the year, 145 were received and 143 discharged. The expenditures were \$65,297. There is also a school for imbeciles, containing 40 pupils, which received an appropriation from the State of \$3,000.

The State Prison contained 207 convicts at the close of the previous year; 81 were received during the year, and 97 discharged; the number remaining at the close was 191. The expenditures were \$23,460, and the receipts \$25,166.

COOKE, Rev. HENRY, D. D., LL. D., an Irish Presbyterian clergyman, polemic and author, born at Grillagh, near Maghera, Ireland, May 11, 1788; died at Belfast, Ireland, December 13, 1868. His father was a small farmer, and unable to do much for the education of his son, but the early promise of the lad attracted the attention of the Presbyterian ministers of the vicinity, and through their assistance he was fitted for Glasgow University at an early age, and entered, in his fifteenth year, a tall, raw-boned youth. He was obliged to support himself by teaching as a private tutor during his university course, and hence did not take any of the honors, though he maintained a respectable scholarship. In 1808 he was ordained and settled at Duneane, near Toome, and, a little more than two years later (in January, 1811), was called to the large and wealthy congregation of Donegore, county of Antrim. Here he soon became distinguished alike for his eloquence and his decided orthodoxy. In 1814 he preached a very able discourse, which was immediately published, in aid of the funds of the Belfast House of Industry. In 1818 he was called to the still larger congregation of Killyleagh in County Down, where he soon became involved in a controversy with the Arians, first with an English Unitarian minister, Rev. J. Smithurst, with whom he held numerous *viva voce* discussions, ending with the complete discomfiture of his antagonist, and then with Rev. Henry Montgomery, a member of his own synod, who avowed Arian sentiments and sustained them with a remarkable eloquence, great rhetorical power, and an imposing personal presence, which was well calculated to awe any man who controverted his views. The controversy between Montgomery and Cooke commenced in 1827, and was followed up for two years, the antagonists being in most respects well matched, though in logical acumen, in ready repartee, and power of invective, Dr. Cooke was the abler of the two. The discussion ended in Montgomery's defeat and withdrawal from the synod. At its close Dr. Cooke was called to the May Street congregation, Belfast, with which he spent nearly forty years of his life. He was at this time in the full prime of manhood, with a reputation for ability as a controversialist, and brilliant eloquence as a preacher, second to that of no man in the Presbyterian Church in Ireland. The times were such as demanded a bold leader, of great argumentative powers, and Dr. Cooke was too thoroughly a man of war from his youth to hesitate for a moment in the advocacy of measures which he believed to be right. In the National Board of Education controversy, from 1831 to 1840, he took an active part, advocating the acceptance of the proposals of the Government, when it could be done without any surrender of Presbyterian principle. His conservatism, or, as we should say, toryism, at this time alienated some of his previous friends, but he was not the man to abandon

for any cause a position which he had once deliberately taken. The discussion of voluntarism, prompted by the action of the seceders from the Scottish Kirk, and stimulated to greater intensity subsequently by the organization of the Free Church of Scotland, was another topic which called forth all his eloquence, logic, sarcasm, and invective. He opposed the voluntary system with the utmost vehemence; and the maintenance of the Irish Presbyterian Church in its condition of semi-dependence upon the Government and its continued reception of the *regium donum* was due in a great measure to his efforts. In 1841 he entered the lists with Daniel O'Connell, having challenged him to a discussion of the advantages and disadvantages of Repeal of the Union to Ireland. Dr. Cooke's address to the people of Belfast, in reply to O'Connell's sophistries, was terrible in its satirical power, its scathing invective, and its bold defiance of the great repealer. In 1844 he was involved in a controversy in his own synod in regard to the location of the Magee College, for which a large bequest had been left. In the end this resulted in the erection of a collegiate institution at Derry on the Magee foundation, and the establishment of the Irish General Assembly's College at Belfast. In this latter college, in 1847, Dr. Cooke was appointed to the chair of Sacred Rhetoric and Catechetics. On receiving this appointment he resigned the pastorate of the May Street congregation, but at the urgent request of the people continued as their perpetual supply till March, 1868. His powers as a preacher did not fail till a few months before his death, and his audiences continued to listen with evident interest to his discourses till the close of his life. He was three times moderator of the General Assembly of the Irish Presbyterian Church, and was universally regarded as the ablest of her presiding officers, during the present century. His principal published works are his controversial discussions, some occasional discourses and addresses, and an edition of Brown's "Self-interpreting Bible," with copious annotations.

COQUEREL, ATHANASE LAURENT CHARLES, a clergyman of the French Protestant Reformed Church, a politician and an author, born in Paris, August 27, 1795; died in that city, January 10, 1868. He was connected with England and English literature, through his aunt, Miss Helen Maria Williams, a well-known writer, who undertook the charge of his early education. After completing his academical and theological studies at the reformed institution at Montauban, he was ordained in 1816, and was offered the incumbency of the Anglican Church in the Island of Jersey, but declined it, because he could not subscribe to the Thirty-nine Articles. He then went to Holland, and was first appointed pastor to the French Church in Amsterdam, and subsequently preached to the Calvinistic churches in Leyden and Utrecht. In 1830 he returned

to France, with a high reputation for eloquence, being invited to Paris by the celebrated naturalist Baron Cuvier, who was also connected with the Reformed Church. In 1833, he became a member of the Protestant Consistory, but soon found himself involved in a controversy with the leaders of the Reformed Church, who, from the liberal opinions which he put forth, accused him of having abandoned their cardinal doctrines of exclusive faith and predestination. A division ensued, and M. Coquerel became the acknowledged leader of the Liberal or Rationalistic section, as M. Guizot was of the Orthodox Calvinists. The controversy between these two sections was maintained, with increasing divergence of views, until the death of the Rationalistic leader. Of late years the number of adherents to his views had considerably multiplied, and his son, M. Athanase Coquerel, Jr., who, like his father, is a clergyman of the French Reformed Church, has become a leader of the Rationalists, going to much greater lengths in his departures from orthodoxy than his father. In the revolution of 1848, M. Coquerel came forward as a candidate for election to the National Assembly, and was chosen; receiving 109,934 votes, as a moderate republican. The Abbé Lamennais and the great Dominican friar-preacher Father Lacordaire were among his colleagues. He was one of the commission to frame the new Republican constitution, supported the administration of General Cavaignac and Prince Louis Napoleon Bonaparte, and advocate the abolition of capital punishment. As a whole, how-

ever, his legislative career, which continued till the *coup d'état* in December, 1851, did not enhance his reputation. He returned to his pulpit services, where his really extraordinary power as an orator always insured him a large audience. M. Coquerel was a somewhat voluminous author. In 1831, appeared his first work, "The Protestant." This was followed in 1834 by "The Free Inquiry." He also published "Sacred Biography," "Analysis of the Bible," "Answer to Strauss's Life of Jesus," "Modern Orthodoxy," "Experimental Christianity," and eight volumes of sermons. M. Coquerel was amiable, tolerant, kind-hearted, and charitable, and greatly esteemed by all who had the pleasure of intimate acquaintance with him.

COTTON. The cotton crop of the United States for the last year (ending September 1st) was 2,430,893 bales, an increase of 478,905 over the preceding year. The quantity produced or exported for the last three years in each State was as follows (the crop of Mississippi being included in Louisiana and Alabama):

STATES.	1866.	1867.	1868.
Louisiana.....	711,629	702,181	579,331
Alabama.....	429,102	239,516	366,195

Decrease.....	632

The quantity of old cotton remaining in the country, September 1, 1868, not brought to the shipping ports or interior towns, was unusually small, say only 15,000 to 20,000 bales, against 30,000 to 40,000 same time last year. The stocks in the interior towns, September 1, 1868, not counted in the receipts, were 8,897 bales, against 5,703 same time last year. We append approximate growths of previous years.

Year.	Bales.	Year.	Bales.
1868.....	2,577,000	1858.....	3,247,000
1867.....	1,650,000	1857.....	3,014,000
1866.....	500,000	1856.....	3,335,000

CRANWORTH, ROBERT MONSEY ROLFE, Lord, LL. D., an English jurist, twice Lord High Chancellor of England, born in Cranworth, Norfolk, England, December 18, 1790; died in London, July 24, 1868. He was the son of Rev. Edmund Rolfe, and grandson of Rev. Robert Rolfe, both Norfolk clergymen. His father was a cousin of Lord Nelson. He was educated at Winchester, and Trinity College, Cambridge, and took a moderately high stand in classics. Being elected to a fellowship in Downing College soon after taking his first degree, he was called to the bar at Lincoln's Inn in 1816. He chose the equity side of the courts of Westminster, and rose stead-

ily, though not rapidly in reputation, till he had acquired a large practice and the name of being one of the best equity lawyers in the Chancery Courts. He was not elected to Parliament till 1832, when he took his seat for Penrhyn in the moderate Liberal interest. He continued in Parliament for that borough till 1837, being also Solicitor-General in Lord Melbourne's two administrations. He was made baron in the Court of Exchequer in 1839, and, though brought up at the Equity Bar, gave the greatest satisfaction as an honest, painstaking, upright, conscientious, common-law judge. In 1850 he was made Vice-Chancellor, and a year later one of the Lords Justices of Appeal in Chancery. He exhibited the remarkable versatility of his mind in the readiness with which he reverted to his equity training after twelve years' service as a judge in the common-law courts. On the formation of Lord Aberdeen's coalition Cabinet in December, 1852, he became Lord High Chancellor, and retained the position under Lord Palmerston's administration. He occupied the woolsack again in 1865-'66 from Lord Westbury's resignation until the return of the Tory party to power under Lord Derby, when he retired finally from public life.

CRAWFORD, JOHN, F. R. S., F. R. G. S., a British Oriental scholar, geographer, and ethnologist, born in Edinburgh, in 1783; died in London, May 11, 1868. He was educated in the University of Edinburgh, studied medicine under the great physicians of that day, and at the age of twenty years sailed for India, and devoted himself to the acquisition of the Oriental languages. His attainments commended him to Lord Minto, the Governor-General of India, and, when his lordship set out on his expedition for the conquest of Java, he took the young physician with him, and appointed him successively to fill diplomatic offices, both with relation to the Dutch and the native princes. The knowledge acquired in this diplomatic career was subsequently embodied in his elaborate "History of the Indian Archipelago," published in 1820. He was subsequently appointed British commissioner at Singapore, and British envoy to Siam, Burmah, Pegu, and Cochin China. Of his residence at these courts he subsequently gave an account in some pleasant volumes, and, as a contribution of great value to philology and ethnology, he prepared an excellent grammar and dictionary of the Malay language, and a descriptive dictionary of Malayan dialects, and the languages of the Philippine Archipelago. After a long career as a diplomatist in the East, he retired on a liberal pension from the Indian Government, fifteen or twenty years since, and, taking up his residence in London, was active until the close of his life in the prosecution of geographical, ethnographical, and philological studies. He was constant in his attendance upon the scientific societies, and, though generally courteous

* Included in the consumption at the North.

in his manners, was positive and determined in his opinions, and always self-reliant and independent in his views.

CUSHMAN, Rev. ROBERT WOODWARD, D. D., a Baptist clergyman, teacher, and author, born in Woolwich, Me., April 10, 1800; died in South Reading, Mass., April 7, 1868. Left an orphan at an early age, his struggles with poverty in his childhood were very severe, but he was unflinching in his determination to acquire an education, and, with very slight assistance from others, qualified himself to enter Columbian College, Washington, D. C., at the age of twenty-one years, and graduated in 1825. In August, 1826, he was settled as pastor of the Baptist Church in Poughkeepsie, N. Y., but, after a three years' pastorate, his health requiring a milder climate, he removed to Philadelphia, and established the Cushman Collegiate Institute, a female seminary of high grade in that city, which he managed with great success for twelve years. In 1841 he accepted a call from the Bowdoin Square Baptist Church, Boston, to become their pastor, and was eminently successful in that relation for six years, when he again sought a milder climate, and established a female seminary in Washington, D. C., which, like his former enterprise, was prosperous from the beginning. After a few years he returned to Boston and supplied the First Baptist Church in Charlestown for several years, though he was never formally installed as their pastor. He had during most of this period the charge of a female seminary in Boston, which he managed with his accustomed success. He also at this period, as well as previously, contributed freely to the periodical press, and published several small works. One of these, "A Pure Christianity the World's only Hope," has passed through numerous editions. He was a chaste and elegant writer, his style being formed on the best models, and while he avoided carefully all meretricious ornament, his language was always graceful and dignified. His health having become impaired, he retired from active life in 1868, and in the quiet of his beautiful home at Village Side, South Reading, spent the evening of his days.

CUSTOMS (ZOLL) PARLIAMENT OF GERMANY. By virtue of the treaty concluded by the members of the German Zollverein on the 4th of June, 1867, the customs legislation was thenceforth to belong to the Federal Council of the North-German Confederation, to which the South-German States should send thirteen plenipotentiaries, and to a Customs (Zoll) Parliament, composed of 297 members of the North-German Reichstag, and of 86 deputies from the Southern States, chosen according to the electoral law of the North-German Confederation, as follows: by Bavaria, 48; Wurtemberg, 18; Baden, 14; Hesse-Darmstadt, 6.

The results of the elections in the South-German States greatly disappointed the hopes of the National Liberals, the party in favor of

the unification of Germany under the lead of Prussia, who had confidently expected that their representatives in the Reichstag would gain such large accessions by the elections in the Southern States as to give them a good working majority in the Customs Parliament. Their plan, in that event, was, that the Customs Parliament, immediately after its organization, should transform itself from a *Zoll*-Parliament into a *Voll*-Parliament, that is to say, not confine itself to the subject of taxation and duties, but extend its deliberations to politics and the unity principle. Toward the close of the year 1867, however, the adversaries of German unity under the lead of Prussia in the Southern States—the Particularists, Great-Germans, Ultramontanes, and Radical Democrats—succeeded in effecting a fusion in opposition to the National Liberals, and, after a campaign of unparalleled excitement in the political history of Germany, inflicted upon the latter a defeat, which, as the sequel proved, was sufficiently decisive to thwart the plans of the National Liberals.

The elections for the Customs (Zoll) Parliament took place in Bavaria on the 23d of January, 1868, and resulted in the success of 24 National Liberals and 24 Particularists; in Baden, where the elections were held on March 3d, the National Liberals elected eight members, and the Particularists six; in Hesse-Darmstadt, each of the two parties elected, on the 2d of April, three members; and in Wurtemberg the Particularists defeated, on the 5th of April, the National Liberals in every district in the kingdom. On the opening of the Parliament the distribution of parties was as follows: South-German Particularists, 50; South-German National Liberals, 85; North-German Conservatives, 79; Liberal (or Free) Conservatives, 47; National Liberals, 76; Centre, 30; Left, 16; Particularists (Hanoverians, Saxons, etc.), 87.

The Customs Parliament was opened by the King of Prussia, in Berlin, on the 27th of April, with a speech from the throne, in which "he first called upon the delegates to carry their minds back forty years to the early history of the Zollverein. The need of the German people for freedom of commercial intercourse among themselves had gradually, by the force of the national idea expressing that want, extended the Zollverein from a small beginning over the major portion of Germany; thereby creating unity of interests, victoriously surmounting heavy trials, and taking up a satisfactory position in the commerce of the world. Since the commencement of the reorganization that had been undertaken, the existing arrangement had yet appeared insufficient for the rapid development of commerce in all directions. The well-justified demand of the people for an effective share in the legislation upon the politico-economical changes of the country required the formation of a representative assembly for the Zollverein. The deliberations would range

over nearly all the subjects alluded to in the treaty, concluded in the summer of 1867, the extension of which to Mecklenburg and Lubeck was near at hand. The first subject to come under consideration would be the settlement of the relations of commercial intercourse with an adjacent country, closely connected with Germany by similarity of race and a variety of material interests." After enumerating the various bills to be submitted to the Parliament, including a uniform tobacco tax and duty bill, and a treaty of commerce and navigation with Spain, the King concluded by saying: "The friendly relations which the German Governments maintain with all powers, the national prosperity, whose care unites here the representatives of the German races, together with the blessings of peace, for the protection of which the German States have entered into alliance, will remain secure, and with God's help we shall at all times be able to reckon upon the united power of the German people."

At the conclusion of this speech Count Bismarck, in the name of the governments constituting the Zollverein, declared the Customs Parliament opened. On the following day the Parliament elected as president Dr. Simson, the Speaker of the North-German Reichstag, who obtained all but thirty (blank) votes. Prince Hohenlohe-Schillingsfürst, Prime Minister of Bavaria, was elected first vice-president by 258 to 43 votes; and Duke Ujest was chosen, on the second ballot, second vice-president by 153 votes; the other candidates, Baron Roggenbach and Neurath, receiving respectively 137 and 7 votes.

In accordance with the parliamentary usages of Germany, the Parliament devoted its attention, in the first place, to the examination of the credentials of its members. On April 29th an excited debate took place in regard to a clause of the electoral laws of Bavaria, by which the right of suffrage was conferred upon "all Bavarian subjects, twenty-five years of age, and paying a direct tax," and which the National Liberals contended was in conflict with the electoral laws of the North-German Confederation, by which "every respectable citizen, twenty-five years of age," was to be an elector. Despite the protests of the Particularists, who asserted that a Customs Parliament was incompetent to act on such questions, the majority decided that the Bavarian Government should be instructed to remove the aforesaid clause from its electoral laws.

Still more exciting were the debates on the electoral laws of Wurtemberg, by which householders only were admitted to the ballot-box. The manœuvres by which the Wurtemberg ministers, it was asserted, had tried to exercise a pressure upon the electors, and secured the defeat of the National Liberal candidates in that kingdom, led to a most acrimonious debate, which terminated in the adoption (by 162 to 105 votes) of the resolution, moved by Count Bethusy-Huc, "that the Government of

the kingdom of Wurtemberg should be required to conform henceforth more strictly to the stipulations of the late Zollverein treaty."

On May 7th the National Liberals, emboldened by these apparent victories, determined to move an address in reply to the opening speech from the throne, pledging the Parliament in strong terms to the promotion of unity in Germany; assuring the King of Prussia "that a national representation of the whole of Germany, for which the nation had striven for several decades, and which all the German Governments, in times gone by already, had recognized as just and necessary, could not be withheld from the people for any length of time;" and urging him in the most impressive manner "by the united strength of the German nation, and in conjunction with his august allies, to finish the great national structure, the completion of which would secure to Germany safety, power, and peace in its relations with foreign states, and material prosperity and constitutional liberty at home."

They were strongly supported by the National Liberals from the South, and a majority of the Free Conservatives of the North. A motion to set aside the motion for an address, and to enter upon the simple order of the day, was made to decide the question whether the Parliament should extend its deliberations to national politics and the principle of German unity, or confine itself to the economical questions of the Zollverein. The motion was opposed by those in favor of union, and supported by all others. It was carried, after an exceedingly stormy debate, by a majority of one hundred and eighty-six against one hundred and fifty. Count Bismarck was present, but did not speak. Among the notable persons who voted "aye" on this important occasion, were Prince Albrecht of Prussia, the Prussian Ministers of Finance and the Interior, Baron von der Heydt, and Count Eulenburg, General von Moltke, and most of the Southern members, including the Bavarian Liberal Premier, Prince Hohenlohe-Schillingsfürst, and the Wurtemberg Premier and Minister of Finance, Baron von Varnbühler, and Herr von Mittnacht.

The Parliament then took up the treaty of commerce and navigation, which Prussia, in the name of the Zollverein, had concluded with Spain, and which was ratified, after a brief debate, on the 18th of May.

By far more important and animated was the discussion about the ratification of the commercial and customs treaty, concluded on March 9, 1868, between the Zollverein and the Government of Austria. On May 18th, when the final vote was to be taken, Messrs. Bamberger, Metz, and twenty-nine other Southern and Northern National Liberals, moved "that the Federal Council of the Zollverein should take the necessary steps to remedy the complaints to which the conflict between the reduction of the duties on foreign wines and the existing system of indirect taxation had given

rise in the grand-duchy of Hesse-Darmstadt." Insignificant as this motion was, it afforded the Particularists another opportunity to deny the competency of the Customs Parliament in questions of this description, and led to a very bitter and prolonged struggle, which was rendered especially interesting by the elaborate speeches delivered by Count Bismarck, Völtk, and other prominent members, on this occasion. Bamberger's motion was finally carried by an overwhelming majority, nearly all the Prussian Conservatives voting with the National Liberals. The commercial and customs treaty with Austria, by which the import duties between the two countries were materially reduced, was ratified by a still more decisive majority, only seventeen members, among them Maurice Mohl and other extreme protectionists, voting against it.

The Federal Council of the Zollverein proposed to the Customs Parliament to cover the deficit arising in the budget of the Zollverein in consequence of the ratification of the treaty with Austria, and which was estimated at about 1,500,000 thalers, by imposing a tax of twelve thalers per acre on domestic tobacco, raising the duty on imported tobacco from four to six thalers per cwt., and levying a duty of one-half thaler per cwt. on imported petroleum. The Prussian Minister of Finance, Baron von der Heydt, who was the author of these proposed reforms in the customs and revenue laws, informed the Customs Parliament, in order to overcome its opposition to the duty on petroleum, that it would yield, at the most, six hundred thousand thalers a year; but statistical reports, published at that very moment in the official Prussian *Staatsanzeiger*, showed plainly that the minister had underrated the quantity of petroleum imported into the territory of the Zollverein, and that a duty of one-half thaler per cwt. would have yielded, in the year 1867, upward of 800,000 thalers, and in the year 1868 at least one million thalers. For this reason, as well as for others of a constitutional and political character, the Parliament rejected the duty on petroleum; on the 20th of May, by a vote of one hundred and ninety against ninety-nine.

Not more successful was the proposition of the Federal Council in regard to the tax and duty on domestic and foreign tobacco. Instead of adopting the tax of twelve thalers per acre on domestic tobacco, the Parliament fixed it at six dollars, and refused to raise the duty on imported tobacco from four to six thalers.

In consequence of these defeats, Count Bismarck declared at the last sitting of the Parliament, on the 23d of May, that the Federal Council of the Zollverein had instructed him to withdraw the other propositions which the Council had made in regard to changes in the tariff of the Zollverein.

On the same day the Parliament was closed by the King of Prussia, who said in his speech, that "he hoped the results of the session would

strengthen the sentiments of mutual trust between the people of the various states of the Zollverein; destroy the prejudices which have existed in some portions of the country; and prove that the Germans, though apart in some interests, were one people in warm brotherly feeling." He predicted that the most desirable blending of the financial and economical interests, to which the Zollverein owed its rise and prosperity, would be brought about at the next session of the Customs Parliament by the united efforts of the allied governments and the Customs Parliament; and closed by saying that "the rights intrusted to him by Germany would be sacredly exercised as his highest rule of action."

As soon as the Zoll-Parliament had adjourned *sine die*, brilliant festivities took place in honor of the South-German representatives, in Berlin and other cities of Prussia. A large majority of the representatives made a pleasure-trip to the naval station of the North-German Confederation at Kiel; and they were received there, as well as in Hamburg and Altona, with great enthusiasm by the people and military and civil authorities.

A portion of the South-German deputies, mostly leading members of the Particularists from Bavaria and Wurtemberg, issued, on the 24th of May, a species of account of their stewardship in the shape of the following address to their constituents:

At the close of the first session of the Customs Parliament we consider it our duty to give an account of our acts, and to communicate our experiences.

Convinced that a perfect union would render it easier for us to adhere to the legal basis of the Customs Parliament as secured by treaty, and to hold thereupon the interests confided to our charge, we united as the South-German party, composed of the majority of the Bavarian, all the Wurtemberg, and a portion of the Baden members, and were joined by several other deputies from various parts of Germany.

Our organization succeeded in contributing materially to the rejection of the address, the discussion of which in the present critical position of affairs would not only have brought out still more strongly the contradictions existing in Germany, but would have changed the legal character of the Parliament at the first moment of its operations.

We further succeeded in reducing to a tolerably moderate amount the taxation demands put forward by the Federal Council, which appeared to us not sufficiently called for by temporary reductions in the revenue, so that, instead of 2,800,000 thalers in duties and taxes upon tobacco and petroleum, a tobacco duty of only 450,000 thalers has been agreed to. Our party voted unanimously against the petroleum tax, and against any duties being imposed upon tobacco.

The majority of the party supported the treaty of commerce with Austria, but the minority opposed it because its tariff reductions also applied to non-German countries without corresponding concessions. We had no reason to oppose the commercial treaty with Spain, or the bills as to customs procedure.

Summoned at an historically important period to an assembly that represents in material interests a large portion of Germany, and is opposed to partition with more or less determination upon bringing the Southwest German countries into full State community with the North, we have considered it incumbent upon us, while closely inspecting governing pe-

sons and relations, to examine the position of the South-German States toward Prussia and the Northern Confederation, and to communicate to our constituents the results of this examination. We have, however, again recognized that entrance into the North-German Confederation would promote neither the union of the collective nation, nor the constitutional liberty, nor the special interests of South-Germany, but that, on the contrary, in view of the North-German Constitution, the further preservation of the independence of the South-German States is in all respects advisable.

The overwhelming furtherance of military objects, especially in the Northern Confederation, restricts the promotion of moral and material interests, and, without financially relieving the Prussian people, leads to increased burdens upon its allies. As the necessary consequence of Prussia's traditional policy, this increase will be permanent.

By nearly all parties north of the Main line the subjection of the South-German States is looked upon simply as a question of time, and as an object of the mission of Prussia. That the ultimate absorption of the South in the Prussian union would be the consequence, is apparent to all who do not allow themselves to be deceived by the appearance of political forms of transition. The preponderance of the presiding power, increased by the annexations, affords no space for the justifiable maintenance of the smaller Federal States. In view of these circumstances, it is

essential to harmonize the active preservation of the independence of the South-German States with the sincere fulfilment of the national duties.

We only see the way to this twofold object in a decidedly liberal policy and in the firm association of the South-German States. We have gained the conviction that it is urgently requisite for these states, governments, and people, to emerge from drifting isolation, and to agree upon common action, especially as regards the military protection of the South, to make their influence felt by unanimous action within the sphere of the Zollverein, and to adopt a fertile initiative in institutions useful to the community. Existing treaties justify the pursuance of this course.

The union of the South Germans in common action offers no hostile opposition to any other part of the German nation. It will, on the contrary, operate conciliatorily between the great powers, will conduce to European peace and material interests, and render possible to the South-German States the energetic fulfilment of their treaty duties toward North Germany without exposing them to the danger of absorption in Prussia. Although, therefore, we may not recognize, in the close connection of the South-German States with each other, the ultimate satisfaction of material requirements, it yet appears at present the only path leading us, while avoiding seriously threatening dangers, to the final object of a free and united Germany.

D

DANA, SAMUEL LUTHER, M. D., LL. D., A. A. S., an American chemist, born in Amherst, N. H., July 11, 1795; died in Lowell, Mass., March 11, 1868. He was fitted for college at Phillips Academy, Exeter, N. H., and graduated from Harvard College in 1818. He was desirous of becoming a military engineer, and applied immediately after his graduation for an appointment to West Point, that he might prosecute engineering studies there; but, instead of obtaining his request, he was commissioned a lieutenant in the First Regiment U. S. Artillery, and served in New York and Virginia, till the close of the war. Soon after the peace, he resigned his commission, commenced the study of medicine, and received his medical diploma in 1818. From 1819 to 1826 he was a practising physician in Waltham, Mass., and was there brought into intimate relations with the early cotton manufacturers of the State, and having a strong predilection for physical science, in several departments of which he had already made considerable attainments, he was led to give his attention to practical chemistry, in connection with the manufacture and printing of cotton goods. He established on his own account at Waltham, about the year 1826, a chemical laboratory for the manufacture of sulphuric acid and bleaching-salts. This was subsequently merged in the Newton Chemical Company, of which he was chemist until 1834. In 1833, he visited England and spent some months there in chemical investigations. On his return he removed to Lowell, and became the chemist of the Merrimack Manufacturing Company, which position he held until his

death. His investigations on the subject of bleaching cotton, which led to what is known in the arts as the "American method of bleaching," attracted great attention in Europe. They were first published abroad in the *Bulletin of the Industrial Society of Mulhausen*, and the eminent chemist Persoz said of his process, that "it realized the perfection of chemical operations." He also made many important improvements in the printing of cottons, and the chemical processes involved in that work, which have given to the Merrimack prints the highest reputation of any printed goods in the country. He devoted much time to investigations in regard to the injurious influence of lead pipes for water for drinking and culinary purposes, and, besides an essay on the subject, translated and edited, with large additions, Tanquerel's "Treatise on Lead Diseases." He had also given much attention to Agricultural chemistry, and his "Farmers' Muck Manual," published in 1842, and his "Essay on Manures," issued in 1843, are still standard works on these subjects. Aside from these works, he had published as early as 1833 an exposition of the "Chemical Changes occurring in the Manufacture of Sulphuric Acid;" several papers in the *North American Review* and the *American Journal of Science*, and in 1818, in conjunction with his brother, James Freeman Dana, the "Mineralogy and Geology of Boston and its Vicinity." For fifteen years of the thirty-four in which he was employed in Lowell, he resided on his farm at Tyngsborough.

DELAWARE. This State financially is in a prosperous condition. The settled policy of

its Legislature has been to avoid a national debt. During the recent war, however, a debt was contracted to provide the number of men, demanded of the State by the Federal Government, without conscription. This debt consists of bonds authorized to be issued in 1864 and 1865, and amounts to \$1,110,000. The State is also liable for certain internal improvement bonds issued to railroad companies, amounting to \$346,000. The real and apparent indebtedness of the State thus amounts to \$1,456,000. The investments of the State, consisting of bank stock and loans to improvement corporations, amount to \$850,150, which, deducted from the debt, leaves \$605,850. The income derived from these investments has been appropriated in part to support the State government and in part to purposes of education. The amount thus applied to free schools during the year 1868-'69 was \$86,867. The amount of income from all sources for the support of the government was \$80,849, which, with the previous balance on hand, made an unappropriated surplus at the close of the year of \$37,796. It was anticipated that the Philadelphia, Baltimore, and Wilmington Railroad would resist the further payment of an annual tax to the State. The principal source of revenue in former years had been the tax on the banks. Upon the change from State to national banks, all but two had ceased to pay this tax. The tax on the railroads, although less than in previous years, was sufficient to pay the interest on the State debt. This decrease was ascribed to a diminution of passengers since the close of the war. It becomes, therefore, a financial question whether the State should not impose a small tax to provide against any contingencies that might affect her credit. This tax, it was suggested by the Governor, should include bonds and mortgages and machinery, and reach the national banks. The Legislature at the beginning of the year was Democratic, with the exception of two members of the Senate. Its acts were entirely of a local nature.

The State is strongly Democratic. At a convention held in June, to nominate delegates to the National Democratic Convention, the following resolutions were adopted:

Resolved, That the elective franchise is a political privilege and not a natural right, and is to be granted or withheld by the several States to their respective inhabitants as in the free, sound judgment and discretion of each State shall be deemed best for the public interest and welfare.

Resolved, That we regard negro rule in this country, under its names of "impartial" or "universal suffrage," as the vital issue against which, as the champions of a constitutional government founded on the consent of free white men, we are ever arrayed—and that our delegates to the National Convention, to be held at New York, while left to their own sound discretion in selecting worthy candidates for the presidency and the vice-presidency, are hereby instructed to vote for no candidate who is not clearly and distinctly in favor of ruling this country by the virtue and intelligence of white men only.

At the convention of the Republican party, held on April 28d to nominate delegates to the National Republican Convention, the following resolutions were adopted:

Resolved, That we approve the plan adopted by Congress for the reorganization of the rebel States; that its vital principle of impartial suffrage is just as well as politic, and that in view of the action of Congress already had, as well as of natural justice, we express the hope that such an amendment of the Constitution of the United States will be made as will secure the application of the principle throughout the Republic.

Resolved, That we give one voice to and pledge our assistance in the maintenance of the national faith and credit, insisting that, in the payment of the debt, the spirit of *contract* shall be truly and honorably observed.

At the election for President, Seymour, Democrat, received 10,980 votes; and Grant, Republican, received 7,623: Democratic majority 3,357. The Legislature chosen at this election was entirely Democratic.

DENMARK, a kingdom in Europe. King, Christian IX., born on April 8, 1808; succeeded King Frederick VII. on November 15, 1863. Heir, Prince Frederick, born June 8, 1849; betrothed with Princess Louisa, of Sweden, on July 15, 1868. Area of Denmark Proper, 14,698 English square miles; of the dependencies Faroe, Iceland, Danish settlements in Greenland, the islands of St. Croix, St. Thomas, and St. John, in the West Indies, 40,214 square miles. Minister of the United States in Denmark, George H. Yeaman, appointed in 1865. The population of Denmark, according to the official census of 1860, was 1,608,095; in 1865, it was estimated at 1,717,802. The population of the Danish dependencies, in 1860, was 108,988. In the budget for the year 1868-'69 the revenue is estimated at 27,438,748 rix-dollars; the expenditures at 28,024,955. The public debt, on March 31, 1868, amounted to 132,685,400 rix-dollars. The army,* in 1868, was composed as follows:

	First Call (Line and Reserve).		Second Call.	
	Officers.	Men.	Officers.	Men.
Infantry...	730	26,750	235	9,896
Cavalry....	126	1,923
Artillery...	139	6,523	23	1,540
Engineers..	4	207
Total....	995	35,195	262	11,143

The fleet, at the close of 1867, consisted of 30 steamers, inclusive of 6 iron-clads, with an aggregate of 389 guns, one sailing-vessel, 22 gunboats, and 81 transports.

The movement of shipping in 1867 was as follows:

	Vessels.	Tons.
Domestic Navigation.....	41,593	251,143
Foreign Navigation.....	35,878	514,382

The number of foreign vessels taking part in the domestic navigation was 942, or 2.3 per

* See the ANNUAL AMERICAN CYCLOPEDIA for 1867, for an account of the military law of 1867; the latest statistics of the value of imports and exports; and an account of the present constitution.

cent.; and of those taking part in the foreign navigation, 18,419, or 51.3 per cent.

The merchant navy, on March 31, 1867, consisted of 8,736 vessels, among which were 77 steamers, together of 86,230 lasts.

In January both Chambers of the Diet gave their assent to the treaty with the United States relative to the sale of two of the Danish islands in the West Indies.

On March 3d, the Minister of Public Worship, Bishop Kierkegaard, tendered his resignation, on the ground of ill-health.

On April 9th, a postal treaty was signed at Copenhagen, with the North-German Confederation.

On May 20th, the Danish Diet was prorogued, the president of the ministry reading the royal message.

In August, the balance of the 29,000,000 thalers, due by Prussia to Denmark, in accordance with the provisions of the treaty of peace concluded at Vienna, were paid over to the Danish plenipotentiary at Berlin. The state council's levy, five and a half millions of this amount, had previously been paid.

On October 5th, the King opened a new session of the Diet with a speech from the throne, in the course of which he thus referred to the most important events in the foreign and domestic relations of the kingdom:

The confidential negotiations with Prussia respecting the free vote in North Schleswig, provided for in the treaty of Prague, have hitherto been without result. Our views of what justice and the well-understood interests of both countries require in this matter are unaltered. We must regard it as our first duty to cooperate toward no arrangement which, while not satisfying the wants of the inhabitants, might lead to future difficulties for the Danish kingdom in its relations with a country with which we wish to remain upon a friendly footing. We are convinced that Prussia approves these motives, and we hope to succeed in attaining the long-expected settlement on the basis of the above considerations.

The treaty with the United States of America for the cession of the Danish West Indian Islands, which has been approved by the Diet, has not yet been finally sanctioned by the United States, in consequence of the state of political affairs in that country, and at the wish of the American Government the term for the ratification of the treaty has been prolonged for another year by the Danish plenipotentiary at Washington.

The internal condition of the country is satisfactory. Now that Prussia's monetary engagements toward us are settled, we propose to reduce the public debt by 10,000,000 rix-dollars. At the same time the public Treasury will be able to defray the expenditure for the large public works required for the development of the country. An important railway line has been opened in Jutland, and other works are approaching completion. Private enterprise is developing the rich resources of the country, and the indirect taxes are continually yielding a larger revenue, thus demonstrating increased prosperity, and we therefore fearlessly lay before you bills for adding to the public receipts in order to reorganize the army and the fleet, preferring to bear now the burden of this expenditure instead of resorting to new loans.

DENMARK, THE PRESS OF, IN 1868. On the 1st of March, 1868, there were published in the kingdom of Denmark seventy-four politi-

cal papers, twenty-four literary journals, nineteen papers devoted to scientific, agricultural, and mechanical subjects, seventeen sheets, containing only advertisements, and eleven monthly magazines and quarterly reviews. Of the political newspapers twenty-two were dailies, seven tri-weeklies, nine semi-weeklies, and thirty-six weeklies. Twelve new political journals were started in the course of the year 1868, of which five were dailies, and the rest weeklies. Five of the old papers suspended publication or were entirely discontinued. The aggregate circulation of the daily papers of Denmark, in the first three months of the year 1868, was on an average ninety-two thousand copies daily; of the tri-weekly and semi-weekly papers, in the same length of time, on an average nineteen thousand copies; and the aggregate circulation of the weekly papers was estimated at a little over fifty thousand copies.

The largest circulation, of any daily paper published in Denmark in 1868, was nine thousand copies; the circulation of four other dailies exceeded five thousand copies; seven other dailies had a circulation of upward of three thousand copies; and the rest of the Danish dailies printed less than one thousand copies daily. Fourteen of the daily papers of Denmark receive daily dispatches from all parts of Europe; the other dailies are furnished from Copenhagen with a brief telegraphic synopsis of the most important news of the day. The sums paid by the Copenhagen and provincial press to the Danish telegraph-offices, for regular and special dispatches in the year 1867, amounted to about seventy-five thousand rix-dollars—a considerable falling off, when compared with the amount paid for the same purpose in the year 1866, when the Copenhagen papers vied with one another in procuring early and detailed telegraphic intelligence from the seat of war in Germany and Italy. The lack of important and interesting events, the continued stringency of the money-market, and the stagnation of business, which caused an unusually large number of failures in Copenhagen in the year 1868, exercised a depressing influence upon the newspaper business in Denmark, and there was, in consequence, a considerable falling off in the receipts of even the most flourishing papers in the kingdom, both from subscriptions and advertisements. There were, however, several occasions on which the Copenhagen papers succeeded in disposing of very large extra editions, as, for instance, during the week of the memorable visit which the delegation of French journalists paid to the Danish capital, and which, owing to the hopes which the Danish people built on an alliance with France in regard to a prospective struggle with Prussia and the other states of the North-German Confederation, assumed the importance of a great national demonstration. On the second day after the arrival of the French guests at Copenhagen, the *Dagbladet*

sold thirty thousand copies—an event unparalleled in the Danish newspaper market, where no journal had ever before succeeded in reaching a circulation of over twenty thousand copies on days of critical importance and extraordinary excitement.

In giving an account of the newspapers of Denmark, we should divide them into two classes: the Copenhagen press and the country journals. There is a wide difference between these two classes. The Copenhagen press, as even its most implacable adversaries are obliged to admit, is worthy of the great and beautiful city, the Paris of the North, in which it is published; while the provincial press, especially that of Jütland, consists only of very small papers of limited circulation, very little reading-matter, mostly confined to extracts from the Copenhagen papers, and an occasional leader written with very little ability. But, while the unusually large number of accomplished journalists and feuilletonists, who live in Copenhagen, impart a remarkable degree of editorial and literary excellence to the journals of that city, which in that respect are certainly superior to most of their German contemporaries, and while the managers of these Copenhagen papers, with hardly an exception, display a marked spirit of enterprise, the limited extent of the kingdom and the illiterate character of the population of the rural districts set bounds to the success of the metropolitan press. Their circulation is mostly confined to Copenhagen and the island on which the capital is situated; and no Copenhagen daily sends more than three hundred copies to the other islands and Jütland. At the same time, the people of Copenhagen and of Denmark generally advertise comparatively but very little in their newspapers, and, inasmuch as the advertising rates, moreover, are very moderate in Denmark, few of even the most popular Copenhagen newspapers can boast of brilliant financial successes. One of the consequences of this peculiar state of affairs is, that the compensation paid even to the most eminent journalists of Copenhagen is considerably smaller than that obtained by their brethren in any of the adjoining states; and it is a noteworthy fact that some of the leading Danish feuilletonists receive larger sums for the copyrights of the German, English, and French translations of their writings than they obtain for the originals published in the literary columns of the Copenhagen newspapers.

The aggregate circulation of the nine daily papers published in Copenhagen was on the 1st of August, 1868, 59,000 copies, a figure which is frequently exceeded on days of considerable excitement. Their total receipts for advertisements during the year 1867 were slightly above 250,000 rix-dollars. Of the older dailies the *Dagbladet* has the largest circulation; but some of the cheap dailies which were started a few years ago, and are sold at the low price of one rix-bank-shilling a copy,

such as the *Telegraph* and the *Railroad Gazette*, have occasionally sold more copies than the *Dagbladet*.

As regards the press laws, the Danish press is almost as free as that of Great Britain. Prosecutions of editors and publishers for offences committed against the press laws are exceedingly rare, and in 1868 nothing of the kind took place, save the final disposal made of an old prosecution against a contributor of the *Dagbladet*, who had two years ago published in that paper a number of letters, which, in the opinion of the Government, preached treasonable doctrines. The courts, however, did not sustain the prosecution. The tone of the Danish press toward the royal Government is one of marked independence and determination. A majority of the Copenhagen journals are opposed to the domestic and foreign policy of the present Government, and they attack it nearly every day in articles the bold language of which would in every other country on the continent, except perhaps Belgium and Italy, lead to the suppression of the paper. Throughout the year 1868, the opposition journals in Denmark accused the Government of displaying a spirit of lukewarmness and pusillanimity in its negotiations with Prussia in regard to the retrocession of the Danish districts of North-Schleswig. In the summer of 1868 another cause of discontent added to the bitterness and indignation of the language used by the opposition organs. For some time past, it had been rumored that the royal Government intended to apply to the Danish Chambers for the adoption of a law subjecting the Danish press to certain restrictions. These rumors assumed a more definite character at the above-mentioned time, it being reported that the subject had been discussed at several sittings of the royal cabinet. The emphatic and defiant protests of a large majority of the Danish papers, sustained as they evidently were by public opinion, especially in the city of Copenhagen, induced the Government to abandon its purposes in this direction, its special organs in the press claiming that the proposed changes in the press laws had no other object than the adoption of certain regulations which would not have interfered at all with the liberty of the press.

The extension of the telegraph lines throughout the kingdom in the early part of 1868, and the reduction of the telegraph rates, and the favorable arrangements made with the continental telegraph bureaux; an unsuccessful attempt to form a Scandinavian press association, and a general strike on the part of the compositors and pressmen of Copenhagen, which fortunately terminated at an early day in an arrangement satisfactory to both printers and publishers, were the other noteworthy events in the history of the political press of Denmark during the year 1868.

Of the literary and scientific journals, magazines, and reviews of Denmark, it may be said

that their circulation is as limited as their reading-matter is excellent. The proudest names of Danish literature and science are represented in these periodicals, few of which have a circulation of over one thousand copies. Two new magazines and seven new literary papers were issued in Copenhagen during the year 1868; one of the older magazines and three literary papers were discontinued.

DIPLOMATIC CORRESPONDENCE AND FOREIGN RELATIONS. *Alabama Claims.*—

The question of the payment by Great Britain of the claims of American ship-owners for the depredations by vessels fitted out in England for the Confederates, and known by the general term of the Alabama claims, was revived in the House of Commons on March the 7th, 1868, by Mr. Shaw Lefevre. He made a long and eloquent speech on the subject, in which he urged the settlement of this vexed question on the plan proposed by the American Government. In calling for papers on the subject, and in moving the consideration of the question, he disclaimed any feeling of prejudice. All future negotiations, he said, would but add to complications already existing. He sketched the progress of the recent civil war in the United States to its happy termination. He said the fall of Fort Sumter evoked the famous proclamation of Mr. Lincoln. In less than a month after the appearance of that proclamation Great Britain had recognized the Southern insurgents as belligerents. They had no fleet, but they purchased ships in our ports. These ships, notwithstanding the vigorous measures of our Government to stop them, eluded our vigilance, and went to sea, and were hospitably received at British colonial ports. They captured and destroyed during the war more than two hundred American merchant-vessels. In less than two years the United States was literally driven from the seas, while the commerce of Great Britain was doubled. For this reason, the speaker thought we ought to treat these claims generously. They were first made in 1862, by the American minister, Mr. Adams.

After a warm eulogium on the course of Mr. Adams on this and other questions, Mr. Shaw Lefevre continued: The arbitration of the matter had been proposed by the American Government, but refused by Lord John Russell, who repelled the suggestion. Mr. Stanley might have taken the other course, as the Tories had changed on the question of household suffrage. The question of recognition by England was only as to her rights, if these were rights that might safely be referred. But Mr. Stanley had insisted that the responsibility of England was only a moral one in the Alabama case. The speaker thought the less said about morality on this question the better. He regarded the breaking out of a war between England and the United States as extremely unlikely; but thought, on the other hand, that all needless irritation should be shunned.

Lord Stanley then took the floor. He praised the pacific oration of Mr. Lefevre, and warmly complimented Mr. Adams for the conciliatory spirit he had displayed in the subject under discussion. He said we could not make indiscriminate concessions, but we could learn the right of the case. There never was a case where there was more need of understanding the points. Much allowance is to be made for the feeling of the United States. Great Britain, in the same case, with five hundred millions of debt contracted through a civil war in which a million of lives had been lost, might appreciate the matter better than mere lookers-on only. He thought England had been entirely neutral; but no neutrality would have pleased America. What the United States wanted was neutrality coupled with warm sympathy and support. The Queen was ready to arbitrate and submit all questions but the great point of recognizing the belligerent rights of the South. Nobody contends that at no time the South acquired them, and, if not, why deny the right of Great Britain to recognize them at the time she did? The Confederate ship Alabama did not sail from England until 1862, and the battle of Bull Run was fought in 1861. Admitting that it was wrong for Great Britain to recognize the South, would the United States Government say that its case against the Alabama had been altered had Great Britain made the declaration of neutrality six, rather than eleven months before she sailed? The speaker referred to the speeches of Daniel Webster in the United States Senate, on the subject of recognizing Hungary, in support of his argument. How could England refuse to recognize a war which Mr. Seward himself had announced to be a civil war nine, twelve, or sixteen days before the proclamation? Who could complain that England had recognized a civil war which the United States had admitted some weeks before? In conclusion, he thought a friendly arrangement of this difficulty was still practicable. He deprecated the debate. The friendly reception of Minister Thornton at Washington was a pledge of peace. The ministers were ready to leave the question to the entire world.

W. E. Forster, the member for Bradford, thought Mr. Seward's views of the question of the recognition of the Alabama claims deserved better treatment and more careful consideration, as being perhaps the view that was right and sensible. He complained of the abrupt disposition of the question which had been made when the universal wish of the United Kingdom was for its speedy settlement. He thought that if any impartial statesman had been sent to the United States as minister, the point in dispute might be readily adjusted.

John Stuart Mill, the member for Westminster, was the next speaker.

He regarded the present condition of the question as the result of a mutual mistake. The real question was, whether England was

bound to prevent such expeditions as that of the Alabama. He denied that the United States Government claimed, or could claim, that the recognition of the South was a violation of law, but only that it was an unfriendly, rash, and unprecedented act. The American Government only pressed the point for the purpose of showing that, but for the unfriendly action of England, the Alabama depredations would not have occurred. Mr. Mill thought that an arbiter between the two countries was needless, and that reparation was fairly due to the United States. He concluded by advising the appointment of a mixed commission for the purpose of the adjustment of the question.

W. E. Gladstone, member from South Lancashire, thanked Mr. Lefevre for his able speech, and Lord Stanley for his temperate reply. He (Gladstone) could not understand why the negotiation ended, nor could he agree with Mr. Mill that Lord Stanley had admitted that reparation was due, or that an arbiter would surely decide against England. For himself, he doubted if reparation for the Alabama depredations was due the United States. It was unquestionably right that the point should be referred to a commission; but, if the Government feared such a reference, it should settle the matter at once, or leave the decision with an umpire.

Mr. Gladstone inferred, however, from the closing sentences of Lord Stanley, that the communications between the two Governments had not closed, and that friendly feelings between the United States and England would be preserved. He concluded by saying, if his inference was correct, the whole country would support Lord Stanley in a just and honorable settlement of the case. The debate was closed with Mr. Gladstone's remarks.

On Mr. Reverdy Johnson succeeding Mr. Adams as minister to the court of St. James, he immediately opened negotiations with the Foreign Secretary in reference to the settlement of this question, which negotiations carried on with Lord Stanley and his successor, Lord Clarendon, resulted in the following text of a treaty to be submitted to their respective Governments:

Whereas, claims have been made at various times, since the adjournment of the convention between the United States and Great Britain of February 8, 1853, upon the Government of her Britannic Majesty on the part of citizens of the United States, and upon the Government of the United States by the subjects of her Britannic Majesty; and whereas some of said claims are still pending and remaining unsettled, the President of the United States of America, and her Majesty, the Queen of the United Kingdom of Great Britain and Ireland, being of opinion that a speedy and equitable settlement of all such claims will contribute much to the maintenance of the friendly feelings which exist between the two Governments, have resolved to make arrangements for that purpose by means of a convention, and have named their plenipotentiaries to confer and agree thereupon, that is to say: The President of the United States of America, Reverdy Johnson, Envoy Extraordinary and Minister Plenipotentiary of the United States to her Brit-

annic Majesty, and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Lord Clarendon, etc., her Britannic Majesty's principal Secretary of State for Foreign Affairs, who, after having communicated to each other their respective full powers, found in good and due form, have agreed as follows:

ARTICLE 1. The high contracting parties agree that all claims on the part of individuals, citizens of the United States, upon the Government of her Britannic Majesty, and all claims on the part of individuals, subjects of her Britannic Majesty, upon the Government of the United States, which may have been presented to either Government for its interposition with the other, since the exchange of ratifications at London, February 8, 1853, which yet remain unsettled, as well as any other such claims which may be presented within the time specified in article three, hereinafter, shall be referred to four commissioners to be appointed in the following manner, that is to say: two commissioners shall be named by the President of the United States, and confirmed by the Senate and by her Britannic Majesty. The aforesaid commissioners shall meet at the earliest period after they shall have been respectively named, and before entering on the discharge of their duties shall make a declaration under oath that they will impartially and carefully examine and decide, to the best of their judgment, and according to justice and equity, without fear, favor, or affection to their own country, upon all such claims as shall be laid before them on the part of the Governments of the United States and of her Britannic Majesty, respectively, and such declaration shall be entered on the record of their proceedings. The commissioners shall then, and before proceeding to any other business, name some third person to act as an arbitrator or umpire in any case or cases on which they may themselves differ in opinion. If they should not be able to agree upon the name of such third person, they shall each name a person, and in each and every case in which the commissioners may differ in opinion as to the decision which they ought to give, it shall be determined by lot which of the two persons so named shall be the arbitrator or umpire in that particular case. The person or persons so to be chosen to be arbitrator or umpire shall, before proceeding to act as such in any case, make and subscribe a solemn declaration in a form similar to that which shall already have been made and subscribed by the commissioners, which shall be entered on the record of their proceedings. In the event of the death, absence, or incapacity of such person or persons, or of his or their omitting or declining or ceasing to act as such arbitrator or umpire, another and different person shall be named as aforesaid, to act as such arbitrator or umpire in the place and stead of the person so originally named as aforesaid, and shall make and subscribe such declaration as aforesaid.

ART. 2. The commissioners shall then forthwith proceed to the investigation of the claims which shall be presented to their notice. They shall investigate and decide upon such claims, in such order, and in such manner, but upon such evidence or information only as shall be furnished by or on behalf of their respective Governments. They shall be bound to receive and peruse all written documents or statements which may be presented to them by or on behalf of their respective Governments in support of and in answer to any claim, and to hear, if required, one person on each side, on behalf of each Government, as counsel or agent for such Government, on each and every separate claim. Should they fail to agree in opinion upon any claim, they shall call to their assistance the arbitrator or umpire whom they may have agreed to name, or who may be determined by lot, as the case may be, and such arbitrator or umpire, after having examined the evidence adduced, for and against the claim, and after having heard, if required, one person on each side, as aforesaid, and

consulted with the commissioners, shall decide thereupon finally and without appeal. Nevertheless, if the commissioners, or any two of them, shall think it desirable that a sovereign, or head of a friendly state, should be an arbitrator or umpire in the case of any claim, the commissioners shall report to that effect to their respective Governments, who shall thereupon, within six months, agree upon some sovereign, or head of a friendly state, who shall be invited to decide the claim. In the event of a decision involving the question of compensation to be paid being arrived at by a special arbitrator or umpire, the amount of such compensation shall be referred back to the commissioners for adjudication, and in the event of their not being able to agree, it shall then be decided by the arbitrator or umpire appointed by them, or who shall have been determined by lot. It shall be competent for each Government to name one person to attend the commissioners as agent on its behalf, to present and support claims on its behalf, and to answer claims made upon it, and to represent it generally in all matters connected with the investigation and decision thereof. The President of the United States of America, and her Majesty the Queen of Great Britain and Ireland, solemnly and sincerely engage to consider the decision of the commissioners, or umpire, as the case may be, as absolutely final and conclusive upon each claim decided upon by them respectively; and, to give full effect to such decisions without any objection, evasion, or delay, whatsoever, it is agreed that no claim arising out of any transaction of a date prior to February 8, 1853, shall be admissible under this convention.

ART. 3. Every claim shall be presented to the commissioners within six months from the day of their first meeting, unless in any case where reasons for delay shall be established to the satisfaction of the commissioners, or of the arbitrator or umpire, in the event of the commissioners differing in opinion thereupon, and then, in any such case, the period for presenting the claim may be extended not exceeding three months longer. The commissioners shall be bound to examine and decide upon every claim within two years from the day of their first meeting, which meeting shall be held in the city of Washington.

ART. 4. All sums of money which may be awarded by the commissioners, or by the arbitrator or umpire, on account of any claim, shall be paid in coin or its equivalent by the one Government to the other, as the case may be, within eighteen months after the date of the decision, without interest.

ART. 5. The high contracting parties engage to consider the result of the proceedings at this commission as a full, perfect, and final settlement of every claim upon either Government arising out of any transaction of a date prior to the exchange of the ratifications of the present convention; and further engage that every such claim, whether or not the same may have been presented to the notice of, made, preferred, or laid before the said commission, shall, from and after the conclusion of the proceedings of the said commission, be considered and treated as finally settled, barred and thenceforth inadmissible.

ART. 6. The commissioners and the arbitrator or umpire shall keep an accurate record and correct minutes or notes of all their proceedings, with the dates thereof, and shall appoint and employ a clerk or other person to assist them in the transaction of the business which may come before them. A secretary and clerks are to be appointed conjointly. The whole expenses of the commission, including contingent expenses, shall be defrayed equally between the two Governments.

ART. 7. The present convention shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by her Britannic Majesty, and the ratifications shall be exchanged at London, as soon as may be within twelve months from the date hereof.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the fourteenth day of January, A. D. eighteen hundred and sixty-nine.

CLARENDON.

REVERDY JOHNSON.

China.—Mr. Burlingame, the representative of the United States in China, by letter of December 11, 1867, to Mr. Seward, informed him of his appointment by the Chinese Government as envoy to the treaty powers, and his acceptance of the position, and his intention to visit the United States with the embassy by the first opportunity. On arriving in Washington, the embassy was presented and received by President Johnson, who on the 9th of July transmitted to the Senate the text of a treaty (*see CHINA*).

This treaty was subsequently ratified by the Senate substantially as given on a preceding page.

Extradition.—The following important opinion, delivered by Judge Hall of the United States Circuit Court for the Northern District of New York on the *certiorari* and *habeas corpus* in the notorious extradition case of Charles H. Baker, which was argued by Messrs. Swartz and Benedict, counsel for the Queen, and by Messrs. Box and Parker for the prisoner, will be important to the legal profession:

Judge Hall says that a foreign conviction under the statutes of the State of New York does not render a witness incompetent, as the statute has no reference to a conviction under the laws of the State. The statutes of the State of New York provide that the Governor or Legislature may pardon a convict, and thus restore his competency. This could not be done in the case of a foreign conviction, however. "I am of the opinion that the same result would be reached, if the case was governed by the rules of evidence as they stood previous to the statutes of this State, as a foreign conviction in the year 1789 would not render such person incompetent."

The following important questions of law were fully argued, but the decision on the first point rendered a decision on them unnecessary, although the intimations of the Court were in their favor:

1. Bail could not be taken under the extradition treaty, because cases so arising are not offences against the United States, but simply under the treaty.

2. The question whether the United States Circuit Court has appellate jurisdiction from the decision of the United States Commissioner.

3. How far the Criminal Court could receive evidence in *certiorari* and *habeas corpus*.

Neutrality Laws.—The Government Commission, named by the British Cabinet to inquire into the workings of the neutrality laws and amendments proper to be made to enable the Government to fulfil all its international obligations, made their report.

The commission was composed of very eminent men, including two Lord Chancellors, several learned judges, and public men of high political standing of both of the great parties. Among them is Mr. Phillimore, the distinguished author of a work on public law, and Mr. Vernon Harcourt, the author of the well-known letters on this class of questions, printed over the signature of "Historicus." The commission was as able and independent as could be well made up from the two great parties.

The commission dealt with the subject in a very comprehensive spirit. They refused to be guided by any nice line of discriminations as to what constitutes exact duty under international law; but took as the basis of their recommendations the moral obligations of nations to maintain strict neutrality, and on that proceeded to make a code of municipal regulations which would effect that object, whether required or not by the strict letter of international law.

In this temper they recommended certain alterations in the law, and improvements in the forms of pleading on indictments under the neutrality law, to the end that a trial may be reached on the merits without delay.

Among the new provisions recommended are these:

A prohibition against the preparing or fitting out, from any British port, of any naval or military expedition against any state with which Great Britain is at peace, whether such state be at war with any other state or not.

Making it a misdemeanor—

1. To fit out, arm, dispatch, or cause to be dispatched, any vessel with intent, or knowledge, that it will be employed by any foreign power, in war against another, with which Great Britain is at peace; or

2. To build or equip within British jurisdiction any ship, with the intent that the same shall, after being fitted out and armed, "either within or without the British dominions," be employed in that way; or

3. Commence or attempt to do, or aid in doing, these acts.

There is a special section containing ten provisions for regulating and making efficient the powers of the executive and the courts.

It is also recommended that it be made a misdemeanor to engage any person to quit the country on any representation whatever, if it be the intent to employ him in foreign military service.

It is further recommended that all prizes of neutral vessels brought into British jurisdiction, if captured by any vessel in the employ of a belligerent, which has been built or sent out of England, in violation of the neutrality act, shall, on due proof, be returned to the owners from whom they were captured, and no vessel which has got out of British jurisdiction, against the neutrality laws, and becomes employed in the service of any belligerent government at war, shall be admitted into any British port thereafter.

Naturalization.—H. Kreissmann, United States consul at Berlin, writes as follows, under date of July 11th, to F. W. Seward, Assistant Secretary of State:

I beg to inform you that, in a circular dated July 6th, the Prussian Minister of the Interior instructs those government officials whom it concerns that by the conclusion of the treaty of February 22, 1868, between the United States and North Germany, it is intended, in accordance with article second of said treaty, that citizens of the North-German Union who have emigrated to the United States without permission of the proper authorities, and thereby committed an act punishable under the laws relating thereto, are not to be indicted, prosecuted, or punished for such criminal act on their return to their former homes, after an absence of five years, and that any judgment or punishment which may have been pronounced or decreed against such citizens, by reason of their emigration to the United States without permission, is not to be executed or enforced against them, provided the parties have acquired citizenship in the United States, in accordance with article one of the treaty in question. The circular of the minister accordingly directs the proper officials, throughout the kingdom, in no case to institute the proceedings for the trial and punishment, and to desist from any molestation whatever of any individual coming under the provisions of the treaty, if such individual furnish the proper proof of his having become a naturalized citizen of the United States, pursuant to article one of the treaty. The Minister of Justice has, moreover, called on the Courts of Justice throughout Prussia for official reports of all the cases in which judgments and sentences have been passed, and still stand in force, with the view of having all punishments, fines, and costs remitted by means of a royal pardon.

Negotiations, tending to the recognition of the rights of the naturalized citizens of the United States by their native governments, were carried on, and in some instances concluded favorably to such rights.

Paraguay.—A difficulty arose between the Paraguayan Government and Mr. Washburn, the United States minister, during the year. The trouble sprung out of the evacuation of Asuncion, and the declaration by the Paraguayan Government that it was a military point. The American legation alone was allowed to remain in Asuncion, and several persons, between the date of evacuation and June 16th, took up their abode in the American ministry. A correspondence arose between Benitez and Mr. Washburn as to the persons who were protected at the American embassy, the former charging some with crimes and others with communicating with the enemy, and demanding their surrender to the authorities. These allegations were denied by Mr. Washburn. A long and bitter correspondence ensued, resulting in the forcible seizure of some of the residents, and, as claimed by Mr. Washburn, attachés of the United States legation, by the Paraguayan authorities.

Matters were in such a condition, that Mr. Seward writes, under date of November 11th, to Secretary Welles: "I have thought it my duty to advise the President that the rear admiral should be instructed to proceed, with an adequate force, at once to Paraguay, and take

such measures as may be found necessary, to prevent violence to the lives and property of American citizens there, and, in the exercise of a sound discretion, to demand and obtain prompt redress for any extreme insult or violence that may have been arbitrarily committed against the flag of the United States or their citizens." In compliance with this request, the naval forces of the United States demanded and obtained an apology, and promise of reparation.

DOMINION OF CANADA. It is known that by an Act of the Parliament of Great Britain and Ireland, passed in March, 1867, this Dominion was created, and that by royal proclamation, issued in the subsequent month of May, it was proclaimed to exist, and its operations directed to commence. This act abrogated the constitutions, respectively, of the Provinces of Canada, Nova Scotia, and New Brunswick, and enacted that thenceforth they should be "federally united into one Dominion under the crown of Great Britain and Ireland, with a constitution similar to that of the United Kingdom." Although the same preamble states that these Provinces had "expressed their desire" to be so united, it would be more strictly true to say that the measure originated in the political necessities of the Province of Canada. The maritime Provinces had desired a Confederacy apart from Canada, and had entered into consultation to that end; but the authorities of the latter Province seized upon the occasion to effect the larger Union, and thus escape from local embarrassments, which had become almost chronic, and the nature of which may be somewhat understood by an outsider when told that in twenty-three years there had been fourteen governments, giving an average duration of nineteen months; besides which was the frequent forcing out of individual members of the Cabinet to make way for others, who might possibly bring more strength, and the equally glaring scandals of keeping offices of the Executive vacant for months from sheer inability to fill them by men in popular favor, and having others occupied by ministers who could not obtain seats in Parliament. Let it not be understood, however, that good had not been effected under this *régime*. The Act of 1840, which united the Provinces of Upper and Lower Canada, was intended to correct long-standing abuses, and to introduce changes demanded by the advanced knowledge and love of freedom of the time; and, notwithstanding the mutations and errors referred to, these objects were, to a great extent, attained. The improvident and not less imprudent Act of King George III., in reserving one-seventh of the lands of Upper Canada for the support and maintenance of the Protestant clergy "produced, as might have been foreseen, much bitter dissension," which was but little relieved by the several attempts made, under imperial dictation, to vary the bearings of the law; but by an act of the free

Parliament of Canada, passed in the session of 1856, the "clergy reserves" again became a portion of the public domain—due provision being made for the interests of clergymen to whom salaries and allowances had been made under the old law—the act also solemnly affirming that its provisions were intended "to remove all semblance of connection between church and state"—an all-important preparation for "a new nationality." In the period referred to, education was much improved and extended in the two Canadas. In the Upper Province the Toronto University, endowed from the public lands, but the benefits of which had been long monopolized by the Church of England, was remodelled by the legislature, and a remarkable impetus given to grammar and common school education. In Lower Canada much was also done, especially as regards elementary instruction, colleges and high schools having been from an early period in good standing. But the grand reform in favor of the latter Province was the abolition of the "feudal rights and duties" which had obtained since the first settlement of the country by the French, and "the substitution of a free tenure for that under which the property subject thereto hath heretofore been held." This change was effected at a cost of nearly four millions of dollars to the public chest, and is universally regarded as an act *par excellence* of liberal legislation. It is also said to be the only case in the history of the world, excepting the recent change in Russia, in which the feudal system was abolished without resort to violence. For the benefit of the United Provinces throughout, were established, since 1850, railways of an aggregate length of nearly two thousand miles. The principal of these is the Grand Trunk, extending over eleven hundred miles. Toward the construction of these several railways the Government contributed \$20,000,000, which expenditure, however, induced the investment in the same work of at least \$100,000,000 of English capital. The telegraph was introduced in 1847, and soon extended to all the principal places in the country. In 1853 the Montreal Ocean Steamship Company was formed, and in 1856 its regular mail service commenced. It was at first fortnightly, but in 1859 it was made weekly, and so continues. The capital of the company may be estimated at \$9,000,000. To an ordinary observer such regular progress as this outline indicates would seem to insure a continuance of the form of government under which it was effected, at least for years yet to come. But, with collective bodies as with the individual man, prosperity produces not so much contentment, or rest, as the desire for more—or, as we prefer to have it, *Excelsior* is the natural motto.

The Dominion of Canada, thus brought into existence, the creature of circumstances exposing it to early and probably hostile criticism, required skilful guidance, at least in the

start, and so far it may be said to be gradually advancing in strength and national importance. Constructed so as to admit, one day or other, of the question of "State rights," Sir John A. MacDonald thus described the care that was taken to prevent evil from that source. First referring to the United States, he says: "They declared by their Constitution that each State was a sovereignty in itself, and that all the powers incident to a sovereignty belonged to each State, except those powers which, by the Constitution, were conferred upon the General Government and Congress." Then, speaking of the Dominion, he points out the difference: "Here we have adopted a different system. We have strengthened the General Government. We have given the General Legislature all the great subjects of legislation. We have conferred upon them, not only specifically and in detail, all the powers which are incident to sovereignty, but we have expressly declared that all subjects of general interest not distinctly and exclusively conferred upon the local Governments and local Legislatures, shall be conferred upon the General Government and Legislature."

Discussion has, however, arisen as to the relative powers of the local and General Governments and Legislatures, friends of the former affecting to see a disposition at headquarters to "belittle" them, as they have somewhat forcibly expressed it. Hence Mr. Dunkin, a prominent member of the Quebec Administration, announced in his place in the Legislature in 1867 that "none of the functions of the Provinces have a municipal character. They are not derived from the Dominion; they are not dependent on the Dominion; their authority is not subordinate to the Dominion. It has far more the character of coördination." But some months' reflection would seem to have modified Mr. Dunkin's view—bringing it more in harmony with Sir John A. MacDonald's—for, in a recent speech, we find him affirming that "he never entertained a thought of claiming any undue importance or jurisdiction for the local governments. The local governments had subordinate functions to the General Government, but no one could deny that they had some coördinate powers, and that was all he claimed." Trouble of a more serious nature, amounting almost to alarm, prevails in another quarter of the Dominion. The people of Nova Scotia have from the beginning been opposed to that province being included in the Confederacy, and have, by protest and remonstrance, in various forms, denied the right of the local Parliament to sanction the annulling of their ancient Constitution—holding to the doctrine of Locke, that "the Legislature can have no power to transfer their authority of making laws, or to place it in other hands." This opposition, led by the Hon. Joseph Howe, an old and able politician, completely controlled the elections which have occurred since confederation, and still continues formidable; but, as

the appeal to England was absolutely without effect, and, as the leading statesmen of both parties in the House of Commons have expressed their unwillingness to interfere with a scheme which, although more immediately colonial in its operations, is yet of great importance, from an imperial point of view, it is thought that Mr. Howe is becoming somewhat more pacific in his disposition toward the General Government, and that the latter are willing to meet him in a spirit of compromise.* It is understood that Newfoundland is now well disposed toward that "eventual admission into the Union" which the imperial Act provides for, and that an open declaration to that effect would soon follow an adjustment with Nova Scotia. British Columbia has made formal communication of her willingness to join immediately upon the Hudson's Bay Territory being acquired. The Dominion Parliament of 1867 passed resolutions authorizing this acquisition, and two members of the General Government, Messrs. Cartier and MacDougall, are at present in England, engaged in forwarding the necessary negotiations. It is believed that the ancient company to whom this territory legally belongs will not be induced to surrender their rights at a less cost to the Dominion than \$5,000,000.

The legislation of the several Parliaments of the Dominion, federal and local, has been, so far, carefully consistent with the general welfare, if we except an apparent unwillingness in Quebec to encourage immigration.

Prominent among the measures of the Federal or Dominion Parliament of 1868, stands the Post-office Act, which repeals the material provisions of all previously-existing postal laws in the former Provinces, and assimilates the regulations and rates throughout the Dominion. The rate of local postage has been reduced from five cents to three, and the Postmaster-General has effected an arrangement with the United States, reducing the postage between that country and Canada from ten cents to six. Post-office savings banks have been authorized and established. Another important postal event has been the withdrawal of the Cunard boats from the route between Liverpool and Boston, *via* Halifax, by which the provinces of Nova Scotia and New Brunswick were deprived of direct postal communication with Great Britain. But the Canadian Government has since entered into a contract—which commenced on the 1st of July last, and is to continue for three years—with the In-

* Since the above was written, Mr. Howe has been at Ottawa, the seat of the Dominion Government, and obtained such an extent of fiscal and other concessions for Nova Scotia as to warrant, in his own judgment, his acceptance of a place in the Cabinet. He has returned to Nova Scotia to seek reflection to the House of Commons under these circumstances. Writing from Portland, on his way home, to a friend in Montreal, he says: "I did not take office, though it had been open to me for eighteen months, till my country's fair claim to readjustment of the scheme was admitted, and until Gladstone's Cabinet, with John Bright in it, counselled peace and refused repeal."

man Steamship Company, to perform this service, by calling fortnightly at Halifax for mails and passengers, on their voyages to and from the United Kingdom. Important laws respecting customs, public works, the civil service, the militia, marine, and fisheries, and an "Act respecting the currency," have also passed.* Cap. 40 of the militia law makes provision for works of fortification and defence. Power is taken to raise £1,000,000 for such works, under the guarantee of the imperial treasury, to rank next after the Intercolonial Railway Loan, and to be expended on the works at St. John, N. B., Montreal, and points farther west. The Currency Act provides that if the Congress of the United States adopt the basis of the International Monetary Conference, making the American half-eagle equal to the French twenty-five franc piece, then, by proclamation, the same currency will be adopted in the Dominion. It is also provided that the Governor may order that silver coins of the United States be received as legal tender in Quebec, Ontario, and New Brunswick. A marked feature in the legislation of Ontario is a measure in favor of immigrant settlers. "Free grants and homesteads" are authorized to be given in several extensive districts, and it is humanely regulated that, "upon the death of the locatee, the land so given passes to his widow, unless she prefers to accept her dower in it. The land cannot be alienated or mortgaged until the patent issues, nor within twenty years of the location, without consent of the wife, if living. Nor shall it be liable during that twenty years to be sold under execution for any debt, except a mortgage or pledge, after the patent issues." An act "respecting gold and silver mines" also passed; and the genius of the people (chiefly of English and Scotch birth and origin) is shown by a law relating to the municipal institutions of the Province, in which previously-existing laws are carefully and minutely altered and improved. The Quebec Legislature has shown no disposition to encourage emigration to that province from Europe. This is, no doubt, owing to the natural desire to preserve intact the power of the French element. Much anxiety is evinced to induce French Canadians from the old and thickly-settled districts to take possession of the unsettled, or crown lands; and to this end "colonization roads" are being constructed to a considerable extent, exclusively by the Government, and aid tendered to municipalities for a like purpose. It is also known that agencies are at work to induce French-Canadian emigrants to the United States to return. As a result of this movement, addresses from many of those emigrants, residing in the Northern States, have lately been presented, praying that "the Parliament of Quebec will furnish them

an opportunity of returning to their country." *Per contra*, it may be stated that the Catholic Bishop of Burlington, Vt., lately applied, in the city of Quebec, for French-Canadian priests to coöperate with him in ministering to their countrymen residing in the United States, of whom, he says, there are not less, in the aggregate, than half a million; "that they are still pressing forward at an average of a thousand per week," and that he "desired to supply them with priests, speaking their own language and participating in their ideas, on the soil to which they have become attached."

In New Brunswick, the legislation embraces collection and management of revenue, roads and bridges, county courts, and an act which exempts homesteads, not exceeding in value six hundred dollars, from seizure for debt, or cause of action accruing after the passing of said act. The principal measure in Nova Scotia relates to its leading interests, gold and coal mines. And besides the general act, not less than thirty-five "gold-mining companies" were incorporated—capital from fifty thousand to one hundred thousand dollars each—and eight companies for "coal mining," capital from one hundred thousand dollars to five hundred thousand dollars.

But the proceeding of paramount interest in the Dominion in the past year is the enactment authorizing the Intercolonial Railway, and the commencement, accordingly, of that great work. This road is to confederation as the keystone to the arch. Without it there could be no union, and without the union the British Government would never guarantee the necessary loan of £8,000,000. The imperial act authorizing this loan provides thus: "The commissioners of her Majesty's Treasury shall not give any guarantee under this Act, unless and until an Act of the Parliament of *Canada* has been passed, within two years after the union of Canada under the British North America Act, 1867, providing, to the satisfaction of one of her Majesty's principal Secretaries of State, as follows:

"1. For the construction of the railway.

"2. For the use of the railway at all times for Her Majesty's military and other service.

"Nor unless and until the line in which the railway is to be constructed has been approved by one of her Majesty's Principal Secretaries of State." The main object of this clause was to oblige the Dominion Parliament to adopt a line marked out some years since by Major Robinson, an imperial officer, running by the Gulf shore as far north as possible from the American frontier. This line has been adopted, the sanction of the Secretary of State obtained accordingly, railway commissioners appointed, as directed by the Dominion Act, and tenders for contracts called for. There are two provisions in the law evidently directed against jobbing, viz.: "All contracts for over \$10,000 to be submitted to the Governor in council for approval. No member of Parliament can be

* The Customs Act, consisting of one hundred and forty-one clauses, consolidates the previous laws of the several Provinces of the Dominion, furnishing a complete general code, and making the tariff uniform.

an officer or a contractor under the commissioners." Reliable figures as to finance and trade in the Dominion since its formation could not be obtained up to a recent date, the official answer to a request for particulars being, "The accounts of the Dominion and of the Provinces, for the first year of the Union, are not yet ready for publication." It may be interesting, however, to state that the ordinary revenue of all the Provinces the year before confederation was \$15,842,380; the ordinary expenditure was \$15,227,168. The imports for the same year were \$84,000,000, including about \$6,000,000 of coin and bullion; the exports, \$65,000,000, including \$8,000,000 of specie.

The united debt of the former Provinces of Canada, and the Provinces of New Brunswick and Nova Scotia, at the time of the Union, was not less than \$90,000,000—\$75,000,000 for the former, and \$15,000,000 for the latter—to which will be added, almost immediately, at least \$28,000,000 for Intercolonial Railway, fortifications, and purchase of northwest territory. This will be no small total for a population of not more than four millions to grapple with; and should the population not increase more rapidly than at present, and a further influx of British capital not take place, there would be little justification for an early expenditure for enlarging canals, and an extension of railways—objects of lively interest at present to a mercantile party in the Dominion.

There are twenty-six chartered banks in the four Provinces, viz., in Ontario, six; Quebec, eleven; New Brunswick, four; Nova Scotia, five; capital varying from \$60,000 to \$6,000,000. The total authorized capital is \$38,000,000, the greater part of which is paid up. In March last the oldest bank in Ontario was obliged to suspend, and become amalgamated with the Merchants' Bank, two-thirds of its capital stock of \$4,000,000 disappearing in the process. In November the Commercial Bank of St. John's, New Brunswick, failed, causing a severe financial crisis. A number of failures of wholesale houses in Quebec has had a most prejudicial effect on credit and business generally. A recent report of one of the banks in Montreal, referring to these failures, says: "Commercial morality appears so singularly debased, that a large portion of the community seem to consider it not dishonorable to become bankrupt, or even fraudulently bankrupt, as a means to enrich themselves." This does not apply so much to the west, where there has been a continued growth of prosperity, owing to a series of abundant harvests.

The political government of the Dominion continues the same as at the outset, Sir John A. MacDonald the presiding genius. Lord Monck has been replaced as Governor-General by Sir John Young, baronet, etc., a man of high reputation as an administrator.

DUFFIELD, Rev. GEORGE, D. D., an American Presbyterian clergyman, scholar, and author, born in Strasburg, Lancaster County, Pa.,

July 4, 1794; died in Detroit, Mich., June 26, 1868. He was of Revolutionary stock, his grandfather having been a distinguished patriot and chaplain of the First Congress of the United States. His father was a merchant, and for nine years Comptroller-General of Pennsylvania. He early developed a passion for learning, and graduated with honor from the University of Pennsylvania at the early age of sixteen. The ensuing autumn he entered the Theological Seminary in New York City, then under the care of the celebrated Dr. John M. Mason, and after a four years' course there was licensed in April, 1815, by the Presbytery of Philadelphia. In December of the same year he was called to the pastorate of the Presbyterian Church in Carlisle, Pa., and soon after his settlement there married a daughter of the celebrated Divie Bethune. He remained in this pastorate for nineteen years, and then accepted a call to the Fifth Presbyterian Church of Philadelphia, as successor to Rev. T. H. Skinner, D. D. Two years later he was called to the Broadway Tabernacle, New York, but remained there but a single year, when he again removed in October, 1838, to Detroit, Mich., and became pastor of the First Presbyterian Church in that city. Here he found his home, and remained till the close of his ministry and life. He was well adapted for such a post, and for thirty years he was a pillar of strength in all great measures of reform and progress. Michigan and the whole Northwest owe much to him for his broad views, his untiring zeal, and his hearty coöperation in all movements for the promotion of education, science, and philanthropy. Few men in our country were so fully conversant with all departments of science, or possessed so wide and liberal culture. He was particularly well versed in all the branches of physical science: astronomy, meteorology, geology, mineralogy, geography, and chemistry, and all the departments of natural philosophy, were subjects of constant study and observation with him, and he was the peer of the special cultivators of each, in his thorough knowledge of them. As a preacher he was able, eloquent, logical, and often profound; as a writer, the master of a clear, vigorous, and brilliant style, often original, and always interesting by the wide range of illustration he could bring to embellish his argument. Possessing a strong will, extraordinary moral courage, and yet great tenderness and gentleness, he exerted, perhaps, a more powerful influence than any preacher in the Northwest. In the late war, he was conspicuous for his patriotism, and seconded, with all his eloquence and fervor, the efforts to increase the number of our troops in the field, and the measures adopted to provide for the sick and wounded soldiers and their families. Notwithstanding his age, he went repeatedly to the battle-field as a delegate of the Christian Commission, and ministered to the wounded, aided in burying the dead, and performed labors from which many younger men would have shrunk.

Dr. Duffield has left but few memorials of his rare abilities and his profound scholarship behind him. Two or three volumes, not of great size, a score or more of occasional sermons and addresses, many able contributions to theological and literary reviews, and a volume, as yet unpublished, of reminiscences of his own life and times, are all his contributions to posthumous fame.

DYNAMITE. The dynamite of M. Nobel is nothing but nitro-glycerine absorbed in highly porous silica. It consists of 75 per cent. of nitro-glycerine and 25 per cent. of porous silica. Hence it appears to possess only three-fourths of the power of nitro-glycerine, the specific gravity of both substances being very nearly the same. But, practically, there is no advantage in the greater concentration of power of nitro-glycerine. It ought not to be poured direct into the borehole, since it easily causes accidents by leaking into crevices, where it explodes under the miners' tools. It must, therefore, be used in cartridges, which leave considerable windage; whereas dynamite, being somewhat pasty, easily yields to the slightest pressure, so as completely to fill up the sides of the borehole, and leave no windage whatever. For this reason a given height of dynamite charge in a hole will contain quite as much nitro-glycerine as when the latter is used in its pure liquid state. As a test of the power, a cylinder, of 11-inch diameter and 12-inch height, of best scrap-iron, and cut off a shaft, was bored through the centre with a 1-inch borer, and a charge of six ounces was put in without securing either end by any sort of plug or

tamping. The cylinder was blown with such violence against a three-quarter inch boiler plate at some distance as to break it. As a test of safety, a box containing about 8 lb. of dynamite (equal in power to 80 lb. of gunpowder) was placed over a fire, where it slowly burned away; and another box, with the same quantity, was hurled from a height of more than 60 feet on the rock below, no explosion ensuing from the concussion sustained. At Stockholm, a weight of 200 lb. was dropped from a height of 20 feet on a box containing dynamite, which it smashed, of course, yet no explosion took place. Such a test can leave no doubt that dynamite offers sufficient safety against concussion for all practical purposes; and a Prussian military commission recently reported that it appears to be the safest of all known explosives. The greatest drawback on nitro-glycerine is its liquid form.

Nearly all the calamities caused by nitro-glycerine have been owing to leakage, which, for practical reasons, it is very difficult to prevent, and are, therefore, indirectly chargeable to its liquid state. A substance sensitive to concussion, unless it is quite unmanageable, like chloride of nitrogen, can easily be protected against accidents by wrapping it in a soft material; but if that substance is a liquid and a leakage takes place, it becomes subject to the danger of direct percussion; and if nitro-glycerine in that condition becomes exposed to the sun's rays, the heat which it takes up renders it so sensitive as to become dangerous under the slightest blow.

E

EARTHQUAKES. The year 1868 was remarkable for the number, the wide-spread distribution, and the highly destructive effects of the earthquakes which occurred. They were characterized by a great variety of sublime and wonderful phenomena, rivalling in all respects the most violent earthquakes of which history has made record.

In the Island of Hawaii.—The first of these terrestrial convulsions worthy of special mention commenced on the 27th of March, in the island of Hawaii, one of the Sandwich Islands. On that day the great volcano, Mauna Loa, began to eject immense columns of lava, and simultaneously shocks of earthquake set in. During twelve days succeeding there were (estimated) two thousand shocks, followed at intervals by fearful tidal waves, destroying villages and large numbers of their inhabitants. The first outpouring of lava came down the mountain-side in a broad stream several feet deep, and travelled with such rapidity, that a family living in its path, two miles from the point where it broke out, had barely time to escape, taking with them only their clothes. The lava

pushed onward toward the sea, which it entered, driving the water back with great violence, and forming a point or artificial tongue of land, at least one mile in length. The smoke thrown out of Mauna Loa at this time rose to a height (estimated) of seven and four-fifths miles, obscuring every thing for a great distance around, excepting when bright spirals of flame shot up from the mouth of the volcano. The severest shock occurred on the 2d of April. At the village of Waischina the earth burst open, and a tidal wave rushed in with great velocity, sweeping over the tops of the high cocoanut-trees and carrying death and destruction in its train. Vast bodies of earth were torn from the mountain-side and thrown to considerable distances. It was reported that the slope and part of the summit of a mountain, fifteen hundred feet high, were lifted up by the earthquake and hurled over the tops of the trees to a distance of over one thousand feet. On one side of Mauna Loa a singular eruption of moist clay occurred, covering a space about two miles and three-quarters long and one mile broad. This was followed by an immense stream of

water. Lofty precipices were levelled to the ground, and, in places where the earth had been formerly smooth and unbroken for miles around, the surface was rent asunder and upheaved, and gigantic chasms and cliffs left. The entire topographical appearance of the country round about was so completely changed, that those who lived in the desolated district could not afterward recognize or point out the localities with which they were formerly familiar. Fortunately, that part of the island was but sparsely inhabited, and the lands were not under general cultivation. The new crater of Mauna Loa, formed on the 27th of March, was over two miles in circumference. In addition to the one mile of land formed (as already mentioned) by the lava driving back the sea, another stream poured down the mountain, striking the water with a tremendous shock, and extended into the sea to a distance of about three miles. At this time a very severe shock occurred, and immediately after an island nearly four hundred feet in height rose above the water, and was soon joined to the island of Hawaii by the stream of lava. The base of the volcano presented, after the shocks, a most barren and desolate aspect, the gases arising from the rent earth having completely destroyed all vegetation. The shocks were felt in all of the Sandwich Islands, but only in Hawaii were the effects disastrous. The violent and dangerous period of the earthquakes lasted about twelve days. The loss of life was reported to be as follows: In the village of Paliuka, thirty-three; at Mokaka, thirteen; at Punalua, four; at Honah, twenty-seven; at Varulo, three—total, 80. All of the persons killed or injured were native Hawaiians. The loss of property was estimated at about \$500,000. Animals especially suffered by the poisonous gases emitted during the eruption. At Keaiwa a thousand domesticated animals were killed by this cause.

Some of the details presented in the foregoing account are calculated to tax the credulity of readers, but they are confirmed by the testimony of eye-witnesses of the catastrophes, and others who visited the scene after the occurrences to gather the facts. One visitor, who ascended a ridge of the mountain, April 10th, says that the valley itself was floored over with a pavement of fresh lava, from ten to twenty feet deep, which appeared to have been the first thrown out, and came from a crater about ten miles up the mountain, which burst out on Tuesday, April 7th. This crater and stream had ceased flowing, and the lava was rapidly cooling, so that the visitors ventured to stand on it, though at the risk of burning their boots and being choked by the sulphurous gases. Four huge jets or fountains were continually being thrown up out of this great crater, ever varying in size and height, sometimes apparently all joined together, and making one continuous spouting a mile and a half long. These four grand fountains were

playing with terrific fury, throwing blood-red lava and huge stones, some as large as a house, to a height varying constantly from five hundred to a thousand feet. From the lower side of the crater a stream of liquid, rolling, boiling lava poured out and ran down the plateau, then down the sides of the pail (following the track of the government road), then along the foot of the pail or precipice five miles to the sea. This river of fire varied from five hundred to twelve hundred or fifteen hundred feet in width, and when it is known that the descent is two thousand feet in five miles, the statement that it ran at the rate of ten miles an hour will not be doubted. The shock of April 2d, says the same writer, destroyed every church and nearly every dwelling in the whole district. From ten to twelve o'clock of that day there had been service in the large church in Waiohinu, and it was crowded with people. Only four hours after they left the heavy shock came, the walls tumbled in, and the roof fell flat—all the work of twenty seconds. At the same instant every man, woman, and child were thrown from their feet. Horses and cattle dropped down as if dead. A man riding on horseback had his horse stumble under him so suddenly that he found himself and horse lying flat on the ground before the thought of an earthquake entered his mind. The earth opened all through the district, and in some places caused dangerous fissures, while in others it closed up again. An incident which ought not to be omitted is the shower of ashes which preceded the eruption. During Monday night, prior to the eruption, the ground throughout the district was covered with a coating of fine sand and light pumice-stone, of a light-yellowish color. Where this shower of sand and pumice-stone came from is unknown, but probably from some vent-hole near the crater. The sufferings and alarm experienced by the residents of Kau, during the two weeks that the earthquakes and eruptions continued prior to their leaving, appear to have been great. Night after night they were compelled to sleep on the mountain-ridge back of the village, exposed to the damp winds and rain from the sea, subsisting on taro and fishes when they could get these, or fasting when they could not.

Another observer visited the crater of Kilauea (the summit of Mauna Loa) after the earthquakes were all over, and describes the changes which had been wrought in the appearance of the mountain and crater. He says that on the west and northeast side, where the fire had been most active before the great earthquake of April 2d, the falling masses probably had been at once melted by the lava, and carried off in its stream, for the walls there remained perpendicular, as they were before; but that this part of the wall had lost portions of its mass was shown by the deep crevices along the western edge, and the partial detachment in many places of large prisms of rock.

But it was on the east and northeast wall particularly that the character of the crater had undergone a change. Along the descent on the second ledge masses of rock, many of more than 100 tons in weight, obstructed the path and formed abutments to the stone pillars—small buttress hills similar to those observed in front of the high basaltic wall in Koolau, Oahu. So, also, in the deep crater itself, the eastern wall had lost most of its perpendicular dip, and become shelving, in part. The crater itself was entirely devoid of liquid lava; no incandescence anywhere; pitchy darkness hovered over the abyss; white vapors of steam issued from the floor in a hundred places, but of those stifling, sulphurous, and acid gases, formerly so overpowering in the neighborhood of the lakes and ovens, only the faintest trace was perceived here and there. The heat was nowhere so great that the visitor could not keep his footing for a minute or more, although in many places it would forbid the touch of the bare hand. The great South Lake was transformed into a vast pit, more than five hundred feet deep, the solid eastern wall projecting far over the hollow below, while the remaining sides fell off with a sharp inclination. More than two-thirds of the old floor of Kilauea had caved in and sunk from one hundred to three hundred feet below the level of the remaining floor. The depression embraced the whole western half, and infringed in a semicircular line on a considerable portion of the other half. It was greatest in the northern, and rather gradual and gentle in the southern portion.

Regarding the tidal wave, another writer states that at Punalua, at the moment of the shock of April 2d, it seemed as if an immense quantity of lava had been discharged into the sea some distance from the shore, for almost instantly a terrible commotion arose, the water boiling and tossing furiously. Shortly afterward a tremendous wave was sweeping up on the shore, and when it receded there was nothing left of Punalua. Every house, the big stone church, even the cocoanut-trees—all but two—were washed away. All persons who were out fishing at the time perished, and many of those ashore. A huge chasm opened, running from the sea up into the mountain, down which, it is said, lava, mud, trees, ferns, and rocks were rushing out into the sea. At the time of the shock a man named Holoua and his wife, living at Ninole, ran out of the house and started for the hills above, but, remembering the money he had in the house, the man left his wife and returned to bring it away. Just as he had entered the house the sea broke on the shore, and enveloped the building, first washed it several yards inland, and then, as the wave receded, swept it off to sea with him in it. Being a powerful man, and one of the most expert swimmers in that region, he succeeded in wrenching off a board or rafter, and with this as a *papa heenulu*

(surf-board) he boldly struck out for the shore, and landed safely with the return-wave, which was from fifty to sixty feet high.

The last great eruption of Mauna Loa, previous to that of 1868, occurred in 1859, when the volcano opened on its northern flank, and the lava flowed sixty miles through a desolate region before reaching the sea.

In South America.—The earthquakes in the Sandwich Islands, terrible as they were, were but trifling compared with those which visited portions of South America, commencing on the 13th of August. The statements which follow are prepared from various narratives of persons who were on the spot at the time of the calamity:

The first shock (in Peru) was felt at 5½ P. M. It was preceded by a rumbling sound. An eyewitness at Arica says that the hour was that when by custom most of the inhabitants had just closed their daily labors and were at their homes. The instant the startling indications of an earthquake were felt there was a general rush for uncovered spaces, which were reached by many uninjured, but not by all. The streets became a scene of terror. All the houses in the city trembled like a person affected with the ague. Then they surged, and some of them fell to pieces with crash after crash. At this juncture, when the undulations were active, the earth opened in several places in long and almost regular lines. The fissures were from one to three inches in width. The sensation, was distinct, as though something were rolling underneath. From every fissure there belched forth dry earth like dust, which was followed by a stifling gas. Owing to the demolition of buildings and the general destruction of all kinds of property, and the dust thrown out, as well as that set in motion by the general tumult, a dense cloud was formed over the city and obscured the light. Beneath the cloud was the gas, which severely oppressed every living creature, and would have suffocated all if it had lingered longer stationary than it did, which was only about ninety seconds. The undulations were three in number. Each succeeding one was of greater magnitude than the former. When the undulations ceased, the cloud of dust ascended and dispersed, and light was restored. Then quakes at short intervals succeeded, as though subterranean explosions were taking place. At this time people from all parts of the city fled to the hills, amid falling stones and timbers, which descended from swaying walls and broadly-rent buildings, just on the eve of crumbling into perfect ruin. Some were struck down dead by the falling materials, and others were maimed, while all were made to stagger from side to side like people in a state of intoxication. Many persons carried children in their arms, and those who had not these carried articles of value. The avarice of some was stronger than fear, even amid this terrible confusion, and hence there were those who de-

layed their escape to collect valuables, many of whom suffered for their temerity, either by the sacrifice of their lives or otherwise. As the rush for the hills continued, and stones and materials of all kinds were falling, and houses were crashing, numerous people were struck down, and either killed or dangerously hurt.

The number of persons (estimated) killed at Arica was 500; and not a house was left uninjured. All the public edifices were destroyed, including the custom-house, which contained \$4,000,000 worth of goods, all of which were lost. The entire damage at Arica was estimated at about \$12,000,000. The waters rose to such a height that a tidal wave, forty feet high, rolled with resistless fury upon the ships in the harbor and precipitated them on the main-land, far beyond any point ever reached before by the sea. The United States storeship *Fredonia* and the United States steamer *Wateree* were both at anchor in the harbor of Arica, near each other. After the first shock had occurred on the land, Dr. Dubois, surgeon, and the paymaster of the *Fredonia*, took a boat and went on shore to inquire for the welfare of friends, and offer the services of the ship. A few moments after leaving the vessel a great upheaving of the waters in the bay commenced, and the *Fredonia*, parting her chains, was tossed about at the mercy of the sea, and was finally dashed to pieces on a reef. Nothing of the vessel was saved. Her officers and crew, twenty-seven in number, were lost, also Mrs. Dyer, wife of the lieutenant commanding. The officers were Lieutenant B. Dyer; D. Organ, master; J. G. Cromwell, purser; and S. Lunt, secretary to the commander. The *Wateree* was more securely anchored, but dragged her anchor, and the great tidal wave swept her four hundred and fifty yards inland, about two miles north of the ruined town, where she lay between two hillocks of land very slightly injured. Only one sailor was washed overboard and drowned. Lieutenant Johnson of the *Wateree* was ashore at the time, and, while carrying his wife in his arms to some place of safety, she was struck by a portion of a falling building and instantly killed. The Peruvian corvette *America* shared the same fate as the *Wateree*, but lost three officers and thirty men. Commander Gillis, of the *Wateree*, after the disaster, together with Dr. Winslow and Dr. Dubois, of the *Fredonia*, were of great service to the inhabitants, dividing their provisions among the suffering inhabitants, and saving many lives. The American merchantman *Rosa Rivera*, the English ship *Chancellor* (with eight men), and the French bark *Eduado*, were lost.

Another writer, who witnessed the occurrences at Arica, says that toward five o'clock in the afternoon a fresh breeze from the south set in, but it lasted only while the damage was being done. A noise like that of a tempest disappearing in the distance preceded the awful

shock of earthquake, and the ground began to shake from south to north with so great force that all the buildings began to shed their decorations, and in a few moments tumbled to the ground themselves. The wooden buildings stood a few seconds longer than their stone-built neighbors. All at once the cry was heard—"The sea! the sea!" On looking toward the water, he saw at a glance that he had to move rapidly to the hills or be engulfed, for the sea had risen to an immense height. He could not measure it. In an instant it rushed impetuously on the shore, which was shaking from the earthquake. The vessels were at anchor in sight. They were now pitched ruthlessly northward, then southward, and tossed thus to and fro for some moments by waves about thirty feet high, when they were cast ashore or dashed to pieces on the reefs. Five different times did such a wave rise, but the last four times its height was less than the first. Had the waves risen a few feet higher they would have washed away the upper portion of the town, which, however, has been rendered uninhabitable by the shocks of the earth. These shocks occurred on the first day every quarter of an hour, and on the second day every hour.

Among the curious effects of the earthquake, in the vicinity of Arica, was the reported opening of the earth and the appearance of a large number of mummies, or dead bodies, buried long ago, and preserved by various causes from decay. These mummies had been buried in the sand in a sitting posture, facing the sea, in a cemetery covering a large area. Most of them were described as having been found (after the earthquake) with their hands either crossed on their breasts or held up by the sides of the head. A specimen of the bodies thus strangely thrown up was recently presented, by Dr. Stinson to the Chicago Academy of Sciences. It was the person of a female, probably of adult age, having jet-black hair, tastefully braided down in front. The age of the specimen is believed, from various circumstances, to be less than two hundred years. Some conjectures place the age as low as fifty, or even twenty-five years.

At Arequipa, Peru, over 600 people were drowned. In a few minutes after the first shock, nearly every house in the city was levelled to the ground. Most of the inmates of the prisons and hospitals perished in the destruction of those buildings. The shocks continued at intervals; nearly one hundred occurring in a space of three days. Mount Misti threw out lava and smoke, and enormous quantities of mud, and the river emitted a sulphurous odor. Rocks and earth were constantly falling from the mountains into the water. Hundreds of persons were killed by being crushed by falling houses when the first severe shock came. At Callao the sea burst over the line of houses skirting the shore, at 10 o'clock at night on the 18th, completely gutting them

of their contents. The next night a fire broke out, and fifty-seven houses in the business portion of the place were destroyed, entailing a loss of a million and a half of dollars. No lives were lost. The cities of Ica and Pisco also suffered heavily, forty houses being overthrown and twelve lives lost in the former city. Nearly all the population of Callao fled to Lima. At Iquique the shock lasted over four minutes, after which the wave came and destroyed about three-fourths of the place, with about six hundred lives, nearly all the provisions, and the condensing machinery which supplied the people with drinking-water. Among those killed at Iquique was the British consul, Mr. Billingham. One German house at Iquique lost over \$400,000 worth of property. The steamer *San Diego*, bound from Callao to Valparaiso, put into the port of Chala, where, on the 18th, she was seized by the great wave, her chains snapped, and the vessel carried to sea. In a few moments the wave returned toward the shore, carrying the steamer with it, taking her, with all her passengers, safely over a high cliff, and leaving her safely inside the channel. The port of Ohala was completely covered with water. Nearly all the towns and villages in the mineral provinces of Huanca were destroyed or reduced to shapeless masses. The cities of Puno and Cuzco were not damaged. The port Molendo, where were stored the materials for building Mr. Meiggs's railway, was completely destroyed, nearly all the tools, rails, and provisions being ruined by the earthquake and the succeeding tidal wave. Moquegua, Locumba, and Pequiaca were utterly destroyed. Tacna lost sixty houses and a hundred and fifty lives, mostly of children returning home from school. The town of Mejia was swept away, only twenty out of its five hundred inhabitants escaping. All the habitations at Tilo were destroyed and twenty lives lost.

At Lima there was not much damage done to life or property. The heavy shock lasted about four minutes, creating the utmost consternation—the inhabitants fleeing to the open plaza, where they besought protection from the Almighty.

At Chincha (the Guano) Islands, off the coast of Peru, a reddish vapor was seen rising out of the sea during the forenoon of the 18th; and at 12.20 P. M. a strong wind sprang up from the south, almost approaching a hurricane, which lasted until 4.38 P. M., after which a prolonged and distant noise was heard, resembling thunder. A complete calm, says an eyewitness, ensued immediately, after which the first shock of earthquake took place. This lasted for four minutes eighteen seconds; so great was the movement that people were thrown down. After this a mighty crash was heard, as though a powerful wave had broken on the rocks; but the sea was calm. At 5.56 P. M. the earth again began to tremble, and continued to for two and a half hours.

The sea now became entirely calm, but the birds were seen abandoning the sea and rocks, and soaring to the elements above, screeching most horribly, as though they were aware of what was about to take place. The night became pitchy dark; nothing could be seen over sea or land; the breeze, felt during the day, commenced to blow, causing further terror to the people, who were momentarily expecting the island to be swallowed up. At 9.45 P. M., persons, living in the vicinity of the mole, noticed that the water was leaving the land, and the alarm was immediately given. Nothing can describe the terror which prevailed on the northern island. The population, consisting of from five to six hundred souls, all forsook their houses and sought refuge on the higher part of the island—some naked, others sick and infirm, women and children, all thronged in one spot, dumb with terror. At 10 P. M. the breeze lulled, and the heavens cleared so that a view could be obtained of the sea, which had retired from the land about seventy yards. This circumstance is the more remarkable, from the fact that the depth of water in the bay at low tide is from fifteen to twenty fathoms, but soon after the water was seen to rise in the shape of a colossal wave, and, in less time than it takes to describe it, had almost covered the island, washing away the houses and every thing it came in contact with. The losses were heavy. Both moles were destroyed, many launches broken to pieces, and the houses in the vicinity washed away. In one of these was a family of three, husband, wife, and child. The husband and wife were saved, but the child was drowned. The sea rose and fell at the rate of ten feet in every three or four minutes. The following were among those vessels which suffered the most: English ship *Resolute*, partly destroyed; English ship *Eastern Empire*, greatly damaged; English ship *Royal Oak*, in a very bad state; Prussian bark *Leopold II.*, an entire wreck; English ship *Oceanica*, nearly a wreck; and English ship *Southern Ocean*, greatly damaged, as also the American ship *Shatemuc*. Many of them were loaded and about to leave, and their cargoes were considerably injured.

Among other places in Peru destroyed or greatly injured by the earthquakes were Tacna, Oanate, Cafaria, Chaspa, Cerro-Azul, Quicacha, Oabacera, Pullo, Chumpe, Cobija, Antiquipa, Sarna, and Coracora. The cultivated and beautiful estates near Acarf were all ruined. The port of Las Lomas was united to the islands in the bay; the port ceasing to exist. The valley of Lluta was completely ruined. The town of Tambo was entirely washed away, and upward of five hundred persons perished. From Callao to Iquique the whole coast of Peru was left in a complete state of desolation and ruin.

The promptest and most liberal measures were at once adopted at Lima to relieve sufferers throughout the republic. The Peruvian

Government fitted out and dispatched all the available Government vessels to take surgeons, medicines, provisions, clothing, water, etc., to the various points where the greatest suffering prevailed. The American and French consuls tendered their vessels to the Government, all of which were accepted. The consignees of guano placed the sum of \$500,000 at the disposal of the Government without interest. Congress authorized the President to raise the sum of two millions toward alleviating the distress. Señor Andres Alvarez Calderon presented the sum of \$50,000 as a voluntary contribution. Mr. Henry Meiggs, the contractor of the Arequipa railroad, gave an equal sum, to be distributed as follows: \$20,000 for Arequipa, \$10,000 for Arica, and \$10,000 for Iquique, and the balance for other ports. The Government also sent the military to different points to keep order and render assistance. The Pacific Steam Navigation Company's steamer Chili sailed from Callao on the 21st of August with a large quantity of provisions, on account of the company, to be distributed among the sufferers. In view of the great national calamity, Congress adjourned for three days, and all places of amusement were closed.

The disastrous consequences of one of the same series of earthquakes occurring in the Republic of Ecuador, on the morning of August 16th, are stated as follows by Mr. A. P. Hovey, United States minister to Peru, in a communication to Secretary Seward. He says that "the earthquake seems to have had its centre in the province of Imbabura, near the volcano of Ocampo, about sixty miles north of the city of Quito. Eight towns, with the adjoining haciendas and populations, are said to have been destroyed, numbering from 40,000 to 50,000 inhabitants. The cities of Otavato and Cotacachi, containing respectively about 12,000 and 8,000 inhabitants, and both situated on the shores of the Lake Mejanda, are said to have been swallowed up, with their entire populations, and their sites have become a part of the lake. The city of Ibarra, with a population of 13,000, was totally destroyed, only about three thousand of the inhabitants escaping; and the town of Atunlaque is levelled with the earth, burying all its inhabitants in its ruins. Nor is the injury confined to the cities and towns, but all the haciendas of the province, the richest in Ecuador, growing sugar and grain, and producing large numbers of cattle and sheep, have, as it were, been swept out of existence. Quito did not suffer in the same ratio in the loss of life, but its walls and houses are destroyed. The most of the inhabitants, including the English chargé d'affaires, Mr. Hamilton, with his large family, were driven to the open square or plaza in the centre of the city. To heighten the gloom, despondency, and misery of all, the terrific thunder-storms of the tropics redoubled their force, and literally deluged the whole country. The difficulty of conveying food from Guayaquil was very great, as the journey re-

quired twelve days' severe travel, with mules carrying small burdens over rugged and precipitous mountains, deep gorges, and narrow passes. These shocks have almost ruined the Republic of Ecuador. Had the earthquake in Peru taken place at night-time, as it did in Ecuador, the loss of life would have exceeded 100,000 souls. As it was, the loss of life in Peru is less, but the loss of property far greater."

Other accounts state that in Guayaquil but little damage was done. The towns of San Pablo and Imantad, besides those already mentioned, were destroyed. A lake of water occupied the site of the town of Cotacachi. Almost the entire population of those towns and of Otavato lost their lives.

At Quito, the earthquake commenced at twenty minutes past 1 A. M., and continued at intervals, with varying degrees of severity, for several days. All the churches, public buildings, and many private residences, were laid in ruins. The towns adjoining Quito, named Perucho, Puellarro, and Cachiguanjo, almost entirely disappeared, with their inhabitants, the few left alive being obliged to flee to escape the pestilence arising from decomposed dead bodies. The towns of Pincho and San Antonio were also destroyed. The number of lives lost in the neighborhood of Quito was estimated at 20,000.

At Valparaiso the tide rose and fell three or four times an hour, in a most remarkable manner, during the progress of the earthquake, but the city sustained no injury. On the night of the 14th of August, about 9 o'clock, three shocks occurred at Talcahuano, the second of which caused an immense tidal wave, which swept away fully one half of the town and rendered the other half almost uninhabitable. Four lives only were lost, the inhabitants fleeing to the hills. At Tome the same occurred, but, being higher, little damage was done. The port of Constitucion suffered from the wave, but not much damage was done. Several small vessels were driven ashore, and five men drowned. The town of Concepcion was also damaged by the same causes. Cabaja, the Mexillons Islands, Pisqua, and all the cities and towns from Cape Francisco in Ecuador to the Magellan Straits, suffered more or less terrible visitations.

At La Paz, Bolivia, a place where earthquakes have been almost unknown, a slight shock was felt on the 18th of August, and twice repeated in the night.

The entire loss of life by the earthquakes in South America, in August, has been estimated at 80,000 persons; and the value of property destroyed at \$800,000,000.

The United States Government, through its representatives in the afflicted regions, rendered great aid to the sufferers. The U. S. steamship Kearsarge was at Caldera at the time of the first reports of the disaster, and, as soon as provisions could be put on board by the municipality, she started for Arica, arriving there

before any other vessel-of-war. Her presence was the means of relieving to a great extent the sufferings of the people. The United States ministers and consuls at, or near, the scenes of devastation, gave timely aid. Large sums of money were subsequently raised for the relief of the sick and starving, by voluntary efforts in New York and other American cities.

The tidal waves originating from the earthquake of the 13th swept rapidly across the Pacific Ocean to the Sandwich Islands. Reports from those islands state that, on the shores of the entire group, on the 14th of August and for several succeeding days, the water in some places rose from ten to twelve feet above the usual high-water mark, and did considerable damage. The same phenomenon was noticed at San Pedro, on the California coast, on the 15th of August. A series of waves commenced flowing upon the coast, causing the tide to rise three or four feet above its ordinary high-water mark, which were regularly followed by a falling of the tide the same distance below its usual low-water mark. This agitation occurred regularly twice every half hour, and continued for several hours. The inhabitants thereabouts became much alarmed, apprehending some sudden convulsion upon land, but nothing of the kind happened. Large ponds were left by the receding waters, and a house was twice surrounded by water in half an hour.

In California.—The most calamitous earthquake known in the annals of civilization, on the Pacific coast, occurred on the 21st of October. The first shock, which was the heaviest at San Francisco, was felt at seven minutes before 8 o'clock A. M., and lasted forty-two seconds. The direction of the undulations was from southeast to northwest; and they increased in violence up to the time when they ceased. Ceilings tumbled down; the walls of houses cracked, and in some instances fell; tall buildings swayed to and fro; none but strongly-constructed edifices, in parts of the city least affected, altogether escaped injury. Men, women, and children, many of them just out of bed, rushed into the streets to seek safety in open places. Five persons were killed by falling walls and chimneys, and many were injured. The worst consequences of the shock were experienced on the made ground, and the flats where the foundations of buildings are known to be unstable. Few structures in that portion of the city escaped damage. At the junction of Market and Front Streets, the ground sank for a foot or two, and there was evidence that the tide had risen in the adjoining lot at the same time, for a pond of water collected and remained until low tide. On Pine Street near Battery, the cobbles on the south side of the street sank away from the curb-stone to the depth of one foot in some places, and the asphaltum side-walk on the north side was twisted and torn out of all shape and its connection with the curb-stone severed. This pe-

culiarity was slightly noticeable on Clay Street, opposite the Railroad House. On Mission Street, opposite the Mechanics' Mill, corner of Fremont Street, the north side of the street settled, drawing away the planks of that side from the crown of the street, leaving a fissure of two or three inches in width. Opposite the gas-works, on Howard and Fremont Streets, there was a narrow fissure, caused by sinking, and a barely perceptible crack in the sidewalk. On the southwest corner of Fremont and Mission Streets, the ground opened in many places. It is said that hot air and water issued from these openings. At the corner of Fourth and Harrison Streets, the cracks settled a couple of inches from the centre space between. Some of the streets, that had been most carefully paved, cracked open in great seams. There was an appearance in some places as if the pavement had been blown up with powder; and from some of the openings springs of water gushed forth. Side-walks were split in the same way, especially in places where the buildings adjoining them had sunk to the depth of several inches.

Among the principal buildings most badly injured were the City Hall, the Post-Office, and the Custom-House (the two last-named under one roof). The walls of the City Hall were split in every direction. Several stones in the front wall fell out. The prisoners were taken from the station-house to the county jail; and the courts did not consider it safe to meet in the building. Owing to the shattered condition of the Custom-House, the business of the department was removed to the Internal Revenue offices. The chimney-top on the north end of the building fell at the first wave, injuring a lady and gentleman who were passing. The chimney on the west side was twisted round. The earth-walks about the building, generally solid and firm, were so loosened by the vibration, that a stick could be thrust into them several feet without difficulty.

A San Francisco correspondent of the New York *Herald*, writing on the day of the earthquake, after a personal inspection of the damage done, gives a full list of the buildings injured, from which the following instances are taken, showing the various effects of the shock upon different kinds of structures:

Coffey & Risdon's building is at the junction of Market and Battery streets. It is built of brick, three stories in height, and is in an unfinished condition. The walls are very slim, and the mortar with which they are built is largely composed of sand. The western half of the building is on the foundation of the old blacksmith's shop, the roof of which was raised for that purpose. The walls of this portion of the structure have completely fallen down, burying in their ruins a Mr. Shaw, aged fifty years. When he was taken out, two and a half hours afterward, he was still alive, though there were no hopes of his recovery. The rear wall of the building fell over into the office of Benchley & Co.'s hardware store, which is a one-story structure in the rear of their store, of which it forms a part. Those in the

office at the time barely escaped with their lives. Mr. Benchley's building is not injured in the least, if we except the fire wall in front, built six or eight feet above the roof, which was cracked badly at each end. It is quite evident that, but for the substantial manner in which the Benchley building is constructed, it must have been seriously damaged. As it is, there is not a crack in the walls, with the exception already referred to. And yet so great was the commotion that bars of steel reclining against the walls in the inside were violently thrown down. A brief reference to the manner in which this building is constructed will explain its safety and at the same time teach a lesson as to the mode of erecting brick buildings in this city hereafter. This section, it will be remembered, is all made ground. In the first place, the foundation of the building was laid broad and firm. As the walls rose they were liberally tied by iron rods and anchors. In addition, the joists are all fastened to each other at the ends by bands of iron which circle the building as a hoop. The Murphy & Grant block, Oriental block, and other large buildings in that vicinity, are constructed in a similar manner, and hence their remarkable escape, not a fissure being visible in any of them. Nothing but the fact that the rear wall of the standing portion of Coffey & Risdon's building was placed against Benchley's building saved any portion of the damaged structure from becoming one heap of ruins. The general absence of any expression of surprise at the disaster to this building, among the lookers-on this morning, was noteworthy. The portion mostly damaged had but one anchor for its support, and the wonder is that there is one brick left upon another.

In the Union Foundry on First Street, corner of Mission, most of the machinery was displaced. The brick front half of the building was not injured, but a lower building in the rear is a total wreck. The walls are broken and the roof fallen in. The men had just gone to work and made a rush for the street. All escaped but two, who were caught by the falling bricks and timbers, and seriously though not fatally hurt.

The roof of the old Mechanics' Mill on Mission Street, corner of Fremont, was prostrated, and the walls of the building toppled over into the street in several places.

The Mechanics' Co-operative Mill on Mission Street (the old Brooklaw Mill) was badly damaged and the machinery stopped. Much of it was thrown out of place. The floor sunk down in places and raised in others several feet, and a fire wall in the mill sunk down. The centre of Mission Street in front of the mill exposes an opening of eight to ten inches in diameter, and openings of the ground are also plainly to be seen on Fremont Street, in the same vicinity.

The floor of the Pacific Foundry was raised about two feet in places, and some of the machinery was thrown out of place.

Most of the planing-mills were stopped and more or less injured, but the actual extent of the damage could not be estimated.

The Selby Shot-tower stood intact.

The San Francisco Gas-Works, on Howard and Fremont Streets, suffered severely. The tall chimney on the part of the structure facing First Street was thrown over and fell through the roof, and the main walls badly cracked. In another part of the establishment, north side of Fremont Street, the destruction was still greater. A large quantity of coal was stored in the building, and the pressure of the mass forced the wall out on the Fremont Street side from roof to foundation, and for the space of about fifty feet.

Jewish synagogue on Sutler Street—one small pin-nacle thrown down and several more apparently well shaken.

Casebolt & Kerr's carriage factory, corner Fifth and Market Streets, westerly corner fire wall thrown down; building shored up.

Hayes Valley public school—two Chinamen thrown down, and numerous others in the vicinity.

About 100 feet of the merchandise shed on the south side of Folsom Street wharf were completely wrecked and lies on the wharf. The long shed on the easterly side of the wharf was injured, but is now being secured.

The Tehama Street school-house, which is of brick, is almost intact. The plastering fell from portions of the wall, but the walls themselves are not injured.

At No. 138 Natoma Street, Charles Moneyppenny's brick boarding-house was made a total wreck. Most of it was thrown down, and workmen were employed tearing the rest of it down. Fortunately, no one was injured there. At No. 144 same street, John Farmer's house was badly injured, and most of his furniture destroyed.

On the northwest corner of Mission and Third Streets, the fire wall of a brick building was thrown off, and in falling demolished a boot-black stand beneath. No one injured. Nearly all the windows of stores on Third Street, between Mission and Market, were broken.

Lincoln school-house is badly damaged, most of the chimneys being broken off, but none thrown down, and the plastering on the walls and ceilings badly shattered.

The large statue of Lincoln in front of the building is quite ruined; the head is broken in two or three pieces, and the trunk is shattered in several places. Singularly, however, the statue was not thrown off its pedestal.

A part of the walls of the new Calvary Church fell down, and the crumbling bricks and mortar barely escaped demolishing a small frame dwelling at the side of the church. None of the heavy iron pillars recently erected were moved from their places.

At the College of St. Ignatius, on Market Street, a large number of people had assembled for the service of mass. The shock rocked the immense building like a cradle. The priests maintained their positions and composure, but great consternation seized upon the audience. Several women fainted, but beyond this there were no casualties reported.

Many chimneys on houses in the southern part of the city were thrown down, but no one was seriously injured by them. Much furniture was destroyed in many of them.

The only serious injury on Kearney Street was done to a building on the east side of the street, between Sutter and Vermehr Streets.

Poffler's building, which was partly thrown down by the heavy shock three years ago, is not injured.

Nearly every wholesale house on Sansome, Battery, Front, Clay, Davis, and other streets in that part of the city, was closed during the day, and several buildings are so badly injured that it will probably be necessary to tear them down entirely.

The halls of the Brevoort House, on the Mission Street side, were badly shattered.

On California Street, below Sansome, south side of California, a large one-story brick building, formerly occupied by Heinman & Co., was wholly ruined, and an adjoining one, occupied by the Pacific Pump Factory, was partly thrown down.

On the opposite side of California Street, a house owned by Michael Reese was badly wrecked. The walls have sunk down and are broken in places.

Some of the ornamental stone-work on the Bank of California building was marred.

St. Mary's Cathedral, Grace Cathedral, the Young Men's Christian Association building, the new Merchants' Exchange building, in fact, all substantial structures in the city on good foundations, escaped without noticeable injury.

The building occupied by the Health Office on Jackson Street was also seriously injured. Windows of stores on Montgomery, Washington, Clay, and Market Streets were broken, and shelves in many localities were thrown down.

Howard's building, on Battery Street, between Clay and Commercial Streets. The roof of this building was recently raised, and a third story built on: the cornice and portions of the fire wall have fallen and demolished the wooden awning and lower cornice.

New Orleans Warehouse, California and Davis Streets. The fire wall on California Street demolished.

Hooker & Co., California Street. The east fire wall on their building demolished.

Thurnauer & Zinn. The building occupied by them badly cracked on Sacramento Street.

At McDonald's mill, on Market Street below Front, the ground sunk in the rear, letting down the wall some eight feet, and opened.

At the northwest corner of Mission and Third Streets, the top line of the wall came down.

At the corner of Fourth and Harrison the ground sunk and raised about one foot and a half, stopping the cars.

The building on the southwest corner of Kearney Street and St. Mark's Place is badly cracked.

A. M. Boyle's drug-store, on Washington Street, near Sansome, was injured to the extent of \$2,500.

The chimney of the Mint is in great danger of falling, as also is the granite front of Blake's hat-store, on Montgomery Street.

The rear of the old *Alta* office, on Sacramento Street, is badly cracked.

The rear of the clothing-store of G. Broderick, on Sacramento Street, near Montgomery, was entirely crushed in by the adjoining walls falling. Nobody hurt. It was a one-story frame building.

The fire-wall of the Pacific Mail Steamship Company's office was thrown down.

The front walls of the stores of A. J. Platt, No. 510, and Wigmore, No. 512 Sacramento Street, sank about six inches. The floor of the cellar raised up two feet. A crack extended along the street about one hundred feet.

The walls between the Coso House and adjoining building were separated at the top five or six inches.

The fire-wall of Howard's building, Sansome and Clay—the entire Sansome Street front—fell into the street. Blumenthal, the proprietor of the restaurant in the building, was badly hurt.

A fire-wall on the west side of Leidesdorff Street fell on the adjoining frame building.

The Railroad House, fronting on Commercial Street, below Battery, and running north to Clay, is a four-story brick, filled with lodgers, many of whom rushed out without clothing. The northern half of the building settled from one to two feet, breaking the building in two. The walls of the top are divided at least a foot. Nobody was hurt. The Clay Street front lower story is occupied by S. P. Taylor & Co., paper-dealers. The front of their store is a complete wreck. One of the cast-iron pillars sunk about five feet.

The tobacco-store of A. S. Rosenbaum & Co., adjoining Taylor & Co.'s on the east, is almost as bad a wreck as the latter establishment. The two buildings, having settled in toward each other, support one another, which is all that prevents them from falling.

The heavy fire-wall of J. D. Farwell & Co., Clay Street, above Front, fell. Also that of Coghill & Co., Front and Commercial Streets.

The fire-wall of L. Downing & Son, wagon and carriage dealers, at Battery and Merchant Streets, fell, crushing a wagon in front.

The store of Lowe Brothers, at Sacramento and Battery Streets, badly cracked; walls incline in and have sunk several inches.

The roof of C. P. Rank & Co.'s hosiery-store, on Sacramento Street, below Battery, was crushed in.

The roof of the woollen store adjoining on the west is in the same condition.

The walls of several stores on the north side of Sacramento Street, below Battery, incline inward at the top several inches.

The walls of Dorrance's new store, No. 305 Battery Street, are badly cracked at the top.

The front wall of H. Brandt's store, No. 304 Battery Street, is badly cracked and in a dangerous condition.

Coffee & Risdon's foundry has fallen, and several men are buried in the ruins.

At the Mechanics' and Brokaw's Mills the roof fell in and made a perfect wreck. No lives were lost.

Booth's foundry, corner Mission and First Streets, and the moulding-shop, were badly damaged, the chimney torn down and wall bulged out.

The fire-wall at the top of Sam Brannan's building fell and broke through the side-walk. Nobody hurt.

At Trainer's block, on the corner of Kearney and Sutter Streets, the top of the building fell off and broke down the awning.

At No. 20 Kearney Street the building cracked at both ends.

The chimneys from the Nucleus building fell upon the roof of the dining-room, smashed through and fell between two tables while people were breakfasting at them. The front wall of the dining-room is badly cracked to the top.

Mrs. Chamberlain's house on Third Street sustained much injury, large plates of glass being broken from the stores beneath.

What Cheer House, portion of the southwest corner of Leidesdorff and Sacramento Streets, wall badly cracked—the whole side wall being cracked at short intervals.

The Pacific Insurance building, on the northeast corner of California and Leidesdorff Streets, shows numerous small cracks in the walls.

Squarza's building on Leidesdorff Street is badly cracked from top to bottom; also the continuation of building forming the southeast corner of Sacramento and Leidesdorff Streets.

J. G. Hodge & Co.'s building, on the southwest corner of Sacramento and Sansome Streets, was considerably cracked and the shelving in the store was twisted out of place.

The American Express building was badly cracked, especially on the Halleck Street side.

The Bank of California building, northwest corner of Sansome and California Streets, had the stone ornaments on top and balustrades thrown down; also in the arches of the doors and windows the joints between the stones opened with the shock of the earthquake. On the California Street side the stone cornice was broken in places and the main west wall showing a decided crack.

Northeast corner of Sansome and Halleck Street, front and side wall of old building, American Theatre, parapet wall thrown down and the rest of the building in a very dangerous condition. Brick building, south side of Sacramento Street, No. 425, occupied by A. Wasserman & Co., badly cracked.

No. 415 Sansome Street, front wall badly cracked; occupied by Williams, Bornstein & Co.

Nos. 221 and 223 Battery Street, east side, are badly injured, the front wall having fallen in.

The southwest corner of the building at the southwest corner of Battery and Halleck Streets is badly cracked, as also parapet wall of the building adjoining.

Building southeast corner of Battery and Halleck Streets, corner parapet wall down, and main wall very badly cracked.

Brick store northwest corner of California and Front Streets, occupied by DeWitt, Kittle & Co., east parapet wall almost all down.

At the northwest corner of Halleck and Front Streets, a brick store, occupied by Castle Bros., with parapet walls on south side, is all down, with part of the main wall. Some of the roof bracing timbers also came down. The north parapet wall fell down.

A building, No. 817, south side Sacramento, was

cracked, and the goods of L. Fieldman & Co. badly injured.

Buildings Nos. 819 and 821 Sacramento Street were also much cracked and damaged.

On Sacramento Street, just below Montgomery, the roof of a building fell in on a clothing-store underneath.

The back part of Smith & Beasson's carpet-store, on Washington Street, is all down.

The building corner of Polk Lane and Stockton Street is badly damaged. The front wall is very much cracked, and is likely to fall at any moment.

The Jewish synagogue, between Broadway and Vallejo Streets, is somewhat damaged. Brick and mortar cover the side-walks.

The new building on Bush Street, near Battery, fronting on Market, in process of erection, fell and covered up, it is supposed, three persons. Jasper Shawe was taken out badly cut about the head, and with an arm broken.

The store on the corner of Front and California Streets is badly damaged.

J. C. Noonan, the porter of the Lick House, was asleep, and, hearing the noise, jumped out of the window, about ten feet from the ground, and broke his leg.

A man on the Presidio Road was thrown out of his buggy. The chimneys in that neighborhood are nearly all down.

The fire-wall of the new building corner of California and Battery is down.

No. 818 California Street, brick building, occupied by California Powder Works, etc., front wall considerably cracked.

Wooden building, south, occupied by O. F. Willey, badly settled on south side, by Reese's building, adjoining.

Reese buildings, seven two-story brick, extending to Battery Street, very badly injured; the west end, adjoining Willey's ready to fall down at a moment's notice; store underneath occupied by S. Reinstein, considerable injury to goods; end of store settled about a foot; all the other buildings of the row more or less cracked, and cornice on southeast end thrown down.

Building southwest corner of Halleck and Battery, south wall badly cracked and leaning off from balance of the building on Halleck Street; occupied by Enestein Brothers. Front wall of Newhall & Co.'s warehouse badly cracked at southeast corner, on Halleck Street.

The building on the corner of Battery and Merchant Streets, used as a carriage-warehouse, is badly shattered, the awning falling and crushing one or more carriages.

The earth at the corner of Battery and Commercial Streets has settled about three feet below the regular grade.

The building at the corner of Clay and Battery Streets, occupied by Breed & Chase, and Sherwood, Buckley & Co., is considerably shattered.

All the lumber-piles on Stewart Street have been more or less shaken by the earthquake. No damage was done, save in the expense of repiling.

The Empire Mills, Fremont Street, were also damaged. The floor settled in some places nearly two feet, while in others the planks were thrown up by the shock. The earth cracked about eight or nine inches, and the water gushed through the fissures. The damage cannot be determined yet—estimated at \$2,500 to \$3,000.

At No. 418 Sacramento Street, the inside of the windows fell in, and a Chinaman in the second story fell to the first and was killed.

At the New Orleans Warehouse, the top of the wall fell, and one man was injured by being struck on the head with a brick.

At Mrs. Johnson's, corner of Third and Market Streets, all of the plastering was thrown down.

The building belonging to Stern, on Powell, be-

tween Post and Geary Streets, was very badly cracked. The statues in front of the pillars fell down.

At Badger & Lindenger's store, on Battery Street, corner of Merchant, the fire-wall is down.

At C. P. Ranks's old store, on Sacramento Street, the inside has all fallen in.

The Railroad House, on Commercial Street, is badly cracked.

In Bosqui's printing-office, located on the third floor of a strong brick building on Clay Street, below Montgomery, a heavy Adams press has been moved bodily over a foot, and thrown from its supports; the other presses the same way. In Bacon & Co.'s office, on the other side of the street, the effect has been the same, and much of the standing type has been pried; indeed, nearly all the printing-offices have suffered in the same way, in a greater or less degree. The agency of Hagar & Co.'s New York Type Foundry, in the same vicinity, has suffered severely. Tons of job-type have been emptied into one shapeless mass upon the floor, and the shelving that held them turned upside down, although fastened very strongly to the walls. The building, in which this establishment is, is one of the worst wrecked of all those damaged in Clay Street. It is split from the cellar to the roof, the upper portion of the south wall has fallen out, and the west wall has separated from the roof over six inches, while every wall and partition within is cracked and split. The porter narrowly escaped being crushed under the falling type and other material. The papers had hard work to get out their afternoon editions and extras, for the compositors could hardly be induced to enter the buildings and run the chance of what might occur should another heavy shock come on.

Other shocks occurred during the day, at the following hours, as noticed in San Francisco: 8.10, 8.15, 8.30, 8.45, 9.20, 9.35, 10., 11.05, A. M., 2.25, 3.30, 7, and 7.30, P. M. Some of them were severe, others light. None equalled in intensity the first shock of the day. Nothing peculiar was noticed in the weather, previous to these phenomena, or during their occurrence. The morning was calm and foggy, afterward clearing up to a mild, beautiful day. The waters in the bay, as seen from the land, were not at all affected, but as calm as ever. Passengers on ferry boats felt the shock and supposed for a moment that they were aground.

Upon Russian and Telegraph Hills the shock was not so severely felt as in other parts of the city. In some houses, ornaments were not displaced from the shelves, and the inmates did not go to the door. In others, books and ornaments fell down, and marble mantels were started from their places.

Several of the public clocks stopped, and the large pendulum clocks in private houses came to a stand-still. The hands indicated from five to seven minutes before eight, as the time of the first shock.

The loss of property in San Francisco has been variously estimated. A statement bearing the name of Mr. James Otis, President of the San Francisco Chamber of Commerce, addressed to a similar body in New York, places the loss at a sum not exceeding \$300,000.

Effects of the earthquake were felt in many other parts of California. At Martinez, the shock came at three minutes after eight o'clock. The only damage reported was to the court-

house, both ends of which fell in, leaving the building a wreck. At Alameda, the Asylum was badly damaged, the chimneys being thrown down; Edmonston's warehouse was moved several feet, and the walls and roof fell in. Hotels and brick buildings in the same place were also injured. At Alvarado, a brick grain-warehouse fell, and Homer's old mill was also demolished. Near San Lorenzo, the chimneys of many dwellings fell. The court-house at San Leandro was thrown down, and the Deputy Clerk, Joslyn, killed. None of the prisoners escaped, or were injured. Several adobe houses were prostrated at the same place. Mare Island Navy Yard experienced two severe shocks. Several chimneys were thrown down, and some of the buildings considerably shaken, but no serious damage was done and no persons were injured. Captain Mitchell, of the navy, said that the ground shook so violently as almost to throw him off his feet, the shock being accompanied by a frightful rumbling sound. Several people took to the water, considering the stream much more safe than the land. The earthquake was quite severely felt at Vallejo, many chimneys toppling down, but no serious injury occurring. The shock was very severe at Redmond. The large brick court-house was little better than a complete wreck. It was deemed so unsafe, that the county officers had moved out of it. The building was considerably shattered by the earthquake three years before, the walls having then spread several inches. Chains were then put in and the gaps closed up, so that it was deemed tolerably safe; but the ground is adobe, not more than two feet above the tide-water of the creek, and the foundations were not suitable for such a structure. On the other side of the creek about half of the front of Merrill's new block of brick stores fell out. The chimneys of the public schoolhouse and some other brick buildings were more or less injured in the town. The chimneys on Thomas Selby's house, about two miles below, were prostrated, and some slight damage was done to other houses in that vicinity. The shock at Marysville was very light, being noticed only by a few. Quite a severe shock was felt at Grass Valley about eight o'clock, causing lamps to vibrate and occupants of second stories to vacate the buildings briskly. About five minutes after eight there was another very slight shock. A slight shock was felt at Sonora four minutes past eight. The shock visited San Mateo at eight o'clock, lasting fifteen seconds. The vibration was from the north. The damage to property there was estimated at not less than \$5,000.

The effects of these startling phenomena on men and animals are described by a writer in the *Alta California*. He says: "Men run into the street laughing, as a rule, while women sink down and cry hysterically. This was generally the case yesterday. On the lower animals the effect is varied. Horses

generally snort with terror, and many run away. Dogs take to barking violently, and running about without any apparent object. A lady, who was standing in a barn-yard feeding her fowls, when the great shock came yesterday, tells us that the chickens all ran from her and took to the hen-house as if a shower had occurred, while a turkey ran to her and lay flat down on the ground at her feet, looking up in her face as if for protection."

On the 23d of October another severe shock was felt at San Francisco, occurring at 2.15 A. M. People in their night-clothes ran into the streets, shrieking with terror. No damage was reported to have been done. At 7.30 A. M. on the same day, a slight shock, harmless in its results, occurred.

Other shocks visited California during the year, but did no harm, as follows: one at Victoria, February 29th; another at San Francisco, July 24th; and another at Silver Mountain, October 6th.

In Mexico.—A severe earthquake occurred on the Pacific coast of Mexico, December 20th. The most disastrous effects were experienced at Colima and Manzanillo. For several days previous to the calamity the volcano of Colima, about thirty miles from the city of that name, emitted smoke and steam, and, at the same time, the rumblings and shakings of the earth were noticed. On the morning of the 20th the earth commenced to rock, and the vibrations steadily increased until walls cracked and houses fell. The cathedral, a warehouse, and several brick buildings, were greatly damaged. The inhabitants, being roused from their sleep, rushed frantically to the plaza. It was reported that several persons were killed by the falling of the walls of the National Hotel. The vibrations were from the northeast to the southwest, and lasted nearly forty seconds. At Manzanillo the shock rent the cathedral (a building which had withstood earthquakes for over a century) from top to bottom. Eighteen or twenty persons were reported killed by the falling walls of the American Hotel, and three others were buried in the ruins of Wasserman & Co.'s warehouse. The shock was felt to a great distance from the coast. In several places the ground opened, trees were uprooted, hills levelled, water-courses changed, and a general upheaving of the earth took place.

In other Places.—Slight shocks were experienced at Augusta, Me., February 29th (the same day as at Victoria, Cal.) October 26th, tremblings of the earth were noticed near Cork, Ireland. December 17th, a heavy shock, which did no damage, however, was felt at Gibraltar. Portions of New England and the State of New York were treated to the sensation of slight vibrations at different times in the year.

On February 22d, at 3.30 P. M., a shock was felt at Tiflis, Asia, accompanied with a rumbling sound in the earth. It continued about three seconds. There had been three very distinct shocks in the direction from the north-

west to the southeast. The first two were quite strong, and the third feeble. At Alexandropol, between February 18th and 20th, several shocks were perceived. On the first the trembling of the earth under the feet was distinctly felt. The shocks continued feeble for two hours. At 3 P. M., on the 19th, a very smart shock was felt, followed by a second and a third, and so on, until seven were noted during the evening.

On the 16th of April a shock was felt at Aleppo, in Syria, at 8.40 A. M., which continued from twenty to thirty seconds. It was feeble at first, but increased in force, and ended very strong. The undulatory motion was from east to west.

EASTERN CHURCHES, or ORIENTAL CHURCHES. The collective name given to a number of churches in Eastern Europe, in Asia, and Northern Africa (Greek, Armenian, Nestorian, Jacobite, Coptic, and Abyssinian), which hold to the doctrine of the apostolic succession of bishops. The statistics of the Eastern Churches,* as reported in 1868, were as follows:

United States (chiefly in Alaska)....	10,000
North-German Confederation.....	2,000
Turkey (in Europe).....	12,500,000
Greece.....	1,270,000
Russia (in Europe).....	52,810,000
Persia.....	800,000
China.....	1,000
Russian Possessions in Asia.....	4,885,000
Turkish Possessions in Asia.....	3,000,000
East Indies.....	800,000
Egypt.....	200,000
Abyssinia.....	800,000
Total.....	75,578,000

The bishops of the Eastern Churches generally were invited by Pope Pius IX. to take part in the Ecumenical Council which is to meet in Rome, on December 8, 1869. The Pope addressed to them the following letter:

Placed by the impenetrable designs of Divine Providence, without any merit of our own, on this sublime see, as heir of the Blessed Prince of the Apostles, who, "in virtue of the prerogative which God has vouchsafed to him, is the solid and immovable rock on which the Saviour has built His Church," and impelled by the anxiety which we feel from the burden placed upon us, we ardently desire and endeavor to extend our cares to all who, in every part of the world, bear the name of Christians, and to draw them within the embraces of our paternal love. We could not, without great peril to our soul, neglect any part of this Christian people, who, purchased by the precious blood of the Saviour, and admitted to the sheepfold of the Lord by the waters of baptism, have a demand upon us for all our vigilance. Obligated, then, to devote, without intermission, our thoughts and our cares to the salvation of all those who acknowledge and adore Jesus Christ, our eyes and heart are turned toward those churches which, formerly attached to the Apostolic Church by the bonds of unity, were so flourishing by the merit of sanctity and divine knowledge, producing such abundant fruits for the glory of God and the salvation of souls, and which to-day, by the infernal arts

and machinations of him who plotted in heaven the first schism, we find, to our great grief, elained and separated from that holy Roman Church which is spread throughout the whole world.

It is for this reason that, from the beginning of our Pontificate, we have addressed you, in the fulness of our heart, words of peace and charity. And, although we have not had, by any means, the success we so ardently desired, nevertheless we have never been without hope that our humble and fervent prayers would some day be favorably received and heard, by the infinite mercy and goodness of the Author of Salvation and Peace, "who has brought salvation to the world, and, in coming from heaven to testify how agreeable was peace to Him, and should be to every one, since He had announced it from His birth, by the mouths of angels, to men of good-will, who, in living among these same men, has taught it to them by his words, and preached it to them by His examples."

Now, as lately, with the advice of our venerable brothers, the Cardinals of the holy Roman Church, we have indicated and convoked an Ecumenical Council, to be opened in Rome on December 8th of next year, the Feast of the Immaculate Conception of the Blessed Virgin, Mother of God; we address our words to you again, and we conjure, warn, and entreat you, with all the earnestness we are capable of, to come to this same General Assembly, as did your ancestors to the Council of Lyons, held under the blessed Gregory X., our predecessor of venerable memory, and to the Council of Florence, celebrated by Eugenius IV., also our predecessor of happy memory, to the end that, renewing the laws of ancient love and restoring to its vigor the peace of our fathers, that celestial and salutary gift of Jesus Christ, of which in time we have lost the fruits, we may see at last, after a long period of grief, in which darkness and division prevailed—we may see arise the brilliant and pure morning which we so long have prayed for.

Be this the happy fruit of the blessings with which Jesus Christ, our common Lord and Redeemer, consoles, in these unhappy times, His cherished and immaculate Catholic Church! May He thus sweeten His grief and dry up His tears, so that, all divisions having ended, voices heretofore discordant may unite in perfect unanimity of spirit in praising God, who wishes not schisms among us, but who has prescribed that we speak and think by the voice of the Apostle.

What immortal acts of thanksgiving will be endlessly rendered to the Father of Mercies by all the Saints, but especially by those most glorious Fathers and Doctors of the Eastern Church, when from on high they see reestablished and restored the Union with the Apostolic See, which is the centre of Catholic truth and unity—union which they themselves, during their life on earth, strove to sustain with all the care and activity of their zeal, and every day to strengthen by their teaching and example, because the Holy Spirit had filled their hearts with the love of Him who overturned the wall of separation, who reconciled and pacified all things by His blood, who wished that the characteristic mark of His disciples should be unity, and whose prayer to His Father was: "I ask that all be one, as we are one."

Given at Rome, at St. Peter's, September 8, 1869, in the twenty-third year of our pontificate.

2. THE ARMENIANS.—The letter of the Pope, inviting the Oriental bishops to the Ecumenical Council to be held in Rome, in December, 1869, was officially presented to the Armenian Patriarch of Constantinople by the Roman Catholic Archbishop of that city, Mgr. Hassoun. According to the *Levant Herald*, of Constantinople, the Armenian Patriarch replied that he could not answer it without consulting his Synod. Roman Catholic papers,

* Full statistics of each of the Eastern Churches are given in Schem's *American Ecclesiastical and Educational Almanac for 1869* (New York, 1869).

however, announced that both the Patriarch of Constantinople and a number of the Armenian bishops might be expected to take part in the council.

The Patriarch of Constantinople and the high clergy are disposed to take strong measures against the "Armenian Lusavoritchian (Illuminator) Society," a body of reformers in the Armenian Church, not connected with the Protestant Armenians, who, in 1866, published a revised translation of the Gregorian Armenian prayer-book. But, as there are too many favorers of the new doctrines holding high places in the Gregorian fold, the Porte did not appear disposed to support the Patriarch. The Reformers, in 1868, opened a church in Constantinople. The following information on the history and opinions of this society are given in a communication to the *Levant Herald*, of Constantinople (July 1, 1868):

"The society in question was organized in this city in 1866, with the view of reforming the Gregorian Armenian Church and bringing it back to its primitive doctrines and modes of worship as taught by St. Gregory. The parent society is composed of a considerable number of members, and provides for the establishment of branches in the provinces wherever Armenians may desire to espouse the reform movement. The new body owes its existence, primarily, to the spread of the Scriptures among the Armenian nation, by Armenian agencies, as also by the instrumentality of the British and Foreign Bible Society. But an active stimulus was given to the creation of the new body by the excitement caused three years ago in Smyrna, when the clergy and laity of the Armenian Church there sought to erect a statue to the Virgin Mary within its precincts. The bishops formally disapproved of this act of mariolatry; the feeling on the subject ran high; and a body of those to whom the statue was obnoxious proceeded to the church and broke it to pieces. Thereupon many enlightened Armenians, seeing the necessity of improvement, formed themselves into the new society.

"The Armenian Reformers reject the following doctrines and practices followed by the present Gregorian Armenian Church; viz.: Transubstantiation; absolution of sins; the sacrifice of the mass; celibacy of the clergy; the belief that the clergy are Christ's representatives upon earth; fasting on specified days; the omnipresence and intercession of saints; adoration of images and relics, and any faith in their miraculous or curative properties; going on pilgrimages; blessing the salt; and the sacrifice of lambs and cocks as oblations and means of grace. They only acknowledge two sacraments as ordained and instituted by the divine Head of the Church, namely, Baptism and the Holy Communion; and repudiate the other five, Confirmation, Penance, Ordination, Extreme Unction, and Matrimony, as unscriptural. In the same year (1866), the Reformers

published a revised copy of the Armenian prayer-book under the title of "The Picture of the Armenian Lusavoritchian Holy Church," with all the passages of the old book eliminated for which they did not deem there was sufficient warrant in the word of God. This was condemned by the Gregorian Patriarch as a sectarian and heretical work; the Reformers promptly replied by calling upon his Holiness to convoke a meeting and prove the alleged heresies of the book, a challenge which, however, was not accepted.

"Sacredotal intolerance, unhappily, soon showed itself in the matter. Of the clergy who favored the Reform movement, some were subjected to threats and even to direct persecution on the part of the Patriarch. For instance, the *cartabet* of one of the parochial churches dwelt openly from his pulpit upon the truth and appositeness of the new doctrines, and, although warned to desist by the Patriarch, persevered in maintaining them. Not content with depriving him of his living, the Patriarch urged the Porte to prosecute the bold ecclesiastic as a revolutionary proselyte and propagandist. The Porte, however, viewing the matter as one of purely internal concern to the Gregorian Armenians, declined to take this extreme step; but the result has led the clergy who adopt the new doctrines to wear a particular sign, the sign of the cross on the top button of the hat, to distinguish them from the clergy under the jurisdiction of the Patriarch, and to their selecting and recognizing—for the present, and until their own organization becomes more complete—the president of the Evangelical Armenians as the civil administrator of their affairs.

"The ranks of the Reformers are being steadily recruited; and divine service is celebrated every Sunday in the new rite by Reformed Gregorian Armenian clergy according to the ceremonial laid down in the revised prayer-book (*Badgher*)."

In May, a demonstration was made in Constantinople by a number of Gregorian Armenians in favor of union with the Orthodox Greek Church, by proceeding in a large body to the church of the Panagia, in Pera. On the following Sunday, the visit was returned to the Armenian church, with no little ceremony, by the Bishop of Pamphilius, accompanied by his clergy and fifteen hundred members of his congregation. The Armenian archbishop, surrounded by a great number of clergy and laity, received the procession at the door. The Greek prelate, Dionysius, preached a sermon earnestly advocating the union of the two churches, and a Greek layman having also delivered an address to the same effect, the assembly dispersed with loud acclamations.

The *Friend of India* says that the Armenians in Calcutta seem to show few or no signs of ecclesiastical activity or religious progress.

8. THE NESTORIANS.—At the annual convo-

cation of native helpers and church representatives of the Nestorians who are in communion with the Protestant missionaries, held in October, 1867, ninety members were in attendance. Bishop Mar Yohanan was elected moderator of the meeting. The practical subjects of education, benevolence, temperance, family worship, and the means for promoting the spiritual growth and efficiency of the communion, were presented in able and well-prepared papers, and were followed by free and animated discussions. The increase of wine-drinking, within the last two or three years, among some of the communicants and a few even of the helpers, received warning and rebuke. Eighty accessions to the churches were reported. The subject of self-support came up, and in the discussion several pledged a tithe of their possessions to the church. Deacon Yacob reported the sale of 1,900 Bibles and Testaments in modern Russian, and many other religious books and tracts, besides many books in German and other languages. He also spoke of revival-scenes, resulting in the conversion and baptism of several adherents to the Greek Church. A great work is opening in many places in the Russian empire. It was stated that the Emperor especially encourages the circulation of the Scriptures in the spoken language; allowing free passports to colporteurs, and exacting no duties for the largest sales, and that he has himself paid the expense of translating and printing a large edition, and has caused it to be circulated in the army and among officials, free of expense.

A number of Nestorians, in 1867, addressed a letter to Archbishop Langley, of Canterbury, and Bishop Tait, of London, saying that they were in a state of great ignorance and darkness, and that many of their rulers and guides were not capable of instructing them—a state of things which apparently arose from their chief spiritual offices being hereditary. That being so, they applied to the English bishops to come over and help them—to send some one to instruct and enlighten them. At the meeting of the Anglo-Continental Society, the archbishop remarked with regard to this appeal:

I have reason to believe, from communications I have had with Mr. Badger, who has been a missionary in the country, that they are not at all wedded to Nestorian principles, and that they might be led to abandon them. I cannot but hope, therefore, that inasmuch as this appeal has been made to us, and inasmuch as I have now publicly stated its nature, there may be some wealthy and well-disposed people who may be inclined to contribute to a mission to these poor Nestorians. It would be entirely an independent mission, because there is no existing society that can exactly take it up. It does not belong to the Society for the Propagation of the Gospel or to the Anglo-Continental Society; but I think a separate committee might be formed, and that it might send out two missionaries.

4. THE COPTS.—The Pacha of Egypt, who is paying much attention to the Coptic Patriarch, still persecutes the American Presbyterian missionaries, and has closed their schools. A pres-

byter of the name of Fam Stephanos, who has been a Protestant for more than twenty years, was only saved from deportation to the Blue Nile by the interference of the missionaries, who appealed to the American consul-general for assistance. He was imprisoned at Esneh. These missionaries, who have done more for the regeneration of the Pasha's dominions than all other influences put together, dare not now print their tracts, nor teach freely in their schools, nor preach as before.

The labors of the United Presbyterian missionaries in Egypt begin to exercise a great influence upon the Coptic Church:

The Coptic priests, finding so firm a preference for the teaching which the children receive in our school, were led to take a new and rather strange plan to keep others from leaving their school. They concluded to introduce Brown's Catechism into their school, and have actually done so—saying that the doctrine which the Protestants teach the little ones is good, but their teaching to the grown people is bad—referring no doubt to those books which expose the corruptions of the Roman and Eastern Churches. We have sold several copies of Brown's Catechism to them, and they asked also for the Shorter Catechism (the Westminster Catechism), which is taught in our school, but our supply is exhausted, and therefore we cannot accommodate them until we get more from Cairo. This desire for religious books is a very pleasing contrast to the work of last year, when the Copts, to please the Patriarch, burned many good books. One man, who had a copy of Brown's Catechism, when the Patriarch came and commanded that all such books should be burned, took the precaution to bury his precious little book, lest it should be taken from him and burned.

5. THE ABYSSINIANS.—The works on Abyssinia, which have been called forth by the conflict of England with the late King Theodore, of Abyssinia, contain a great deal of importance on the religious and social condition of the Abyssinian Christians. The following are a few extracts from the work of Dr. Blanc, one of the captives:

"Churches abound—one near every village, and several in every town, is the rule. They are by far the best-built houses in the country; surrounded as they are by guiches and cedars, always in a commanding position, they add much to the picturesqueness of the landscape. They are all built on the same pattern—that is to say, a large circular stone building, composed of three concentric circles. The smaller central room is screened from the eyes of the people, and the priests alone can enter it. It is intended to represent the Holy of Holies. It contains the tabet, or ark—a small wood box, the receptacle of the sacred volumes. The sanctuary where the priests officiate is formed by the second circle. This is in reality the church, as the nave, where the congregation assembles, is but a veranda. The interior of the church, and sometimes also the veranda, is adorned with rude paintings—a strange mixture, representing the favorite saints—St. Michael, St. George, the apostles, our Lord, the Virgin Mary, God himself, the devil, and former emperors. All Abyssinians who confess before

they die have the privilege of being buried among the trees outside the church, but no stone or memorial is there to recall the 'dear departed.'

"Polygamy exists to a fearful extent. All who can afford it keep several wives and concubines. Though there is a religious marriage, few avail themselves of it, as it binds both for life. Abyssinians prefer the more simple ceremony of marrying by the 'King's death' (the usual form of oath in the country), a marriage as easily contracted as dissolved. But even this shadow of morality is generally dispensed with. Men and women live in concubinage with no other tie but the pleasure they find in each other's society—short passing intercourse sufficient only to gratify their grossest passions. Women are kept in a very degraded position; they are not allowed to sit or eat in the presence of the men; they cook the food, spin the cotton, clean the stables, and carry water and wood. Men, on the other hand, wash the clothes, go to the market, are dress-makers, embroiderers, and tailors."

ECUADOR, a republic in South America. President, since January 30, 1868, Dr. Xavier Espinosa. Area, 218,984 square miles; population, 1,300,000. The value of exports from the port of Guayaquil (exclusive of precious metals) amounted, in 1867, to 8,894,284 piastres (that of cacao alone 2,614,651). The number of entries in the port of Guayaquil, in 1867, was 108 vessels, together of 11,798 tons. The revenue of the republic amounted, in 1865, to 1,401,300 piastres (522,122 from customs), and the expenditures to 1,399,672 piastres. The foreign debt was, in 1866, 9,890,554 piastres, and the home debt, 8,692,955 piastres. There is neither a standing army nor a fleet.

At the elections for a new Congress, which ended on the 7th of May, the Conservative party was almost everywhere successful, except in Guayaquil and Imbalura, and the north and south frontier.

In August the republic was visited by one of the most terrific earthquakes known in history. In the three districts of Otavalo, Ibarra, and Cotacachi, of the province of Imbalura, in particular, the disaster was overwhelming, and it was calculated that more than one-half of all the inhabitants had perished. Altogether the number of lives lost was estimated at more than 30,000.

In October, the Ecuadorian minister to Chili, Don Antonio Flores, brought about an arrangement with Chili to this effect: That Spanish vessels coming to the Pacific, whose destination is Ecuador, shall in no case be molested by the Chilean navy, and, in case of necessity, they may touch at any Chilean port. This concession was made by Chili in consequence of the great damages which Ecuador had suffered from the earthquake, and the necessity of securing her some relief from the misfortunes brought upon her by joining a profitless alliance.

EGYPT, a dependency of Turkey in Africa. The government, since 1841, is hereditary in the family of Mehemet Ali, and since May 14th the rulers bear the title Khedervi, the Arabic equivalent for viceroy. Present Viceroy, Ismail Pacha, born November 26, 1816, eldest surviving son of Ibrahim Pacha, who was the eldest son of Mehemet Ali. Heir-apparent to the throne, Mehmed Tefvik Pacha, born in 1852.

At the head of the administration is a Council of State (established in 1856), which consists of the princes of the viceregal family, four generals, and four high dignitaries. In 1868 Sherif Pacha was president of the Council of State. The Cabinet, in 1868, embraced the Ministers of the Interior, Foreign Affairs, the Viceregal House, Instruction, Finances, and three ministers without portfolio. The ministers of the Marine and War did not belong to the Cabinet. Since 1866, there is also an Assembly of Delegates which holds annual sessions.

The area of Egypt is estimated at 659,000 square miles, and the population at 7,465,000. Cairo has about 260,000 inhabitants; Alexandria, 170,000; Damietta, 87,000; Rosetta, 18,000; Suez, 5,000. The annual revenue of the Government is estimated at £8,000,000. The tribute to the Sultan was largely increased in 1866, and is said to amount now to 150,000 purses (one purse=500 piastres, or £4.54 sterling, or about \$21). The total public debt amounted to £19,420,000 at the end of 1868.

The strength of the Egyptian army is 14,000 men, 8,000 infantry, 8,000 cavalry, artillery, and engineers, and 8,000 black troops. The navy, in 1867, comprised seven ships-of-the-line, six frigates, nine corvettes, seven brigs, eighteen gunboats and smaller vessels, and twenty-seven transports. In 1868 the English captain, McKillop, was appointed to reorganize the fleet, which is to be largely increased.

The exports from Alexandria, in 1866, amounted to 1,807,000,000 Egyptian piastres (20 Egyptian piastres=\$1). The number of entries in the port of Alexandria, in 1866, was 8,698 vessels, of which 980 were steamers, together of 1,373,217 tons.

The Egyptian Assembly of Delegates was opened on Monday, March 16th, by the Viceroy, who delivered a speech in Arabic. The principal internal and foreign questions were thus referred to:

I feel, gentlemen, a just pride in the assistance you lend me for the development of the prosperity of Egypt, and I have the firm hope that the approaching deliberations, like those of last year, will have the most salutary effect for all. During the year which has just elapsed schools have been opened in the towns of Benha and Siout. My government is occupied with the creation of similar establishments in the localities which are still deprived of them. Public instruction is a capital question, the importance of which has been felt. I have seen the proofs of this in donations made to our national schools, and have heard of those donations with sensible pleasure. Such acts of generosity deserve all praise, and show

a real desire on the part of the population to contribute to the development of instruction. The abolition of the ohdes system is completely effected. Requests for concessions of land not included in the cadastre have been accorded. My government will again submit this question to your examination. I think that the period of the concessions might be extended, and greater facilities accorded: this would be an encouragement to the agricultural population, and an augmentation of the general welfare. The public works voted by you have been carried out with activity in the twenty-three localities you have designated. The necessary contingents cannot be definitively fixed until after the completion of the general census upon which they are established. Hitherto we have been unable to carry out this operation, the importance of which I leave to your appreciation, and the radical solution of which I confide to your enlightenment. A census system carried out with intelligence and equity offers manifest advantages without causing any annoyance to the inhabitants, and without interfering with individual liberty. The regulations you have established with regard to the bonds to be subscribed by native borrowers have been communicated to the moudiriens. The application of these regulations is subordinated to the operation of a law upon mortgage, which will shortly be submitted to your deliberations. The monthly collection of the territorial dues was to undergo modifications in uniformity with the desire you expressed last year. The Minister of Finance is instructed to explain to you the reasons which have prevented the government, in presence of the difficulties which resulted from it, from putting in execution the new mode of collection.

The proposals that my government will submit to your deliberations this year relate to three principal questions—hygiene, the cultivation of cotton, and the sluices and dams. Various causes of insalubrity have been pointed out to me. In a great number of localities there are lakes of stagnant water and marshes. Now, experience has shown that in draining these lakes and marshes the atmosphere is purified and the germs of sickness destroyed. It is of importance, therefore, that you should deliberate upon the measures to be taken in order to ameliorate the sanitary state by proceeding gradually and taking into account local exigencies. For two years the cotton crop in certain provinces has not answered our expectations. Egypt had, nevertheless, conquered an eminent place among producing countries by the excellent quality of her cotton. It had been distinguished at the Paris Universal Exhibition. But in the majority of the provinces of Lower Egypt the abundance of the crops has diminished, while the quality has deteriorated. This latter fact arises from the introduction of foreign seed. As to the diminution in the quantity, you will have to seek the causes in order to combat them with success. I also call your attention to the means of developing and perfecting all the branches of agriculture. The works of the sluices, dams, and bridges, have already absorbed considerable sums. We ought to pursue with energy the accomplishment of these eminently useful undertakings, the fertile sources of public wealth. To seek the means of developing the prosperity of the country, such, gentlemen, is our duty. May God protect and bless our efforts!

On September 26th Mr. Charles Hale, United States consul-general, entertained at dinner, at Alexandria, Mehemet Tefvik Pacha, heir-apparent to the throne of Egypt, together with twelve other pachas, principal ministers of the Egyptian Government. Tefvik Pacha proposed the health of the President of the United States and the happiness of the American people.

On June 17th a contract was signed between the Egyptian Government and an English company for the construction of the proposed

breakwater and docks at Alexandria. The company is authorized to levy the same dock-dues as are paid at Liverpool. In the event of the Egyptian Government taking possession of the enterprise when completed, interest at the rate of twelve per cent. will be allowed on the purchase-money until paid off.

The Slave-Trade Blue Book, published by the English Government in 1868, contains new charges against the Egyptian Government for conniving at the slave-trade on the White Nile. Mr. Reade, the English consul at Cairo, denies the truth of the statements made in July, 1867, by the Viceroy in Paris, to a deputation of the British and Foreign Antislavery Society, that, "though he could act against his own people, he was defeated when he sought to do so against Europeans, who were the chief delinquents," and that, "if he were free to act against European slave-traders, the slave-trade would soon disappear." Mr. Reade, rejecting this charge against Europeans in Upper Egypt as impossible, the whole number of whom, he says, is under a dozen, and who are regarded with much jealousy by the local authorities, proceeds to say:

It is, however, a matter of public notoriety that from ten to fifteen thousand slaves are annually brought down the Nile to Cairo, while an equal or even greater number find their way to Souakin and the Red Sea. The principal dealers are well known, and allowed by the local authorities to pursue unmolested their abominable traffic. True it is that some of these delinquents are occasionally arrested and their property confiscated, and sometimes a few slaves are even set at liberty; but the great bulk of the trade is tacitly sanctioned, if not actually connived at, by the authorities themselves. At Galabat, on the Abyssinian frontier, an enormous slave-mart is constantly open. Two hundred Nile-boats, employed regularly in this trade, are permitted to navigate with impunity, upon the payment for every voyage they make of a certain tribute to the local authorities, while a similar impost is levied on every slave caravan that passes along the desert of Korusco.

If, my lord, the Egyptian Government were sincerely desirous of checking the progress of so great an evil, a good opportunity is now afforded to it for inflicting a severe blow on the slave-trade in this part of the world. I must confess, however, I am far from sanguine that much can be expected from that government of its own volition, and for several reasons: 1. That important persons and functionaries of the government derive considerable profit and advantage from the trade, either directly or indirectly—directly, because their palaces, houses, and estates are supplied with slave labor; indirectly, because inasmuch as the trade is ostensibly a forbidden one, they are enabled to levy on the dealers heavy toll for permission to evade the law. 2. That the army of Egypt is largely recruited from the male black adult slaves. And 3. That the fellahs, or farmer population, are glad to have the means of sending as substitutes for themselves and children, when summoned by the government to forced labor, slaves bought at these marts.

Mr. Reade, in the disguise of an Arab, visited a number of slave-markets in Cairo and Tanta. In the former city he saw between two hundred and fifty and three hundred. There would have been three thousand on sale there, but the greater number had been removed to

Tantah for an approaching fair. At Tantah he saw between five and six hundred, but believes the total number there on sale to have been about two thousand. Having made these discoveries, he informed the mudir or governor of the province, who undertook to seize all the slaves in the night and have them freed. He only partially fulfilled his promise, and Mr. Reade tells Lord Stanley that the governor was ordered to desist from the work of emancipation by a superior functionary, the Inspector-General of Provinces.

Representations made by Mr. Reade to Sherif Pacha were met by an evasive reply. Mr. Reade had afterward an interview with the minister, and convinced him that the charge against Europeans of complicity in the slave-trade was untrue.

The Pacha then complained that European Christians in Upper Egypt were largely engaged in the slave-trade, but I believe I very soon satisfied him that such was not the case. The unsatisfactory nature of Sherif Pacha's reply to my representations with regard to the slave markets at Tantah and Cairo will prove to your lordship, better than any thing I can state from my own experience, that no reliance whatever can be placed in the antislavery protestations of this government.

The Blue Book contains further communications, of great interest as to the slave-trade carried on in Upper Egypt, from M. Saulter, a German missionary at Khartoum, and from the Prussian consular agent and the Austrian vice-consul at Khartoum.

ELECTRICITY. Submerged Uninsulated Cables.—Mr. H. Wilde, of England, the inventor of the powerful magneto-electric machine which bears his name, has been making experiments to ascertain with what degree of facility electric signals may be transmitted through metallic cables submerged, without an insulating envelope. The principal electro-motors employed by him were three magneto-electric machines of different degrees of power, a Grove's battery, and a Daniell's battery. The test of the magnitude of the current adopted by Mr. Wilde in every case was, the melting of a given quantity of wire, because he had not been able to discover any other method which could at all compare with that in expressing easily, and without ambiguity, the associated properties of quantity and intensity, especially when dealing with currents of such magnitude as those evolved from the five and ten inch magneto-electric machines. The building which contained the various electro-motors was situated about 100 feet from the edge of the basin of a navigable canal in which most of the experiments were made. Connection between the electro-motors and electrodes and other conductors submerged in the canal was effected by means of two lengths of copper-wire rope, each 140 feet long and nearly half an inch thick. These wire-rope connections consisted of seven thick copper wires twisted together, and were supported through the air, and insulated from one another, by means of a

pole fixed upon the bank of the canal. The conductors submerged were copper-wire ropes of various lengths, but of the same diameter and construction as those used for the aerial connection. Mr. Wilde's experiments with these contrivances were very numerous, and the general conclusions at which he arrived can only be given here. He regards the fact as established, that currents of electricity of great quantity, but of an intensity below that which is required to effect the electrolyzation of the liquid in which the conductors are submerged, may be transmitted to considerable distances without the necessity of surrounding the conductors with an insulating envelope. But he remarks that it is impossible for him to say, without further experiments with conductors of much greater length than those employed by him, whether it would be practicable, under the most favorable circumstances, to transmit to distant places electric currents sufficiently powerful to be made available for any useful purpose, under such conditions. One of his experiments on naked copper wires, 750 feet long, in water, is worthy of mention. When currents of high tension were sent through these wires, a marked diminution of electrodynamic effects was observed at the other ends of the wires, but currents of low tension passed over the wires with but little diminution of their primitive intensity. Using the current from a 10-inch intensity armature, a sufficient quantity of electricity was transmitted through the wires to produce a brilliant electric light, and to melt 22 inches of iron wire, .050 of an inch thick. With the current of lower intensity from a 5-inch quantity armature, 7 inches of the same wire, .035 of an inch in diameter were melted.

Electric Lights for Light-houses and Ships.—M. Ernest Saint Edme presented this subject in a communication to the September number of the *Annales du Génie Civil*. He says that, since the report made by M. Reynaud, director of the administration of light-houses in France, three years ago, electric lighting in light-houses, etc., has not achieved much progress. The reasons of this are stated by the author as follows: To transform existing light-houses, existing apparatus must be sacrificed for a sole advantage of increasing the light at any moment. It is doubtful whether all light-houses are large and strong enough for the accommodation of the new machinery; this is certainly the case with most of those on the French coast. As to the light-houses of inferior order, it would be illusory to think of altering them. And other difficulties are inherent in electric lamps, which, however well designed, are subject to causes of derangement which render necessary the best mechanism; and the crayons, if impure, may scale, and cause interruptions; and these impurities might cause mistakes incompatible with the service of the light-house. When a new light-house is to be built, it will be advantageous to adopt the electric

light; but the importance of the question, relative to the general administration of light-houses, is much less than was at first supposed.

In 1868, in a notice of the applications of the electric light, the author suggested the lighting of vessels by it. The maritime exhibition at Havre shows that the suggestion has been considered, at least in principle. In the point of view of lighting the course of a ship, no one will deny that the oil lantern is insufficient to prevent collisions at night; while the electric lantern would illumine the air all around, and the rocking of the vessel would cause such changes of light as would attract the notice of the men on other vessels. When the whole cost of a ship is considered, that of electric engines is insignificant; two or three horse-power will work a magneto-electric machine. And the electric light will serve other purposes on board a ship. Recent experiments have shown that it would be possible to assist a ship in her course by dazzling the steersman by a jet of light, when an oil lantern would not be seen by him. It can also be used to light under water; an application that concerns the repairs of the sheathing and hulls of vessels, the finding of lost articles, and the catching of fish. The fish are confused by the light, and then easily caught. Mons. Dubosc has constructed a lantern well fitted to enclose an electric lamp. The conducting wires are connected so that there is no chance for water to leak into the lantern. This apparatus can, without fear of too high pressure, be lowered to great depth in the sea.—(*Translated for Van Nostrand's Engineering Mag.*)

The London *Chemical News* states that the electric light at Dungeness can now be worked by either of the two engines, so that no disturbance occurs when one requires repairs. The services of the high-class engineers and firemen have been dispensed with, and the Elder Brethren have their own ordinary keepers trained to drive the engines as well as to attend to the lamps, a steady, old, experienced keeper being placed at the head of the establishment. Since the alterations made at Dungeness, the light there has worked with great regularity and efficiency, and the Elder Brethren have proposed to place similar lights at the South Foreland, Lowestoft, and Souter Point. The English Board of Trade approve the extension of this mode of illumination to the South Foreland and Lowestoft, but suspend their decision respecting Souter Point. The committee of Elder Brethren who attended the Paris Exhibition say, that so far as the eye is a test, the power of the English fixed light was considerably in excess of the French, and when both machines were in use, and there was a good current, the fixed beam of the English light did not contrast unfavorably with the revolving one of the French, the flash of which is of great power. The contrast of the electric fixed light with the French first-order oil dioptric revolving light was very

marked; indeed, the one may be said to put the other out. But the most beautiful feature of the electric was the extraordinary beam it gave. It shone night after night, large, steady, and lustrous as a planet, and you could see in the darkness a beam passing as far as the eye could see. From the tower, with the light at the back, it was very marked, and quite lit the hills round Paris. The whole horizon in the plane of the light showed the white beam, and at the distance of four miles it shone upon the windows of some houses, making them appear to be lit up. By extinguishing and relighting quickly several times this was very plain. Altogether the light was very remarkable, and the committee were glad to be able to report such an advance as the powers of the light show over that at Dungeness; indeed, the latter gives to the observer no conception of what the present one is; and it is satisfactory to know that the result of five years' work and observation, with imperfect and ill-arranged apparatus, has now borne such good fruit; and that as England was the first to test and adopt this adjunct to the sources of light-house illumination, so she still retains her superiority. It is due, however, to Mr. Holmes to say that great as are the improvements already effected, he states that he is confident he can yet greatly increase the illuminating power before the present apparatus is reërected at a permanent station.

Satisfactory experiments have been made with the electric light on board the French iron-clad ship *Heroine* and the yacht *Prince Jerome*, to ascertain the value of the light for signalling purposes. The machine was furnished by the Alliance Company, producing a light equal to two hundred Carcel burners, or sixteen hundred candles. An ordinary newspaper could be read in the direct line of the light at the distance of 1,581 yards. Signalling was most easily done by short and long flashes, and was found to be practicable. The Government commissioners reported, after an investigation, that the apparatus showed a very powerful focus of light, perfectly suited to night signalling, or for throwing a light over a coast or a ship; and that it would be most useful on board the flag-ship of a commander-in-chief. By the aid of this light, the *Prince Jerome* was enabled to steam by night through the intricate navigation of the Bosphorus, when the yacht belonging to the Viceroy of Egypt was obliged to wait until daylight. On some steamers of the French commercial marine the same light produced by the magneto-electric engine has been introduced, and is regarded as a practical success.

Experiments in Electrolysis.—M. Bourgoïn has published a memoir on the electrolysis of organic acids and their salts. He has found by experiment that the action of the electric fluid is in reality only a fundamental action on all acids and salts, whether mineral or organic. It separates the basic element which goes to the

negative pole, while the elements of anhydrous acid and oxygen, which answer to basic hydrogen or to metal, fly to the positive pole. Such, he claims, is the fundamental action of the electric current. M. Bourgoin has specially studied the action of the current on neutral tartrate, on a mixture of tartrate and alkali, and on free tartaric acid. To examine the action on tartaric acid, a concentrated solution of the neutral tartrate of potash is conveniently operated upon. As soon as the current passes, the solution becomes alkaline at the negative pole; only a moderate disengagement of gas is produced at the two poles. The principal result is the formation of a white precipitate, which is slowly but continuously deposited from the positive electrode. Analysis shows this substance to be wholly cream of tartar. The solution at the positive pole remains neutral during the experiment. The gas evolved at the positive pole was composed of carbonic acid, oxygen, carbonic oxide, and nitrogen. Nearly the whole of the loss takes place at the positive pole.

The tartaric acid thus regenerated at the positive pole forms, with the neutral tartrate, cream of tartar; there is, however, some tartaric acid destroyed by oxidation. The action of the current on a mixture of neutral tartrate and alkali produces quite different results to those obtained with neutral tartrate only, notwithstanding that the fundamental action is the same. At the positive pole a mixture of carbonic acid, carbonic oxide, oxygen and hydride of ethylen is evolved. M. Berthelot discovered acetylen also in the sample of the gas sent him by M. Bourgoin. The decomposition of free tartaric acid yielded the same products as the neutral tartrate, though in different proportions. The carbonic acid is the dominant product from the first; the carbonic oxide diminishes as the experiment proceeds; the same is the case with the oxygen and nitrogen, though to a less extent. Acetic acid is formed at the positive pole. After the fifth day the experiment had been in progress, the solution in the neighborhood of the positive pole contained a large quantity of acetic acid, which was isolated as acetate of baryta.

New Batteries.—M. Cauderay has devised a battery, composed of four elements, of which the electro-motors consist of perfectly new carbon plates, the one being what is termed agglomerated carbon, the other gas carbon. These plates never having been previously used, were, consequently, free from acids and salts. The battery was connected up in the ordinary manner, the carbon of one cell being connected to the gas carbon of the other, and so on. Immediately on being placed in action the battery gave a current of 45° on a galvanometer, and rang a bell perfectly for a space of about ten minutes. The intensity diminished rapidly after that time; but after a rest of about one hour the battery had almost recovered its previous force. Each time that the

battery was tried a rest was always sufficient to restore its action; but after each trial the force became less, until, after trying it for thirty-five days, it became so weak as to give only 8° on the galvanometer, and at that period a remarkable change took place. The sign of the current altered: the current, which hitherto had been passing from the agglomerated to the gas carbon, was now proceeding in the opposite direction. M. Cauderay states that, on the second day after the fixing of the battery, he thought he remarked a strong smell of gas-tar. He perceived that this smell was accumulated around the last gas carbon forming the positive pole of the battery. It seemed to him then extremely probable that the gases which diffused those smells had been withdrawn from the interior of the carbons by the current, to be accumulated and disengaged at the positive pole, for previous to their being immersed the carbon had no smell whatever. The agglomerated carbon placed in the same cell was covered by bands of very brilliant colors, among which were Prussian blue, violet, green, etc., arising, he supposes, from the decomposition of salts, or, perhaps, from a small quantity of tar contained in the gas carbon. A peculiar fact in connection with these bands is, that they were precisely similar in order to those of the solar spectrum—the red at top and the violet below, with all the intermediate colors of the spectrum.

M. G. Plante has invented a new "secondary battery," as he calls it. It consists of a novel and peculiar arrangement for multiplying the power obtained from a weak source. In form it is not unlike an ordinary condenser. There is a rectangular gutta-percha vessel provided with lateral grooves, and containing a series of lead plates immersed in dilute sulphuric acid. As in a large condenser, the odd plates are joined in one series and the even plates in another series; to either end is attached one of the poles of a weak source. Such a battery, with six plates only, and a source of two small nitric couples, was strong enough to create temporary incandescence in a platinum wire one millimetre thick and eight centimetres long. By increasing the size and number of the plates, more powerful calorific effects, such as incandescence of iron and steel rods, may be obtained by charging the battery with two or three Bunsen's elements. An arrangement, termed by the same inventor his "secondary tension battery," produces still more remarkable results. The apparatus consists of forty secondary couples, each couple of lead plates being in a narrow gutta-percha vessel, immersed in dilute sulphuric acid, the pole of each vessel being connected to a peculiar commutator, so that the plates could be joined as an arrangement of tension or as one of surface. This battery was charged with three couples of Bunsen's medium-sized battery. On applying the current from the secondary circuit, a platinum wire, two metres long and one-quar-

ter of a millimetre thick, was rendered incandescent for a few moments, and the voltaic arc was also obtained. M. Plante remarks upon this that it is not, as in the case of induction, the direct production of one physical effect by another physical action; but the final result is none the less an accumulation or a modification of electrical force, which can be utilized under certain circumstances.—(*Mechanics' Magazine*.)

An Electric Piano.—M. Spies, of Paris, has invented an electric piano, which has been exhibited at a meeting of the "Société d'Encouragement," and elicited great surprise and admiration. The electrical arrangement consists, in the interior of the piano, of a series of electro-magnets, which act upon the hammers that strike the wires. These hammers communicate in the ordinary way with the keyboard, but on their opposite side they have small wooden rods, terminating with armatures, which are attracted to the electro-magnets whenever they become active. The "directing organ," as it is called, is constructed as follows: First, there are two wooden rollers, with an intermediate roller of metal. The paper, specially prepared with a series of holes, placed in positions representing the several notes of music, is rolled around one of the wooden rollers; passing over the metal roller, it is drawn off and wound around the second wooden roller. This unwinding keeps it always at a uniform tension. Second, a clockwork movement gives motion to the rollers. Third, a small keyboard, with movable copper hammers, is placed above the intermediate roller, so that the heads of the hammers rest upon the paper band (prepared as described) which represents the musical notes. The battery is a series of thirty-six Daniell's cells. One pole of the battery connects with the small keyboard; the other, through the various electro-magnets of the piano, with the metallic roller. The rollers being set in motion by the clockwork, cause the prepared band to be unrolled and pass on the metallic roller. Whenever a hole in the paper comes under the keyboard, the lightly-resting hammer at once makes contact, a current passes through to the electro-magnet, which attracts the hammer, and the required note is struck; and so, from a series of these prepared holes a number of successive electric contacts are made, acting upon the several electro-magnets, causing the various hammers to strike the required notes. The principle of the piano is really that of automatic telegraphy, except that, in transmitting messages automatically by the ingenious apparatus devised for that purpose, the result is a permanent and visible record; whereas, in the case of the electric piano, the result is simply one of sound. The electric current being uniform throughout, produces a uniform blow with all the hammers; but, by the application of pedal and sourdines, M. Speiss causes any music to be played with the required expression.

Magnetic Alphabetical Telegraph.—Rev. H. B. Wilde, of Reading, England, has invented a new magnetic alphabetical telegraph. The sender has a dial plate, inscribed with the letters of the alphabet and other signs. This has a jointed handle, which may be quickly moved round the dial, and may be checked at any point, by a ratchet. The instrument upon which the messages are received has a smaller dial, traversed by a delicate indicator hand. The movements of the handle by the sender of a message are accurately reproduced on the index plate at the other end of the line, and may be easily read. A series of permanent horseshoe magnets furnishes the power. These are united to form a compound magnet, to the north and south poles of which are fixed, vertically, independent electro-magnets, their upper ends being inserted through holes in a brass plate, and planed off so that the iron and brass present one smooth, flat, surface. The handle employed in sending messages gives motion to a thick, circular piece of soft iron, which is supported above the compound magnet by a suitable socket-piece. The edge of this plate is divided into twenty-eight equal spaces, which are alternately notched out right and left, so that there are fourteen projections or teeth and the same number of corresponding spaces. The iron plate in its rotary movement lightly rubs the brass plate through which the ends of the electro-magnets are inserted, and as the projections and spaces at the edge of the plate alternately pass over these ends, positive and negative currents are excited in the insulating wire surrounding the electro-magnet. The currents being conveyed to the receiving instrument induce rapid changes in the polarity of an ordinary electro-magnet, between the poles of which a small permanent magnet vibrates; each vibration liberating the teeth of an escape-wheel propelled by a very light train of clockwork wheels and mainspring. The axis of the escape-wheel carries the hand or index of the dial. Thus, as the sender moves the handle over the letters on the dial, positive and negative currents are alternately induced in the conducting wires, which currents cause the hand of the receiving instrument to pass over the same letters.

Electric Apparatus for Blasting Purposes.—A new dynamo-electric apparatus, especially adapted for blasting operations, the invention of Mr. O. W. Siemens, is described by the *Mechanics' Magazine*. It is an adaptation of the larger machine contrived by him for the conversion of great mechanical force into dynamic electricity (*see ANNUAL CYCLOPEDIA for 1867*). The essential difference between the Siemens apparatus and that of Wilde is the absence, in the former case, of the magneto-electric machine as the exciting agent. An electro-magnetic machine is alone employed, having as its exciting agent its residuary magnetism only. The electro-magnet is provided with a magnet-cylinder, within which revolves

a small Siemens armature. The coils of this electro-magnet are traversed by the current produced by the rotating armature, after being, by means of a commutator, made to flow in one direction only. At the commencement of rotation, the armature is acted upon merely by the weak residuary magnetism of the electro-magnet, and consequently only weak currents are produced in its surrounding coil. These weak currents, passing through the coils of the electro-magnet in the same direction, instantly increase the residuary magnetism, thereby again producing increased induction currents in the armature, and so on until the iron of the electro-magnet has taken up the highest amount of magnetism which it is capable of holding. In this arrangement the coils are short-circuited, and so kept during the revolutions of the handle when current and magnetism are developed to their utmost extent. By now suddenly opening this short circuit a very powerful current of short duration (expressly adapted to blasting purposes) will pass through a line connected to the terminals. The instrument is claimed to be handy, portable, and useful in all weathers, having a superiority over galvanic batteries and also over static-electric machines, which only act in fine weather. The instrument may be actuated either by magnetism or by a current from a single cell. After that there is always sufficient residuary magnetism to induce a weak current in the armature; and thus a never-failing supply of electricity is at command for the object required. In blasting operations it is said to work with great success. It is also adapted for the release of clockwork or signal bells for railways, and for the sending of currents in rapid succession into a line of telegraph.

Electro-capillary Paper.—M. Becquerel has investigated certain electro-capillary phenomena, and describes the process and results as follows: He prepared parchment-paper with ordinary filter-paper by immersing in sulphuric acid, containing fifteen per cent. of water, withdrawing immediately and washing with a large quantity of water. A tube closed by a diaphragm of this material, and filled with a saturated solution of nitrate of lime, was plunged into a solution equally saturated with sulphate of soda. Stalactites formed on the under surface of the paper, composed of crystallized double sulphate of soda and lime. These stalactites are of variable diameter, varying according to the size of the pores which allow the passage of the nitrate of lime. By diminishing the size of the capillary tubes, the passage of the liquid is indefinitely retarded, until it at length becomes inappreciable. There is a point, in regard to the diameter of these capillary tubes, where the electro-capillary force ceases to act, and where complete filtration ensues; a single pore is sufficient to produce this effect. For this reason it is necessary that the parchment

paper be uniform. Some experiments were made with siliceous diaphragms. Columns of sand, varying from five millimetres to five centimetres in height, kept in position in each case by a tuft of asbestos, were substituted in a former apparatus. In operating in Dutochet's way, with solution of sugar, solution of salt, and distilled water, simple filtration took place, instead of a strong endosmose with the organic membrane; but this was not the case when a saturated solution of sulphate of soda was placed in the tube, and in the outer vessel another of chloride of barium, an endosmose of two centimetres resulting in two days. No precipitate is seen in the outer vessel, so that there is only a displacement of the solution. In placing in a tube closed with a diaphragm of parchment-paper a solution of sugar or of salt, colored with litmus or other coloring matter, and water in the outer vessel, a strong endosmose is produced in the tube, and at the end of a few days traces of color in the water are only seen with difficulty; the color is completely arrested by the membrane.

An Improved Voltastat.—Professor Guthrie has exhibited to the British Chemical Society an improved Voltastat by which the current of a galvanic battery may be maintained perfectly constant and regular by a self-acting arrangement, which is thus described: A vertical glass cylinder of about the size of a test tube is charged with dilute sulphuric acid, with a layer of mercury below occupying about one-third of its total contents. Partly immersed in the acid liquid is a pair of platinum electrodes insulated by glass fused upon the wires at that portion which passes through the cork stopper of the jar, and a comparatively wide glass tube open at both ends is fixed in the same cork, with its lower extremity dipping below the level of the mercury, while another delivery tube with bulb and capillary orifice provides for the slow escape of the mixed gases resulting from the electro-decomposition of the water. This apparatus having been placed in the battery circuit, say of three Bunsen cells, evolves the oxyhydrogen gas with a rapidity which may be easily regulated by the size of the aperture; if, then, the activity of the battery is increased, the larger volume of gas, unable to escape, exerts a greater degree of pressure upon the liquid contents of the cylinder, and the mercury is forced up the open tube, whereby the column of liquid descends and smaller surfaces of the platinum plates are left immersed, and the power of conduction is to a corresponding extent lessened. In this manner the author states that he found no difficulty in maintaining a perfectly uniform current for a period of six or seven hours, and any required adjustment could be made by altering the size either of the apparatus or of its component parts. By collecting the gases evolved, this little arrangement could also be made to serve as a voltameter. The president of the society, Mr.

Warren De la Rue, in remarking upon the ingenuity displayed in the construction of the apparatus, suggested that, while it would be found serviceable in electro-plating and other applications where a somewhat intense current was employed, he doubted its use in the ordinary electrotype process for the deposition of copper, where weak currents only were required.

A New Exciting Liquid.—In a note to the French Academy of Science, M. Delaurier mentions a new exciting liquid for galvanic batteries. He says that, in order to obtain very powerful batteries disengaging no deleterious gas, and of very cheap maintenance, he has solved the problem of transforming azotic acid into sulphate of ammonia, under the influence of sulphuric acid and hydrogen. This he does by the agency of protosulphate of iron; the proportions are twenty parts of the protosulphate dissolved in thirty-six parts of water (the operation being sheltered from contact with the air), to which are added, with stirring, seven parts of diluted (equal parts) sulphuric acid, and then in the same manner one part of diluted (equal parts) azotic acid. He says that the resulting liquid is the most energetic and most economical that he knows for an exciting liquid for iron, zinc, and other metals without any disengagement of hydrogen or binoxide of azote. In the use of this liquid with nitric acid in Bunsen's pile, the action goes on without any exterior emanation of nitrous gas, and without the emission of hydrogen in the interior, and consequently the platinum does not polarize.

Decomposing Action of the Voltaic Arc on Certain Substances.—Mr. F. P. Le Roux, in a paper in the London *Chemical News*, offers evidence to show that the earthy and alkaline-earthly oxides undergo a real decomposition in the voltaic arc. If a cylinder of magnesia, or lime, or strontia, be fixed in the voltaic arc, a slight cavity instantly forms at the base, and the conditions remain the same for an indefinite time; the arc continuing to play upon the body without inducing any change but the vitrification caused by the siliceous vapors emitted by the impure charcoal. If, however, the cylinder of earthy matter be brought into actual contact with the charcoal points and the pressure maintained with a slight spring, different results follow. If a pencil of lime, or even plain chalk, be used, the carbons will hollow out in it a sort of trench in which the heat is condensed as in a sort of reverberatory furnace, and the amount of light emitted is proportionally augmented. On examining the light with a piece of black glass it presents the appearance of an opaque luminous cloud in which the extreme ends of the charcoal are undistinguishable, their usually well-marked brilliancy being lost in the mass of light, and there is a sensible evolution of whitish fumes. The spectroscope displays an intermittent spectrum filled with large and brilliant rays, which are recog-

nizable as those described by different authors as characteristic of calcium, but their number and intensity is greater and they are better defined. This is not surprising if the difference between the luminous intensity attainable by this process and by those hitherto employed be considered. It would be doubtless possible by this method to obtain much new information respecting the spectra of metals, provided only pure products were employed.

The employment of strontia gives analogous effects under the same conditions, the light assumes a characteristic red tinge, and the spectroscope displays the rays characteristic of strontium, thus presenting a simple means of enriching the electric light with red rays. It may be here remarked that the flame always contains a large proportion of white light, for if the metal be set free in some parts of the flame, in others it returns to the state of oxide, the incandescence of which always yields a white light.

Color-effects of Electric Discharges.—The *American Journal of Science* for May, 1868, contains the substance of a paper, read by M. Becquerel before the French Academy, on the effect of coloration presented by discharges from an inductorium taking place between the platinum wire and the surface of a liquid. The apparatus employed by the author was very simple, consisting merely of a glass tube, partly filled with a saline solution in contact with a platinum wire forming one pole of an inductorium. The other pole was formed by a platinum wire, the extremity of which was placed a few millimetres above the surface of the liquid, the discharge taking place between the liquid and the wire. In case the inductorium is of low power, coloration is not observed when the liquid is positive and the wire negative, but only when the wire is positive. But when the coil is powerful, and the salt dissolved easily vaporized, coloration is observed in either case, though the maximum is given when the wire is positive. With a sufficiently powerful coil, the luminous effects of the discharge are very brilliant. The spectrum of the light produced in this manner is more complex than that resulting from the introduction of small quantities of saline matter into a non-luminous flame. The water is vaporized and we have lines due to oxygen and hydrogen; the temperature is also higher than that of the flame of a Bunsen's burner. With very pure water the intensity of the discharge is feeble and the spectrum contains the red and blue hydrogen line corresponding to the dark rays C and F of the solar spectrum. With a strong solution of hydrochloric acid in water the tint of the discharge is slightly violet and the two red and blue rays are more distinct than with water. There are also an orange band and a few fainter rays throughout the extent of the spectrum. A very small quantity of saline substance in water is sufficient to communicate to the light of the discharge the color due to the elements of the

salt. Thus water containing one one-thousandth part of its weight of chloride of strontium gives very distinctly the orange and blue rays characteristic of strontium. With concentrated solutions the effects are more marked, and with the chlorides in particular they are very brilliant. Thus the chlorides of strontium, calcium, sodium, magnesium, copper, and zinc, give fine effects. But other substances, such as various compounds of barium, potassium, antimony, iron, manganese, silver, uranium, etc., give effects which are more or less marked. In general the lines are more numerous than in the spectra of flames containing the same saline elements, which doubtless arises from the higher temperature, but in all cases the lines are the same as those given by Bunsen and Kirchhoff. Thus with a saturated solution of chloride of strontium, besides the orange and the clear blue, we see two violet rays, one more intense than the other, several green rays, one of which is particularly distinct, and a certain number of feebler rays in different parts of the spectrum. Chloride of lithium, besides the red and the feeble orange, gives a very vivid blue ray. A concentrated solution of chloride of calcium gives a great number of rays, among which the dark-blue ray is very intense. Chloride of magnesium, besides other lines, gives two very bright-green and one clear-blue ray. Chloride of zinc gives a red ray, three brilliant blue rays, and a very intense violet line. Nitrate of silver gives, among other rays, two of a vivid green. In conclusion, the author points out the very obvious and marked advantages which this method of observation offers in certain cases over the usual method of ignition in a non-luminous flame.

The Electric Spark in a Vacuum.—MM. Alvergnyat, Frères, have invented an apparatus to demonstrate that the electric spark cannot pass through a perfect vacuum. They create a nearly absolute vacuum, by means of a mercurial pneumatic machine, in the tube that serves for the experiment. This contains two platinum wires, placed at a distance of two millimetres from each other. The tube is heated to dull redness, and, when that point is attained, the process of making the vacuum is still continued, and the electric spark passed until it ceases to be transmitted through the interior of the tube. The tube is then hermetically sealed and separated from the machine. In a tube thus prepared, notwithstanding the slight distance between the two platinum points (two millimetres), electricity absolutely ceases to pass.

Magnetism and Molecular Changes.—Experiments made by M. Trèves, a French naval officer, prove that a steel bar, magnetized by an electric current, undergoes some molecular change while magnetized. Two exactly identical steel diapasens, giving sounds precisely in unison, were selected. A small mirror was so placed in relation to each, that, when vibrations were struck upon either diapasen, a figure of the vibrations was reflected into the mirror—

the figures from the two diapasens being precisely similar, in consequence of the metals being in unison. Round one diapasen was then placed a powerful bobbin of wire, actuated at will by a current from eight Bunsen's elements. The other diapasen was left unchanged. Immediately on passing the current through the bobbin, exciting the diapasen, and rendering it magnetic, the following changes were noticed in the figure reflected from it in the mirror: The luminous circle that had previously been constant was observed to alter immediately from itself into an ellipse, and oscillate from right to left with a speed that enabled the new vibratory movement to be measured. This speed was faster or slower in proportion to the increase or diminution of the number of elements used. Whenever the current was shut off, the normal state of the diapasen returned, and the fixed luminous circle, due to its natural condition when vibrating, reappeared. M. Trèves conducted similar experiments upon diapasens of soft iron, and of steel of various sizes, arriving at the similar results. M. Faye, in a note to the French Academy, accompanying a report of the facts, says that the new experimental method of M. Trèves has made a marked step in the science of magnetism.

The Aurora Borealis as a Weather Prognostic.—Mr. Murray Gladstone, of England, has for many years studied the aurora borealis as a weather prognostic. He has observed that, when the coruscations are vivid, and particularly if they extend toward the zenith, or show much motion, they are almost invariably followed by a gale of wind with rain from S.W., within from forty-eight hours to four days. The more brilliant and lively the appearance and motion of the aurora, the earlier the gale which follows takes place, and the greater is its severity. Slighter manifestations of the northern lights are not followed by any appreciable changes of weather. In explanation of the connection between the two sets of phenomena, Mr. Gladstone suggests that when a larger body than usual of light air from the south begins to descend upon the cold stream of air coming from the north, as those opposite currents in the atmosphere come into close proximity, their negative and positive electricities produce coruscations. The rarity of the atmosphere and the great elevation probably prevent (at least for the most part) any sound or thunder being heard; and the former cause, joined with the manner in which the currents approach each other, may probably occasion the shooting, flickering movements of the aurora. The arches of boreal light frequently seen stretching from E. to W. may be produced by large masses of air charged with opposite electricities meeting each other and feeding the flames quietly and continuously, on an extended front; while the movements of light occasionally occurring throughout the length of these arches may arise from the masses of vapor coming more actively into

contact at particular points, and lighting up a coruscation which, like a running fire, passes along the whole line. When the coruscations are more than usually vivid or violent in their motion, it would indicate a larger arrival than usual of negatively electric air from S. or S.W., which, in a shorter or longer time, according to its strength, first checks, and then overpowers the N. or N. E. wind, generally, blowing when the aurora is seen. The lower temperature of the atmosphere, cooled down by the recent northerly wind, condenses the moisture borne from the warm south, and precipitates it in showers.

Effects of Lightning.—General Morin has communicated to the French Academy an illustration of the heating effect of a flash of lightning, which penetrated a piece of furniture where was placed a silk purse containing gold and silver pieces. The gold pieces were not fused, but slightly soldered together, without apparent alteration. The silver coins were completely defaced and strongly soldered together. A more remarkable story was narrated to the Academy by M. Bobierre. It seems that at Nantes last July a violent storm occurred, and a man on the bridge of the Canal de Bretagne found himself, as he says, "enveloped in a brilliant light." Looking at the contents of his pocket-book some time after, he discovered that the silver pieces had a dull, partly-fused look; and on examining a gold piece in another part of the pocket-book, separated from the silver by a partition of leather, he observed the gold piece uniformly covered by a thin layer of silver, having the appearance (under a microscope) of a multitude of globules in contact with each other. A portion of this coating of silver having been removed by weak nitric acid, the gold below was found in the same condition as the deposited silver, exhibiting a slight appearance of fusion. M. Bobierre explained the phenomenon on the theory that the electric shock, to which the man was subjected when "enveloped in a brilliant light," volatilized a portion of the silver, and that the metallic vapor passed through the leather, and coated the gold piece.

ELLIOTSON, JOHN, M. D.; an English physician and medical professor and author, born in London in 1788; died in that city, July 29, 1868. He was educated at Jesus College, Cambridge, and pursued his medical studies at Guy's and St. Thomas's Hospital, and afterward at Edinburgh, where he took his medical degree, but subsequently became a Fellow of the Royal College of Physicians, London. He was appointed physician of St. Thomas's Hospital, and assisted greatly in the establishment of a separate medical school there, in which he became a lecturer on state medicine, and afterward on the principles and practice of medicine. He distinguished himself also by the reform of several administrative abuses in the hospital, as well as by the adoption of some new prescriptions, among them those of hy-

drocyanic acid in affections of the stomach, of sulphate of copper, and of creosote. These, with his discoveries in the use of the stethoscope, roused the opposition of his professional brethren and brought a great deal of ridicule upon him, without, however, affecting his reputation, which was greatly increased by a course of clinical lectures which he delivered in London about that time. In 1831 he accepted a professor's chair in the University College, and the course of lectures he delivered immediately after was published at length in *The Lancet* and *The Medical Gazette*. In 1837 he turned his attention to the subject of animal magnetism, and, having made a variety of experiments which satisfied him of its remedial efficacy, he applied this mysterious agent to the treatment of certain affections which were up to that time considered incurable. His experiments excited public curiosity to the highest pitch; but his new doctrine as to the curative powers of magnetism, while it made many converts, raised up a host of adversaries against him, and he was ultimately compelled to resign the professor's chair which he held. He was subsequently instrumental in establishing a hospital for the treatment of patients on mesmeric principles, became the founder of the Phrenological Society, of which he was elected president, and started, under the title of *The Zoist*, a journal devoted to mesmerism and phrenology. Dr. Elliotson's best titles to fame are a remarkable work on sulphate of quinine; his employment of creosote in excessive irritability of the stomach; his essay "on the Advantages of Sulphate of Copper in Dysentery;" his discovery of the admirable curative properties and diuretic qualities of potash; his "Lectures on the Principles and Practice of Medicine;" his translation of Blumenbach's *Institutiones Physiologicae*, which passed through many editions, and to which he had added more matter in the way of notes than the original work contained; and his experiments in the use of the stethoscope. Among his later works is one on "Surgical Cases in Mesmerism," etc.

ELLIOTT, CHARLES LORING, one of the most distinguished of American portrait-painters, born in Scipio, N. Y., in December, 1812; died in Albany, N. Y., August 25, 1868. His boyhood was passed in Syracuse, where his father was a builder. His father at first obtained a situation for him in a store, but, finding that he had no taste for mercantile pursuits, he determined to make an architect of him; but the boy's instincts for painting were too strong to be resisted. His friend F. S. Cozzens says that "while a mere boy he narrowly escaped suffocation from locking himself up into his bedroom, in order to paint 'The Burning of Moscow,' during the winter, with no companion but a portable furnace of burning charcoal to keep himself warm. In after-days, at the early age of fourteen, he made a copy of the portrait of a clergyman, which he painted with

three colors only—black, white, and rose pink. This portrait is in the possession of his family, and shows that even at an early age the artist had acquired a delicate sense of art in the arrangement of the drapery, the tenderness of the expression of the mouth, the modelling, and the freedom of touch in the painting of the hair, some of which characteristics are apparent in his latest pictures." Finding that his passion for art was so strong, his father wisely allowed him to pursue the necessary studies to become a painter. Having learned what he could of his art, and become a very fair portrait-painter in Syracuse, he came to New York in 1833, or the beginning of 1834, and became a pupil of Trumbull, and subsequently of Quidor, a fancy painter of some note. While here, he painted portraits of Captain and Mrs. Cornelius Vanderbilt, for which he received the modest sum of fifty dollars each. He also painted in oils some scenes from Irving's and Paulding's works, which were thought very creditable for so young an artist. After a residence of little more than a year in New York City, he returned to Western New York and practised his profession, confining himself particularly to portrait-painting, for about ten years. He returned to New York City in 1845, and in 1846 became a member of the National Academy of Design. From that time he had been a resident of New York or its immediate neighborhood, though occasionally absent for several months at Albany or Washington. He had painted a large number of portraits, and all were remarkable for the fidelity of their likeness, the vigor and perfection of their coloring, and for presenting the sitter in his most characteristic and effective expression. In private life he was one of the most genial and social of men.

ELLSWORTH, WILLIAM WOLCOTT, LL. D., an eminent Connecticut jurist, born in Windsor, Conn., November 10, 1791; died at Hartford, Conn., January 15, 1868. He was the third son of Oliver Ellsworth, second Chief Justice of the United States, and a twin brother of the late Henry L. Ellsworth, long Commissioner of Patents at Washington, D. C. He graduated from Yale College in the class of 1810, and at once commenced his legal studies under Judges Reeve and Gould in the Law School at Litchfield, and afterward continued them in Hartford, in the office of his brother-in-law, the late Chief-Justice Williams. He was admitted to the bar in 1813, and was engaged in the successful practice of his profession until 1829, when he was elected to Congress and twice reëlected at the expiration of his term. He resigned, however, at the close of the first session of the Twenty-third Congress, to return to his profession. He was a member of the Judiciary Committee during the whole of this period, and a member of the committee appointed to investigate the affairs of the United States Bank at Philadelphia. In 1838 he was chosen Governor of the State, and

reëlected the three following years. He twice declined, during the period of his service as Governor, an election to the United States Senate—from an unwillingness to be further drawn away from his cherished profession. In 1847 he was elected by the Legislature a judge of the Superior Court, and of the Supreme Court of Errors, and remained on the bench as one of the associate judges of the Supreme Court, until he reached the age of seventy, when his term expired by limitation of law. He then retired to private life, carrying with him, however, the unabated interest in public affairs, and in religious and charitable enterprises, which made his life so honored and useful to the last. Since 1827 he had held the appointment of Professor of Law in Trinity College. He received the degree of LL. D. from the University of New York in 1838.

ENGLE, Rear-Admiral FREDERICK, U. S. N., a distinguished officer of the Navy, born in Delaware County, Pa., in 1799; died in Philadelphia, February 12, 1868. He entered the service November 30, 1814, and had consequently been a naval officer for more than fifty-three years, of which almost twenty had been passed afloat. At the beginning of the Mexican War he had risen to the rank of captain, and commanded the Princeton, winning distinction by his services in the blockading squadron. When treason threatened the capture of the United States Navy, Captain Engle, as an officer worthy of confidence, was sent to China to assume command of the Hartford, and brought that powerful ship home to aid in overcoming the South. His advanced age disabled him; he was therefore assigned to the command of the Navy-Yard at Philadelphia, and subsequently became Governor of the Naval Asylum in that city. He was promoted to be rear admiral on the retired list, July 25, 1866. Finally, after a long life of honorable service to his country, he resigned his office, and remained thenceforward waiting orders, until his death.

EUROPE. The aspect of Europe during the year 1868 was, on the whole, of a pacific character. The great powers seemed desirous to preserve peace, and none of the important international questions—the German, the Roman, and the Eastern—brought on a war.

There was, however, one serious breach of the universal peace—the revolution in Spain. Being unconnected with any of the great international complications which have agitated Europe for years, its effects did not extend beyond the change of the form of government in Spain. It occupies a remarkable place in the history of European revolutions for the rapidity with which it spread, and the universal support it met with. Within a few weeks after the raising of the first insurrectionary cry, in September, it overthrew the throne of Queen Isabella. For the remainder of the year Spain was administered by a Provisional Government, which represented three parties,

the "Liberal Union," the "Progresistas," and the "Democrats." The determination of the future government of Spain was referred to the Constituent Cortes, to be elected by universal suffrage, in January, 1869. Hardly any opposition was made to the Provisional Government by the few partisans of the ex-Queen, or the Absolutists (partisans of the family of Don Carlos); but serious dissensions arose in the last weeks of the year between the Republican party and the Provisional Government. The latter, instead of awaiting the decision of the Constituent Cortes on the form of government, used their whole influence in behalf of the re-establishment of a monarchy. This led to bloody conflicts in Cadiz and Malaga, and threatened more disturbances during the coming year. The strength of the Republican party was a surprise to the entire world, and even appeared to be greater than in any other monarchical country of Europe. (*See SPAIN.*)

Soon after the beginning of the Spanish revolution, insurrectionary movements broke out in Cuba. Being at first somewhat undefined, and directed partly against the re-establishment of a monarchical government in the Spanish dominions, and partly for severing the connection of Cuba with Spain, they soon became entirely a war of independence. The great majority of the population in Cuba showed itself in sympathy with the insurrection, and at the close of the year still held out against the Spanish forces. (*See SPAIN.*)

England, at the beginning of the year, found herself at war with Abyssinia. The landing of the troops had begun in October, 1867, but a real advance did not take place until January, 1868. Hardly any resistance was offered by King Theodore until the arrival of the English, in April, 1868, before his stronghold, Magdala, where he made a desperate fight, and, after the capture of the fort, fell by his own hand. The English troops at once evacuated the country. (*See ABYSSINIA.*)

Russia is steadily advancing in Central Asia, and, during the past year, conquered the whole country of the Emir of Bokhara. The Russian Government disclaims any intention of annexing, for the present, additional territory; but, at all events, she is steadily increasing her power and influence in Asia. Russian writers claim that Russia is, and England and France are not, Asiatic powers, and that the time will come when European powers like England and France will receive notice to quit Asia. (*See RUSSIA.*)

The insurgents in Candia continued throughout the year to defy the authority of the Turkish Government, being encouraged by the frequent arrival of men and ammunition from Greece, and by the sympathy of Russia and the United States. In December, the Turkish Government presented to that of Greece an ultimatum, demanding a pledge that no further aid should be given to Candia. The ultimatum was rejected by the Greek Government, the

Turkish ambassador left Athens, and the Greek ambassador Constantinople, and the relations between the two countries became so unfriendly that, for some days, a war was regarded as inevitable. But the great powers of Europe promptly interfered, and agreed upon a European Conference, to be held in Paris in January. (*See CANDIA, GREECE, TURKEY.*)

No agitation at all was caused during the year by the question of the annexation of Rome to Italy, or by the efforts made in Germany for the consummation of German unity. The Roman question again formed the subject of a diplomatic correspondence between the Governments of Italy and France; but the Italian party of action took no steps toward another expedition against the temporal power, and the Italian Government put off to the future all its hopes for consummating the unity of the kingdom. Prussia expressly vindicated her right to comply with the application of any of the South-German States for admission into the North-German Confederation; and the Government and people of Baden expressed a great desire to enter the Confederation at once, but practically no step was taken in advance, and, this being so, France appeared very anxious to avoid any quarrel with Prussia. (*See FRANCE, GERMANY, ITALY.*)

The party of progress in Europe, which aims at narrowing the prerogatives of royalty and of aristocracy, and of reconstructing the states on the principles of popular sovereignty and universal suffrage, gained several important victories during the past year. In Spain the Provisional Government ordered the municipal elections and the election for the Constituent Cortes to take place, on the basis of universal suffrage; and as three of the political parties—the Republicans, the monarchical Democrats, and the Progressists—are in favor of universal suffrage, it was expected that, whatever form of government may be decided upon by the Constituent Cortes, universal suffrage will be engrafted upon the new Spanish Constitution. Next in importance was the great victory of the Liberal party in England. They had, in 1867, compelled the Tories to consent to a considerable enlargement of the law of suffrage. This year the majority of the House of Commons, under the leadership of Mr. Gladstone, passed resolutions in favor of disestablishing the State Church of Ireland, and when thereupon Parliament was dissolved and an appeal made to the people, the new election largely increased the Liberal majority in the House of Commons, and led to the formation of a Liberal Cabinet, under the leadership of Mr. Gladstone. The Liberal ministry in Austria, which was appointed in December, 1867, maintained itself, notwithstanding all the violent attacks upon it on the part of the priesthood. The Concordat of 1855 was abolished, and the principles of religious and civil liberty struck deep root throughout the land.

In France the Liberal party remained de-

[illegible]

100 100 100 100 100 100

prived of many rights which they enjoy in nearly every country of Europe; still, the rigorous laws against the press, and the right of holding meetings, were relaxed, and the number of Liberal papers therefore largely increased. Russia issued new edicts for the extirpation of the Polish language and nationality, but made considerable progress in point of education, in the extension of her railroad system, and other points of home administration. Turkey feels herself compelled to make every year some concession to the liberal tendencies in the Christian provinces. The most important reform introduced last year was the organization of a Council of State, to consist of fifty members, both Mohammedans and Christians.

The overthrow of the throne of Queen Isabella of Spain adds another to the many vicissitudes which have befallen monarchy in Europe since the beginning of the present century. Absolute monarchy is nearly gone, and an irresistible current drives the peoples onward, toward securing greater liberties, and more and more threatens the very existence of all monarchies. In view of the unceasing conflict which may bring important changes in the course of the year 1869, the following brief retrospect (from the *Paris Siecle*) of the fate of European monarchy will be found useful for reference, whenever a new change may take place:

The great conqueror of the century, he who transmuted the French Republic into a sort of universal monarchy, Napoleon I., was thrown down definitively in 1815. His brothers, the Kings Jerome and Joseph, had already succumbed. Murat, King of Naples, disappeared soon after. Immediately upon being restored, the Bourbon monarchy in Spain began to totter. It lost all its American colonies, which became republics, and Ferdinand VII. was kept on the throne only by the French expedition in 1823. In the following year took place the fall of Iturbide, Emperor of Mexico. The Sultan of Turkey was shortly afterward deprived of Greece, which was proclaimed an independent monarchy on the 3d of February, 1830. In the same year fell the Dey of Algiers, and also Charles X., led on by M. de Polignac, and the Ultra Legitimist and clerical faction. The King of Holland lost Belgium, that is to say, one-half of his states, on the 23d of August, and the deposition of the house of Orange-Nassau was proclaimed at Brussels. The Duke Charles of Brunswick was, on the 7th September, 1830, driven from his dominions by an insurrection. The Czar, at the same epoch, lost Poland for a time. In 1833, the too famous Dom Miguel, King of Portugal, was compelled to cede the crown to Dona Maria, daughter of Dom Pedro, who retained the sovereignty of Brazil. Louis Philippe was sacrificed to the faults and obstinacy of M. Guizot. On the 1st December, 1848, the Emperor Ferdinand of Austria had to abdicate, in order to avoid being expelled. At that epoch Pius IX. was brought back to and has since been supported at Rome only by the French arms. Austria, for a short time, lost possession of Hungary. The King of Prussia, Frederick William IV., threatened all along from 1848, was forced on the 6th of February, 1850, to take an oath to preserve the Prussian charter. In 1855, Nicholas I. died of vexation and wounded self-love, because he was stopped on the road to Constantinople. In 1859, the Duke of Modena, the Duchess of Parma, and the Grand-duke of Tuscany were struck out from the list of reigning princes. Souleouque, the Emperor of Hayti,

was hurled from his throne on the 15th January, 1859. In the following year, Francis II., King of Naples, saw Garibaldi enter his capital on the 7th September, and again another deposition was announced. Otho, King of the Hellenes, was driven from his throne by an insurrection in 1862. Three years later, Prince Conza lost the quasi-sovereignty of Roumania. In 1866, the Emperor of Austria definitively gave up Venetia; the surrender of which may, perhaps, have saved his empire. In the same year Prussia overthrew the thrones of Hanover, Nassau, and Electoral Hesse; and Maximilian fell in Mexico. During all this lapse of time no constitutional monarchy has been disturbed—no revolution has taken place in England or in Sweden, where the young dynasty continues; in Belgium the royal house has survived the storms of 1848; so in Portugal.

At the close of the year 1868, according to the official censuses or calculations published up to that time, the area and population of the countries of Europe were as follows:

STATES.	Inhabitants.
Andorra	12,000
Anhalt	197,041
Austria	35,558,000
Baden	1,424,970
Bavaria	4,824,421

Montenegro	1,709
Waldeck	423
Wurttemberg	7,532

The total area of Europe is about 3,786,000 square miles, and the total population about 298,500,000. The number of the population connected with the Roman Catholic Church is 142,117,000; of the Protestant population, 68,028,000; of the population of the Eastern Churches, 69,782,000.*

The progress of statistical science in all countries of Europe supplies us with valuable comparative statistics, showing the relative position of the several countries in point of progress, prosperity, and morality. Special attention is devoted to the statistics illustrating the movement of population. From recent publications on this subject, we learn that in France the marriages, which had declined from 305,203 in 1861 to 298,838 in 1865, rose in 1866 to 301,390; but the births, which numbered 994,288 in 1866, were 12,465 less than the number in 1865. To 100,000 of the population in France in 1866, there were 1,584 persons married, while the proportional number in England was 1,770; and to 100,000 of population in either country, the number of births was 2,612 in France, and 3,554 in England. Taking the interval between the mean age of the mothers at marriage and their mean age at the birth of their children at six years, then the number of legitimate births to a marriage in

1866 was 3.1 in France, and 4.2 in England. The death-rate in France in 1866 was 23.26 per 1,000 of population; that of England being 23.61. The population of the kingdom of Italy in 1866, exclusive of Venetia, was 22,703,135; the death and birth rates respectively were 28.96 and 38.62 per 1,000 of population. Spain, with an estimated population in 1866 of 16,516,949, returned a death-rate of 28.05 per 1,000, and a birth-rate of 37.03 per 1,000. The results for the Austrian empire, exclusive of the states of Italy, show a population in 1866 of 37,929,918; the respective death and birth rates were 32.32 and 40.84 per 1,000 persons living; the marriage-rate was low, 14.58 persons married to 1,000 of population; but it will be remembered that 1866 was the year when disaster befell the arms of that empire. Thus, the returns of Austria show a birth-rate much higher than the English rate, and conspicuously higher than the French rate. The birth-rates of Italy and Spain are both higher than the English rate, and show a superiority only too striking over that of France. The death-rate of Austria is considerably higher than the rates of England and France, and the death-rates of Spain, as well as of the Italian kingdom, contrast unfavorably with those of England and France.

F

FINANCES OF THE UNITED STATES.
No change was made in the general system of finance of the Federal Government during 1868. The results were in some respects more favorable to the Treasury; but the greatest improvement was made in the circumstances of the people by the progress of recovery from the destructive effects of war.

A statement of the receipts and expenditures of the Government for the first quarter of the fiscal year ending June 30, 1868, and an estimate of the same for the remaining three-quarters of the year were made by the Secretary of the Treasury in his annual report of December, 1867. The actual receipts of the first quarter of the fiscal year above-mentioned were as follows:

Receipts from customs	\$48,081,907 61
“ Lands	287,460 07
“ Direct tax	647,070 82
“ Internal revenue	53,784,027 49
“ Miscellaneous sources	18,861,462 62
	<hr/>
	\$121,161,928 62
Expendit's for civil service..	\$13,152,348 08
“ Pensions and Indians .	10,484,478 11
“ War Department	30,537,056 35
“ Navy Department	5,579,704 67
“ Int. on public debt	28,515,640 47
	<hr/>
	\$98,269,236 18
Loans paid	\$300,176,368 24
Receipts from Loans	125,103,232 00
	<hr/>
Reduction of Loans	\$65,073,086 24

* Tables of the Roman Catholic, Protestant, and Eastern Churches in every country of Europe, corrected up to January, 1869, are given in Schem's *American Ecclesiastical and Educational Almanac*. (New York, 1869.)

The estimated receipts and expenditures for the remaining three-quarters of the same year were as follows:

ESTIMATED.	
Receipts from Customs	\$115,300,000 00
“ Lands	700,000 00
“ Internal revenue	135,000,000 00
“ Miscellaneous sources	25,000,000 00
	<hr/>
	\$306,000,000 00

The expenditures for the same period, according to his estimates, will be—

For the civil service	\$37,000,000 00
For pensions and Indians ..	22,000,000 00
For the War Department, including \$24,-	
500,000 for bounties	100,000,000 00
For the Navy Department	22,000,000 00
For the interest on the public debt	114,000,000 00
	<hr/>
	\$305,000,000 00

Leaving a surplus of estimated receipts over estimated expenditures of \$1,000,000.

The actual receipts and expenses, however, of the fiscal year ending June 30, 1868, exceeded the estimates by \$69,971,427, and were as follows:

Receipts from customs	\$164,464,590
Receipts from lands	1,348,715
Receipts from direct tax	1,738,145
Receipts from internal revenue ..	191,067,589
Receipts from miscellaneous	
sources (of which amount there	
was received, for premium on	
bonds sold to redeem Treasury	
notes, the sum of \$7,078,203) ...	46,949,033
	<hr/>
Total receipts, exclusive of loans	\$405,638,062

Expenditures for the civil service (of which amount there was paid, for premium on purchase of Treasury notes prior to ma- turity, \$7,001,151)	\$60,011,018
Expenditures for pensions and Indians	27,862,000
Expenditures by War Department	122,246,648
Expenditures by Navy Depart- ment	25,773,502
Expenditures for interest on the public debt.....	140,424,045
Total expenditures, exclusive of principal of public debt.....	\$377,340,224

For the fiscal year commencing on July 1, 1868, and ending on June 30, 1869, the receipts and expenditures of the first quarter, ending September 30, 1868, were as follows:

The receipts from customs.....	\$49,676,594
The receipts from lands.....	714,805
The receipts from direct tax.....	15,536
The receipts from internal revenue	28,735,863
The receipts from miscellaneous sources (of which amount there was received, from premium on bonds sold to redeem Treasury notes, the sum of \$587,725).....	6,949,979

Total receipts, exclusive of loans.....	\$85,392,868
Expenditures for the civil service (of which amount there was paid, as premium on purchase of Treas- ury notes prior to maturity, \$300,000)	\$21,227,106
Expenditures for pensions and In- dians.....	12,858,647
Expenditures for War Department	27,219,117
Expenditures for Navy Depart- ment.....	5,604,785
Expenditures for interest on pub- lic debt.....	28,742,814

Total expenditures, exclusive of principal
of public debt.....\$105,152,470

Estimates were made by the Secretary of the Treasury of the receipts and expenditures of the remaining three-quarters of the same year—ending June 30, 1869—which were as follows:

From customs.....	\$125,000,000 00
From lands.....	1,000,000 00
From internal revenue.....	100,000,000 00
From miscellaneous sources.....	20,000,000 00
Receipts.....	\$246,000,000 00

And that the expenditures for the same pe-
riod, if there be no reduction of the army, will
be—

For the civil service.....	\$40,000,000 00
For pensions and Indians	18,000,000 00
For War Department, including \$6,000,000 bounties.....	66,000,000 00
For Navy Department.....	16,000,000 00
For interest on public debt.....	91,000,000 00

Expenditures\$231,000,000 00

Thus making an estimated surplus, under the
present laws, of \$15,000,000.

The increase of the public debt during the
year ending October 31, 1869, was \$85,625,202.
The expenditures which caused this increase
were of an extraordinary nature, and con-
sisted in part of \$24,152,000 advanced to
the Pacific Railroad, and \$7,200,000 paid for
the purchase of Alaska. Some other extraor-
dinary advances were made, which increased
the expenditures: thus, \$44,060,515 were paid
for bounties, and not less than \$4,000,000 for in-
terest on compound and seven and three-tenths

notes which had accrued prior to November
1, 1867. Excepting these unusual expendi-
tures, consisting of donations of public money
in the form of bounties and additional subsi-
dies to railroad companies, the receipts would
have exceeded the expenditures \$43,787,412.

During the period the amount of debt bear-
ing coin interest has increased \$712,393,459.
The change in the nature of the debt is shown
by the following details:

The public debt on the 1st day of November,
1867, amounted to \$2,491,504,450, and consist-
ed of the following items:

Debt bearing coin interest	\$1,773,110,991
Debt bearing currency interest.....	426,768,640
Matured debt not presented for payment...	18,227,538
Debt bearing no interest.....	402,885,677

Total.....\$2,620,502,846
Cash in the Treasury123,998,398

Amount of debt, less cash in the Treasury. \$2,491,504,450

On the first day of November, 1868, it
amounted to \$2,527,129,552, and consisted of
the following items:

Debt bearing coin interest....	\$2,107,577,950
Debt bearing currency interest	114,519,000
Matured debt not presented for payment...	9,753,723
Debt bearing no interest.....	400,151,898

Total.....\$2,641,000,572
Cash in the Treasury112,872,019

Amount of debt, less cash in the Treasury. \$2,527,129,552

Other causes existed to produce a dispro-
portionate relation between the receipts and
expenditures as compared with former years.
A large reduction of the internal taxes was
made at the session of Congress beginning
December, 1867, especially on manufactures.
On the other hand, large expenditures were
necessary to sustain the military operations on
the frontier and the forces stationed in the
Southern States. These considerations give
a very favorable aspect to the public debt.
The following table (see next page) gives a
statement of the indebtedness of the United
States on June 30, 1868.

Since the close of the war in 1865—a period
of three years and seven months—the receipts of
the Government from all sources have reached
the sum of \$1,662,496,062. Of this large sum
there were \$680,481,125 paid on debts which
were actually due at the close of the war, and
for bounties, which, like the pay of the army,
were a part of the expenses of the war. If
this amount is added to the debt as exhibited
by the books of the Treasury on April 1, 1865,
it appears that the debt of the Government
was at that time \$2,997,886,208, and that the
actual reduction has been \$470,256,650.

A further comparison of the facts presented
at different periods will serve to demonstrate
the tendency of the financial affairs of the
Government, and to illustrate the important
results which have been achieved. At the
close of the war in April, 1865, the cash in
the Treasury was \$56,481,924, while there
were requisitions waiting for payment to the
amount of \$114,256,548. In addition, there

STATEMENT OF THE INDEBTEDNESS OF THE UNITED STATES, JUNE 30, 1868.

TITLE.	Length of loan.	When redeemable.	Rate of interest.	Price of emission.	Amount author- ized.	Amount issued.	Amount out- standing.

were \$52,452,328 of temporary loan certificates edness issued to contractors, and maturing
liable to be presented in from ten to thirty daily. At this time the expenses of the army
days, and \$171,790,000 certificates of indebt- were \$2,000,000 daily, and the vouchers issued

by the Government to contractors for the necessary supplies of the army and navy were sold at a discount of from ten to twenty per cent. Under these circumstances the Treasury was relieved by a loan of nearly \$700,000,000 in seven and three-tenths notes. This relief, however, left the Government with \$1,296,834,123 of the public debt, consisting of various forms of temporary securities, \$438,160,569 of United States notes, and \$26,844,742 of fractional currency. Of this temporary debt, portions were maturing daily, and all of it, including \$18,415,000 of the funded debt, was to be provided for within a period of three years. The seven-thirty notes were, by law, and the terms of the loan, convertible at maturity, at the will of the holder, into five-twenty bonds, or payable, like the rest of these temporary obligations, in lawful money. Certificates of indebtedness were also maturing at the rate of from \$15,000,000 to \$20,000,000 per month; and in addition to the five per cent. notes which matured in January following, and the compound interest notes which were payable at various times within a period of three years, there were \$830,000,000 of seven-thirty notes, which would become due as follows:

August 15, 1867.....	\$800,000,000
June 15, 1868.....	800,000,000
July 15, 1868.....	230,000,000

The course pursued by the Department in this position of the debt is thus stated by the Secretary:

The policy of the Secretary was simply, first, to put and keep the Treasury in such condition as not only to be prepared to pay all claims upon presentation, but also to be strong enough to prevent the success of any combinations that might be formed to control its management; and second, to take up quietly, in advance of their maturity, by payment or conversion, such portions of the temporary debt as would obviate the necessity of accumulating large currency balances in the Treasury and at the same time relieve it from the danger of being forced to a further issue of legal-tender notes, or to a sale of bonds, at whatever price they might command. In carrying out this policy it seemed also to be the duty of the Secretary to have due regard to the interests of the people, and to prevent, as far as possible, the work of funding from disturbing legitimate business. As financial trouble has almost invariably followed closely upon the termination of protracted wars, it was generally feared, as has already been remarked, that such trouble would be unavoidable at the close of the great and expensive war in which the United States had been for four years engaged. This, of course, it was important to avoid, as its occurrence might not only render funding difficult, but might prostrate those great interests upon which the Government depended for its revenues. It was and constantly has been, therefore, the aim of the Secretary so to administer the Treasury, while borrowing money and funding the temporary obligations, as to prevent a commercial crisis, and to keep the business of the country as steady as was possible on the basis of an irredeemable and constantly fluctuating currency. Whether his efforts have contributed to this end or not he does not undertake to say, but the fact is unquestioned that a great war has been closed, large loans have been effected, heavy revenues have

been collected and some thirteen hundred millions of dollars of temporary obligations have been paid or funded, and a great debt brought into manageable shape, not only without a financial crisis, but without any disturbance to the ordinary business of the country. To accomplish these things successfully, the Secretary deemed it necessary, as has been before stated, that the Treasury should be kept constantly in a strong condition, with power to prevent the credit of the Government and the great interests of the people from being placed at the mercy of adverse influences. Notwithstanding the magnitude and character of the debt, this power the Treasury has for the last three years possessed; and it has been the well-known existence, rather than the exercise of it, which has in repeated instances saved the country from panic and disaster. The gold reserve, the maintenance of which has subjected the Secretary to constant and bitter criticism, has given a confidence to the holders of our securities, at home and abroad, by the constant evidence which it exhibited of the ability of the Government, without depending upon purchases in the market, to pay the interest upon the public debt, and a steadiness to trade, by preventing violent fluctuations in the convertible value of the currency, which have been a more than ample compensation to the country for any loss of interest that may have been sustained thereby. If the gold in the Treasury had been sold down to what was absolutely needed for the payment of the interest on the public debt, not only would the public credit have been endangered, but the currency; and, consequently, the entire business of the country would have been constantly subject to the dangerous power of speculative combinations.

One or two questions of importance in connection with the national debt were presented during the year, and attracted much attention. The first related to the currency in which the five-twenty bonds should be paid, whether in gold or in Government's notes (greenbacks). Those who advocated the payment of them in Government notes, urged that the five-twenty bonds were issued intentionally without any provision in the acts requiring payment in gold, except as to the interest, and with a reserved purpose that the Government should be free to avail itself of the privilege of redeeming them pending the suspension of specie payments; and that with this view, the bonds were made payable, at the option of the Government, on the expiration of five years from the date of issue, in whatever might then be the legal-tender money of the country. This option, it was argued, was provided against by the probable contingency that, after the conclusion of peace, the Government might have an opportunity of taking up its obligations in the same depreciated paper for which it issued them, and of renegotiating its loans under the circumstances of the improved credit resulting from the restoration of the national authority.

To counteract these views, the subject of specie payments was brought forward and extensively discussed both in Congress and by the public press. No decisive action was taken on either proposition during the year. The following are the acts of Congress authorizing the issue of five-twenty bonds and also all the acts of Congress authorizing the issue of bonds or notes:

Act Authorizing the 6's of 1861.

July 17, 1861—An act to authorize a national loan, and for other purposes.

Sec. 1. *Be it enacted, etc.*, That the Secretary of the Treasury be, and he is hereby, authorized to borrow, on the credit of the United States, within twelve months from the passage of this act, a sum not exceeding \$250,000,000, or so much thereof as he may deem necessary for the public service, for which he is authorized to issue coupon bonds, or registered bonds, or Treasury notes, in such proportions of each as he may deem advisable; the bonds to bear interest not exceeding seven per cent. per annum, payable semi-annually, irredeemable for twenty years, and after that period redeemable at the pleasure of the United States; and the Treasury notes to be of any denomination fixed by the Secretary of the Treasury, not less than \$50, and to be payable three years after date, with interest at the rate of seven and three-tenths per cent. per annum, payable semi-annually.

Act Authorizing the 5.20's.

February 25, 1862—An act to authorize the issue of United States notes, and for the redemption or funding thereof, and for funding the floating debt of the United States.

* * * * *

Sec. 2. That to enable the Secretary of the Treasury to fund the Treasury notes and floating debt of the United States, he is hereby authorized to issue, on the credit of the United States, coupon bonds, or registered bonds, to an amount not exceeding \$500,000,000, redeemable at the pleasure of the United States after five years, and payable twenty years from date, and bearing interest at the rate of six per cent. per annum, payable semi-annually. And the bonds herein authorized shall be of such denominations, not less than \$50, as may be determined upon by the Secretary of the Treasury. And the Secretary of the Treasury may dispose of such bonds at any time, at the market value thereof, for the coin of the United States, or for any of the Treasury notes that have been, or may hereafter be, issued under any former act of Congress, or for United States notes that may be issued under the provisions of this act; and all stocks, bonds, and other securities of the United States held by individuals, corporations, or associations, within the United States, shall be exempt from taxation by or under State authority.

Act creating a Sinking-Fund, etc.

Sec. 5. That all duties on imported goods shall be paid in coin, or in notes payable on demand, heretofore authorized to be issued, and by law receivable in payment of public dues, and the coin so paid shall be set apart as a special fund, and shall be applied as follows:

First. To the payment in coin of the interest on the bonds and notes of the United States.

Second. To the purchase or payment of one per centum of the entire debt of the United States, to be made within each fiscal year after the 1st day of July, 1862, which is to be set apart as a sinking fund, and the interest of which shall in like manner be applied to the purchase or payment of the public debt, as the Secretary of the Treasury shall from time to time direct.

Third. The residue thereof to be paid into the Treasury of the United States.

Act Authorizing the 10.40's.

March 3, 1864—An act supplementary to an act entitled "An act to provide ways and means for the support of the Government," approved March 3, 1863.

Sec. 1. *Be it enacted, etc.*, That in lieu of so much of the loan authorized by the act of March 3, 1863, to which this is supplementary, the Secretary of the Treasury is authorized to borrow, from time to time, on the credit of the United States, not exceeding

\$200,000,000, during the current fiscal year, and to prepare and issue therefor coupon or registered bonds of the United States, bearing date March 1, 1864, or any subsequent period, redeemable at the pleasure of the Government after any period not less than five years, and payable at any period not more than forty years from date, in coin, and of such denominations as may be found expedient, not less than \$50, bearing interest not exceeding six per centum a year, payable on bonds not over \$100 annually, and on all other bonds semi-annually in coin; and he may dispose of such bonds at any time, on such terms as he may deem most advisable, for lawful money of the United States, or, at his discretion, for Treasury notes, certificates of indebtedness, or certificates of deposit, issued under any act of Congress; and all bonds issued under this act shall be exempt from taxation by or under State or municipal authority. And the Secretary of the Treasury shall pay the necessary expenses of the preparation, issue, and disposal of such bonds out of any money in the Treasury not otherwise appropriated; but the amount so paid shall not exceed one-half of one per centum of the amount of the bonds so issued and disposed of.

Act Authorizing the Consolidated Loan of 1865.

March 3, 1865—An act to provide ways and means to support the Government.

Sec. 1. *Be it enacted, etc.*, That the Secretary of the Treasury be, and he is hereby, authorized to borrow, from time to time, on the credit of the United States, in addition to the amounts heretofore authorized, any sums not exceeding in the aggregate \$600,000,000, and to issue therefor bonds or Treasury notes of the United States, in such form as he may prescribe; and so much thereof as may be issued in bonds shall be of denominations not less than \$50, and may be made payable at any period not more than forty years from date of issue, or may be made redeemable, at the pleasure of the Government, at or after any period not less than five years nor more than forty years from date, or may be made redeemable and payable as aforesaid, as may be expressed upon their face; and so much thereof as may be issued in Treasury notes may be made convertible into any bonds authorized by this act, and may be of such denominations—not less than \$50—and bear such dates and be made redeemable or payable at such periods as in the opinion of the Secretary of the Treasury may be deemed expedient. And the interest on such bonds shall be payable semi-annually; and on Treasury notes authorized by this act the interest may be made payable semi-annually, or annually, or at maturity thereof; and the principal or interest, or both, may be made payable in coin or in other lawful money: *Provided*, That the rate of interest on any such bonds or Treasury notes, when payable in coin, shall not exceed six per cent. per annum; and when not payable in coin shall not exceed seven and three-tenths per cent. per annum; and the rate and character of interest shall be expressed on all such bonds or Treasury notes.

Act creating Legal Tenders.

February 25, 1862—An act to authorize the issue of United States notes and for the redemption or funding thereof, and for funding the floating debt of the United States.

Sec. 1. * * * *And provided further*, That the amount of the two kinds of notes together shall at no time exceed the sum of \$150,000,000, and such notes herein authorized shall be receivable in payment of all taxes, internal duties, excises, debts, and demands of every kind due to the United States, except duties on imports, and of all claims and demands against the United States of every kind whatsoever, except for interest upon bonds and notes, which shall be paid in coin, and shall also be lawful money and a legal tender in payment of all debts,

public and private, within the United States, except duties on imports and interest as aforesaid.

Act limiting the Amount of "Greenbacks."

June 30, 1864.—An act to provide ways and means for the support of the Government, and for other purposes.

SEC. 1. *Be it enacted, etc.*, That the Secretary of the Treasury be, and he is hereby, authorized to borrow, from time to time, on the credit of the United States, \$400,000,000, and to issue therefor coupon or registered bonds of the United States, redeemable at the pleasure of the Government, after any period not less than five, nor more than thirty years, or, if deemed expedient, made payable at any period not more than forty years from date. And said bonds shall be of such denominations as the Secretary of the Treasury shall direct, not less than fifty dollars, and bear an annual interest not exceeding six per centum, payable semi-annually in coin. And the Secretary of the Treasury may dispose of such bonds, or any part thereof, and of any bonds commonly known as five-twenties remaining unsold, in the United States, or, if he shall find it expedient, in Europe, at any time, on such terms as he may deem most advisable, for lawful money of the United States, or, at his discretion, for Treasury notes, certificates of indebtedness, or certificates of deposit issued under any act of Congress. And all bonds, Treasury notes, and other obligations of the United States, shall be exempt from taxation by or under State or municipal authority.

SEC. 2. That the Secretary of the Treasury may issue on the credit of the United States, and in lieu of an equal amount of bonds authorized by the preceding section, and as a part of said loan, not exceeding \$200,000,000 in Treasury notes, of any denomination not less than ten dollars, payable at any time not exceeding three years from date, or, if thought more expedient, redeemable at any time after three years from date, and bearing interest not exceeding the rate of seven and three-tenths per centum, payable in lawful money at maturity, or, at the discretion of the Secretary, semi-annually. And the said Treasury notes may be disposed of by the Secretary of the Treasury, on the best terms that can be obtained, for lawful money; and such of them as shall be made payable, principal and interest, at maturity, shall be a legal tender to the same extent as United States notes for their face value, excluding interest, and may be paid to any creditor of the United States at their face value, excluding interest, or to any creditor willing to receive them at par, including interest, and any Treasury notes issued under the authority of this act may be made convertible, at the discretion of the Secretary of the Treasury, into any bonds issued under the authority of this act. And the Secretary of the Treasury may redeem and cause to be cancelled and destroyed any Treasury notes or United States notes heretofore issued under authority of previous acts of Congress, and substitute, in lieu thereof, an equal amount of Treasury notes such as are authorized by this act, or of other United States notes: *Provided*, That the total amount of bonds and Treasury notes authorized by the first and second sections of this act shall not exceed \$400,000,000, in addition to the amounts heretofore issued; nor shall the total amount of United States notes, issued or to be issued, ever exceed \$400,000,000, and such additional sum, not exceeding \$50,000,000, as may be temporarily required for the redemption of temporary loan; nor shall any Treasury note bearing interest, issued under this act, be a legal tender in payment or redemption of any notes issued by any bank, banking association, or banker, calculated or intended to circulate as money.

The Funding Bill, July 25, 1868.

An act providing for payment of the national debt, and for the reduction of the rate of interest thereon.

Be it enacted, etc., That the Secretary of the Treas-

ury is hereby authorized to issue coupon or registered bonds of the United States, in such form as he may prescribe, and of denominations of one hundred dollars, or any multiple of that sum, redeemable in coin at the pleasure of the United States after thirty and forty years, respectively, and bearing the following rates of yearly interest, payable semi-annually in coin, that is to say: The issue of bonds falling due in thirty years shall bear interest at four and a half per centum; and bonds falling due in forty years shall bear interest at four per centum; which said bonds and the interest thereon shall be exempt from the payment of all taxes or duties to the United States, other than such income tax as may be assessed on other incomes, as well as from taxation in any form by or under State, municipal, or local authority, and the said bonds shall be exclusively used, par for par, for the redemption of or in exchange for an equal amount of any of the present outstanding bonds of the United States known as the five-twenty bonds, and may be issued to an amount, in the aggregate, sufficient to cover the principal of all such five-twenty bonds, and no more.

SEC. 2. That there is hereby appropriated out of the duties derived from imported goods the sum of one hundred and thirty-five millions of dollars annually, which sum, during each fiscal year, shall be applied to the payment of the interest and to the reduction of the principal of the public debt in such a manner as may be determined by the Secretary of the Treasury, or as Congress may hereafter direct; and such reduction shall be in lieu of the sinking fund contemplated by the fifth section of the act entitled "An act to authorize the issue of United States notes, and for the redemption or funding thereof, and for funding the floating debt of the United States," approved February twenty-fifth, eighteen hundred and sixty-two.

SEC. 3. That from and after the passage of this act no percentage, deduction, commission, or compensation of any amount or kind shall be allowed to any person for the sale, negotiation, redemption, or exchange of any bonds or securities of the United States, or of any coin or bullion disposed of at the Treasury Department or elsewhere on account of the United States; and all acts or parts of acts authorizing or permitting, by construction or otherwise, the Secretary of the Treasury to appoint any agent, other than some proper officer of his department, to make such sale, negotiation, redemption, or exchange of bonds and securities, are hereby repealed.

Another proposition, which received some favorable consideration, was to postpone the payment of any part of the principal of the public debt until the national resources should be so increased as to make the payment more easy.

The opinion has heretofore been steadily maintained by the Treasury Department, that a reduction of the paper circulation of the country until it appreciated to the specie standard was the true way out of the financial embarrassments of the country. This policy was decidedly condemned by Congress, and an act passed limiting the amount of reduction which might be made. It is now, therefore, abandoned by the Department, which recommends as the next best step that coin contracts should be legalized. At present* the courts will not enforce contracts or agreements made for the payment of coin. In all the States except California, coin contracts made before the passage of the legal-tender acts, as well as those

* The legality of coin contracts was sustained by a decision of the Supreme Court in February, 1869.

executed since, are satisfied by the payment of the amount called for in depreciated notes. "Perhaps," says the Secretary, "no law could be passed which would be productive of better results, with so little private or public inconvenience, as an act legalizing specific contracts to be executed in coin." In his opinion it would check the outflow of specie to other countries by creating a necessity for the use of it at home; it would encourage enterprises extending into the future, by removing all uncertainty in regard to the value of the currency with which they are to be carried on. It would also remove a formidable embarrassment in the foreign trade of the country, and familiarize the people again with specie as the standard of value, and show how groundless is the apprehension so generally existing, that a withdrawal of depreciated notes, or the appreciation of these notes to par, would produce a scarcity of money, by proving that specie, expelled from the country by an inferior circulating medium, will return again when it is made the basis of contracts, and is needed in their performance. The Secretary also recommended that it be declared that after January 1, 1870, United States notes shall cease to be a legal tender on any contract, or for any purpose whatever, except Government dues, for which they are at present receivable. The act making this declaration should also authorize the conversion of these notes at the pleasure of the holders into bonds of the same rate of interest with other funded bonds. The amount of Government notes outstanding has been as follows:

	November, 1867.	November, 1868.
U. S. Notes	\$357,164,844	\$356,021,078
Fractional Currency	80,706,638	88,418,985
	<u>\$387,871,477</u>	<u>\$389,435,058</u>

The circulation of the national banks has been as follows: October, 1867, \$308,988,971; October, 1868, \$295,684,244. Thus the total circulation of legal tenders, fractional currency, and national banks, was \$685,118,302, being \$6,742,146 less than at the same period of the previous year.

The existence of such a large amount of irredeemable paper money in the country has produced two classes of unfavorable consequences: One, affecting the business and the morals of the people, has been heretofore noticed. The other, comprising the commercial relations of the United States to other countries, is too important to be overlooked. This is so well presented by the Secretary of the Treasury in his annual report as to be very appropriately inserted here. He says:

The receipts from customs for the last three years have been as follows:

For the fiscal year ending June 30, 1866....	\$179,046,651
" " " " 1867....	176,417,810
" " " " 1868....	164,464,599

While it appears from these figures that the customs receipts since the commencement of the fiscal year 1865 have been, in a revenue point of view, entirely satisfactory, the question naturally arises, what

do these large receipts, under a high tariff, indicate in regard to our foreign trade and to our financial relations with foreign nations?

It is impossible to ascertain with precision the amount of our securities held in Europe, nor is there any perfectly reliable data for ascertaining, even, what amount has gone there annually since the first bonds were issued for the prosecution of the late war. In his report of 1866 the Secretary estimated the amount of United States securities of different kinds, including railroad and other stock, held in Europe, at \$600,000,000. He soon after became satisfied that this estimate was too low by from one hundred to one hundred and fifty millions. It would be safe to put the amount so held at the present time, exclusive of stocks, at \$850,000,000, of which not less than \$600,000,000 are United States bonds, nearly all of which have left the United States within the last six years. The amount is formidable, and little satisfaction is derived from the consideration that these securities have been transferred in payment of interest and for foreign commodities, and just as little from the consideration that probably not over \$500,000,000 in gold values have been received for these \$850,000,000 of debt. In this estimate of our foreign indebtedness railroad and other stocks are not included, as they are not a debt, but the evidence merely of the ownership of property in the United States. Fortunately, for some years past, individual credits have been curtailed, and our foreign and domestic trade, in this particular, has not been unsatisfactory. In addition, then, to the stocks referred to and the individual indebtedness, of the amount of which no accurate estimate can be made, Europe holds not less than \$850,000,000 of American securities, on nearly all of which interest, and on the greater part of which interest in gold, is being paid. Nor, under the present revenue systems and with a depreciated paper currency, is the increase of our foreign debt likely to be stayed. With an abundant harvest and a large surplus of agricultural products of all descriptions, United States bonds are still creating, to no small extent, the exchange with which our foreign balances are being adjusted. We are even now increasing our debt to Europe at the rate of \$60,000,000 or \$70,000,000 per annum in the form of gold-bearing bonds.

The gold and silver product of California and the Territories, since 1848, has been upward of \$1,300,000,000. Allowing that \$100,000,000 have been used in manufactures and that the coin in the country has been increased to an equal amount, the balance of this immense sum—\$1,100,000,000—has gone to other countries in exchange for their productions. Within a period of twenty years, in addition to our agricultural products and to our manufactures which have been exported in large quantities, we have parted with \$1,100,000,000 of the precious metals; and are, nevertheless, confronted with a foreign debt of some \$850,000,000, which is steadily increasing; and all this has occurred under tariffs in a good degree framed with a view of protecting American against foreign manufacturers. But this is not all. During the recent war most of our vessels engaged in the foreign trade were either destroyed by rebel cruisers or transferred to foreigners. Our exports as well as our imports are now chiefly in foreign bottoms. The carrying trade between the United States and Europe is almost literally in the hands of Europeans. Were it not for the remnant of ships still employed in the China trade, and the stand we are making by the establishment of a line of steamers on the Pacific, the coastwise trade, which is retained by the exclusion of foreign competition, would seem to be about all that can, under existing legislation, be relied upon for the employment of American shipping.

There are many intelligent persons who entertain the opinion that the country has been benefited by the transfer of our bonds to Europe, on the ground

that capital has been received in exchange for them, which has been profitably employed in the development of our national resources; and that it matters little whether the interest upon the debt is received by our own people or by the people of other countries. This opinion is the result of misapprehension of facts, and is unsound in principle. It is not to a large extent true that capital, which is being used in developing the national resources, has been received in exchange for the bonds which are held in Europe. While many articles, such as railroad iron, machinery, and raw materials, used in manufacturing—the value of which to the country is acknowledged—have been so received, a large proportion of the receipts have been of a different description. Our bonds have been largely paid for in articles for which no nation can afford to run in debt—for articles which have neither stimulated industry nor increased the productive power of the country, which have in fact added nothing to the national wealth. A reference to the custom-house entries will substantiate the correctness of these statements. Two-thirds of the importations of the United States consist of articles which, in economical times, would be pronounced luxuries. The war and a redundant currency have brought about unexampled extravagance, which can only be satisfied by the most costly products of foreign countries. No exception could be taken to such importations if they were paid for in our own productions. This, unfortunately, is not the fact. They are annually swelling our foreign debt without increasing our ability to pay it. How disastrous such a course of trade, if long continued, must be, it requires no spirit of prophecy to predict.

The state of the country, like the circumstances of a debtor, becomes a subject of the first consideration in estimating the future. Many circumstances of a favorable aspect have appeared since the close of the war. The foreign immigration since July 1, 1865, had reached about the number of a million at the end of 1868. Their indirect value, estimated at half the value of a laborer at the South before the war, would be \$500,000,000. To this should be added \$80,000,000 as the amount of money brought into the country by immigrants, which generally averages \$80 per head.

The increase in the products of domestic industry has been equally favorable. The number of cotton spindles, which at the close of the war was about 5,235,727, has increased, as shown by recent returns, to 7,000,000. This is a gain of 31.78 per cent. The increase in the woollen manufacture of Ohio, Indiana, Michigan, Illinois, Wisconsin, Iowa, and Minnesota, since 1860, has been \$3,831,260 in the amount of capital invested, and 700 in the sets of machinery. The increase in the annual product of pig-iron has been as follows:

Tons.

1864.....	1,185,497	
1866.....	1,351,143	9.50 per cent.
1867.....	1,447,771	7.16 per cent.
1868 (estimated).....	1,550,000	7.06 per cent.

The product of copper, chiefly from the mines of Lake Superior, which in 1860 was 6,000 tons, had increased in 1865 to 10,790; in 1866 to 10,375; and in 1867 to 10,735.

The export of petroleum, being about 30,000,000 gallons in 1865, increased in 1867 to 57,052,020; and in 1868 to 97,179,919 gallons.

The increase in the production of anthracite

coal, which may be taken as a measure of the product of all American coal, has been from 7,499,550 tons in 1862, to 12,879,490 tons in 1866; 12,650,571 in 1867; and 13,500,000 tons in 1868.

There has also been a continued increase of the agricultural products of the country, which is not less important. The crop of Indian corn is estimated to increase at an average of three and a half per cent. per annum, which would make the crop of 1868 amount to 1,100,000,000 bushels, and would net, if sold at 46 cents per bushel, over \$500,000,000.

The cotton crop of the Southern States has been, since the close of the war, as follows: 1865-'66, 2,154,476 bales; 1866-'67, 1,954,988 bales; 1867-'68, 2,498,895 bales; 1868-'69, estimated at 2,700,000 bales.

The crop of tobacco increased from 188,816,953 pounds in 1865, to 325,000,000 pounds in 1866, and to 250,000,000 in 1867.

The number of miles of railroad extension since the close of the war has been nearly 8,000. The tonnage of merchandise transported is estimated to have increased from 6,000,000 in 1851, to 48,000,000 in 1867, which is a rate of increase during this period of 800 per cent. The annual value of the tonnage thus moved is increased from \$486,816,505 in 1858, to \$1,728,380,207 in 1867.

An evidence of the prosperity of the country appears in the reduction made in State debts incurred by the war, during the year. Thus the debt of New Hampshire was reduced 6.9 per cent.; Vermont, 16.2 per cent.; Rhode Island, 13.7 per cent.; Connecticut, 3.4 per cent.; Kentucky, 21 per cent.; Ohio, 4.5 per cent.; Michigan, 6.4 per cent.; Indiana, 23 per cent.; Illinois in 1867-'68, 30.5 per cent.; New York, 12 per cent.

Although there exists this apparent prosperity in all the branches of industry since the close of the war, and there is clearly a great increase in the resources of the country, yet the peculiar fact appears that there is hardly a single domestic article or product, agricultural or manufactured, in behalf of which the claim, either directly or indirectly, has not been made within the last two years, that the same could be produced to greater advantage or profit in some other country than the United States. An increased protection, under the form of a tariff, has been demanded for oil painting, rough building-stone, Indian corn, firewood, bibles, and ice. For the last, the protection asked for was to the extent of 15 per cent. in gold. The consequence is thus represented to be, that the United States is unable to exchange its products on terms of equality with those of any other country, except its product of precious metals.

This unusual condition of affairs is brought to the notice of the public by the special Commissioner of Revenue. It is ascribed by him as beyond a question due "to the greatly increased cost of nearly all forms of labor and

commodities, as compared with the price for the same which prevailed previous to the war." This increased cost is further considered as due to three agencies growing out of the war, viz.: irredeemable paper currency; unequal and heavy taxation; and a limited supply of skilled labor. The influence of an irredeemable paper currency to increase the cost of manufactures is thus forcibly illustrated by the commissioner, David A. Wells:

The statement is furnished to the commissioner by a manufacturer of furniture in one of the Middle States, who, previous to the war, had built up an extensive export business to the West Indies, Central and South America, of a variety of "cane-seated" and "cane-backed" furniture suited to warm latitudes.

Thus on the 1st of March, 1861, gold and currency being at par, \$1,000 in gold possessed a purchasing power sufficient to obtain for the South American importer 111½ dozen of what are termed in the trade "ordinary square-post cane-seat chairs." About the 1st of January, 1862, gold began to demand a premium, and advanced during the next three years with great rapidity. This movement was not, however, participated in at first, to any considerable extent, by either labor or commodities, and in consequence the purchasing power of gold greatly increased; so much so that on the 1st of July, 1864, the \$1,000 gold, which in 1861 bought 111½ dozen chairs, then bought 148 dozen. Under these circumstances, as was to be expected, trade increased, as the foreign purchaser found the American market by far the best for his interest; but from July, 1864, a movement commenced in an exactly opposite direction, gold receding and labor and commodities advancing in very unequal ratios. Thus in January, 1865, the \$1,000 gold, which four years previous had a purchasing power of 111½ dozen chairs, and on the 1st of July, 1864, of 148 dozen, then commanded but 126½ dozen; in February, 1866, a still smaller number, viz., 91½ dozen, and ultimately attained its minimum in January, 1867, when the purchasing power of the sum named was only 89½ dozen. From this point the purchasing power has gradually increased, and for the past year, 1868, has remained at the rate of about 102 dozen, or nine dozen less than could be bought with the same money in 1861.

The result has been that the foreign purchaser now goes to France or Germany; while the products of American industry, in the form of furniture, being no longer available to exchange for sugars, spices, or dyewoods, gold has necessarily been substituted; and, to use the words of the manufacturer describing his condition, "unless there is a speedy return to specie payments, custom will soon so fix the channels and currents of trade that any attempt on my part to divert them will be attended with great difficulty;" and what has thus been shown to be the case in respect to the export trade of the United States in furniture, may be accepted as true of almost every other manufactured product, which, as a nation, we were accustomed, before the war, to exchange for foreign commodities.

So far as regards the fluctuation of prices, investigations appear to have established the fact that up to the commencement of the year 1867 the general effect of the agencies growing out of the war had been to occasion an average advance in the price of commodities to the extent of about 90 per cent., while the corresponding average advance in wages was not in excess of 60 per cent. Later investigations, as to the year 1867, in the Eastern, Middle, and some of the Western States, respecting the increase of prices since 1860-'61, have shown that the ad-

vance in the price of groceries and provisions was, on an average, a little in excess of 86 per cent.; of domestic dry-goods, including clothing, 86½ per cent.; of fuel, 57 per cent.; of house-rent, 65 per cent. in the Eastern States, and 90 to 100 per cent. in New York, Newark, Philadelphia, and Pittsburg. The average increase of all the elements which constitute the food, clothing, and shelter of a family during the year 1867 and the first half of the year 1868 has been about 78 per cent. as compared with the standard prices of 1860-'61.

A comparison of the increase of wages for the same period shows it to have been 50 per cent. for unskilled mechanical labor, and 60 per cent. for skilled mechanical labor. The average aggregate weekly earnings in 1867 of families of various sizes in different parts of the country, one or more members of each of which were employed in some branch of manufacturing industry, their average weekly expenditure for provisions, fuel, house-rent, etc., and the balance remaining to them over and above such expenditure, available either for accumulation and capital or for the purchase of clothing or articles of enjoyment, are presented in the following statement, prepared by the commissioner from indisputable data:

SIZE OF FAMILIES.	Average weekly expenditures for provisions, house-rent, etc.		Average weekly earnings.	Surplus for clothing, housekeeping, etc.
	1867.	1860.		
Parents and one child.....	\$10 24	\$17 00	\$6 76	
Three adults.....	8 35	17 52	9 17	
Parents and two children.....	12 26	18 75	6 49	
Parents and three children.....	15 02	19 50	4 48	
Parents and four children.....	17 79	23 33	5 54	
Parents and five children.....	15 23	17 11	1 88	
Parents and six children.....	11 67	13 50	1 83	
Parents and seven children.....	23 73	25 00	1 27	
General average of the above..	14 29	18 96	4 67	

The average weekly expenditures of families of varying numbers in the manufacturing towns of the country for the years 1860 and 1867 respectively are shown in the following statement, founded upon data gathered from the same sources as the preceding statement. It serves to show whether the large increase in wages has brought any real net gain to those employed in manufacturing establishments:

SIZE OF FAMILIES.	Average weekly earnings.		Average weekly expenditures for provisions, house-rent, clothing, etc.		Surplus in 1860.
	In 1867.	In 1860.	In 1867.	In 1860.	
Parents and one child...	\$17 00	\$12 17	\$17 00	\$9 96	\$2 21
Three adults.....	17 52	12 00	17 52	10 31	1 69
Parents and two children	18 75	11 50	18 75	10 79	71
Parents and three children.....	19 50	12 41	19 50	11 33	1 06
Parents and four children.....	23 33	14 15	23 33	13 18	97
Parents and five children	17 11	10 87	17 11	9 46	91
Parents and six children	13 50	9 50	13 50	7 67	1 83
Parents and seven children.....	25 00	15 17	25 00	14 09	1 08
General average of the above.....	18 96	12 16	18 96	10 85	1 31

For the purposes of comparison it is assumed that the general average weekly wages obtained in 1867 (viz., \$18.96) were entirely expended, and in the following proportions: \$14.29 for provisions, meat, fuel, etc., and the balance (\$4.67) for clothing, domestic dry-goods, housekeeping articles, etc. The same quantities and qualities of provisions, groceries, clothing, rent, fuel, and housekeeping articles could have been obtained in 1860-'61 for the respective sums indicated in the adjoining column. This shows an average weekly cost of \$10.85 in 1860, as compared with \$18.96 in 1867, and leaving a balance in the former year of \$1.31 (gold) per week in favor of the operative, as against no accruing surplus whatever in 1867-'68. From these facts, which are drawn from a wide field of details, the commissioner concludes that the condition of the working men and women, in a majority of the manufacturing towns of the United States is not as good at this time as it was previous to the war, notwithstanding that their wages are greater, measured in gold, in 1867-'68 than they were in 1860-'61. Most of the persons above referred to were skilled workmen, receiving an advance in wages of about 52 per cent. in 1867 as compared with the amount received in 1860. If their condition has not improved, the condition of the large class of unskilled workmen, such as day-laborers, teamsters, watchmen, and the like, is even worse.

A comparison of a large number of returns from the proprietors or superintendents of furnaces, mills, founderies, and factories of every description, in almost all sections of the country, establishes the fact that the average weekly wages of laborers and other unskilled workmen for the years 1860-'61 and 1867-'68 respectively were as follows. The effect is manifestly shown in the following table of the average weekly expenditures of laboring-men in various manufacturing establishments in those periods:

ARTICLES.	1867-'68.	1860-'61.
Flour and bread.....	\$1 40	\$0 74
Meat of all kinds	1 50	81
Butter	45	24
Sugar and molasses	50	27
Tea.....	87	19
Coffee.....	10	5
Soap, starch, etc.....	22	14.
Lard.....	18	12
Milk.....	32	20
Eggs.....	20	12
Salt and spices.....	5	8
Potatoes and other vegetables.....	50	29
Fruits, fresh and dried.....	10	7
Coal, wood, etc.....	50	32
Oil, or other light.....	8	10
Other articles.....	82	51
House-rent	1 25	75
Clothing, housekeeping goods, etc..	1 00	57
	<hr/>	<hr/>
Weekly wages.....	\$9 54	\$5 52
	9 54	6 04
Excess in 1861.....		52

This shows an available surplus of 52 cents per week in 1860-'61.

If flour is made the basis of the comparison, the result is, that the wages which in 1860 purchased one and a half barrels of flour, now pay for about one and a quarter barrels; that is, the workman is not as well off in 1867 as he was in 1861, by at least 20 per cent.

The conclusion drawn from these facts, with many others of a similar character, is, that the purchasing power of the irredeemable paper money of the country is not nearly equal to what it was in the immediate years before the war, and that the working men and women of the country do not receive as much in return for their labor as before the war. Although the aggregate wealth of the country is increasing as rapidly as at any former period, yet it does not follow that there is the same increase in the general prosperity.

The system of direct taxation, adopted during the war, has been greatly modified since its close. Within the last three years, all taxes which discriminated against prudence and economy, as the taxes on repairs; against knowledge, as the taxes upon books, paper, and printing; against capital and thrift, as the differential income tax; against the transportation of freights by boats or vehicles, and against the great leading raw materials, as coal and pig-iron, cotton, sugar, and petroleum, have been swept from the statute-book. Nor are any direct taxes now imposed upon any manufactured product, with the exception of distilled spirit, fermented liquors, tobacco, gas, patent medicines, perfumery, cosmetics, and playing-cards, all of which may be regarded in the light of luxuries. These changes, by which an annual revenue of at least \$170,000,000 has been relinquished, have brought no permanent detriment to the Treasury. With some further changes the entire system of internal revenue would become subordinate to the more important end of creating national wealth, and present no direct obstacle, whatever, on the part of the Government, to prevent the domestic producer from placing his product upon the market at the lowest possible cost. These changes should embrace the taxes levied upon telegraph and express companies; upon the gross receipts of railroads, steamboats, and other common carriers for the transportation of passengers; and the percentage taxes on sales of merchandise.

The basis of the present indirect taxation, or the tariff, is found in the act of March 2, 1861, which virtually repealed all former duties by imposing 10 per cent. on all raw or unmanufactured articles imported, and 20 per cent. on all articles manufactured, in whole or in part, and not enumerated in said act. There have subsequently been eleven amendments, essentially affecting rates of duty. So that the rate of duty imposed by the present tariff, on the invoice value in gold of the dutiable goods imported, has averaged for the last three years

about 48 per cent. If to these rates, freights, insurance, and commissions be added, the average of duties will be still further increased from 10 to 15 per cent. Subsequent to the increase of the tariff in 1861, the demand for revenue, arising from the necessities of the war, caused the adoption of an all-pervading system of internal taxation. To prevent the increase of the tariff from being neutralized by taxes levied on the products of domestic industry, it became necessary to increase correspondingly the rates of duty levied on the importation of competing products. This was chiefly effected in the acts of June, 1864, and March, 1865. Since July, 1866, the internal taxes on all domestic products with few exceptions have been substantially removed, without any corresponding change in the tariff. The effect of this action has been to increase gradually, and as it were insensibly, the percentage of the tariff, to an average of 5 per cent. for domestic products excepting some articles, such as liquors, upon which the increase is equivalent to 40 per cent. These extreme rates, higher than ever existed before in this country, or in any civilized nation in modern times, fail, however, in a great degree to check importations, or to give that degree of protection to nearly all branches of domestic industry which they have claimed as their due.

These results are ascribed to the toleration and use of an inconvertible paper currency, and to an indiscriminate and injudicious increase of duties. The effect of legislation subsequent to the war has been to make revenue subordinate to protection. The rule adopted would seem to be "the assumption, that whatever rate of duty could be shown to be for the advantage of any interest, the same would prove equally advantageous to the interests of the whole country."

Such are some of the causes which are supposed to interfere with the rapid development of the country. The question, therefore, presented to the Government, relates to the policy of legislation likely to prove hereafter most advantageous to the revenue, and most certain to establish the credit and industry of the whole country on a sound and substantial basis. Three ends were considered as necessary to be attained: First, the full restoration of the national credit, and resumption of specie payments; second, the refunding of the national debt at a lower rate of interest; third, the reduction of the cost of national production, with a view of enabling the products of American industry to compete on terms of greater equality with the products of foreign nations than is now possible. The mode and facilities for reaching these results are discussed at length by the commissioner. An estimate is made, by which it is shown that, under a proper management of the finances, an available surplus of \$100,000,000 to \$150,000,000 can be had at the close of the next fiscal year. If one-half of such surplus, or from two to two

and a half per cent. on the whole debt, were applied regularly, month after month, and year after year, to purchase in the open market, and to the cancellation of the gold-interest-bearing obligations of the Government, so long as those obligations can be obtained at a discount from their par value in gold; and if, at the same time, the legal-tender notes were, under certain restrictions, as to time and quantity, made convertible, at the pleasure of the holder, into interest-bearing bonds, the value of both bonds and currency might be so greatly and so rapidly enhanced as to make a resumption of specie payments a matter of less difficulty than it appears to be.

After the national bonds and the legal-tender notes have once been brought to par with gold, and the national credit thus fully restored, the gradual refunding of the debt at a lower rate of interest becomes then, for the first time, really practicable.

If a portion of this anticipated surplus is applied to the reduction of taxation, the effect would be a reduction of the cost of national production if this subject is kept in view. This result would remove those impediments which so greatly restrict, and in many instances prevent, the free exchange of the products of American industry with the needed products of other nations. That is, the application of the proposed reduction of taxation should be made so as to remove obstacles in the way of the domestic producer reaching his market.

Such is a general aspect of the financial affairs of the country. Whether such changes as are consistent with the views of the executive officers of the country shall be adopted remains to be seen. Those questions which have engrossed the attention of the Government and people before all others are rapidly losing their importance, and making way for others of a financial and commercial character.

The total value of the bullion deposited at the mint and branches during the last fiscal year was \$27,166,818, of which \$25,472,894 was in gold, and \$1,693,428 in silver.

The coinage for the year was in gold coin, \$18,114,425; gold bars, \$6,026,810; silver coin, \$1,136,750; silver bars, \$456,286; one, two, three, and five cent pieces, \$1,713,385; total, \$20,964,560. A new mint has been completed at Carson City, Nevada.

The subsequent tables, for which we are indebted to that valuable monthly, *Hunt's Merchants' Magazine*, conducted by Mr. William B. Dana, show the prices of merchandise; the movement of treasure at New York; the course of the New York Stock Exchange in 1868; the daily price of gold, and the monthly range of Government securities.

In the table which follows, a comparison is made of the prices of the principal articles of commerce in the New York market about the first of January in the past eight years:

The fluctuations in the preceding table are such as always appear during the existence of a paper currency, issuable by a large number of private institutions. The question of a resumption of specie payments is discussed in a very practical manner by a correspondent (George Walker) of the Commissioner of Internal Revenue, of which the following is an extract:

If I am right in believing that the truest economy would consist in using only the precious metals (with some form of circulating paper, like gold notes, for convenience of handling and transmission), the time for making so considerable a change in the habits of the country is not yet come. Any such change must be gradual, and it must be made with due regard to rooted opinions, as well as vested interests. We have a good way yet to travel before we get back to specie payments; and still another stage to arrive at the more solid ground occupied by European nations. When we have reached that point, we can

take counsel together, and see if the time has not come for trading at home as we always trade with other nations, on the basis of real money.

To get back to specie payments is the first object, and I know no other way of doing it than by the way once attempted and afterward suspended, namely, by the painful process of contraction. It is useless to talk of growing up to the dimensions of the present circulation. Taking bank-notes, legal tenders, and fractional currency together, the outstanding amount in the hands of the people is in the neighborhood of \$585,000,000. In the face of all past experience of this and other countries, what possible justification can there be for such an increase of paper money over the figures of 1860? If left to the operations of natural laws, would the circulation have attained any such limits? Most certainly it would not; and the moment the touchstone of specie redemptions is applied to it, the volume of paper money will shrink to its natural proportions. To wait till we need so much circulating money would be to wait for years—an indefinite period; on the other hand, to force a resumption of specie payments, with so much paper afloat, would cause such a sud-

den fall of prices as would inevitably lead to a crisis, and involve the ruin of many innocent persons. The only method left is to contract the circulation preparatory to redeeming it, to require beforehand a certain accumulation of specie in the banks, and I incline to believe also, to make the redemption partial to begin with. This might be done by redeeming at first only notes of certain dates or denominations, or by redeeming in gold, estimated at a higher price than par, as was done in England in 1820.

Contraction is not an agreeable process, for it involves a fall of prices; and as such a fall is never equal, some property and some people will suffer more than others. But so it was in the war, when the unavoidable losses and burdens to the nation were most unequally distributed among individuals. The restoration of a sound currency is one of the duties resulting from the war; it is a tax we have got to pay, and it cannot be adjusted with exact equality. The burden of contraction cannot, however, at its worst, fall as unequally upon the people as the burden of a depreciated currency. With a depreciated money and a fluctuating standard of value, the condition of industry can never be healthy. Values are all unsettled, and the fluctuations sudden and violent; both labor and capital have irregular employment, and there is a feverish habit imparted to all industries. So inseparable are these incidents from a depreciated currency, that if the national debt could be paid off to-morrow by an issue of legal-tender notes, and there were no considerations of good faith or national integrity involved in the question, it would be a most disastrous measure to the country, crippling its business to a degree far more burdensome, in the present and in the future, than honest payment, according to the intention of the contract. If there is to be any repudiation, let it be by a square refusal to pay the bonds, principal and interest, as well as the notes, to be followed by a repeal of the legal-tender act. Large numbers of people would doubtless be ruined, and the national credit destroyed; but not more surely than by the greenback method of repudiation, which adds the vice of hypocrisy to the crime of dishonesty; while, on the other hand, the private business of the country, after the first violent shock, would be gradually resumed on a solid basis.

The heaviest burden of depreciated money falls upon the poor. As you have shown in your annual reports, and as all the evidence still goes to demonstrate, the laboring man is the heaviest tax-payer under our existing currency system. All the elements of his living have risen fully 20 per cent. above the rise in his wages. What capitalist has to suffer so severely as this? And it is not to be forgotten that the capitalist, because he is a capitalist, pays his taxes out of his abundance—the laborer out of his living. It is one of the worst features of a debased money that it widens the space between the rich and the poor; to those that have it gives more, and to those that have not it takes away even what they have.

Treasure Movement at New York, for 1868, and for the last Ten Years.—The following statement of the movement of treasure at New York shows the amounts received from California, foreign ports, and the interior, and the amounts shipped to foreign ports and to the interior monthly and yearly for the year ending December 31, 1868; also, a recapitulation of the same for the last ten years; also, the amount in banks and the Sub-Treasury at the commencement and close of each month:

MONTHS, ETC.	ACCESSIONS OF TREASURE DURING MONTHS, ETC.					Total Supply of Treasure for Months, etc.	TREASURE WITHDRAWN FROM MARKET.			
	Treasure in Banks and Sub-Treasury on 1st of Month.	Received from Call- forals.	Imported from For- eign Ports.	From all other Sources and Hoards.	Aggregate Acces- sions.		Exported to Foreign Ports.	Returned Inland and to Hoards.	Aggregate with- drawn.	Treasure in Banks and Sub-Treasury on last of Month.

FLORIDA. In this State, more perhaps than elsewhere in the South, the principal business that engaged the people during the year 1868 was the moulding of the new organic law, as required by the reconstruction acts of Congress, as a condition for readmission within the Union, and participation, through their representatives, in the administration of the Federal Government. The contest thus raised was even pushed to the last extremities, and appears not to have ended with the close of the year; though Florida had been actually recognized as a State in the Union since the month of June. It seems worthy of notice that

this conflict was from the beginning, and is still carried on, not so much between opposite parties, as between the members of that party which favored reconstruction, and was the dominant political power in the State.

Shortly before the end of the year 1867, a general election having been held, and delegates chosen to meet in a convention for the purpose of framing a new State constitution, to be then submitted to the people for their ratification or rejection, General Pope, commander at the time of the Third Military District, in which the State of Florida was comprised, issued an order dated December 28,

1867, calling by name the delegates returned in the lists of said election, and enjoining them to assemble in that capacity at Tallahassee, on January 20, 1868.

Ten days before the 20th, however, a lengthy remonstrance, signed by a number of prominent citizens of Florida, was laid before General Meade, who had succeeded General Pope in that command, stating that his predecessor, by whose order the said election was conducted and closed, had prescribed for it a mode of apportioning representation which was in direct and open violation of that prescribed by Congress in the reconstruction acts themselves; besides that, both in the registration of voters, and in the voting, manifest frauds had been practised to a large extent. On these grounds, which rendered the election null in its beginning as well as in its process and final result, the petitioners "invoked his interposition to stay the assembling of said delegates in their capacity of a Constitutional Convention," as "with the universal conviction prevailing that frauds were committed in the registration and in the election—that the vote on the question of a convention was actually against it—and that the law of Congress was unquestionably and clearly departed from in apportioning representation,—the people can regard it in no other light than as an illegal body." The correspondence hereupon reported in the public papers of January 21 and 28, 1868, makes it appear that General Meade, considering the importance of the facts stated, and the gravity of the matter, applied to the army headquarters at Washington for instructions concerning a postponement of the day appointed for the meeting of said convention, and that, the answer from Washington having left the matter to his own discretion, he replied to the petitioners "that he had no authority to undo what had been done," and so the thing was allowed to take its course. Complaints having been made to the district headquarters of criminal acts frequently perpetrated, and information given by competent persons that the civil authorities took no proper steps for proceeding against the offenders to bring them to trial and condign punishment if found guilty, General Meade, intending to sustain the power of the State courts in cases pertaining to them, and being determined at the same time to comply with his own duty, to see justice rightly administered within the district under his command, if they failed to perform theirs, issued on January 15th the following order:

General Orders, No. 10.

HEADQUARTERS THIRD MILITARY DISTRICT }
DEPARTMENT OF GEORGIA, FLORIDA, AND ALABAMA, }
ATLANTA, GA., January 15, 1868.

The frequency of reported outrages, and the accompanying expression of opinion of subordinate officers, that no justice is to be expected from the civil authorities, require notice and action on the part of the major-general commanding.

I. The commanding general desires it to be understood that the trial and punishment of criminals

is to be left to the civil authorities, so long as the said authorities are energetic, active, and do justice to the rights of person and property without distinction of race or color. Whenever the major-general commanding is satisfied from evidence produced that the civil authorities fail to do their duty—then prompt action will be taken by him both for the punishment of criminals and the removal from office of derelict civil officers.

II. The military are to cooperate with and aid the civil authorities in the detection, capture, and custody of criminals, and they are further authorized, in cases where they have reason to believe the civil authorities are not disposed to do their duty, to retain criminals in custody until the fact becomes evident whether the civil authorities will or will not perform their duty—immediately reporting their action on all such cases to these headquarters.

III. Writs of *habeas corpus* issued against criminals in the custody of the military will be obeyed so far as to produce the body of the prisoner in court, and the making of a respectful return setting forth the grounds and authority by which the prisoner is held—should the court fail to respect the authority under which the prisoner is held—the custody of the criminal will not be transferred to the court without a reference to these headquarters.

IV. The major-general desires to impress on the officers under his command, the exercise of a sound discretion and good judgment. It is his determination to afford the civil authorities every opportunity to discharge their duties untrammelled by any action on the part of the military but such as they, the civil authorities, may invite and desire. He makes this public notice to the civil authorities that they may be governed thereby—assuring them they shall be respected in the exercise of their powers so long as impartial justice is meted out to all; but the commanding-general is determined to exercise to the fullest extent the plenary powers with which he is intrusted, to secure protection of persons and property in the district he commands.

By order of Major-General MEADE.

R. C. DRUM, Assistant Adjutant-General, A. D. C.

On January 20th, the delegates met at Tallahassee, and organized the convention. Of the 46 returned in the lists of election, and named in General Pope's order, 41 answered the call and took their official oath, some twenty of them being negroes. Belonging generally to the Republican party, they disagreed amongst themselves on most weighty points, even the right of four of their number to sit in convention. These and their adherents asserted that the fact of their being elected by large majorities, and individually recognized as delegates by General Pope in his order enjoining the meeting of the convention, firmly secured their right to seats and rendered it unquestionable; while the others, who were a majority, affirmed that General Pope, before whom their claims had been contested, had left the decision to the convention, which was the proper judge of the qualifications of its own members, and pointing to the undisputed fact that the former were non-residents of Florida, they contended that the law of both the State and Congress in the reconstruction acts excluded them in express words from the possibility of being voted for, as of their voting for others.

This brought out and nourished a steadily-increasing discord in the convention, as the debates, under cover of discussing a point of

fact or at law, could not possibly be kept free from personal animosity. The majority seemed, indeed, disposed to overlook the ineligibility of the four, and let them occupy their seats, if they (who were regarded as extremists) would agree with it in other matters; but this they appeared not inclined to do. Hence in a few days the dissension widened so as to assume the shape of actual division, and the assembly was split into two portions; the one greater, as to numbers, the other greater in strength, because of its members being individually vested with a larger measure of official power in the convention. They belonged largely to the most important standing committees, and these four delegates, to whom the right of sitting in the convention was denied, were the most influential persons in it, the one being its president, and the other three forming by themselves alone the Committee "on Privileges and Elections," and that "on Eligibility."

On January 26th this committee presented a report, the general terms of which might be so construed as to aim at securing the seats of its own members. After a long and hot discussion, the majority won the point that the report should be recommitted to the same committee, and two members added to it; but the consequence was that, on January 28th, the chairman submitted another report, stating that "all the delegates named in General Pope's order No. 110 are eligible to seats in this convention; and that when seats are contested, and not until then, can this convention act in the matter; such matter in all cases being the special business of this committee." This report was signed by four of the now five members, the dissenting one objecting not to the substance in the first sentence, but to "the concluding part of it," and because he thought that "there was no matter before the convention calling for a report of the committee." It having been proposed to adopt the report, or lay it on the table, the greater number finally voted to lay it on the table "until the 23d of February," a time before the arrival of which the convention would have probably adjourned, as it actually did. The same result attended the motion made by one of the majority, of admitting John W. Butler to sit in convention as delegate of the first district. The committee reported that the delegate elected and returned for the first district was not Mr. Butler, but George Walker, though the latter had not as yet presented himself to take his seat; it was said that he intended not to do so. The majority insisted and obtained that this report also should be recommitted, and three more members added to the committee, one of them being the leader of the party opposed to the original three. The president added still another afterward, thus making nine. A majority of this committee reported, on January 30th, that "from the evidence in the case it appeared that George Walker was the

person for whom the majority vote was cast in the first district and the intention of the electors was so plain that he could present himself and claim his seat, and that the vacancy could be filled by none other. The committee held that, while it would be manifestly improper and illegal to vacate the seat of any member by virtue of General Pope's order, and not clearly made ineligible by the reconstruction acts, it would be equally illegal to fill any vacancy by any person claiming to be a delegate, who received but a small minority of the votes of his district, and who does not claim a seat by order of the commanding general of the military district." The motion here made of further recommittal was followed by a more than stormy debate of two days, and finally carried by a vote of 26 yeas and 11 nays, on February 1st; but the chairman of the committee having immediately moved "that the claims of George Walker and Mr. Butler be postponed until the 1st of March," this motion also was carried at the same sitting, and so the whole matter ended.

Thus the minority outmanœuvred and kept in check the majority; though the members of the latter used every means to lessen the influence attached to the official position of those belonging to the former, especially by introducing numerous changes in the standing rules governing the management of the convention or the manner of voting. But, upon the occasion of their defeat in reference to Mr. Butler, the convention having adjourned to the 4th of February, fifteen delegates, all belonging to the said majority, resolved not to attend the sessions any further, and, without asking leave or giving notice, absented themselves, as it were, in a body.

The remaining members, however, at their first sitting after the adjournment, on February 4th, adopted concerning the absentees the following preamble and resolution:

Whereas, The following named delegates elected and returned to this convention by General Pope, to wit: George J. Alden, Lyman W. Rowley, W. J. Purman, J. W. Childs, T. W. Osborn, John W. Powell, Roland T. Rombauer, Thomas Urquhart, Horatio Jenkins, Jr., Auburn Erwin, E. D. Howse, Samuel Pearce, C. R. Mobly, and David Mizell, have intentionally and wilfully absented themselves from this body, to prevent and obstruct reconstruction: therefore,

Be it resolved by the people of Florida, in convention assembled, That Colonel F. F. Flint, commanding the post of Tallahassee, be and he is hereby requested to arrest such absent delegates and compel their attendance upon this body.

For the rest, they continued sitting and deliberating, as if nothing had happened. Though there were in the hall only twenty-one or twenty-two delegates present, this number they regarded, and afterward declared in express terms, to be "a legal quorum." They thus not only transacted business by adopting resolutions and passing ordinances on numerous matters, but completed also the work for which the convention had been called

together. They actually framed, voted upon, and adopted the new State constitution, on February 6th, as appears from the following:

Resolved, That the president be empowered to telegraph Major-General George G. Meade that we are through our labors, and have formed a constitution, and await his further instructions.

The following is the dispatch sent by the president to General Meade:

CONSTITUTIONAL CONVENTION, }
TALLAHASSEE, FLORIDA, February 6, 1868. }

Gen. Geo. G. Meade, commanding Third Military District, Atlanta, Georgia:

I have the honor to inform you that we have completed our labors in forming a constitution for this State, and await your further orders.

D. RICHARDS, President.

With a view to secure the validity of the enactments passed after the fifteen delegates had arbitrarily absented themselves, the Convention adopted, on February 7th, the following preamble and resolution:

Whereas, after a session of fourteen days, we find that forty-one delegates have taken and subscribed to the oath adopted for delegates by this convention, therefore be it

Resolved, That a majority of that number is a legal quorum of this body.

By another resolution, adopted on the same day, the assembly adjourned as a Constitutional Convention to the next day, and immediately organized itself into a Nominating Convention (the president being the same in either), for the purpose of nominating "the State officers provided for in the constitution." The result of this meeting was the nomination of Governor and Lieutenant-Governor, and that of other high officers of the State, as well as of the member of Congress, mostly out of their own number.

On February 8th, the delegates, twenty-one in number, subscribed their names to the new constitution, whereupon they adopted the following resolution:

Resolved, That this convention send to General Meade a special member from this convention, who shall take with him a corrected copy of the proceedings, and make before General Meade a full statement of the facts.

One from amongst themselves was here appointed for the said mission to General Meade, when they adjourned to the 15th of February. No sooner had this adjournment taken place, than the fifteen absentees, who seem to have been watching the movements of those sitting in the convention, returned to Tallahassee, late in the night of the next day, accompanied by nine more delegates, and went directly to the House of Representatives, where a protest was read by one of them, charging Daniel Richards, hitherto president of the convention, with heavy offences in the exercise of his office. The protest was signed by the twenty-four delegates present, who then deposed Mr. Richards from the presidency, and elected Horatio Jenkins in his place. Mr. Jenkins having immediately taken the chair, all the former officers of the convention, ex-

cept the secretary and the chaplain, were replaced by others, and all the standing committees appointed anew. The convention being thus thoroughly reorganized, it was adjourned to the afternoon of February 10th.

On the 11th the new Committee "on Eligibility" presented their report, stating that Daniel Richards, mentioned above, as well as Liberty Billings, William U. Saunders, and C. H. Pierce (who composed the former Committee "on Privileges and Elections," and that "on Eligibility"), being non-residents of Florida, were by the law of both State and Congress in the reconstruction acts expressly declared ineligible as delegates to the Constitutional Convention, and therefore to be removed from their seats in it. This report, together with the accompanying resolutions, was unanimously adopted by the twenty-six delegates present. Thus were the four named persons unseated, while Messrs. Hart, Davidson, Hill, Stearns, and Wells, whose claims had not been previously acted upon, and in favor of whom the said committee had now reported, were admitted and sworn at the same time.

These proceedings could not but increase the flame of discord which already existed between the two parties. The four expelled not only asserted their right to sit in convention, but they and their adherents claimed for themselves to be the convention, and to have in that capacity framed and adopted the new State constitution; while the other party as firmly denied all this, and claimed the same thing for itself. The contention spread, and rose in its violence to such a point that, in order to prevent disastrous results, which common prudence must have apprehended, the military power presently interposed its authority, and on February 17th General Meade personally appeared at Tallahassee. After hearing both parties, he recommended mutual agreement on the disputed points, proposing at the same time that both presidents should resign their positions, and that the delegates assemble to organize the convention anew, that Colonel Sprague, the commander of the sub-District of Florida, preside in the assembly till the reorganization should be effected. In his efforts to bring about a reconciliation, the General was so far successful that the members of both parties, after separate consultation amongst themselves, recognized his plan to be preferable to all others. The two presidents actually resigned (Richards under protest), and on February 18th the delegates met at the Convention Hall, Colonel Sprague occupying the chair. The resignations of the two presidents having been read, Horatio Jenkins was, on motion, elected permanent president by a vote of thirty-two yeas to twelve nays. The chair being now occupied by Mr. Jenkins, the secretary and other officers were appointed, and many resolutions adopted in quick succession, mostly pertaining to a permanent organization of the body, until the

convention peaceably adjourned to the next day. This convention, both before and after its reorganization, was fitly addressed by Colonel Sprague and General Meade.

On February 19th, the regular standing committees were newly appointed, and in the afternoon of the same day the Committee "on Eligibility," which was now composed of five members, submitted a majority report in respect to Messrs. Billings, Saunders, and Pierce, and a separate one concerning Mr. Richards, repeating the above-mentioned reasons why neither of them could be allowed to sit in the convention. Hereupon a long and most stormy debate, approaching very near to a combat, took place, chiefly between the leaders of the two opposite parties, till, the reports being put to the vote, they were adopted by a large majority. The beforenamed persons were thus ousted, and left the hall.

On February 20th, and the few succeeding days, the convention proceeded in its regular business, but principally in the work of framing the new constitution. This was submitted to the House, voted upon and adopted by a good majority, on February 25th. The delegates being then invited to sign the instrument, eight did so under protest, and nine refused altogether. This circumstance might serve as an indication to show the number of those who opposed the new constitution, either in regard to its general or particular measures. But a resolution having been adopted and spread on the journal, "that such members as refused to sign the constitution should not receive per diem, nor mileage," several among them reluctantly subscribed their names to the document, while the others still refused.

The chief provisions of this instrument, as distinguished from the constitution formerly obtaining in Florida, and those of other States, are the Bill of Rights and the article on franchise, as they refer to the negro, who is here recognized to be politically and socially equal to the white man. The same was the purport of that other constitution, which this same convention (or that part of it who remained in session during the absence of the fifteen delegates) had framed and adopted three weeks before. The Democratic papers of the State pronounced the second instrument to be less rigid and objectionable than the first, and a large portion of the Republican party condemned it indeed as being too mild, so much so, that a committee of ministers of the African Methodist Episcopal Church issued a circular, and dispatched a number of speakers, to persuade the negroes throughout the State to prefer living "under military rule, guided by the reconstruction acts of Congress," and to oppose the ratification of the State constitution framed by the late convention, chiefly on account "of its enlargement of the franchise in favor of the disloyal," namely, the whites who had fought for secession, or their sympathizers. The second constitution seems

certainly milder in prescribing the formula of the test-oath which it imposes on the electors before they are registered, it being both more simple and shorter; as appears from the first of the following sections of the article "on suffrage and eligibility:"

Section 1. Every male person of the age of twenty-one years and upward, of whatever race, color, nationality, or previous condition, who shall, at the time of offering to vote, be a citizen of the United States, or who shall have declared his intention to become such in conformity to the laws of the United States, and who shall have resided and had his habitation, domicile, home, and place of permanent abode in Florida for one year, and in the county for six months, next preceding the election at which he shall offer to vote, shall in such county be deemed a qualified elector at all elections under this constitution. Every elector shall at the time of his registration take and subscribe to the following oath:

I, —, do solemnly swear that I will support, protect, and defend the Constitution and Government of the United States, and the constitution and government of the State of Florida, against all enemies, foreign or domestic; that I will bear true faith, loyalty, and allegiance to the same, any ordinances or resolution of any State convention or Legislature to the contrary notwithstanding. So help me God.

Yet, concerning the equality of negroes and whites in political rights, as well as in every part of common and social life, the intent of the framers of the first constitution could not have been fuller nor more comprehensive than is expressed in the following resolution, offered by the leader of the party called Conservative, who framed the second, and, on his motion, adopted by them:

Resolved, That no Legislature shall ever have the power to prohibit by law any class of persons, on account of race, or color, or previous condition, from having and exercising equal rights and privileges on all public conveyances, in all places of public worship and amusement, and in all public conveniences and accommodations created by charter or license under the laws of this State, nor to pass any law that would, in the least, infringe upon that civil and political equality of all citizens, established and secured forever by the provisions of our constitution: And be it further Resolved, That in all counties where the white and colored populations are equal, or where the colored predominates, the venire for all jurors shall be made up of an equal number of jurors from each population, and in counties where the colored is less than the white population, the venire for jurors shall be made out in the proportion of the two populations.

This second constitution, which the fifteen delegates had, perhaps, prepared at Monticello during their absence from the convention, as it seems too full and elaborate to admit of its contents having been digested in three days, goes into details through all the departments of organic State law. It provides also that the State of Florida shall ever remain under the Federal Government of the United States. We subjoin the section containing this provision and a few others, taken from the Declaration of Rights, as follows:

DECLARATION OF RIGHTS.

All men are, by nature, free and equal, and have certain inalienable rights, among which are those of enjoying and defending life and liberty, acquiring, possessing, and protecting property, and pursuing and obtaining safety and happiness.

Section 2. All political power is inherent in the people. Government is instituted for the protection, security, and benefit of its citizens; and they have the right to alter or amend the same whenever the public good may require it, but the paramount allegiance of every citizen is due to the Federal Government, and no power exists with the people of this State to dissolve its connection therewith.

Section 3. This State shall ever remain a member of the American Union: the people thereof a part of the American nation, and any attempt from whatever source, or upon whatever pretence, to dissolve said Union, or to sever said nation, shall be resisted with the whole power of the State.

In compliance with an ordinance purposely inserted in this organic law, as soon as a majority of the delegates had voted for its adoption, their president gave public notice through the press that the new State constitution would be submitted to the people for their ratification or rejection in a general election to be held on the first Monday, Tuesday, and Wednesday of May, 1868. Having thus completed its work, the convention adjourned. Before adjourning, however, it organized itself again into a Nominating Convention, the president of the former presiding also in the latter, but not all the delegates were admitted in it. This exclusion was stoutly opposed by several even of those who were admitted, and who, on that account, left the assembly, refusing to take part in its proceedings. This meeting nominated Harrison Reed for Governor, William G. Gleason for Lieutenant-Governor, C. M. Hamilton for member of Congress, all three outside of the Constitutional Convention. It nominated also the three presidential electors from among its own members. No other State officers were nominated, since the new constitution confers upon the Governor the power of appointing all of them in every department of State administration, constables only excepted. These, it is ordained, "shall be elected by the registered voters," each county being "entitled to at least two constables." The number of State officers to be appointed by the Governor (and confirmed by the Senate), with the salaries assigned to some of them, was condensed in a list, published in the papers of April 9, 1868, as follows:

One Chief and two Associate Justices for life, with salaries of four thousand dollars per annum.

Seven Circuit Judges for eight years, salaries of three thousand five hundred dollars per annum.

A Secretary of State, Attorney-General, Comptroller, Treasurer, Surveyor-General, Superintendent of Public Instruction, Adjutant-General, and Commissioner of Immigration, for four years, with salaries of three thousand dollars per annum.

All commissioned officers of the militia.

And the following county officers:

Assessors of Taxes, Collectors of Revenue, County Treasurers, County Surveyors, Superintendents of Common Schools, and five County Commissioners in each county, "each of whom shall hold his office for two years;" and "such officers shall be subject to removal by the Governor when in his judgment the public welfare will be advanced thereby."

County Court Judges to hold office four years.

"As many Justices of the Peace as he may deem necessary;" and "Justices of the Peace will hold their

offices during good behavior, subject to removals by the Governor at his discretion."

Seven State Attorneys, one in each judicial circuit, to hold office four years.

County Sheriffs and Clerks of Circuit Courts to hold office four years.

The general election, to be held on the ratification of the new constitution, was ordered and its conduct provided for, by General Meade, in the following order of March 16, 1868:

General Orders, No. 41.

HEADQUARTERS, THIRD MILITARY DISTRICT
(DEPARTMENT OF GEORGIA, FLORIDA, AND ALABAMA),
ATLANTA, GA., March 16, 1868.

I. *Whereas*, The Constitutional Convention recently assembled in Tallahassee, Fla., in compliance with General Orders No. 110, issued from these headquarters, December 28, 1867, did, in pursuance of the Acts of Congress mentioned in said orders, proceed to frame a constitution and civil government for the State of Florida, and provide for the publication of said constitution; and did further, by an ordinance of said convention adopted February 25, 1868, submit for ratification to the persons in said State registered and to be registered as voters under the Acts of Congress specified in said General Orders, at an election to be conducted according to the provisions of said acts, to be held in the various counties of said State, on the first Monday, Tuesday, and Wednesday of May, A. D. 1868;

II. *And whereas*, By an Act of Congress which became a law March 12, 1868, it is provided that, hereafter, any election authorized by the Acts of Congress aforesaid, shall be decided by a majority of the votes actually cast; and at the election, in which the question of the adoption or rejection of any constitution is submitted, any person duly registered in the State may vote in the election district where he offers to vote when he has resided therein for ten days next preceding such election upon presentation of his certificate of registration, his affidavit, or other satisfactory evidence of registration, under such regulations as the district commander may prescribe;

III. *And whereas*, Said Acts of Congress provide that the election for ratification of said constitution shall be conducted by the officers or persons appointed or to be appointed by the commanding general, and at the date fixed by said convention:

IV. *It is ordered*, That an election be held in the State of Florida on the first Monday, Tuesday, and Wednesday of May, 1868, at which the registered voters of said State may vote for or against the constitution submitted to them by the ordinance aforesaid. Those voting in favor of the constitution shall have written or printed on their ballots the words "For the Constitution," and those voting against the constitution shall have written or printed on their ballots the words "Against the Constitution."

V. It shall be the duty of the Boards of Registration in Florida, in accordance with said Acts, commencing fourteen days prior to the election herein ordered, and giving reasonable public notice of the time and place thereof, to revise, for a period of five days, the registration lists, and upon being satisfied that any person not entitled thereto has been registered, to strike the name of such person from the list, and such person shall not be allowed to vote. And such Boards shall also, during the same period, add to such registry the names of all persons who, at that time, possess the qualifications required by said Acts, who have not been already registered.

In deciding who are to be stricken from or added to the registration lists, the Boards will be guided by the Acts of Congress relating to reconstruction, and their attention is especially called to the Supplementary Act which became a law July 19, 1867.

VI. Said election shall be held in each county in said State under the superintendence of the Boards

of Registration, as provided by law, and polls will be opened, after due and sufficient notice, at as many points in each county, not exceeding three, as, in the opinion of said Boards, may be required for the convenience of voters. And in any city, or other place, where there is a large number of voters, it is hereby made the duty of said Boards to open as many polls as may be necessary to enable the voters to cast their votes without unreasonable delay.

VII. Any person, duly registered in the State as a voter, may vote in any county in the State where he offers to vote, when he has resided therein for ten days next preceding the election. When he offers to vote in the county where he was registered, and his name appears on the list of registered voters, he shall not be subject to question or challenge, except for the purpose of identification, or as to residence. And any person so registered, who may have removed from the county in which he was registered, shall be permitted to vote in any county in the State to which he has removed, when he has resided therein for ten days next preceding the election, upon presentation of his certificate of registration, or upon making affidavit before a member of the Board of Registration, or a judge or manager of the election, that he is registered as a voter, naming the county in which he is so registered; that he has resided in the county where he offers to vote for ten days next preceding the election, and that he has not voted at this election. Blanks for such affidavits will be supplied by the Boards of Registration, and the name of the voter making oath must be indorsed on his ballot, and all such affidavits must be forwarded with the returns of the election.

VIII. The polls shall be opened at each voting-place, during the days of election, at 7 o'clock A. M., and close at 9 o'clock P. M., and shall be kept open between those hours, without intermission or adjournment.

IX. All public bar-rooms, saloons, and other places for the sale of liquor at retail, at the several county seats, and at other polling-places, shall be closed from 6 o'clock of the evening preceding the election, until 6 o'clock of the morning after the last day of the election. Any person violating this order shall be subject to fine or imprisonment. Sheriffs and their deputies and municipal officers will be held responsible for the strict enforcement of this prohibition by the arrest of all persons who may transgress the same.

X. The sheriff of each county is hereby required to be present at the county seat, and to appoint deputies to be present at each polling-place in his county, during the whole time that the polls are kept open, until the election is completed, and is made responsible that no interference with the judges of election, or other interruption of good order, shall occur. And any sheriff, or deputy sheriff, or other civil officer, failing to perform with energy and good faith the duty required of him by this order, will, upon report made by the judges of the election, be arrested and dealt with by military authority, and punished by fine or imprisonment.

XI. The commanding officer of the District of Florida will issue, through the Superintendent of Registration for this State, such detailed instructions as may be necessary to the conduct of said election in conformity with the Acts of Congress.

XII. The returns required by law to be made of the result of said election, to the commanding general of this military district, will be rendered, by the person appointed to superintend the same, through the commanding officer of the District of Florida, and in accordance with the detailed instructions already referred to.

XIII. No person who is a candidate for office at said election shall act as a registrar, judge, inspector, manager, clerk, or in any other official capacity connected with conducting election.

XIV. Violence, or threats of violence, or any oppressive or fraudulent means employed to prevent any person from exercising the right of suffrage, is

positively prohibited, and every person guilty of using the same shall, on conviction thereof before a military commission, be punished by fine or otherwise.

XV. No contract or agreement with laborers made for the purpose of controlling their votes, or of restraining them from voting, will be permitted to be enforced against them in this district.

By order of Major-General MEADE.

R. C. DRUM, Assistant Adjutant-General.

By a separate order dated March 17th, the General extended the provisions of the foregoing to the election for State officers also, prescribing "that at the same time and place at which an election shall be held in the State of Florida upon the ratification of the constitution submitted by said convention, an election shall also be held for the Governor, Lieutenant-Governor, one member of Congress, State Senators and Representatives, and county officers," and that the last-named election "shall be conducted by the same persons and in the same manner" as the first.

The results of these elections were that the new constitution was ratified, and the above-named Governor, Lieutenant-Governor, and member of Congress elected by the people with a large majority of votes, notwithstanding the seemingly strong opposition early set on foot, and long continued, on the part of the Democrats to hinder them. Complaints of illegality and fraud in the registration, or voting, were made after the election, and affidavits that false-bottomed boxes had been used in it were published by Democrats under the names of those who had constructed them; but counter-affidavits of the same persons, declaring the former to be false, were also published by the Republicans; and even a special committee of the Democratic party, "to whom was referred the matter of inquiring into the frauds committed at the late election," finally reported that "it would be utterly impossible for them to ascertain the number or quantity of said frauds."

As to the State Legislature, however, not a few of its members, both in the Senate and House of Representatives, were elected from among the Democrats; they being so styled in the return lists published at the time by Republican papers, to distinguish them from the other members whom they called after the name of their own party.

This Legislature, for whose first session the new constitution had fixed the 1st of June, 1868, met, and adopted the amendment to the Constitution of the United States, commonly known as "Article fourteen." In consequence of this, Florida was recognized as a State, and her representatives were allowed to take their seats in both halls of the Federal Congress, notwithstanding the veto of the President, who, on June 25th, returned the bill unsigned.

On June 29th, General Meade provided for the surrender of the government of Florida by the military power of the United States to the civil authority of the State, as follows:

General Orders, No. 92.

HEADQUARTERS, THIRD MILITARY DISTRICT }
DEPARTMENT OF GEORGIA, FLORIDA, AND ALABAMA, }
ATLANTA, GA., *June 29, 1868.* }

Whereas, Official information has been received at these headquarters from the Governor-elect of the State of Florida, that the Legislature of said State, elected under the provisions of General Order No. 43, current series, from these headquarters, have assembled, and complied with the requisitions of the Act of Congress which became a law June 25, 1868, entitled "An act to admit the States of North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida, to representation in Congress;" and *whereas* said act states that, on compliance with the conditions therein set forth by any State, the officers of said State, duly elected and qualified under the constitution thereof, shall be inaugurated without delay: *It is therefore ordered*,

1. That all civil officers, holding office in the State, whether by military appointment or by failure to have successors qualified, shall promptly yield their offices, and turn over to their properly elected and qualified successors all public property, archives, books, records, etc., belonging to the same.

2. Whenever the military commander of the sub-District of Florida is officially notified of the inauguration of the State government-elect, military authority under the Acts of Congress, known as the reconstruction laws, will be at an end in said State; and it is made the duty of the sub-district commander to transfer every thing appertaining to the government of said State to the proper civil officers, and to abstain in future upon any pretext whatever from any interference with or control over the civil authorities of the State in the persons and property of the citizens thereof.

By order of Major-General MEADE.

R. C. DRUM, Assistant Adjutant-General.

On July 1st, the civil governor, who held his office by virtue of the State constitution obtaining since 1865; notified the Governor elected under the auspices of the new constitution, as follows:

EXECUTIVE DEPARTMENT, TALLAHASSEE, FLA., }
July 2, 1868. }

His Excellency Harrison Reed, Governor of Florida:

SIR: I have this moment received an order from General Meade to surrender the government of the State to you, and I am ready to make the surrender accordingly.

Please call at the Executive office.

Yours, most respectfully,

D. S. WALKER.

The change of persons occupying the chair of the State government took place on the same day.

On July 2d, the new Governor addressed to the military commander of the sub-District of Florida the following communication:

EXECUTIVE OFFICE, TALLAHASSEE, FLA., }
July 2, 1868. }

COLONEL: I have the honor to inform you that the State government provided under the new constitution for the State of Florida, in accordance with the reconstruction laws of Congress, has been duly inaugurated, and all the conditions precedent to the admission of the State into the Federal Union have been complied with, and our Representatives admitted to Congress.

With high respect, I am, colonel,

Your obedient servant,

HARRISON REED, Governor.

To Colonel JOHN T. SPRAGUE,
Commanding District of Florida, Jacksonville.

The 4th of July, 1868, was celebrated in

Florida in an unusual manner. On that day, and in the same hour, by one continued act, her State government was both formally surrendered by the military to the civil power, and inaugurated in the person of the Governor newly elected by the people. The ceremony took place within the hall of the House of Representatives, in the presence of the members of both branches of the Legislature, who had assembled there in joint session for the occasion, and of as many people as the room could hold.

On July 27th the War Department at Washington issued the following order:

The commanding generals in the Second, Third, Fourth and Fifth Military Districts, having officially reported that Arkansas, North Carolina, South Carolina, Louisiana, Georgia, Alabama, and Florida have complied with the reconstruction acts, including the act of June 25, 1868, and that consequently so much of the act of March 2, 1867, and all acts supplementary thereto, providing for military districts, subject to the military authority of the United States, as therein provided, have become incorporated in said States, and commanding generals have ceased exercising military powers conferred by said acts; therefore, the following changes will be made in the organization and command of military districts and geographical departments:

First. The Second and Third Military Districts having ceased to exist, North Carolina, South Carolina, Georgia, Alabama, and Florida will constitute the Department of the South, General Meade to command, with headquarters at Atlanta, Georgia.

In execution of this arrangement, and by direction of General Meade, Colonel Sprague, the sub-commander in Florida, issued an order dated August 4th, declaring her condition in military matters to be now changed from sub-district into district, and this to be officially called after her own name. By a further order of the 5th, the colonel made a new distribution of the United States force under his command, by establishing three military posts at different points within the State, concentrating and stationing in each of them a sufficient number of men and officers to do duty.

The first session of the Legislature of Florida under the new constitution lasted for about two months, and on August 6th both Houses adjourned to the 8d of November. During that period they had transacted a vast amount of business on almost every matter of public interest.

As the opening of the next regular session, fixed by the constitution for the first Tuesday of January, 1869, was drawing near, while several Senators and Representatives had in the mean time resigned, or been appointed to offices whose functions were by the constitution declared incompatible with those of members of the Legislature, Governor Reed and George J. Alden, Secretary of State, issued, on October 28th, a joint proclamation, declaring the seats before occupied by said Senators and Assemblymen vacant, and ordering that, in the districts and counties represented by them, an election should be held on December 29, 1868, for filling up their respective vacancies in either House.

According to their adjournment of August 6th, the Legislature met on November 3d. By a proclamation of this date, however, Governor Reed convened them for that same day at eight o'clock, P. M., in extraordinary session, to deliberate on special matters, as follows:

EXECUTIVE DEPARTMENT, TALLAHASSEE, FLA., }
November 3, 1868.

Whereas, There has been no appropriation made for the expenses of the joint convention for the appointment of electors of President and Vice-President of the United States; and *whereas*, Serious obstacles to the administration of justice exist on account of the want of general power in the courts to empanel juries under existing laws; and *whereas*, Power should be granted for the appointment of a Board of Commissioners to equalize and secure uniformity in the value of taxable property throughout the State:

Now, therefore, In order that such legislation may be had as will secure these ends, I, Harrison Reed, Governor of the State of Florida, by virtue of the power in me vested by the constitution of this State, do hereby convene the Legislature in extraordinary session in the capitol at Tallahassee, on Tuesday, the third day of November, at 8 P. M., for the purpose above-mentioned, and for the confirmation of such appointments as may be submitted to the Senate.

In testimony whereof, I have hereunto set my hand and caused the great seal of the State to [L. S.] be affixed this third day of November, A. D. 1868.

HARRISON REED, Governor of Florida.

By the Governor:

Attest—GEORGE J. ALDEN, Secretary of State.

By a message sent to both Houses on the same day, the Governor called their attention to the fact, that the senate as yet could do no business, the constitution fixing the number of its members at twenty-four, and ordaining that a majority of the House constitutes a quorum, whereas, those who had now presented themselves as Senators were twelve, and even four of these could have no part in the business, they having been appointed to, and actually holding offices, whose functions the constitution itself declares incompatible with those of Senators. Among these four was George J. Alden, the Secretary of State, who had issued the said joint proclamation, declaring the vacancy of his own seat in the Senate, and ordering an election in his district to fill it; and Horatio Jenkins, Jr., who was County Judge of Alachua and Levy Counties.

A bill providing for a per diem and mileage to be paid the members of the Legislature for this session passed both Houses soon after their meeting, and was sent to the Governor for his signature. On November 5th, he returned it unsigned, with the following message:

STATE OF FLORIDA, EXECUTIVE OFFICE, }
TALLAHASSEE, November 5, 1868.

To THE ASSEMBLY: I am reluctantly compelled by constitutional obligations to return, without my approval, the bill originating in the Assembly, entitled "A bill to provide for the pay and mileage of the members and officers, and other expenses of the convention."

On the 6th day of August last, the two Houses of the Legislature met in joint convention, and adjourned to meet again on the 3d day of November instant. It was a self-imposed duty as members of the

Legislature. The constitution limits the pay of the members of the Legislature to five hundred dollars *per annum*. That sum was drawn by each member during the first quarter of his official term, and no further pay can, in my judgment, be received without a palpable violation of the constitution. This bill seeks to pay each member in attendance five dollars per diem, and five dollars for every twenty miles travelled, in addition to the constitutional mileage.

Again, the official record discloses the fact that the Senate passed this bill while sitting without a constitutional quorum, there being but seven members of a body constituted of twenty-four.

I fully recognize the right of each member in attendance to receive from the treasury "ten cents per mile for each mile travelled from their respective places of residence, and the same to return."

Very respectfully, etc.,

HARRISON REED, Governor.

This bill was immediately voted upon and passed again by a two-thirds vote in both Houses, "the objections of his Excellency the Governor to the contrary notwithstanding."

On November 6th the above-named Mr. Jenkins, who still continued sitting as Senator, appeared before the House of Representatives as a citizen of the State of Florida, and preferred charges for the impeachment of Governor Reed, as follows:

Inasmuch as I, Horatio Jenkins, Jr., a citizen of Florida, having obtained much and sundry knowledge proving that Harrison Reed, Governor of Florida, has been guilty of many crimes and misdemeanors, and the proof being such that I sincerely believe him to be guilty, I prefer these reasons for impeachment:

1. He has been guilty of falsehood and lying, while transacting business with members of the Legislature, and other officers of the State.

2. I charge him with incompetency, inasmuch as he has filled commissions to officers in blank, and other irresponsible persons have issued them.

3. He has issued a proclamation declaring many seats of the Legislature vacant, before the members duly elected and returned had resigned or their legal term of service expired.

4. He has been guilty of embezzlement, having taken from the State Treasury securities and money, and sold such securities, and then failed to return a portion or all of the proceeds of the sale to the Treasury.

5. He has been guilty of corruption and bribery, having bartered and sold prominent offices in the State to sundry persons for money to him in hand paid, and nominated such persons to the Senate for confirmation. For and in consideration of these and many other crimes and misdemeanors which have come to my knowledge, I ask at the hands of the Assembly the impeachment for high crimes and misdemeanors of Harrison Reed, Governor of Florida.

HORATIO JENKINS, JR.

Hereupon the House, by a vote of twenty-five yeas and seven nays, "*Resolved*, That Harrison Reed, Governor of Florida, be, and he is hereby, impeached of high crimes and misdemeanors in office." A committee of three was then appointed, who proceeded to the bar of the Senate, and, in "the name of the Assembly and of all the people of Florida, impeached Harrison Reed, Governor of the State of Florida, of high crimes and misdemeanors in office, and demanded of the Senate that they should take order to make him appear before that body to answer for the same, and announced

that the Assembly would present articles of impeachment, and make them good." Another committee of three was appointed "to prepare and report articles of impeachment against Harrison Reed, Governor of Florida, with power to send for persons, papers, and records, and to take testimony under oath." The sergeant-at-arms was sent to serve on Mr. Reed "a certified copy of the charges and resolution relative to his impeachment;" while a committee of two was appointed "to wait immediately upon the Lieutenant-Governor, and furnish him with a copy of the resolution in reference to the impeachment of the Governor," and the Clerk ordered to "deliver to the Comptroller of Public Accounts, the State Treasurer, and the Secretary of State, a certified copy of the resolution, as passed the Assembly, relative to the impeachment of Harrison Reed, Governor." This being done, the Assembly adjourned to an early hour next morning.

In the evening of November 6th, the Lieutenant-Governor, who in this capacity was also president of the Senate, asserted his claim to the Executive Department and the exercise of the functions of Governor by the following proclamation:

EXECUTIVE CHAMBER, TALLAHASSEE, FLA., }
November 6, 1868.

Whereas, The Assembly of Florida, as a duly-organized body, in extraordinary session, held by virtue of a proclamation issued by the Governor of Florida on the 3d day of November, A. D. 1868, have impeached Harrison Reed, Governor of Florida, of high crimes and misdemeanors in office; and, *whereas*, under the provisions of the Constitution of the State of Florida, the said Harrison Reed, Governor of Florida, is debarred from exercising the functions of the Executive office of the State, and the administration thereof devolves upon the Lieutenant-Governor:

Now, therefore, I, William H. Gleason, Lieutenant-Governor of the State of Florida, do issue my proclamation taking possession of the Executive Department of the government in all its parts.

I hereby call upon all citizens of the State to support the government, obey the laws of the State, and preserve peace and quiet.

In testimony whereof I have hereunto set my hand and caused the great seal of the State to be affixed this 6th day of November, A. D. 1868.

W. H. GLEASON,
Lieutenant and Acting Governor.

By the Lieutenant and Acting Governor:

Attest—GEORGE J. ALDEN, Secretary of State.

On November 7th the Assembly adopted a resolution, the Senate concurring, to adjourn "until the Tuesday after the first Monday in January, 1869, at 12 o'clock M.;" but the Senate refused to concur, when Mr. Gleason, assuming now to act as Governor, and using the power which the constitution gives the Governor in such cases, sent to both Houses a written message, "declaring the Legislature adjourned to the first Monday of January, 1869."

Governor Reed, however, stood his ground unmoved, and continued to perform the duties of his office, having, on November 6th, ap-

pointed Jonathan C. Gibbs, a negro, as Secretary of State, in the place of George J. Alden. He regarded his impeachment as not in existence, because, when the committee of the Assembly formally impeached him at the bar of the Senate, and the Senate entertained the act of impeachment, there were no more than eight Senators present. On November 7th, he issued, therefore, a proclamation, declaring that he was rightfully exercising the duties of Governor, and should do so "until the judicial tribunals of the State determined otherwise." Two days after, making use of a power expressly given the Governor by the constitution of Florida, Mr. Reed addressed to the Justices of the Supreme Court of the State a lengthy communication, wherein, laying before them the journals of the two Houses, with their official proceedings in regard to his impeachment, he pointed to the parts of the constitution that may have a bearing on the matter, stated the position which he had taken in it, and proposed the two following questions:

1. Whether a Legislature of the State of Florida, consisting of a "Senate" and "Assembly," vested with the legislative authority of the State, has convened in extraordinary session under the proclamation of the Governor, of November 3, A. D. 1868.

2. Admitting, under the several provisions of the constitution referred to, that a Legislature of the State, consisting of a Senate and Assembly duly organized and vested with the legislative authority of the State, had convened in extraordinary session, under the proclamation aforesaid, and were, under the constitution, competent to transact legislative business, are the proceedings of said Legislature, as shown by said exhibits B and C, in so far as they relate to my impeachment as Governor of the State of Florida, of constitutional validity of force, and am I, under section 15 of article v., and section 9 of article xvi., disqualified from performing the duties of my office, by reason of the proceedings had and taken, as aforesaid, in reference to my impeachment?

Upon these questions he requested them to give him their answers in writing, and urged them to do so on account of the situation of affairs, saying: "I am continuing to act as Governor, and the said Gleason is also assuming to act as Governor; the officers of the State do not know, in this unsettled and anomalous condition of things, whom to recognize as at the head of the Executive Department; the administration of the State government is obstructed, and the peace and welfare of the whole State jeopardized."

Not to mention upon this point the many occurrences which took place at Tallahassee in the night of November 6th and in the following days, the official paper of November 12th informed the public as follows: "Thus the matter stands at this writing—Governor Reed occupying the Executive Chamber, and Jonathan C. Gibbs occupying the Secretary of State's apartment in the Capitol, and Governor Gleason and Secretary Alden, who are under the constructive charge of the sheriff, performing their official duties in apartments at the City Hotel."

The paper which Governor Reed had sent to the Supreme Court on November 9th was com-

municated by them to Mr. Gleason, who answered that, "After Governor Reed's formal impeachment by the Assembly, and the recognition of himself as Lieutenant and Acting Governor by both bodies of the Legislature," the Supreme Court had nothing to do in the matter, and he therefore "declined to submit any questions connected with the matter of impeachment to their honors." On November 16th Mr. Gleason issued another proclamation, in which, after detailing many reasons to show that, pending the impeachment, Mr. Reed could not exercise the functions of the Executive, and that they must be performed by himself, he concluded as follows:

Now, therefore, I, William H. Gleason, Lieutenant and Acting Governor of Florida, do issue this, my proclamation, declaring that said Harrison Reed, Governor of Florida, is deemed by the constitution "under arrest, and disqualified from performing any of the duties of his office until acquitted by the Senate," and that "the power and duties of said office" have devolved upon me:

I call upon all citizens to aid me in exercising the powers and discharging the duties thus devolved upon me by the constitution, and to put down the lawlessness and anarchy which must inevitably ensue if any man impeached or indicted, however exalted his station, may refuse to submit to the arrest imposed by the constitution, or to the only tribunal appointed by the constitution for his trial. If one man may do this, all may do it, and, this being done, law and order will cease to exist. Anarchy, lawlessness, and violence, will reign supreme. Against such a doctrine, leading most certainly to such dreadful results, I call upon all law-abiding citizens to sustain me, and stand by the constitution and laws of our State.

In testimony whereof I have hereunto set my hand, and caused the great seal of the State to be affixed, this 16th day of November, A. D. 1868. WM. H. GLEASON,
Lieutenant and Acting Governor.

By the Lieutenant and Acting Governor:

Attest—GEORGE J. ALDEN, Secretary of State.

On November 24th the Justices of the Supreme Court gave their written answers, separately, to the first of the two questions proposed by Governor Reed. They, especially two of them, consider the subject-matter at length and thoroughly, in regard to fact as well as law and precedents, and, though they consider it from different points of view, all three arrive at the same conclusion, which is unanimous. Their answers were published in the papers of December 3d. Associate-Justice James D. Westcott says: "It is, therefore, my opinion upon the facts submitted in your communication and upon the authorities and precedents cited, that twelve Senators did not constitute a quorum to do business; and hence that there was no Senate within the meaning of this clause of the constitution, and that "a Legislature of the State of Florida, consisting of a Senate and Assembly, vested with the legislative authority of the State," did not convene in extraordinary session under your proclamation of November 8, 1868."

Chief-Justice E. M. Randall, concurring fully in this, discusses the matter on his own ac-

count, and concludes: "We are, therefore, of the opinion that, even upon the assumption that the proceeding of impeachment is not properly "legislative business," and that it may be presented at a called session, without the actually-expressed consent of both Houses, there has not been an effective impeachment and suspension from the performance of official duties."

Associate-Justice O. B. Hart entirely agrees with both of the others, and for himself condenses the whole matter in this sentence: "Until a majority of the Assemblymen and Senators provided for by the constitution assemble, there can be no Legislature."

On a writ of *quo warranto*, a suit of ouster was instituted before the Supreme Court by the Attorney-General against Lieutenant-Governor Gleason, on the ground that, at the time of his election, he was ineligible, he being a non-resident of Florida. He denied the jurisdiction of the Supreme Court in his case; alleged, moreover, that he "could not obtain justice in this Court;" and used other means to escape; but these things availed not, and he having been granted a certain time "to show cause why final judgment of ouster should not be rendered against him," his counsel, on December 14th, filed a plea of eighteen counts, claiming that, before reconstruction, the constitution of Florida, and the State itself, did not exist, but was only provisional, and, therefore, that Mr. Gleason, though ineligible by the laws of Florida, was eligible by the law of Congress in the reconstruction acts, and by the order of the district military commander. After hearing his plea, the Supreme Court rendered against him a judgment of ouster, "restraining him from performing the duties of Lieutenant-Governor." Upon this he filed a writ of error, resting on the same ground with the plea referred to above, and appealed to the Supreme Court of the United States. Chief-Justice Randall refusing to sign a "writ of citation," Mr. Gleason proceeded to Washington, where he obtained of Associate-Justice Miller a "citation writ" returnable on the first Monday of December, 1869. This reinstated him as Lieutenant-Governor of Florida for the time.

The election ordered by Governor Reed's proclamation of October 28th, for the purpose of filling the many vacant seats in the Senate and House of Representatives, having been held on December 29th, and the vacancies filled, the Legislature assembled on January 5, 1869, the day fixed for its second session by the new constitution.

Upon their meeting in January, 1869, both the Senators and Assemblymen seemed animated by a quite different spirit from that which guided them in November, 1868, in reference to Mr. Reed's impeachment. Whatever its grounds, they now regarded it as not existing, and considered Mr. Reed to be in the legal possession of the Executive office of Florida. In the

Senate, wherein Lieutenant-Governor Gleason was presiding again, the first resolution offered, and adopted by a vote of ten yeas to one nay, was a plainly-implied condemnation of the impeachment proceedings, as follows:

Resolved, That the Senate recognize no other Journal of its proceedings for this session than the Journal commencing Tuesday, January 5, 1869, and that all other so-called Journals appearing in or attached to, be expunged from its records.

Before the voting on this resolution, another Senator had even proposed a substitute, though it was withdrawn, declaring that "there was no Legislature convened in the State in extraordinary session in November last." As to the House of Assembly, where the impeachment had originated, its very first act, upon its meeting, was the adoption of the following resolution:

Resolved, That a committee of three be appointed by the Speaker to wait upon his Excellency Harrison Reed, and notify him that the Assembly is in session, and ready to receive any communications he may wish to make.

On the first two days of the session, several resolutions and substitutes were indeed offered in the House, purporting the appointment of more or less numerous committees to investigate the charges preferred against Mr. Reed, preparing, as it were, materials for future impeachment, if there was cause; but they were successively postponed, or not acted upon, till, on January 6th, the following preamble and resolution were adopted by a vote of 30 yeas to 5 nays:

Whereas, It is known to this Assembly to be publicly alleged that Harrison Reed, Governor of Florida, has done and committed acts wrongful and unlawful: therefore, be it

Resolved by the Assembly of the State of Florida, That a committee of five be appointed by the Speaker, to inquire into and investigate the conduct, acts, and doings of the said Harrison Reed, Governor of Florida, and that the said committee be empowered and authorized to send for persons and papers, and take testimony upon oath in the premises, and that the said committee be required to report the results of its investigation at its earliest convenience during the present session, and that it accompany its report with the testimony taken in the said matter.

Even this, however, had no result, as a motion was immediately made "to reconsider the vote just taken, and that the reconsideration be laid on the table," which was agreed to.

As each House separately, amongst its own members, condemned the impeachment proceedings, and recognized Mr. Reed to be rightfully exercising the functions of Governor, so did they in joint action together. On January 7th the Assembly adopted the following resolution:

Resolved by the Assembly, the Senate concurring, That a committee of three be appointed by the Speaker, to act with a similar committee on the part of the Senate, to wait upon his Excellency the Governor, and inform him that the Senate and Assembly are organized, and ready to receive any communication that he may be pleased to make.

And shortly after the Senate sent a message to

the House that it had "appointed a committee of two to wait on the Governor, and inform him that both Houses are organized and ready to receive any communication he may wish to make." At noon on the same day the Senate entered the Assembly Hall for the purpose of receiving the Governor's message, when the president of the Senate took the chair, the State officers and some others being, on motion, invited to seats within the bar upon the occasion. A committee of three representing each House having then been appointed by the chair "to wait on the Governor, and inform him that the Legislature was assembled in joint meeting to receive any communication he might wish to make," they executed their mission, and on their return presented to the Assembly the Governor in person, when he delivered his message.

In this document Mr. Reed speaks hopefully, and exhibits a pleasing picture of the condition of Florida, especially in that the animosity of her citizens against each other for political opposition had lost much of its sharpness and intensity, and their minds appeared now mutually softened, saying: "Throughout our beloved State violent opposition to Federal authority and republican government has ceased, and all classes of the people yield obedience to the laws. The newly-enfranchised citizen of color sits side by side with his white fellow in the Cabinet, the halls of legislation, the jury-box, and on the Boards of Commissioners—occupies the magistrate's chair, and executes the decrees of courts, without exciting violence or occasioning asperity. The change since your last session is marvellous, and calls for grateful recognition. Political antagonisms still exist, and must ever exist among a free people; but toleration and concession have taken the place of intolerance and proscription."

As to the finances, he sets down the State bonded debt at \$578,045.08, and her resources, chiefly from new bonds and the estimated revenue for 1869, at \$525,000, leaving a small balance to be provided for. To the \$132,000 of the Florida bonds held by the United States Indian Trust Fund at Washington, he opposes her claim of nearly or quite that amount, against the United States, for expenditures in the Seminole war. The manner of paying her current expenses in scrip seems to have been highly detrimental to the State, since the Governor urges the necessity of forbidding all further issues of scrip and affirms: "If we once resume the payment of all expenses in cash, as they accrue, we shall reduce these expenses from 25 to 50 per cent., and place our bonds at par." He concludes this subject, saying: "Wise and judicious legislation at this session may establish the fact that no Southern State resumes its position in the Union under better financial auspices, or with more available resources."

On taxation, he recommends the establishment of a Board of Equalization, in order to

secure uniform valuation of property, the same class of lands being now valued in some counties "at one-half the amount it is in others." He recommends also the punishment of revenue officers, "by fine and imprisonment," who fail "to make returns at the time prescribed by law."

There being above ten million acres of the State domain yet undisposed of, and several millions more not even surveyed, the Governor calls upon the Legislature to take effective measures for making such vast resources available. As the best means for arriving at this result, he asks them to invite and encourage immigration of capital and labor into Florida, especially from the Northern States, even by ordering pamphlets to be gratuitously distributed, exhibiting distinctly "the resources and peculiar advantages of every portion of the State." In this connection he requests them to favor the promoters of a State Agricultural Society, which "is now in the full tide of successful experiment," and to encourage them by causing the "reports, transactions, essays, addresses, and other like papers of this society" to be published at the charge of the State.

He recommends the construction of two railway lines, the one surveyed since 1857, and for which 600,000 acres of United States land were granted, the other only projected; as both of them, by connecting most important points within the State, and facilitating the communication with others, would add immensely to her population, and, of consequence, to her traffic and general prosperity.

For a State penitentiary, Mr. Reed informs the Legislature that he has obtained from the proper authorities at Washington the use of the United States Arsenal property at Chattahoochee, where nine criminals are confined already, he having made for that purpose temporary arrangements; but says that "provision should be made at this session for fitting up the buildings with cells and accommodations for at least one hundred convicts."

He requests them also to provide a home for friendless and helpless persons, either by taking care of them all in one common building at the expense of the State, or of the counties from which they severally come, or even by granting to each of the counties a suitable tract of State land, requiring them "to make permanent provisions" for those among their respective inhabitants who are in that condition.

In regard to the militia, Governor Reed says that the presence of Federal troops rendered its organization unnecessary; adding, that "several volunteer companies of citizens, both white and colored, had been enrolled, and had selected their officers, but, in the sensitive condition of the popular mind, he had deemed it unwise to accept these organizations." He believes, however, that the establishment of republican government will soon take a firmer footing, "when a thorough enrolment and organization of the militia may be safely had."

He renews the recommendation of his previous message "for the amendment of the constitution, by striking out Section 27 of Article XVI." This section provides that "owners of property sold under the sequestration act of the so-called Confederate Congress, subsequent to January 10, 1861, and prior to May 1, 1865," are entitled "to file a bill in equity, and obtain judgment against the State for all damages sustained by said sale and detention of property."

In order to save for the State the cost of printing in matters which are brought before the Legislature, but in which she is not interested, the Governor recommends, "that all bills introduced for private or local purposes be required to be printed and furnished at the expense of the parties for whom the benefit is sought."

There seems to be good reason to hope that Governor Reed's anticipations concerning the welfare of Florida will be realized.

FORCE, PETER, an American historian, journalist and book-collector, born in New Jersey, November 26, 1790; died in Washington, January 23, 1868. When a child, he removed with his parents to New York City, where he learned the printer's art, and where he remained till he was twenty-five years of age. In November, 1815, he became a citizen of Washington, D. C., and five years later commenced the publication of the *National Calendar*, an annual volume of statistics, State and national, which he continued till 1836. Even before commencing the publication of this work he had begun to collect books and papers on American history and antiquities, and his views of the great importance and permanent value of a complete collection of every thing bearing on this subject were strengthened and increased with every year of his life. He was the earliest collector in the field on topics connected with American history, and his solicitude to obtain every thing relating to the subject ended only with his life. In 1823 he commenced the publication of the *National Journal*, a political newspaper, which was the official journal during the administration of John Quincy Adams. He continued to publish this paper until February, 1830. From 1836 to 1840 he was mayor of the city of Washington, and in 1840, on the organization of the National Institute for the Promotion of Science, he was elected its first president. In 1838 he made a contract with the United States Government for the preparation and publication of a Documentary History of the American Colonies; a work for which his careful research, and his already large collection of newspapers, pamphlets, and official documents of the period of the Revolution and the years which preceded it, eminently qualified him. It was his plan, in the inception of this vast work, to collect, in six series of six or more volumes each, all the documentary history of this country, from its

discovery in 1492, to the adoption of the Federal Constitution in 1789; but to secure the more ready coöperation of Congress—since no private means were adequate for such an undertaking—he commenced with the fourth series, covering the Stamp-Act controversy, and the initial history of the American Revolution (1765–1775). He prosecuted his work with so much vigor, that, between 1837 and 1844, he had completed this series in six folio volumes. He then entered with equal zeal upon the preparation of the fifth series, which was to extend from 1775 to 1778, and by the summer of 1853 had published three more volumes, bringing the history down to 1776, and had prepared for the press most of the remainder of this series, when the work was suddenly stopped by the refusal of Mr. Marcy, then Secretary of State, to approve the volumes thus prepared. Mr. Force was at this time sixty-three years of age, and this unexpected act of Secretary Marcy stunned him. He could not be persuaded to go on with the work, or to make any effort to have the Secretary's decision reversed. Thus it came to pass that the one man whose knowledge on this subject was encyclopædic, and whose collections and notes for its preparation were more complete than any other's could be, was prevented from putting into available shape the material from which our early national history must be drawn. But though Mr. Force never resumed the studies which had occupied him for twenty of the best years of his life, he had not lost his interest in American history, as the publication of four large volumes of historical (political) tracts, of the Revolutionary period, and his eager investigations of all points of the early history of the country, fully evinced. Meantime his accumulation of books relative to the history of America went on. Five spacious rooms of a large building were occupied with his books and pamphlets, the former numbering over twenty thousand, and the latter thirty thousand; in addition to these he had over eight hundred volumes of newspapers, besides files innumerable, occupying the entire basement of his house. He had in person or through his agents ransacked the bookshops, and the farm-houses and garrets, from Maine to Savannah, for historical books and pamphlets, and though much of his collection was procured at a moderate expense, he never hesitated between paying a large price for a valuable book, and letting it pass out of his reach. He had actually mortgaged his real estate to obtain the means of making his collection more complete. It was, of course, rich in autographs, maps, portraits, and engravings, and among other things contained a copy of every army order issued by the War Department. But it is not so generally known that he had made another collection, on a different subject, which was more complete than perhaps any other in this country. He had a passion for the art of printing (his own early-

chosen profession), and had procured a very large number of books printed in the infancy of the art; thus he had nearly two hundred folios and quartos printed between 1467 and 1500, most of them remarkably fine copies, and several hundred volumes illustrating the printing of the sixteenth century.

In 1866, the librarian of Congress began to agitate with great earnestness the question of purchasing this vast, valuable, and unique library, to be incorporated with the library of Congress. Mr. Force had hitherto been unwilling to dispose of it, during his lifetime, but, feeling the desirableness of having it kept together and in a place of safety, he finally consented to accept from Congress the price which had been offered by parties in New York, and refused—one hundred thousand dollars. The bill making the appropriation passed through Congress without an objection, and in the spring of 1867 the library was removed to its future home. But the loss of his accustomed companions preyed upon the spirits of the venerable old man, and though he was as free to use the library of Congress, and his own collection as a part of it, as if it had still been in his possession, he gradually pined away, losing his appetite and strength, homesick for the loss of what had been the ruling passion of his life, till at last he passed away quietly and peacefully.

FRANCE, an empire in Europe. Emperor, Louis Napoleon (Napoleon III.), born April 20, 1808; chosen hereditary Emperor by the *plébiscite* of November 21 and November 22, 1852. Heir-apparent, Napoleon Eugene Louis Jean Joseph, born March 16, 1856. The area amounts to 209,428 square miles.

A remarkable fact in the movement of population is the decrease in the agricultural districts. It appears, from the tables of the last census (1866), that the population of France has increased in 178 arrondissements, and diminished in 185. This does not include the three departments annexed in 1860. In 50 arrondissements it has even considerably advanced, and in 128 the population has remained stationary. The specially agricultural arrondissements have suffered a diminution of two, four, six, eight, ten, and eleven thousand inhabitants. Thus, that of Argentin, in the Orne, has lost, during the twenty years, 14,000 (in 1846 it reckoned 110,000, and in 1866 only 96,000), and that of Vésoul suffered a decrease of 12,000 within the same period. On the other hand, all the arrondissements of which the population has increased possessed either important towns or some very active centres of manufacture. In the departments, in which an arrondissement includes a large town or manufacturing district, and in which there are also agricultural arrondissements, we find that the population increases in the former and diminishes in the latter.

The following table exhibits the population of each department (according to the census of

1866), and the number of deputies to which each department will be entitled during the next legislative period, which begins in 1869:

Departments.	Inhabitants.	No. of Deputies.	Departments.	Inhabitants.	No. of Deputies.	Departments.	Inhabitants.	No. of Deputies.

Total of French colonies.....2,607,357

Under the protectorate of France are the kingdoms of Cambodia (1,000,000 inhabitants); Porto Novo, on the Gold Coast in Africa; Tahiti, Gambier, and other islands in Oceanica, together with a population of 1,043,897. The aggregate population of colonies and countries under the protectorate amounts to 3,631,354. The apparent decrease of the population in the colonies, for which, in 1867, a population of 3,061,888, exclusive of the three new provinces in Cochin China, was reported, arises from the fact that a census in Cochin China showed the population to be considerably inferior to the former estimates. The territory of the Gaboon colony, on the African west coast, was enlarged, in 1868, so as to extend to the Fernand Bay River, in consequence of treaties concluded with the kings and chiefs of the Kamma and the Rembo.

In the "Definite Budget, for 1867," the revenue appears as 2,155,133,049 francs; expenditures, 1,971,527,281 francs; deficit, 183,605,818 francs, which will be met from the new loan of 450,500,000 francs, contracted in 1868. The "Rectified Budget, for 1868," gives the receipts and expenditures each as 1,981,995,692 francs; but 126,701,850 francs of the loan of 450,500,000 francs are employed for the budget of ex-

traordinary expenditures. The budget for 1869, as voted by the Senate and Legislative body, is as follows: Regular receipts, 1,700,948,247; specie budget, 272,959,763; extraordinary budget, 102,592,787; total receipts, 1,995,404,666; total of expenditures, 2,128,340,645; deficit, 132,935,979, which will be covered by a portion of the loan of 440,500,000 francs. The public debt, in 1868, amounted to 12,993,298,000 francs. The following details of the public debt in May, 1868, given by a Paris writer, Louis Plée, are interesting: "The public debt is divided into three parts—consolidated, reduced or converted, redeemable debt, and life annuities. The first (consolidated) is composed of four and one-half, four, and three per cent. rentes. The annual interest paid on the four and one-half amounts to 37,453,098 francs; on the four, to not more than 446,096 francs; and on the three, to not less than 305,900,742 francs; total interest of the funded debt, 343,799,936 francs. The expense of the redeemable debt consists in the interest of capital of which the state is the depositary, such as caution-money, interest on money borrowed annually for the service of the Treasury, and periodical payments for the redemption of dues, or for territory to foreign governments. The interest on caution-money, of which the state is the depositary, amounts to 8,700,000 francs, and which, at three per cent., gives a capital of over 290,000,000 francs, and indicates the large number of functionaries holding places for which they give security. The interest of the floating debt is 26,000,000 francs, or a capital of more than 866,000,000 francs at three per cent. The periodical payments, rents, or *redevances*, amount to 248,832 francs for the Sound and Belt tolls, and another of 20,000 francs to Spain. The *Dette Viagère*, or life annuity, is of several kinds. It comprises fourteen articles, some of them important. First, are the military pensions, which amount to 45,000,000 francs; the second, civil pensions, as fixed by the law of the 9th of June, 1858, amounting to 52,455,000 francs; the third, retiring allowances, or superannuation pensions, amounting to 5,500,000 francs. Then come gratuities to old soldiers of the first republic and empire, which are set down at 2,700,000 francs; civil pensions, fixed by the law of 1790 at 1,779,000 francs; yearly indemnities on the same account, 910,000 francs; pensions on the old civil list, 589,000 francs; pensions granted by way of national recompenses, 508,000 francs; pensions on account of the Mont de Milan, 311,700 francs; pensions of the great functionaries of the empire, 288,000 francs; and some other less important items. The previous budgets comprised the dotation of Marshal Pelissier, but which ended with him.

The army, according to the new law of February 1, 1868, consists of the active army and the reserve, each numbering four hundred thousand men. The active army is composed as follows:

	Men.	Horses.
Staff	1,373	152
Gendarmes	34,548	15,701
Infantry	251,423	379
Cavalry	60,689	46,503
Artillery	37,959	19,133
Engineers	7,845	913
Military Equipage	5,954	7,770
Administration	11,165	264
Total	404,428	90,953

A "Garde Nationale Mobile," which will number about 550,000, was to cooperate for the defence of fortresses, coasts, and frontiers. The National Guard has a military organization, and is placed under the Minister of War. It comprises 250 battalions, having each eight companies of 2,000 men, and 125 batteries of 200 men. Together, the active army, the reserve, and the National Guard number 1,350,000 men.

According to the French "Blue Book," published in January, 1869, the condition of the army of France at the end of December, 1868, was as follows:

Total available military forces	1,092,930
Number of regular troops	700,000
Active army at home	378,552
" in Algeria	64,651
" in Italy	5,328
Total in active service	448,531

The French fleet, on July 1, 1868, was composed as follows: Vessels afloat, 360; in the course of construction, 92; the number of guns was, on January 1, 1867, 6,784; the steamers together had 706,241 horse-power. The marine force consisted of 72,403 men. Of the condition of the fleet at the close of the year the "Blue Book," published by the Government in January, 1869, gave the following information:

The fleet was composed on the 31st December, 1868, of 430 vessels, of which 331 were steamers, with a total of 76,165 horse-power. There are, besides, in course of completion, afloat, seven others of 3,770 horse-power, and on the stocks 31 more of 12,405 horse-power, and one sailing transport. This total is divided into two distinct portions, the first including the vessels which form part of the new fleet, to be constituted in accordance with the programme in course of execution since 1857; and the second, composed of the remains of the old navy, considered unfit to take place in the new, either directly or after transformation. The new naval force, the only one that constitutes the real maritime strength of the empire, counts, as completed, 314 steamers and 10 sailing-vessels. A table shows: 1. Iron-clads to the number of 50, of various classes. 2. The unarmored fighting-ships, 96 screw-steamers. 3. 91 small steamers, dispatch-boats, tenders, etc. 4. Transports, 95 of various sizes; and finally, the two training-schools, one for gunners and the other for naval pupils. Of the old fleet there still remain 17 steamers and 29 sailing-ships.

The works undertaken for the enlargement of the buildings and increase of the mechanical power in the two foundries of Ruelle and Nevers have been actively pushed forward. In the latter place they are very advanced; in the former they may be considered as terminated. These two establishments are now in full course of fabrication of large artillery.

The pieces of 19, 24 and 27 centimetres (7½ to 10½

in.) calibre which they have completed are already in number sufficient to arm all the iron-clad vessels capable of immediately putting to sea, and the battery of the frigates is even augmented in force by the entire substitution of cannon of 24c. for those of 19c. The wooden screw-vessels have also had their military value increased by a new armament of guns of 16c. and 19c. of the most recent type. Subjected to numerous trials at Gavres and at sea, this naval weapon has given results satisfactory upon the whole. France incessantly pursues, moreover, like other nations, the studies intended to improve it in augmenting its power. These experiments seem now to point more particularly to a profound modification in the manufacture of gunpowder. As to portable arms, the Naval Department has been already able to give the muskets of the 1866 model to its sailors and soldiers, and there is reason to hope that the new armament, actively urged forward, will be very soon terminated.

The special commerce* of France with America and some European countries was, in 1866, as follows (value expressed in francs).

COUNTRIES.	Imports.	Exports.
AMERICA—		
United States.....	191,900,000	173,000,000
Central America.....	4,800,000	39,300,000
Haiti.....	24,800,000	8,100,000
Spanish Colonies.....	35,200,000	28,500,000
Brazil.....	57,100,000	81,300,000
Argentine Republic....	59,600,000	51,600,000
Uruguay.....	35,700,000	34,500,000
Chili.....	15,200,000	17,500,000
Peru and Ecuador.....	26,200,000	26,400,000

The following is a summary of the movement of commerce from 1827 to 1866 :

YEARS.	SPECIAL COMMERCE.		SPECIAL & FRE- CIOUS METALS.	
	Imports.	Exports.	Imports.	Exports.
1866.....	2,799.5	3,180.6	1,065	554
1865.....	2,641.8	3,088.4	659	433
Ann'l av'ge 1862-'65	2,517.7	2,815.7	705	536
" 1857-'61	1,883.2	2,044.5	670	489
" 1847-'56	1,001.0	1,204.0	162	302
" 1837-'46	778.0	718.0	150	53
" 1827-'36	480.0	521.0	144	41

* By special commerce those imports are understood which are intended for consumption in France, and those exports which are produced in France.

The movement of shipping in 1866 was as follows :

FLAG.	ARRIVALS.		CLEARANCES.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
French.	11,835	2,090,000	12,660	2,203,000
Foreign.	20,866	3,621,000	20,980	3,620,000
Total.	32,701	5,711,000	33,590	5,823,000

The merchant navy, on December 31, 1866, comprised :

Sailing-vessels.....	15,220	915,034
Steamers.....	407	127,777
Total.....	15,627	1,042,811
Coasting-vessels.....	8,829	66,698

An official report of the ministry of Agriculture, Commerce, and Public Works gives the following information of the different lines of railway working at the close of 1867, and their receipts during the year, as compared with 1866: The total length of railway open on the 31st of December, 1867, was 15,669 kilometres (five-eighths of a mile each), and of which 7,524 formed the old network, and 7,809 the new, while the remaining 336 belonged to private companies; the extent of lines at the close of 1866 was 14,580 kilometres, there being an increase of 1,189 kilometres in 1867. The total receipts in the two years respectively were as follows: In 1867, old network, 499,687,007 francs; new, 152,141,798 francs; other companies, 4,665,288 francs—together, 656,494,088 francs. In 1866, old network, 469,894,060 francs; new, 132,452,882 francs; other companies, 3,834,001 francs—together, 605,680,443 francs. The augmentation in 1867 was consequently 50,813,645 francs.

The legislative session, which had been opened in November, 1867, closed in July, 1868. It was the longest since 1852, having comprised 141 public sittings, whereas that of 1867 consisted of 89 only. The discussion on the budget alone occupied not fewer than 25; in 1867 the debate lasted only 21. For the first time since 1852 the Assembly heard nine ministers take part successively in the public discussions, M. Rouher, M. Baroche, M. Pinard, the Marquis de Moustier, M. de Forcade la Roquette, Marshal Niel, Admiral Rigault de Genouilly, M. Duruy, and M. Vuitry coming forward and defending their departments. One only, Marshal Vaillant, minister of the Emperor's household, took no part in the labors of the Legislative body. The Senate met 84 times in its bureaux and 66 in general sittings. The former had to examine one demand for an interpellation, as well as several petitions, proposing modifications in the Constitution; they appointed 75 committees, the labors of which were as follows: One to examine a *Senatus Consultum*; 63 for the investigation of bills; one to consider a demand for authorization to prosecute a senator; nine to prepare reports

on petitions, and one charged with the examination of the accounts of the Senate. The Assembly deliberated on a *Senatus Consultum* relative to an exchange of land between the crown and private individuals; voted 116 bills, among which were 88 concerning the departments, communes, or private individuals; and 48 of general interest; it also set aside, by the previous question, the application for authorization to institute proceedings against a member.

Among the most important acts approved during the session belong the law on the right of meeting and the law on the press. The law on the right of meeting was adopted by the Legislative body by 209 yeas against 22 nays; and in the Senate by 86 yeas against 24 nays; and the law on the press, in the Legislative body, by 242 yeas against 1 nay; and in the Senate by 98 yeas against 27 nays. (*See FRANCE, PRESS OF.*)

The execution of the law concerning the reorganization of the French army produced considerable trouble in several places. In no place were the disturbances so serious as in Bordeaux. On March 21st a numerous band paraded the Rue de la Trésorerie, singing the "Marseillaise." The commissary of police of the quarter presented himself, and attempted to take away a red flag carried by one of the party. A scuffle ensued, and the commissary was badly knocked about. A grocer, who came to the aid of the officer of justice with an iron rod in his hand, was disarmed and beaten. Subsequently the police made several arrests. In the St. Nicholas quarter a sergeant-de-ville was ill-treated. On the 22d the young men ordered to appear before the council of revision in the Place Tourny presented themselves with big carrots in their button-holes and in their hands. These pacific emblems of agriculture threw ridicule upon the proceedings, and provoked great guffaws from the crowd. The police showed themselves in great force everywhere, and many agents went about in plain clothes. In the Place Tourny a picket of regular troops was obliged to aid the police. These disturbances of the 21st and 22d took place subsequently to the trial, on the 20th, by the tribunal of correctional police, of three young men arrested for singing the "Marseillaise" and crying "Vive la République" on the 19th. One of these, who excused himself for carrying a red flag on the ground that he had seen one paraded in the streets on the day before, which nobody interfered with, was sentenced only to four days' imprisonment; but the two others, one of whom publicly harangued the mob and spoke against the army bill, were sentenced respectively to three months' and one month's imprisonment.

In August M. Magne, the Minister of Finance, addressed a report to the Emperor touching the success of the loan of 440,500,000 francs, which the Government had made. The report states the number of subscribers to the loan at 781,292, and the aggregate of their subscriptions at

660,000,000 of rente, being equal to a capital of fifteen milliards of francs, or little short of thirty-four times the amount called for. The subscriptions received at Paris and in the departments, being not subject to reduction, amount to 8,141,170 francs rente. The moneys deposited to insure an allotment exceed the sum of 660,000,000 francs.

According to a table published by the Paris *Epoque*, the result of fifty-two partial elections for the Legislative body, which have taken place from 1868 (the last general elections) to 1868, was as follows: The official candidates, who in 1868 obtained 1,082,867 votes, received only 849,759, while 525,290 have been given to the opposition aspirants, in place of 307,295 in 1868. Therefore, since the general election, and in fifty-two circumscriptions alone, the Government has lost 182,608 votes, while its opponents have gained 218,000, constituting nearly double the number they obtained five years back. On examining the definitive results, it is found that 86 candidates of the administration have been elected to 16 independents.

On March 17th, a pamphlet was published at the imperial printing-press, under the title *Les Titres de la Dynastie Napoléonienne* ("The Claims of the Napoleonic Dynasty"), having for its object to show, among other facts, that in 1799, as well as in 1852, the imperial dynasty, without upsetting any Government, ascended the throne of France, vacant at each of these dates, with the almost unanimous sanction of the people. The following extracts give a review of the principal elections, which elevated Napoleon I. and Napoleon III. to the throne, and of the changes which have taken place in the Constitution of the Second French Empire, since 1852:

The opposition to the presidential election in 1848 had been 1,918,841 votes; on the 20th of December, 1851, it had declined to 641,851 votes. Against the creation of the empire the nays were only 253,145.

But that which this exposition above all sets forth, is, that six times within half a century the Napoleonic dynasty has received the consecration of universal suffrage. The uncle and the nephew have gone through the same historical cycle; both have rescued France from chaos; each, three times acclaimed, held office for a limited period, soon prolonged, and both took their seats on a throne which they found vacant. The consulate and the presidency both merged in the empire—a unique spectacle in history at fifty years' interval, in spite of so many events that intervened to keep it down. The will of the people, like a river swallowed up by sand, bursts forth from the lower layers of society, and resumes its level of independence and national greatness. The *plébiscite* of 1852 answers as an echo to the *plébiscite* of 1804. The 4,000,000 of voters which amazed the historians (of the First Empire) increased to 8,000,000; and he who was called to the throne by virtue of the constitution of the First Empire becomes the chief of the Second, uniting in his person hereditary with elective rights. From 1799 to 1804 Napoleon received 10,000,000 of suffrages. From 1848 to 1852 Napoleon received 20,000,000 of votes—80,000,000 of voting papers signed by the French people—those are the title-deeds of the Napoleonic dynasty.

In the measures which followed the 2d of December, it may have been seen that the Prince-President

did not confine himself to apply to the nation for extraordinary powers, with a view to devising a remedy for a temporary ailment, but that he set forth a whole system of government appropriate to the permanent requirements of the country. He only consented to undertake the burden of leading the destinies of France on the condition that that system, reverting to the consular tradition of the year VIII., was favorably received by the nation. Never was a condition more explicitly stated nor more unanimously fulfilled. The principles whence the Constitution is derived were, therefore, the result of a freely-consented compact.

But if these bases be fixed, if they cannot be modified without a *plébiscite*, the work itself involves progressive improvements; it is perfectible. The Emperor openly proclaimed that fact as early as the 31st of December, 1851, when he said he intended to inure the country to the wise practice of liberty. Let us add, that the decree of November 24, 1860, and the letter of January 19, 1867, have fulfilled that promise.

The Constitution of the 14th of January, 1852, has, it is known, become the Constitution of the empire. The change effected in the form of government has resulted in abrogating or amending several articles which were no longer in harmony with the new state of things. It has appeared to us useless to point out these differences. The intelligence of the reader will at once supply that want.

As for modifications of another order, they are the result of various *Senatus Consultu*; and, as they mark, so to speak, the stages of the Emperor's Government in the liberal path it has entered on, we will confine ourselves to mentioning the most important, and enumerating the great measures which have been their almost immediate consequence.

We will mention (1) the act which has made public in the papers the debates of the Senate, and has permitted the reproduction *in extenso* by shorthand of the discussions in the two Chambers; (2) the sending of ministers to the Chambers by special delegation; (3) the extension to the Corps Législatif of the right of amendment; (4) the power attributed to the Senate to send back to the Corps Législatif, for fresh examination, bills which appear to it to be defective; (5) the voting of the budget by large sections; (6) the abandonment by the Emperor of the power of opening, in the absence of the Chambers, supplementary or extraordinary credits; (7) the law on the liberty of the press; (8) the law on coalitions, and (9) finally, the bill which is now before the Legislature, and whose object is the right of meeting.

The whole of these dispositions emanate, so to speak, from the womb of that Constitution, which lends itself to every movement of liberty, and which, in this respect, has been an innovation as hardy as fruitful. To appreciate the liberal character of this Constitution, we have only to compare it with the Constitutions of preceding monarchies.

An imperial decree in the *Moniteur* announced the abrogation of the eighteenth article of the commercial treaty between France and Mecklenburg. The concessions accorded by the Zollverein to France were a reduction to 20f. of duty on the 100 kilogrammes of wine in casks and bottles, and to 20 per cent. on cotton tissues, light, transparent white or prepared, and 8f. 75c. on various other articles. Another decree approved of the declaration signed 21st February, 1868, between France and Italy, concerning privileges granted to French subjects in Italy and Italian subjects in France. The subjects of either country shall be respectively exempt from all service in the army, navy, national guard, or militia, from all judicial or municipal functions, forced loans, and military requisition.

The ratifications of the treaty concluded between France and the kingdom of Siam were exchanged in due form at Bangkok on the 24th of November, 1867. On the following day M. Duchesne de Bellecourt laid before the King the presents sent by the Emperor Napoleon. His Majesty testified his gratitude, and declared that he was resolved to neglect nothing to secure the good-will of the European governments.

On the 16th of June a French outpost of twenty-five soldiers, at Rach-gia, Cochin China, was surprised by a roving party of 1,000 Anamite robbers. Only one of the soldiers escaped with his life, when this news reached the garrison. Five days afterward, an expeditionary force, increased by bodies of native militia, who volunteered their services, was sent out to pursue the perpetrators of the massacre, upon whom they inflicted severe loss.

At the end of April the consul-general of France in Tunis broke off diplomatic relations with the Government of the Bey. The difficulty was settled by a mixed commission, presided over by a Frenchman, and diplomatic relations were renewed in May.

The "Blue Book," published by the Government in January, 1869, remarks, with satisfaction, on the conclusion of the labors of the international commission on the boundary question between France and Spain. These labors, which have continued for fifteen years, were brought to an end at the very time when the Spanish revolution broke out. It notices, also, the settlement of the division of the Pontifical debt with the Italian Government, interrupted by the events of which the Roman frontier was the theatre last year. The arrangement concluded then was satisfactory to the Government of the Pope. The attempt since made to suspend its effects afforded an occasion to the Cabinet of Florence to declare its firm desire to cause those engagements to be respected; and the approval given by the Italian Parliament to the declarations of the minister is regarded as unequivocal testimony of a better state of public feeling.

The following paragraph, in the "Blue Book," relates to the Eastern question. After mentioning the difficulties attending it, and the necessity for Europe to maintain the state of things as established by treaties, it says:

Thus, when, in presence of the complications which occurred between the Turkish Government and the Cabinet of Athens, in consequence of the Candiot question, Prussia took the initiative in a proposition for submitting to the powers which signed the treaty of Paris the difference which so seriously menaced the tranquillity of the East, we did not hesitate to recommend that combination to all the courts interested. We have had the satisfaction of seeing it accepted. Already, in the mean time, the good offices rendered by a ship of the Imperial Navy in the Greek waters had prevented all danger of an immediate conflict between the naval forces of Turkey and Greece. Since then a conference met in Paris. Thanks to the spirit of conciliation with which their labors were carried on, the plenipoten-

tiaries agreed on the principle of international right, and the Emperor's Government will soon be able to make known the definitive result of the amicable intervention of the powers.

The relations between France and the United States, according to the "Blue Book," have continued to be cordial; and the French Government had no hesitation in seconding the efforts of the Washington Cabinet in reestablishing peace between Spain and the republics of the Pacific.

As was mentioned last year, the American Government having again proposed its mediation between the belligerents, we thought, as well as England, that the maintenance of our previous offers might become an embarrassment for the Cabinet to which we addressed ourselves first, and retard the arrangement which all the neutral powers desired. We lost no time in declaring that our propositions should not be an obstacle to the success of the American mediation, and desiring, above all, the reestablishment of peace, which became still more necessary after the calamities which occurred on the coast of the Pacific, we are disposed to support the measures, from whatever quarter they come, that appear most likely to attain that favorable result.

As a fresh proof of its friendly sentiments toward the two republics in the South, the French Government has accredited to them diplomatic agents of a rank superior to those who hitherto represented it.

The "Blue Book," in conclusion, thus refers to the remonstrances of France on behalf of the native Christians of Japan:

The Government of the Mikado must have been convinced on a recent occasion that the French Government, which resolved to exact the strict execution of treaties, will not pass the limit which these acts mark out for it, and, in order to avoid exceeding its rights, it has done violence to its sympathies. Hardly had the struggle which he had entered upon with the Tycoon been ended than the Mikado prohibited to his subjects the exercise of the Christian religion, and an edict imposed severe penalties on the Japanese Christians who refused to abjure their faith. The treaties which guarantee to strangers the full liberty of professing their faith, wherever they are authorized to reside, containing no stipulation of a nature to justify the active intervention of the Christian powers in favor of Japanese subjects, we limited ourselves, as well as the Cabinets of Washington and London, to tendering counsels of moderation to the Government of the Mikado, and representing to him that his reverting to the errors of the past would affect the consideration he was held in by other nations. We cannot affirm that a power, which, perhaps, owes a part of its prestige to the influence of theocratic ideas, will at once consent to reconsider an act so grave; but we may be permitted to hope that the measures of repression, already less cruel than those enforced in former times, will be more and more mitigated in practice until such time as they fall into complete desuetude.

FRANCE, THE PRESS OF, IN 1868. The year 1868 is of special importance in the history of France as regards the newspaper press of the country. For sixteen years past the Draconic Press Law of February 17, 1852, with its system of *communiqués*, warnings, previous authorization, stamp-tax, caution-money, and all those illiberal features which rendered it in every respect more oppressive than the press laws of any other European country, with the

exception of Russia and the two Mecklenburgs, had weighed down journalism in France and prevented its healthy growth and development. In consequence of the discretionary powers given to the Minister of the Interior and to the prefects of the departments, with whom it was left optional whether or not they would allow new papers to be established, sixty departments, at the beginning of the year 1868, had no other political journals than small official or semi-official sheets, all attempts to start independent or opposition papers having been thwarted by the minister or the prefects. Even in the largest provincial cities of the empire, such as Lyons, Marseilles, Bordeaux, Lille, Toulouse, Nantes, and Rouen, the condition of the newspaper press was so deplorable, that these seven cities, with an aggregate population of upward of 1,800,000 inhabitants, had on the 1st of January, 1868, only eleven daily papers, with a total circulation of less than 180,000 copies. Only in Paris, where the imperial Government could not entirely disregard public opinion, the rigorous provisions of the Press Law of February 17, 1852, were not enforced as inexorably as in the provincial cities and towns; still, the tone of even the organs of the most advanced wing of the opposition was singularly mild and cautious, and, although the old saying that "Paris is France" is most decidedly true so far as its newspaper press is concerned, nearly all the Paris dailies having as many subscribers in the departments as in Paris, the aggregate circulation of all the daily political journals published in Paris, on the 1st of January, 1868, fell short of 800,000 copies; and the profits of even the most successful of these dailies, such as the *Siècle* and *Liberté*, with respectively forty and thirty thousand subscribers, and with a heavy advertising patronage, remained comparatively insignificant.

In the celebrated letter which the Emperor Napoleon had addressed on the 19th of January, 1867, to M. Rouher, the Minister of State, he had promised that "a law should be proposed for assigning the jurisdiction over offences against the press laws exclusively to the correctional tribunals, and thus suppress the discretionary power of the Government." The semi-official organs of the imperial Government had added to this letter comments evidently proceeding from official sources, and promising in the most emphatic and unequivocal manner that the imperial Government, besides the reforms granted to the political journals of the country in the Emperor's letter, would at the earliest moment submit to the Senate and Corps Législatif an act modifying many of the most burdensome paragraphs of the Press Law of February 17, 1852, and thus place France, in this respect, too, on a footing of equality with the most liberal states on the European Continent.

For a long time, notwithstanding the most urgent appeals of the organs of the opposition, these promises remained unfulfilled, and ap-

prehensions that the importunities of the reactionary party at the imperial court, which was known to be bitterly hostile to the reforms which the Emperor had granted, might induce him not to redeem his promises, were constantly gaining ground, although the semi-official journals from time to time tried to reassure the public by asserting that the delays in the publication of the draft of the new law arose solely from the profound and protracted discussions to which the examination of all the questions bearing upon the subject had given rise in the meetings of the imperial Cabinet and the Council of State. They pointed also to the comparatively lenient course which the Minister of the Interior, the Marquis de Lavalette, had been pursuing toward the Paris papers since the publication of the imperial letter of January 19, 1867.

At length, in the early part of January, 1868, the Government submitted the new press law to the Corps Législatif. This law provided in its first paragraph that the French press should be free, but subjected it in its subsequent sections to so many oppressive restrictions that the independent and liberal journals, with one accord, pronounced it utterly unsatisfactory, and even went so far as to declare that it was very doubtful if the existing state of affairs was not preferable to the condition in which the new law would place the French press. While the new law, it is true, put an end to the discretionary power of the Minister of the Interior and the prefects of the departments over the political press, and abolished the system of authorization for those who wished to start newspapers or establish printing-offices, it proposed no reduction of the burdensome caution-money, lessened the still more burdensome stamp-tax but very slightly, fixed the fines, which the correctional tribunals were empowered to impose upon editors, publishers, and printers, for the most trifling press offences, at the most unheard-of rates, and added to the existing press régime so many new and odious features, that Emile de Girardin, editor-in-chief of *La Liberté*, indignantly pronounced the new law a "hateful trap" (*un piège odieux*), and the first impulse of all the opposition papers was to call upon the representatives of their party in the halls of the Corps Législatif to reject the law *in toto*.

The majority of the Corps Législatif, on its part, did not seem to be very anxious to pass the new law. Largely composed as it was of ultra-conservative members, it was seriously dissatisfied with what few additional liberties the new law granted to the press, especially with the section which permitted every Frenchman, of good repute and in the full possession of his civil and political rights, to establish political journals without previous authorization on the part of the Government. It was thought that, in consequence of this paragraph, liberal journals would spring up in all rural districts, and by their influence secure the election of a

great many opposition deputies in districts then represented by conservative adherents of the second empire. Many of the department prefects added to the reluctance of the majority of the Corps Législatif by their protests against the new press law, which they asserted in their reports to the Minister of the Interior would give fresh vitality to the revolutionary (i. e. anti-Bonapartist) element in the country, and greatly lessen their influence over the electoral body in the provincial districts. The reactionary club of the so-called *Arcadians*, embracing upward of one hundred members of the Corps Législatif, resolved at one time to vote for the rejection of the entire law; and the reactionists at the imperial court were incessantly dinning into the ears of Napoleon III. that the "revolutionists" would use the new law as a powerful engine for overthrowing his dynasty.

In the mean time, however, the opposition journals had thought better of the matter, and deemed it advisable to accept the new law, which was, after all, a slight progress toward liberty; and when the committee, to which the draft of the new law submitted by the Government had been referred, after a very long delay finally reported it back to the Corps Législatif, they urged their political friends in the Legislature to vote in such a manner as to secure the adoption of the law, without regard to its illiberal features. The amendments proposed in the report of the committee added to the oppressive character of the law. The non-authorization clause in regard to the establishment of new printing-offices, the reduction of the stamp-tax, and other liberal features, had been struck out from the drafts submitted by the Government, and in their places had been inserted paragraphs rendering the position of political editors, correspondents, publishers, and printers of newspapers, more precarious and difficult than before.

The debates on the press law in the Corps Législatif were exceedingly stormy. The opposition orators fought its oppressive paragraphs step by step, but did not succeed in wresting any concessions from the conservative majority, and giving a more liberal character to the important law. On the contrary, the so-called Guilloutet amendment, which was carried by a very large majority, in rendering more stringent the responsibility of editors, reporters, and publishers, in regard to articles written about the affairs of private persons, added another most burdensome feature to it. At the final vote on the law it was carried by an overwhelming majority, only seven of the *Arcadians* voting against it; the majority of the colleagues of the latter, yielding to the urgent wishes of the Government, had voted for the law. The Senate passed the law likewise, though not without gloomy predictions on the part of many of its reactionary members; and on the 11th of May the law was promulgated. The following circular, which M. Pinard, the

Minister of the Interior, issued a few days afterward to the prefects of the several departments in regard to the new press law, shows the important changes which it introduced in the legal condition of the political journals :

M. LE PRÉFET: In realizing the promise of January 19, 1867, the new press law puts an end to the discretionary power of the administration. The necessity of previous authorization and the disciplinary powers of the minister are at the same time abolished. Henceforth the press will only have as its judges the judges of every citizen. It will no longer be under tutelage.

Henceforth it is incumbent upon the Guardian of the Seals to give detailed instructions to the public prosecutors as to the execution of a law which only maintains the repressive action of the tribunals toward the press. But if the part of the administration is profoundly changed, it remains none the less considerable ; it is transformed and does not disappear.

What is this part as toward the judicial authority ? What, as toward the writer ? In what degree shall you concur, as administrative power, in the application of the new law ? Brief explanations will suffice to settle upon these three points the character and the nature of your intervention.

When the judicial authority has to begin a prosecution having a political character, it is essentially desirable that it should be in agreement with you. It alone has to decide the question of legality, but you will often have to give your opinion as to the question of opportuneness. This situation implies that frequent relations and an understanding will be more than ever necessary between you and the public ministry. It also requires that you should not point out any article to the bar without having previously referred it to me, and that you should keep me fully acquainted with the phases as well as the results of every prosecution.

Toward the writer, who does not come under the application of the repressive laws, you have a double duty to fulfil—the duty of surveillance and the duty of good relations. The duty of surveillance is indispensable to place you in a position to rectify erroneous facts. The more the control of the press is extended to the acts and intentions of the authorities, the more it becomes important to establish its truth. You have at your disposal either the *communiqué*, a direct reply to the journal that has led the public into error, or the contrary asserted insertion in another journal. These two methods of rectification possess no serious value save when they are made use of immediately. They only strike the mind of the reader when they put on a brief, a taking form, when they avoid the warmth of controversy and the length of discussion. They should confine themselves to correcting the erroneous figures of the inexact fact. As previously, you will be good enough to submit to me in advance every *communiqué* together with the article by which it is called forth. The duty of good relations is the best means of defence. It compromises neither the dignity of the Government nor the independence of the writer. You will understand how to keep up these relations with all those who shall address themselves loyally to you. When essential questions do not divide us, these relations may often prove the cause of voluntary rectifications. In bringing men closer together, they may bring ideas closer also ; they may, at any rate, obtain more justice in appreciating intentions ; they may cause private wounds to be avoided, and may take from controversy that aggressive character which sometimes separates men more widely than the contradiction of principles.

You will have, M. le Préfet, to assist in the application of the law by watching over the execution of three new regulations. These refer to the declaration, to the deposit, and to the authorization of special printing-offices.

The declaration is to be made upon stamped paper.

It must precede the publication of the journal by at least fifteen days, and must be accompanied by evidence establishing its sincerity. Article 2 sets forth all that this declaration must contain. The declaration only gives the right of publishing a journal to those who are at the same time Frenchmen and of full age, and in enjoyment of their civil and political rights. The declaration once received, you will deliver a receipt to the declarant, and you will employ the fifteen days elapsing between the declaration and the expiration of the term fixed for publication in verifying the capacity of the declarant. You will demand for this purpose bulletin No. 2 from the judicial file at the public prosecutor's office in the declarant's original domicile. You will first communicate to me the declaration, and ultimately the evidence you will have gathered as to the declarant in the course of this examination.

The deposit of two copies of the journal, as prescribed by Article 7, shall be made at Paris at the ministry of the Interior. In the departments it must be made at the prefecture in the chief town of the department, at the subprefecture in the chief town of the district, and at the mairie for other towns. One of these two copies must be sent immediately by the préfet, the sub-préfet, or the mayor, to the ministry of the Interior (departmental press-office). A similar deposit is required, by the second paragraph of Article 7, for the office of the public prosecutor. In towns where there is no tribunal of first instance, this deposit must be made at the mairie, and the mayor must immediately send to the public prosecutor's office the two copies of this second deposit. You will be good enough to watch that these various deposits are made with the greatest regularity. The more liberty is extended, the greater the necessity for the surveillance of the Government.

Every manager of a journal shall be authorized, when he may request it, to have a printing-office reserved exclusively for printing his newspaper. The Legislature has not yet settled the question by the monopoly of liberty of printing and publishing, but it has desired that, previous to this definitive solution, the journalists might always be certain of having a printer. It promises, henceforth, an authorization, and the Government would not be able to refuse it either to the manager of the industrial, the literary, or the purely political journal. Furthermore, this printing-office could not be diverted from its object. It is created for no other purpose than to secure the free establishment of the journal. It must only print that journal itself, or any thing forming an essential element of its publication, as prospectus, posters, postage bands, subscription lists, and receipts. It could not go beyond this without encroaching upon establishments now in existence, and whose monopoly is still maintained by law.

This arrangement shows you, M. le Préfet, the liberal intentions animating the Emperor's Government and the Corps Législatif in this matter. If the Legislature holds that the manager of a journal should always find a printer, it is a logical and legitimate consequence to favor the establishment of new printing and publishing offices wherever it might be justified by serious needs. Thus, in making proposals to me upon this point, you will have to take into account at the same time the guarantees candidates must offer, and the degree of utility the issue of new privileges would present in certain localities.

I confine myself, M. le Préfet, to these brief explanations. It would be useless to revert to the other arrangements of the decree of February 17, 1852, which still remain in vigor, and over the execution of which you have watched up to this day. Should the stamp right disappear in some cases, should it be restricted in others, the application of these arrangements comes more especially within the province of the Minister of Finance, who will instruct his agents upon this point.

No change is imported either into the amount of

the caution-money or into the rules accompanying its payment. You will have, as formerly, to place the declarants in a position to deposit at the office of the Treasurer-General of your department the caution-money to which they are subjected, and you will transmit the receipt of the payment to the Finance Minister. PINARD, Minister of the Interior.

No sooner had the new press law been promulgated, than a great many new papers were started both in Paris and in the departments. Up to the 1st of July, 1868, sixty-four new journals, mostly weeklies, had been established in the departments, and seven new dailies and twenty-three new weekly papers in Paris. A very noteworthy fact was, that most of these new papers were organs of the most advanced wing of the Liberal party. Public opinion in France was evidently awakening from its long torpor, and not a few of the newly-established papers used a more defiant language toward the Government than had been heard for long years past. These audacious sheets were so eagerly read by the people, that some of them obtained in the course of a few days a truly enormous circulation. Especially was this the case with *La Lanterne*, a weekly politico-satirical paper, whose wonderful success marks an era in the history of French journalism, and which immediately found a great many rivals and imitators, none of which, however, were able to gain an equal degree of popularity. *La Lanterne*, issued every week in pamphlet form, consisted entirely of spicy little paragraphs written by Henri Rochefort, a young journalist of strongly democratic views, whose satirical attacks and *mots* upon all the "dark spots" of the Second Empire were greatly relished by vast numbers of French readers. The first nine issues of *La Lanterne* reached the enormous aggregate circulation of 1,155,000 copies, and its subscription list was rapidly increasing when the heavy sentences imposed upon the editor and proprietor by the Sixth Chamber of the Correctional Tribunal of Paris caused M. Henri Rochefort to remove the office of the paper from Paris to Brussels, and Aix-la-Chapelle, where it is now issued alternately, and where every week upward of one hundred thousand copies of the *Lanterne*, printed on very thin letter-paper, are sent in sealed envelopes to the subscribers of the paper in Paris.

Of the numerous imitators which *La Lanterne* found among the other newly-established Paris papers, *La Cloche*, edited by Ferrayus (Louis Ulbach), and *Le Diable à Quatre*, edited by Villemessant, Lockroy, and other eminent journalists, were the most successful; *La Cloche* reaching a circulation of eighty thousand copies, and *Le Diable à Quatre* selling about sixty thousand copies.

The increasing boldness with which the organs of the opposition criticised many acts of the Government, led to a large number of prosecutions of liberal papers. Especially numerous were the press trials which took place before the Sixth Chamber of the Cor-

rectional Tribunal of Paris. The worst fears of the opposition, in regard to the servility of these correctional judges, were more than verified. A prosecution of a newspaper before them, with very rare exceptions, was equivalent to a condemnation, and the sentences, as a general thing, were so severe as to create the most marked dissatisfaction in the minds of the people. Despite the fines and imprisonments imposed upon editors and printers, the tone of the Liberal papers grew daily more independent; and at the beginning of November, when the Government tried to prevent them from advertising subscriptions for the erection of a monument in honor of Baudin, one of the illustrious victims of the *coup d'état*, whose humble grave, until then unknown, had been recently discovered, the whole independent press of Paris, with one accord, bade defiance to the Government and refused to obey its behests. The prosecutions which were instituted in consequence of this bold attitude against the *Reveil*, the *Temps*, the *Journal de Paris*, the *Avenir National*, and other leading journals, resulted in severe sentences against their editors and publishers; but these sentences had been wrung from the correctional tribunal only by the peculiar construction of the old Law of General Security; and in several other cities of France, especially in Clermont and Castres, editors were acquitted on the same charges on which their Parisian colleagues had been convicted. Besides, the language which the counsel of the prosecuted journalists used at these trials in criticising the *coup d'état* and Bonapartism in general, was so scathing and bitter that public opinion became greatly exasperated, and when M. Pinard, the Minister of the Interior, who had been the soul of these press prosecutions, made himself and the Government an object of ridicule by the vast display of military precautions on the 8d of December, in order, as he pretended, to nip in the bud a contemplated rising of the revolutionists, the Emperor dismissed him on the 18th of December in a somewhat abrupt manner, and appointed in his stead M. de Forcade, who is generally believed to be in favor of a more liberal and moderate course toward the press.

Among the other noteworthy events which took place in the affairs of French journalism in 1868 is the change which the *Moniteur Universel* underwent toward the close of the year. Already in the early part of 1868 the Emperor Napoleon had ordered his Minister of State to take steps for severing the connection of the Government with the *Moniteur*, which had been its official organ, as well as that of all the preceding *régimes*, and for establishing a new official journal. M. Rouher and his colleagues vainly tried to dissuade the Emperor from his purpose, and the efforts of M. Dalloz on the part of the proprietors of the *Moniteur* remained equally unsuccessful. In the autumn of 1868 active preparations were made for

establishing the new official journal, which was to bear the name *Moniteur Officiel*. M. Dalloz appealed to the courts to enjoin the Minister of State from applying the name *Moniteur* to the new paper, and a permanent injunction to this effect was granted, whereupon M. Rouher decreed that the new Government paper should be entitled *Journal Officiel de l'Empire Français*; the offer of M. Dalloz to let the Government use the name *Moniteur* upon the payment of 2,800,000 francs having been previously rejected. The *Moniteur Universel*, which, it is believed, is now controlled by the princes of the Orleans dynasty, will be published, as heretofore, twice a day.

The list of press trials in France from the promulgation of the law of May 11, 1868, down to the 31st of December, 1868, shows that the defendants were convicted in sixty-four cases, and that they were sentenced to undergo terms of imprisonment amounting in the aggregate to sixty-six months, and to pay fines footing up to 121,957 francs. The two most severe sentences were those passed upon Henri Rochefort, who was condemned to be imprisoned for twenty-nine months, and fined 26,000 francs.

According to the official reports published on the 15th of October, 1868, 1,668 journals are published in the French empire. Paris has 69 political and 710 non-political journals.

The *Siècle*, the organ of the Democratic bourgeoisie, has still the largest circulation of any political paper in France, its daily sales being rarely less than 42,000 copies. Its advertising receipts are upward of nine hundred thousand francs. In the autumn of 1868 it sustained a heavy loss in the death of its principal stockholder and managing editor, M. Havin, to whose judicious management the *Siècle* is indebted for much of its prosperity. Louis Jourdan remains the leading editor. The *Temps*, another organ of the moderate democracy, circulates about ten thousand copies, and is noted for the great ability of its editorial staff, which embraces some of the most illustrious names of French journalism. The *Avenir National*, advocating the principles of the more advanced wing of the Democratic party, had a circulation of eight thousand copies on the 1st of July, 1868, which its publishers claim has been nearly doubled in November and December. It has sustained heavy losses in consequence of repeated prosecutions on the part of the Government. Its managing editor is M. A. Peyrat. The *Journal des Débats*, the organ of the liberal Orleanists, has a circulation of nine thousand copies. It maintains its high reputation for literary ability, Prévost-Paradol, Edouard Laboulaye, Michel Chevalier, Jules Janin, and other eminent writers being among its editors and contributors. *La Liberté*, Emil de Girardin's journal, claims the largest circulation next to the *Siècle*. At the beginning of 1868 it had upward of thirty thousand subscribers, but it is said to have

lost over ten thousand of them in the course of the year. Its advertising receipts are over eight hundred thousand francs a year. *Le Figaro*, Villemessant's paper, a gossip, but able and brilliant sheet, has also a very large circulation. The rival of the *Figaro* is the *Gaulois*, which was started in the spring of 1868 and acquired great popularity by the articles of Edmond About and the enterprise it displayed in obtaining early and reliable news about the Spanish revolution. In November M. Henri de Pène, one of the founders of the *Gaulois*, withdrew from that journal and established a similar one, called *Paris*, which has as yet not obtained a very marked success. The *Opinion Nationale*, A. Guérault's paper, an advocate of moderate democratic principles, and not entirely hostile to the Second Empire, lost in 1868 much of its former popularity, its circulation having dwindled down in the course of the year from sixteen thousand copies to less than half that number.

The ultramontane and legitimist papers, the *Gazette de France*, the *Union*, the *Monde*, and the *Univers*, have only between three and six thousand subscribers each. Though edited with much ability, they are losing concern, and are kept alive only by liberal contributions from wealthy members of their respective parties.

The *Patrie* and the *Constitutionnel* are the two leading semi-official papers. The *Constitutionnel*, with a circulation of ten thousand copies, is edited by M. Henri Baudrillart, the distinguished political economist, and Robert Mitchell, the son of an American, but naturalized in France. The *Patrie*, with a circulation of fourteen thousand copies, is now under the editorial control of Clément Duvernois, heretofore managing editor of the *Epoque*, a paper representing the principles of the liberal wing of the Bonapartists, but of very limited circulation. Ernest Dréolle, for many years the leading writer on the staff of the *Patrie*, was forced in October to leave that journal in consequence of a quarrel between two members of the imperial Cabinet, and he issued in November the first number of a new semi-official paper, named *Le Public*, which met with but very little success. The *Etendard*, with between three and four thousand subscribers, is edited by M. Aug. Vitu. The *France*, the organ of the Vicomte de Laguéronnière, has six thousand subscribers; and the *Pays*, edited by Granier and Paul de Cassagnac, sells only between 800 and 1,000 copies daily, and is considered the most unpopular paper in France. The Cassagnacs pay to the owners of the *Pays* fifty thousand francs a year, and in return receive all the money paid in for subscriptions and advertisements. *La Presse*, now under the control of Mirès, the famous banker, circulates between 5,000 and 8,000 copies.

Among the first-class political weeklies established in Paris since the promulgation of the new press law, the *Electeur*, the organ of

Jules Favre and the members of the Left in the Corps Législatif, the *Tribuna*, edited by Eugene Pelletan, and the *Reveil*, M. Delecluze's journal, deserve special mention. Their circulation on the 1st of November was, respectively, 25,000, 18,000, and 14,000 copies.

FRENCH EXHIBITION. In the *ANNUAL CYCLOPÆDIA* of last year, under the head of the "French Exhibition," brief notices were given of some of the material and machines then exhibited, but there was a very important omission in one of the awards of the new prize.

The Emperor of France proposed ten awards of 10,000 francs each (nearly \$2,000 gold), or 100,000 francs in the aggregate, to ten different individuals or associations, who, in a series of years, had accomplished the most to secure a state of harmony between employers and their work-people, and most successfully advanced the material, intellectual, and moral welfare of the same. A special jury was appointed from the different countries represented in the exhibition. Five hundred applications were received from France and other countries on the Continent of Europe, from Great Britain and the United States.

Nine of the awards were given to France, Germany, and other countries in Europe, one to the United States, and none to Great Britain. The name of the Pacific Mills, Lawrence, Mass., was placed third in the list of ten successful candidates; this award was among the highest made at the Exposition, and the highest received by a citizen of the United States. The recompense awarded consisted of a gold medal with appropriate emblems, and motto, and name on it; nine thousand francs in money, and a diploma printed on medallion card suitable for framing.

The "Pacific Mills" is the corporate name of a joint-stock company, devoted to the manufacture, from the raw staples, of ladies' dress goods, of cotton wholly, of worsted wholly, and of cotton and wool combined, and the printing or dyeing of the same.

There are now in operation about 100,000 spindles for spinning cotton, with cleaning, picking, and carding machines to supply them, and about 16,000 spindles for worsted, with all the necessary preparing machines to occupy 3,500 looms for weaving the two classes of goods above-named and others, together with 22 printing-machines, producing a weekly average of about 700,000 yards. The machinery is propelled by 8 turbine wheels, of about 1,500 horse-power. About 3,600 work-people are now employed by the company; of these there are 1,680 men, 1,510 women, 80 boys between 10 and 12 years, 140 boys from 12 to 18 years, 40 girls from 10 to 12 years, and 150 girls from 12 to 18 years.

In the origin of the establishment the principle was adopted by the managers that there was to be a mutual dependence between employers and employed, each having rights which the other should respect. For the ma-

terial well-being of the laborers, special care was used, in the original construction of the work-rooms, to make them cheerful, comfortable, and well-ventilated. Houses were constructed, which should give to families residences at a moderate rent, that would secure the health and comfort of the work-people. The weekly rent for these houses is about equal to one-eighth of men's wages. Large buildings were erected for the use of single females whose residences were at a distance. The rooms are arranged for two persons each; well ventilated and lighted, and comfortably furnished. Unmarried men are never allowed to lodge in these houses, nor in any case a married man excepting he is accompanied by his wife, and even then but rarely. Females pay about one-third of their average wages for rooms in these boarding houses, including food, lights, and washing. It is common to provide coal, and sometimes flour, for the work-people, at the cost price of large quantities.

Each person employed by the company *must* be a member of an association called "Pacific Mills Relief Society," the entire management thereof being in the hands of the work-people, each officer being chosen by themselves from their own number, excepting the president, which office has always been filled by the resident manager. Each person, on commencing service, pays two cents per week to the relief fund. When the sum in the hands of the treasurer of the society, who is always the confidential clerk of the company, and keeps the deposit with the company for protection, has reached the sum of \$1,500, the weekly subscription of all persons who have been employed by the company three months ceases, while it continues with the new-comers. This condition of funds occurs so often that for nearly one-half the time the older employes are not assessed. Persons in the employment of the company three months become full members of the Relief Society, and entitled to certain privileges. If sickness occurs, preventing any from labor, the sick one becomes the special charge of certain appointed stewards, to see that a nurse and physician are secured, if necessary, and to draw from the wardrobe of the society such changes of personal and bed linen as the circumstances demand.

Each sick person (if the illness continues one week) who has paid two cents per week for at least three months, receives \$2.50 for the first ten weeks of sickness, and \$1.88 per week for longer-continued sickness. In cases of special need the officers of the society are authorized to make an extra allowance. Those who die poor have their funeral expenses paid, and are respectably buried in the beautiful lot in the city cemetery belonging to the society. In some cases the deceased has been sent to his native town, by the desire of his friends, without cost.

The total amount of money expended for the benefit of sick members in twelve years of its

existence, ending in April, 1866, has been \$25,580.68, to 1,868 persons, and the amount paid to the fund has exceeded this sum by about \$1,200. The corporation contributes weekly to this fund, and also to meet individual cases which are especially aggravated.

To meet the protection of the large number of single females employed by the company, who are away from the guardianship of their friends, the boarding-houses are controlled by persons carefully selected for their ability to influence this class of work-people of established good character, who will secure the comfort of their boarders, save them from bad moral influences, and act as far as possible in the place of guardians. If a female gives any reason for suspicion that she is guilty of immorality, she is admonished, and, if reform is not immediate, she is discharged from the house and from employment. The doors are locked at ten o'clock at night, and no one is allowed to be out after that hour without a satisfactory excuse. Men of intemperate habits, or of general bad character, are excluded from the company's service.

When the company was first established, the directors appropriated \$1,000 for the purchase of suitable books for a circulating library, and provided a convenient room for it on their premises. The work-people have always been required to pay one cent each week during their services, and they thus become members of the "Pacific Mills Library Association," which is managed entirely by themselves. This weekly payment secures the privilege of the use of the library and reading-rooms of the society. One room is appropriated to males, and is supplied with newspapers, and scientific and literary serials, and is open from 6 A. M. till 9 P. M., warmed and lighted. It is in close proximity to the other room containing the library, now exceeding 5,000 vols., and also a cheerful, airy, comfortable, carpeted apartment for females, and made attractive by daily and weekly publications, and stereoscopes. It is open from 9 A. M. till 9 P. M. A large number of volumes of the library are in constant circulation, as the number of the work-people who cannot read or write does not exceed 50 in 1,000, and these are principally of foreign birth. The funds of the society are also used to purchase tickets of admission to lectures, and suitable popular amusements, which are distributed among the members.

It has often been stated that care of employers for the education and welfare of their operatives, especially to the extent herein shown, is incompatible with pecuniary success. Facts prove that this is not true with the Pacific Mills. There have been no strikes among the work-people, which are their curse, and the dread of employers. They have been encouraged to feel that any grievances will be patiently listened to, and frankly discussed. A higher class

of workmen has been secured. Those best able to appreciate the privileges enjoyed in connection with this company have been drawn thither for employment. Many of the work-people have invested their funds in savings banks, and this is specially encouraged.

Quite a number of the work-people own houses free of debt, while others have been partially assisted by the company, it receiving a portion of their wages each month in reduction of the debt. More than \$50,000 are thus invested. Others invest their funds in the bonds of the United States Government. Several of the workmen are owners of the stock of the company. Their stock has now a market value exceeding \$60,000. Investments of earnings in premiums on life insurance have been made by many of the workmen. More than one of the workmen has been a member of the city government in its Board of Aldermen and Common Council.

The least sum now paid in weekly wages to the youngest employé is \$1.82 in gold. Boys of sixteen years do not receive less than \$2.85 gold weekly. The least amount paid weekly to men is \$6.75 gold. Females receive from \$2.48 gold weekly, for the lowest, to \$6.72, while a few earn more. Spinners, weavers, and a few others, are paid in accordance with their products, some of them earning very large wages.

The stockholders have invested \$2,500,000 in the company. During the past twelve years they have received in dividends more than \$8,000,000, and the value of the fixed property is in excess of the capital stock; and in the hands of the treasurer, as cash capital, there is a very large amount of undivided earnings.

FULFORD, Right Rev. FRANCIS, D. D., Bishop of Montreal and Metropolitan Bishop of Canada, a prelate of the Anglican Church, born in Fulford, Devon, in 1808; died at Montreal, September 9, 1868. He was educated at Exeter College, Oxford, and was for some years a Fellow of that College. Resigning his fellowship on his marriage, he was preferred to the rectorship of Trowbridge, Wilts, and subsequently appointed minister of Curzon Chapel, May Fair. In 1850 he was consecrated Bishop of Montreal, and came to that city, which was thenceforth his residence until his death. He was active and zealous in his duties in this responsible position, possessing rare gifts of temper, judgment, prudence, and moderation; in administrative power he had few equals, and still fewer superiors. He was noted for his learning, and took an active part in the promotion of education throughout his diocese; yet his profound scientific and classical attainments were never paraded before the public. He was widely popular with all classes and ranks of people throughout Canada. In 1859 he was appointed, by royal letters patent, Metropolitan Bishop of Canada.

G

GATES, Brevet Brigadier-General WILLIAM, colonel Third Artillery, U. S. A., a brave and meritorious army officer, born in Massachusetts, in 1788; died in New York City, October 7, 1868. He entered the Military Academy at West Point in 1801, and graduated in 1806, when he was appointed second lieutenant in the regiment of artillerists, and served in garrison at Atlantic posts until 1812; when the war with Great Britain commenced, he was appointed acting adjutant of a regiment of light artillery, and aide to General Porter. He had been advanced to a first lieutenancy in 1807, and in March, 1813, was promoted to be captain of the regiment of artillerists. He was engaged in the capture of York (now Toronto), Canada West, and in the bombardment of Fort George. In May, 1814, he was transferred to the corps of Artillery, and served in garrison and frontier duty for several years. On the reorganization of the army in June, 1812, he was made captain in the Second Artillery, and in 1823, brevet major. He remained in garrison duty till 1832, when, during the troubles in regard to nullification in South Carolina, he was stationed at Fort Moultrie, in Charleston harbor, with his command (he had been promoted to be major in May, 1832). He took an active part in nearly all the Indian troubles, having captured Osceola in person, and escorted the Cherokees to the Indian Territory; and, when the war with Mexico broke out, he accompanied the Third Artillery as colonel. In 1846, and for two years subsequent, he acted as Governor of Tampico, Mexico. Since then he had done many years' service in garrison. He retired from active service in 1863, and was brevetted brigadier-general in 1865, for long and faithful services. General Gates was one of the old school—one of the few remaining links that connect us with the past. He was engaged for sixty-two years in his country's service. General Gates was the father of seventeen children, only seven of whom survived him, the youngest being but seven years of age. He was buried on Governor's Island, New York harbor, by the side of his son Major Gates, who fell in the Mexican War.

GEOGRAPHICAL EXPLORATIONS AND DISCOVERIES IN 1868. The year 1868 has been more remarkable for physical phenomena, earthquakes of a terribly destructive character, violent volcanic eruptions, and the depression of considerable tracts of the earth's surface, and for changes in political geography caused by revolutions, wars, etc., than for any of those great discoveries which have made some of the years of the past decade so conspicuous. No great exploration has been crowned with perfect success, so far as we are aware, during the

past year, except that of Carl Mauch, into the hitherto untrodden regions between the Limpopo and the Zambesi, which has resulted in the finding of extensive gold-fields, to which thousands have since been hastening. At this time we are uncertain whether Livingstone, now supposed to be slowly making his way to the Lower Nile, has definitely settled the question of the ultimate sources of the Nile; and we are equally in the dark as to the recent progress of that intrepid and daring traveller Gerhard Rohlfs, in his adventurous journey into the kingdom of Wadai, from Abyssinia and Eastern Africa. War, which sometimes, as in the case of the Abyssinian expedition, promotes our geographical knowledge, oftener tends to obscure and prevent it. In Central Africa, in South America, and in China, and Middle Asia, it has sadly hampered and delayed the movements of explorers, and often put them in great peril.

But the year, though not prolific in discoveries, has been one of more than ordinary mortality among the friends and promoters of geographical research. *Lieutenant Le Saint*, whose departure on an expedition across the African Continent, we chronicled in the ANNUAL CYCLOPEDIA for 1867, fell a victim to the deadly paludal fever of the Upper Nile, in April, 1868, at Abu Kaka, 120 miles north of Gondokoro. *Charles John Andersson*, a brave and intrepid explorer, whose "Lake Ngami" and "Okavango River" give evidence of his daring and his scientific qualifications as a geographer, had made his home in Herrero-Land, and, after encountering perils and wounds which had materially impaired his health, died of fever, near Ondonga—Southwest Africa. Rev. *Pierce Butler*, rector of Ulcombe, Kent, an accomplished geographer and physicist, who had made two very careful and thorough reconnoissances of the Sinaitic peninsula, and had arranged for a third and more complete exploration of that entire region, under the auspices of the Royal Geographical Society, on which he was to have set out on the very day on which he died (February 8th), succumbed to a sudden attack of illness, greatly to the distress of his friends and the loss of science. *John Crawford*, a veteran traveller and geographer, more critically acquainted with the entire East-Indian Archipelago, Burmah, Siam, and British India, than any man of our time, a man whose careful research and fulness of knowledge on all geographical subjects had made him at times perhaps a little captious, and had caused his associates in the Royal Geographical Society to give him the title of Objector-General, but who was nevertheless a most accomplished scholar in all departments of physics, died very suddenly, though at the

great age of 85 years, in London, on the 11th of May. At the very beginning of 1869 (January 9th), *Viscount Strangford*, a learned traveller in the East, and a profound Orientalist, an active member of the Geographical Society, and said to be better acquainted with the entire range of Oriental literature than any other man in Great Britain, died at the early age of 48 years.

These losses it will be difficult to make up, for so wide is the range of geographical science, that few men can give it that thorough and life-long study which will qualify them to become authorities in regard to all subjects appertaining to it.

We turn now to the brief record of what has been accomplished in the way of exploration and discovery during the year 1868, and commence with the Arctic region, and the efforts to penetrate into the circumpolar space. The year was as prolific in theories and adventures, and as barren in accomplishment, as that which had preceded it. The German Arctic Expedition, projected and fitted out by Dr. Aug. Petermann, sailed from Bremen in the *Greenland* or *Germania*, a vessel of eighty tons burden, commanded by Captain Karl Koldey. On the 24th of May they left Bergen, Norway, and on the 19th of July had penetrated as far north as $80^{\circ} 80' \text{ N. lat.}$ and $60^{\circ} 85' \text{ E. long.}$ from Greenwich, where they were seriously impeded by the ice. Captain Koldey, while managing his little vessel with great skill, to avoid being crushed by the ice, made repeated efforts, both on that parallel and farther south, to reach the east coast of Greenland, but without success, though on the 10th of August they reached the meridian of $17^{\circ} 80' \text{ W. long.}$ in lat. $78^{\circ} 28' \text{ N.}$, when they were not more than seventy miles distant from Cape Hold-with-Hope, and could see several of the rocky promontories of the coast, but the heavy solid ice prevented their penetrating any nearer. Finding progress in this direction impossible, Captain Koldey turned the prow of his vessel toward the north coast of Spitzbergen, and on the 21st of August reached Cape Torell, $79^{\circ} 28' \text{ N. lat.}$, and $21^{\circ} 80' \text{ E. long.}$ from Greenwich, having passed through the Hinlopen Straits, though not without considerable difficulty. Here they were locked in by the ice for several weeks, but, by climbing the mountains, and using their powerful glasses, they were able to survey the greater part of the southern coast of the island of Northeast Land (the northeast island of the Spitzbergen group). They waited till the 10th of September for the breaking up of the ice, but, foul weather coming on, with snow and fog, they were reluctantly obliged to return homeward. By great exertion they succeeded in forcing a passage through the Hinlopen Straits into the sea north of the Spitzbergen Islands, and on the 14th of September reached lat. $81^{\circ} 5' \text{ N.}$ on the 16th meridian of east long., the farthest point yet attained in this part of the Arctic

Ocean, though not so high by nearly two degrees as Wrangel's Land north of Smith's Sound, visited by Parry. On their return they reached the Fiord of Bergen on the 30th of September, 1868, and at Bremen were entertained with a banquet on the 16th of October.

An Arctic expedition was also dispatched from Stockholm by the Swedish Government in the summer of 1868. A powerful screw-steamer, expressly built for winter navigation, and provisioned for twelve months, sailed in July, and by the last of September had reached the latitude of $81^{\circ} 42' \text{ north}$ of Spitzbergen.

Captain Lambert, of the French Navy, whose projected voyage toward the polar regions, by way of Behring's Straits, was noticed in the *ANNUAL CYCLOPÆDIA* for 1867, was delayed by various causes, mainly by the incompleteness of the subscription (the voyage being long and very expensive), and did not, as he had expected, sail in the autumn of 1868, but will probably commence his voyage during the year 1869.

Meantime, Captain Hall still remains in that frozen region, and has pursued his discoveries with considerable success. He has ascertained, beyond a doubt, that Captain Crozier and one other man of Franklin's party survived till 1864, and had heard of some traces of others of the party in Prince William's Land, which he was about to explore. His heroism and perseverance certainly deserve success. Of projected expeditions to the Polar Seas, the number is greater than ever before. Dr. Hayes is endeavoring to secure the means for another tour of exploration, by way of Smith's Sound, in search of that open Polar Sea which he has already twice essayed to reach; Captain Sherard Osborne is urging with great strenuousness another British expedition, also by way of Smith's Sound; the Russian Government propose to seek a route to the Pole by way of the New Siberian Islands or Nova Zembla; Captain Long, an intelligent and experienced captain of a whale-ship, whose discovery of new lands in high latitudes was chronicled last year, has demonstrated, in two or three well-written essays, that the attempt to enter the Polar Sea, and to reach the Pole by Baffin's Bay and Smith's or Jones's Sound, is futile, because the advance must be made against the strong current of water and ice flowing out of this sea through these channels, and down the east coast of Greenland, the result of the immense volume of water poured into it from the great rivers of Siberia and Arctic America; and he advises, as the only sensible course, to follow the current through Behring's Straits, and either along the route lying north of Siberia and Russia to its efflux into the Atlantic by way of Spitzbergen, or north of the extensive tracts of land to the north of our own continent to the Pole itself, and out by way of Smith's or Jones's Sound, and Baffin's Bay. Captain David Gray, an experienced Scottish whaling-captain, insists, and will at-

tempt the experiment this season, that the true way to the Pole is by the eastern coast of Greenland, the ice there, being, he says, even in winter, field or floe ice, and always in motion, so that it is more easily penetrated than the attached ice of Smith's Sound. He urges also that this route is the one most readily and easily accessible, and that it can be reached so much earlier than any other as to give a much longer season for prosecuting the voyage.

With so many ardent explorers in the field, it is hardly possible that another year should pass without revealing to us the secrets so long sought, and demonstrating that it is not so very cold and dismal at the North Pole after all.

With a few words concerning some of the countries partially or wholly within the arctic circle, we will pass to warmer climes.

Mr. Edward Whymper undertook, in 1867, an exploration of the interior of *Greenland*, while his brother was ascending the Yukon in Alaska; but his expedition was somewhat unsuccessful, in consequence of an epidemic which delayed him until much of the route he had intended to traverse was impassable. He, however, made a considerable collection, mineral, botanic, and archæological, and obtained partial vocabularies of some of the Indian and Esquimaux tribes.

In *Iceland* there was a violent eruption, in August, 1867, from the north side of the volcano Skaptár Jökull, which was visible for more than a hundred miles from the shores of the island. No lives were lost, nor was any serious injury sustained in consequence of it. The attention of Danish geographers and physicists has been of late called to the mountains of Iceland, which are more numerous than is generally supposed. Professor Schjellerup in 1867 published a list of twenty-one, giving the latitude and longitude of each, and its height above the sea in Danish feet, which differ but very slightly from English feet. Of these the Öræfs Jökull is the loftiest, being 6,241 feet above the sea-level. The next four in height are the Eyjafjalla Jökull, 5,482 feet; Herderbried, 5,290 feet; Hecla, 4,961 feet; and the Snæfells Jökull, 4,577 feet. None of the others rise above 4,000 feet; and the lowest, Ingólfshöfði, is but 260 feet in height. A considerable number of the whole are volcanoes.

Alaska, considering its remoteness, and how little was previously known concerning it, has within the past two years been explored more fully than most of the northern portion of the continent. Mr. Frederick Whymper ascended and descended the Yukon River for 1,800 miles, and explored other portions of the territory with great care and thoroughness. Mr. Dall and Mr. Thomas Kane (brother of the Arctic explorer), have both traversed considerable portions of it, and have given us a very fair idea of the commercial, agricultural, mineral, and zoological value of our new territory. That it has several large navigable rivers, great numbers of fur-bearing animals, some valuable

minerals and metals, and trees and shrubs of stunted growth, except in the interior, fisheries of considerable probable value, coal of good quality, and ice in great abundance, may be considered certain. Its native inhabitants seem to be, in about equal numbers, Esquimaux, or Innuít, and Indians; but the former, whose homes are nearer the coast, in striking contrast to those in the more eastern part of the continent, are men of large stature, finely formed, and considerably intelligent; while the Indians are smaller and some of them more degraded than most of the Indian tribes of the Pacific slope. Mr. Whymper, who visited also Kamtchatka and the coasts of Northeastern Siberia, obtained very full vocabularies of the languages of several of the Indian and Esquimaux tribes on both continents, and the great similarity of some of these indicates the close connection between the Esquimaux of Northern America and the Aborigines of Northern Siberia. His narrative of his travels, which is very interesting, has been republished here by Harper and Brothers. Mr. W. H. Dall, who was a companion of Mr. Whymper in a part of his tour, in a paper read before the Boston Society of Natural History, confined himself mainly to the physical geography of Alaska. He states that the Rocky Mountain range, about latitude 64°, turns westward, and meets the coast range in a confused, high, rolling country, where the distinctive characters of both ranges are lost. From these springs, however, one lofty volcanic range, which, extending at first westward, and then southward, forms the backbone of the peninsula of Alaska. North of this, between the Mackenzie and Porcupine Rivers, the country is filled with low rolling hills, but west of the Mackenzie, along the northern coast, the Romanzoff Mountains, a separate, lofty, snow-capped range, extend nearly to the mouth of the Colville River. There are, in consequence of this deflection of the mountains westward, two distinct faunas in the territory; that of the west coast of North America, bounded to the north by the Alaskan Mountains, and that of the great valley of the Yukon and its tributaries, which is properly northern and eastern in its character. There are no glaciers north of the Alaskan Mountains, but many local ones south of these mountains.

Captain Edward G. Fast, formerly stationed at Sitka, brought to New York, early in 1868, a large collection of implements, domestic and warlike, and curiosities and antiquities of this new region, many of them illustrative of the degree of civilization, habits, and customs of the Indian and Esquimaux tribes there.

In the summer of 1867, Commander W. Chimmo, of the British Navy, in her Majesty's steamship *Gannet*, surveyed a portion of the *Labrador* coast between the parallels of 52° and 56° north latitude, and found that the charts of previous surveys had placed the coast from ten to eleven miles too far eastward.

He explored several of the harbors along the coast, some of which, especially, Occasional Harbor, Indian Tackle, and Hopedale, he found of considerable importance for the fisheries.

There is nothing of special geographical interest to report respecting the *Dominion of Canada*. The restlessness of a portion of its inhabitants under the new *régime* and the extraordinary magnitude of the emigration thence to the United States during the past year seem to indicate that its present government is not likely to prove a permanent one, and the most intelligent English travellers and explorers are unanimous in advising the British Government to grant it entire independence or to cede it to the United States. The vast region hitherto known as the Hudson's Bay Company's Territory is to be incorporated with Canada, and, while adding greatly to its area, will increase its expenses far more than its capacity for production.

Mr. Waddington, an enterprising capitalist of *British Columbia*, who has devoted much attention to the best routes for a railroad across British America, and has explored most of the available routes in person, read a paper before the Royal Geographical Society, in March, 1868, and made an address upon this subject. The route he proposed would go in an almost straight line from Montreal to Collingwood on the Georgian Bay, thence around Lake Superior to Dog Lake, Lake of the Woods, and Fort Garry; thence northward along Red River to Lake Winnipeg, up Lake Winnipeg along the Saskatchewan to near the foot of the Rocky Mountains, across through a pass in $50^{\circ} 56'$ north latitude, near the southern end of Soudan Lake, the elevation of which does not exceed 2,500 feet above the Saskatchewan River, and is very gradual, thence following the valley of the upper Frazer River to the mouth of the Quesnille, a distance of 280 miles, and from that point in a nearly straight line to Bute Inlet in about latitude $50^{\circ} 30'$. This route has several advantages: Its length was somewhat greater than that of the Union Pacific Railway, being 3,490 miles, but 2,400 miles of the whole could consist, at first, of steamboat navigation, railroads being subsequently constructed as needed, and the 1,090 miles of railroad being in great part provided for by the colonial governments. Mr. Waddington contended that this route was much less liable to obstruction by snow than that of the Union Pacific.

Coming now to the *United States*, there is on the Atlantic slope but little in the way of either geographical progress or discovery to report. A few facts in physical geography and its allied sciences are all that have attracted our attention. In Salisbury, Connecticut, a remarkable cave, rivalling the Mammoth Cave of Kentucky, was discovered in 1868. Its numerous chambers, halls, and galleries, are adorned with stalactites and stalagmites of the most varied forms, and in some instances rise

into vaulted ceilings or lofty domes, glittering by artificial light, with numberless crystalline stars.

In the vicinity of Poultney, Vermont, numerous natural wells have been discovered far down below the horizontal layers of slate in the slate quarries, made, it is believed, by the whirling of large pebbles or round stones in the hollows into which currents of water from greater elevations had forced themselves.

The coast of New Jersey has been for many years past gradually subsiding, as the recent geographical and geological survey of the State clearly proves. The tides along the whole coast reach a much higher point than they did sixty or one hundred years ago, and the shores have worn away, especially in the southeastern portion of the State, from a fourth of a mile to a mile. From these and other facts, the average subsidence is reckoned at about two feet in a century. As much of the southern part of the State is but slightly elevated above the ocean level (very few points in Cape May County being more than twenty feet above it, this gradual subsidence occasions considerable apprehension. There are, however, very probably in the future, as there have been in the past, epochs of elevation as well as of subsidence, and if these should not come in season, as a last resort, the people of southern New Jersey, like those of Holland, must resort to diking out the sea.

One of those measures, of which our times are so prolific, for changing the course and embouchure of great rivers, or the connection of large bodies of water, is now in progress in Louisiana. The Mississippi and Mexican Gulf Ship-Canal Company have undertaken to open a ship-canal between the Mississippi River and Lake Borgne, to leave the river at English Turn, ten miles below New Orleans. This canal will be but about three miles in length, opening into the Bayou Bienvenue, an arm of Lake Borgne; it will be eighteen feet in depth, and have a lock three hundred and fifty feet in length and eighty feet in width, to guard against the annual rise and fall of twelve feet in the river. By this route the largest steamers can load anywhere on the Upper Mississippi, for any of the Gulf ports east of New Orleans, passing out through Lake Borgne into the Mississippi Sound, and thence to Mobile or elsewhere in the Gulf, saving the one hundred and twenty miles of difficult and dangerous navigation of the Mississippi below English Turn, as well as the passage of the bar, and the eighty miles northward from Pass l'Ouvre to Cat Island; or the dangerous and shallow navigation of Lake Pontchartrain. The cost of the canal is estimated at \$300,000, and it is to be completed by September, 1869. It is estimated that it will save nearly a million of dollars annually in tonnage, pilotage, and port charges, while it will greatly increase the commerce of the port. In this case, the canal so inexpensive in its character, seems to be

fraught only with beneficent results; but the attempt to change the natural course of large bodies of water is to be deprecated when, as in some instances is the case, it will produce far-reaching results not contemplated by the projectors. The proposed great ship-canal from Lake Michigan to the Mississippi River might very possibly restore the bottom lands of Lower Illinois to their ancient condition as one or more great lakes, produce great destruction in the region of the Lower Mississippi, and so far drain the great lakes as to materially diminish the volume of water which passes through the Niagara River and the St. Lawrence.

Two discoveries in meteorology and ornithology have yet perhaps a sufficient bearing on physical geography to be worthy of a place in our record. In August, 1868, an immense meteor or aërolite exploded in the vicinity of Cheat-ham's Cross Roads, Tennessee, and a fragment of it, cone-shaped, and about seven feet in its longest diameter, and ten feet in circumference at its base, supposed to weigh at least five or six tons, penetrated several strata of the soft blue limestone of that region, and sunk to a depth of twenty-five or thirty feet. When discovered, five or six days after the explosion, it was still very hot, though a stream of water had passed over it for several days. So large a meteorite has not fallen in this country since the large mass which fell in the Red River region, Arkansas, nearly fifty years ago, and it is doubtful whether this is not larger than that. Near Mound City, Illinois, a bird was shot in the autumn of 1868, by James Harney, of a genus and species entirely unknown. It weighed 104 pounds, was larger than an ostrich, had a snow-white body, a scarlet head, a yellow bill, twenty-four inches long, green sinewy legs four feet long, and was on a high tree engaged in devouring a sheep which it had captured. Several of these points resemble more nearly the fossil birds who were the contemporaries of the mastodon, etc., than any known living birds.

The *Western region of the United States* includes properly both slopes of the Rocky Mountains, the Great Utah Basin, and the northern valleys between the Rocky Mountains and the Sierra Nevada, and also that chain of mountains and the Coast Range, as well as the valleys between and beyond the latter. Across this wide extent of mountain, valley, and plateau, the two Pacific Railroads, one starting from Omaha in Nebraska, and the other from Sacramento in California, have been approaching with extraordinary rapidity during the year 1868, and in May, 1869, formed a junction. The enterprise is the most stupendous of modern times, and on its completion opens a continuous railway route of over 3,800 miles. It is estimated that the running time between New York and San Francisco will be reduced to seven days, and perhaps on the fastest trains to six. The result of this greatly

increased speed of transit must necessarily change the conditions of political geography materially, and must eventually make San Francisco and New York the ports of entry and departure for the entire commerce of the Orient, and the latter the financial capital of the world. The climate, soil, and productions of California and the Pacific slope are such as to invite an immense immigration, and to give the promise of a vast and populous empire there; but the year 1868 developed a danger to its population not hitherto taken into the account. There had been occasional slight earthquake shocks on the coast since the organization of California as a State, and there were traditions of others of somewhat greater severity, seventy or a hundred years ago, but these had never excited the attention of the people until the morning of October 21, 1868, when a series of earthquakes occurred which produced great consternation, and destruction of property, and the loss of six lives in San Francisco, and a considerable number in other parts of the State. The first shock was the most destructive, though subsequent ones completed the ruin of some buildings injured by the first. The most serious results occurred on the made ground (that which had been filled in, having originally formed a part of the bay). There were occasional shocks of considerable severity for two or three months; one on the 2d of December, destroying the little town of Loretto in California. One or two of the volcanoes of the State, hitherto quiet, have given indications of renewed activity by sending up columns of smoke, though they have not as yet emitted water, mud, sand, ashes, or lava. The volcanic character of large tracts of the soil indicates that they were active centuries ago.

Lower California, the peninsula lying between the Gulf of California and the Pacific Ocean, has been but little known to Europeans or Americans. It has about 15,000 inhabitants, mostly Indians, who have been gathered into missions or villages by the Jesuit missionaries who have been stationed there for two centuries or more, and have lived a life of great seclusion, holding very little intercourse with the rest of the world. In 1866 a company of capitalists, organized as the Lower California Land Company, explored the peninsula, both along the coasts and through the interior, and the next year purchased from the Mexican Government all that part of it lying between the parallels of 31° N. latitude and 24° 20' N. latitude, leaving a rocky and mountainous tract about 100 by 85 miles in extent at the southern extremity, and one almost as mountainous at the north, about 175 by 85 miles. The peninsula has been usually described as an arid, rocky region, with a torrid climate and sterile soil, and has been supposed to be almost uninhabitable. The explorations of Messrs. Ross Browne, W. M. Gabb, and Dr. Ferdinand von Loehr, all men eminent for their scientific attainments, show that it is, on the contrary, in

many respects a very desirable country. Physically, it is divided into three regions, or perhaps we might as properly say four. From Cape San Lucas at its southern extremity, due north to Cape La Paz, latitude $24^{\circ} 20'$, a distance of about 100 miles, the mountain-chain known as the Sierra de San Lazaro, having an average height of about 6,000 feet, a bare granite mass, forms a kind of backbone of the lower portion of the peninsula, and the land slopes from this eastward and westward to the Californian Gulf and the ocean, terminating, however, at either extremity in a rocky, bold promontory. Separated from this chain by La Paz Bay, but commencing about the 24th parallel, and adhering closely to the gulf shore, the Sierra de la Gigantea, a chain having an average height of from 3,000 to 4,000 feet, but rising in occasional peaks to more than twice that height, extends, in a direction nearly due northwest, to about latitude $30^{\circ} 35'$, a distance of full five hundred miles. On the gulf side this chain rises up as an almost perpendicular wall to its full height, giving the impression, which is probably the correct one, that, by some convulsion of nature, the mountain-chain was cleft from summit to base, and one half sank below the waters and now forms the bed of the Gulf of California. On the west side the Sierra de la Gigantea declines gradually in gentle slopes or plateaus with occasional broken tracts toward the Pacific. Between the 26th and 27th parallels the land on the Pacific shore is low, and there are extensive lagoons. Between $26^{\circ} 40'$ and $27^{\circ} 50'$ the peninsula suddenly extends westward, having a mean breadth of about 135 miles, and a range of coast hills of considerable altitude extends from northwest to southeast near the Pacific coast. About latitude 29° the Coast Range, which extends through the whole of Upper California, commences, and from latitude $30^{\circ} 40'$ the eastern side of the peninsula, for a breadth of nearly 80 miles from this Coast Range to the head of the gulf and the Colorado River, is nearly level and low. There are a number of volcanoes on the peninsula, and the soil and mountain-slopes give evidence of the frequency and extent of volcanic eruptions. The climate, though inclined to be dry, is delightful, especially on the plateaus. It is the finest country in the world for the culture of the grape, and there are numerous mountain-streams which can be utilized for the purpose of irrigation. There are mines of copper, silver, and gold, and there are indications of the existence of the ores of quicksilver. Tropical fruits are produced in great perfection.

The *Colorado River*, which discharges its waters into the Gulf of California about the parallel of $31^{\circ} 30'$ N. latitude, is one of the most remarkable streams on the North American Continent. Its northernmost source (the Green River) rises near Fremont's Peak in the Wind River Mountains in Idaho, in the immediate vicinity of the sources of the Lewis's Fork

of the Columbia River and the Wind River, an affluent of the Yellowstone and the Missouri; while others of its tributaries have their source in the Rocky Mountains in the centre of Colorado Territory. The general course of its several tributaries, as well as that of the main river, is southwest, until it reaches Callville, a small settlement in the southeast of Utah, whence it flows almost due south to the Gulf of California. It is navigable for steamers to Callville, about 400 miles above the gulf, though for much of this part of its course it passes between perpendicular walls of rock from 4,000 to 5,000 feet high. Above Callville both the main river and its affluents, the Grand, Green, San Juan, and Little Colorado, flow through ever-deepening cañons, the walls of which at some points are nearly 7,000 feet above the bed of the river, and the streams which enter these from either side also flow through deep cañons, and there are several cataracts of great height. The plateaus through which these rivers pass are divided by them, and there is no way of bridging the broad rivers which flow so far below the surface of the plateaus. From the surface of these broad and generally treeless plains, other terraces, with nearly perpendicular walls 1,000 feet or more in height, rise, resembling in the distance gigantic walled towns and fortresses. Over both the loftier and lower plateaus there are massive ruins of once populous walled towns and cities, where it is supposed the predecessors of the Aztecs (the Toltec race) lived and ruled more than a thousand years since. Even now there are on the loftiest of these plains several villages of this intelligent and remarkable race. Some of these were visited by Professor Newberry in 1860, who found them an agricultural people, skilled in many domestic manufactures, fire-worshippers, and wholly diverse in appearance, manners, customs, religion, and civilization, both from the Indian tribes around them (the Apaches and Camanches), and the Pueblo Indians of New Mexico.

Signor Dollfus, an Italian geographer, has recently published his determinations of the elevation of numerous points in *Mexico* made under very favorable circumstances in 1865. On the vexed question of the height of Popocatepetl, his measurement, taken with great care, gives 5,410.8 metres, equal to 17,720 feet, which is 128 feet less than that of Von Grollt, but is probably much nearer the truth.

In Petermann's *Mittheilungen* for March, 1868, Dr. Gustav Bernouilli gives a full account of the physical geography of the State of Guatemala, as well as of its productions, etc., the result of many years' residence there. He states that, contrary to the usual law of the Andean or Rocky Mountain chain, the central Cordilleras, which rise only to an average height of about 8,700 feet, are not the highest mountains of Guatemala, that honor belonging to the volcanic chain, which has an average elevation of over 9,500 feet. The volcano of

Fuego (14,700 feet) is the highest summit in Central America, and the volcano de Agua (12,620 feet) is the next. Pacaya and Atitlan, both volcanoes, are nearly 10,000 feet high. As to the productions of the State for export, the indolence and indifference of the inhabitants render their commercial condition very far below what it should be with their fine soil and genial climate. Cochineal is gathered in considerable quantities, and a moderate amount of tar, spirits of turpentine, and other products of the resinous woods, and dye-stuffs, are exported, though far less than should be. The principal crops of the State are maize, black-beans, rice, bananas, Chili pepper (capsicum), etc., which are consumed by the people, and form almost their entire food. With a great variety of fibrous plants, natives of their soil, and of every preparation, the inhabitants for the most part confine themselves to cotton fabrics generally, blue and red, and their garments of these are scanty in number and size.

Mr. John Collinson, an English civil engineer of great courage and skill, succeeded in 1867 in making a very thorough exploration and spirit-level survey from Lake *Nicaragua* to the Atlantic Ocean, the first, it is said, across Central America except that for the Panama Railway. He found a pass through the mountains from the lake to the Atlantic favorably situated for a railway at an elevation of only 820 feet above the ocean-level, and one on the other side between the lake and the Pacific Ocean, only 615 feet in height. This survey settles the practicability of a new railway across that isthmus. Mr. Collinson also gained much information concerning the quadrupeds of Central America, and the languages of the Indian tribes.

Mr. A. S. Cockburn, English commissioner to the Belize, has communicated to the Royal Geographical Society some interesting particulars relative to his explorations of the Belize River and the adjacent coasts. It would seem that the tract drained by the Belize River, comprising the greater part of British Honduras, is one of the most rainy regions in the world. "The average rain-fall in Belize," says Mr. Cockburn, "for the last four years was 67½ inches per year, and it often rains in the interior when not a drop falls upon the coast." He estimates the annual rain-fall of the district, from 50 to 100 miles from the coast, as above 100 inches, and the water falling into the river and its affluents, from a district 90 by 80 miles, at 89,128,101,745 gallons, equal to 17,467,929 tons. Of this vast amount, he estimates that about two-thirds go off by evaporation, but the quantity of 5,418,680 tons, which is discharged into the sea, brings down with it such quantities of detritus from the soft and recent deposits of that region, that the bed of the river and its delta are filling up with considerable rapidity.

M. Lucien de Puydt, a French engineer and

geographer, communicated to the Royal Geographical Society of London, in 1868, an account of two tours of survey and exploration made by him in 1861 and 1865, by order of the French Government, across the Isthmus of Darien, to ascertain the feasibility of an interoceanic canal across that isthmus. The route which he took in his last tour was one hitherto unknown: following toward its source in the mountains, first the Tanela (a stream discharging into the Atlantic south of the Atrato), and finally its southern affluent. They found the latter flowing through a pass in the Nique Mountains (the local name of the Cordillera, at this point), at an elevation, M. de Puydt believed, not to exceed at the highest 140 feet above the ocean-level. From this pass there was a gentle descent to the plain on the west, through which the Tuyra, another small river, flows into the Pacific. This is by much the most feasible route yet found for an interoceanic canal.

Recent observations, continued for a series of years, indicate that the reputation for unhealthiness of the island of Hayti, and especially of Port-au-Prince, is due to the excess of moisture in the climate. A rain record, kept in that city during the period from August, 1863, to January, 1868, gives the following facts: In 1864, there were 145 days during some part of which rain fell, and the number of inches of rain-fall during the year was 60.57. Of this amount, nearly 11 inches fell in the month of May, and about 9 inches in August. In 1865 there were 157 rainy days, and 66.76 inches of rain fell during the year; and of this, more than 18 inches fell in the month of May, and about 12 inches in September. In 1866 there were 179 rainy days, and 67.48 inches of rain fell during the year; of this, 14 inches fell in April, nearly 9 inches in May, and from 5½ to 7 inches in each of the other months, except December, January, and February. In 1867, there were but 126 rainy days, and only 50.2 inches of rain. Of this, about 13 inches fell in May. There was thus an average rain-fall of 61.25 inches during each of the four years, and an average of 152 rainy days to each year.

A series of deep-sea soundings, made in March and April, 1868, by Captain R. A. Hamilton, of H. B. M. ship *Sphinx*, in the neighborhood of *Santa Cruz*, demonstrates that island to be the apex of an immense submarine mountain. Off Ham's Bluff, one and a half miles from the shore, the lead sunk 1,000 fathoms without reaching bottom.

Hon. E. G. Squier, a very high authority in all statistics relating to Spanish America, published in December, 1868, the following statement of the population of the States of SOUTH AMERICA, and the Hispano-American States of North and Central America, in 1867 or 1868, with the amount of the trade of the United States with them in 1858 and 1866, respectively:

COUNTRIES.	Population.	Trade in 1867.	Trade in 1868.
Mexico	}	\$2,702,200	\$2,742,221
Guatemala			
San Salvador			
Honduras		287,200	1,345,000
Nicaragua			
Costa Rica			
Colombia		4,702,200	5,402,000
Venezuela		4,202,772	2,207,155
Ecuador		12,700	20
Peru		1,002,000	2,002,072
Bolivia	}	51,000	45,517
Chili		4,207,804	1,201,004
Argentine Republic		2,002,572	2,002,704
Uruguay		1,200,016	1,207,220
Paraguay		None.	None.
Brazil		21,207,000	22,016,207

The gold-fields of *Venezuela* have attracted much attention during the past year. The first considerable discoveries of gold in that republic were made in 1854 by Dr. Placard, a physician of Ciudad Bolivar, the capital of Guiana, one of the States of the republic, but the extent of the gold-fields has not been known till within two or three years, and, indeed, many discoveries were made in 1868. The gold-fields, so far as is yet known, are situated in the vicinity of the hydrographic basin of the Essequibo, the river forming the boundary line between British and Venezuelan Guiana. They are from 100 to 160 miles south of the Orinoco River, and about 200 miles west of the Atlantic Ocean, between the Caroni and the Yuruari Rivers, and east of the latter. There is also very good evidence that they extend east of the Essequibo River in British Guiana. There is as yet excellent placer-mining at many points in this field, and experienced and skilful American mining engineers, who have carefully explored the mountains of that region, find extensive quartz gold-veins running in all directions through the slate and blue-stone of the Marcupio Valley, and the watershed, between the Caroni and the Yuruari. The veins differ greatly in product, though the poorest give a fair yield, even with the rude and wasteful processes employed. They are generally very regular and sound, and offer little difficulty in the extraction of the ore. The only difficulty of magnitude is the unsettled state of the country, and the jealousy and ferocity of the Indian tribes.

We find the following statistics of the empire of Brazil in the *Berlin Zeitschrift für Erdkunde* for February, 1868: The entire population of the empire, in 1867, excepting the wild Indians of the interior, was 11,220,000, of whom 1,400,000 were slaves. The wild Indians were estimated at 500,000, but little is known of their real numbers. In the public schools, there were 107,483 children in regular attendance. The population of the several provinces was, in round numbers, as follows: Pará, 350,000; Maranhão, 500,000; Ceará, 550,000; Paraíba, 250,000; Rio Grande do Norte, 240,000; Pernambuco, 300,000; Pernambuco, 1,220,000; Alagoas, 300,000; Sergipe, 220,000; Bahia, 1,450,000; Espírito Santo, 100,000; Rio de Janeiro (province and city),

1,850,000; São Paulo, 900,000; Paraná, 120,000; Santa Catharina, 200,000; Rio Grande do Sul, 580,000; Minas Geraes, 1,600,000; Goiás, 250,000; Amazonas, 100,000; Mato Grosso, 100,000.

Mr. Chandless, whose zeal in the exploration of the tributaries of the Amazon we have heretofore recorded, still continues his labors in that field. In 1868 he undertook to ascend the Juruá, one of the largest of the affluents of the Upper Amazon, and spent three months on that river. The Juruá is not far from 1,500 miles in length, and enters the Amazon on the south shore, about S. lat. 4° and W. lon. from Greenwich 66°. Mr. Chandless ascended the main river (Juruá) between 1,000 and 1,200 miles to lat. 7° 12' S., and lon. 72° 10' W. from Greenwich, but was compelled to turn back while the river was yet navigable for many miles farther, by an attack of Nanas Indians, by which his boat's crew were terrified. On his return he explored the Maú River and one of its affluents, and, when last heard from, was hoping to start soon to explore the Beni, one of the largest of the southern tributaries of the Amazon.

Professor P. Strobel, an Italian naturalist, has just published in the *Zeitschrift für Erdkunde*, an account of a scientific excursion made by him in 1866, from Curico in Chile, through the Planchon Pass to San Rafael, a considerable town in the Pampas of the Argentine Republic. The journey was not without its adventures, and the naturalist, fully alive to whatever concerned his profession, gleaned a large amount of valuable information relative to the geology, mineralogy, botany, and zoology of the Cordilleras as well as the Pampas. His narrative settles several important questions in the botany and zoology of that partially-known region.

The proposed construction of a railway from Cordova to Jujuy, in the Argentine Republic (we believe it is now completed as far as Tucumán), furnished an opportunity to Dr. Hermann Burmeister, the director of the State Museum of Physical Science at Buenos Ayres, to make a thorough exploration of the physical geography of that portion (the northwestern) of the republic, and he has reported the work accomplished with great ability and thoroughness, in Petermann's *Mittheilungen* for February, 1868. A part of this route was explored on foot about eleven years since, by a young naturalist of Massachusetts, Mr. Nathaniel S. Bishop, then but seventeen or eighteen years of age. His narrative, entitled "A Thousand Miles Walk in South America," was published last year by Lee & Shepard, of Boston, and contains a large number of valuable observations on the soil, productions, and people of this part of South America.

William Bollaert, Esq., a Peruvian geographer, communicated, in the spring of 1868, to the Royal Geographical Society of London, the

result of his explorations in 1866, in the province of Tarapucá, *Southern Peru*. This province is in the Department of Moquegua, and forms the extreme southwestern portion of the republic. It is a rainless, mostly desert region, but has of late years risen into prominence from the immense quantities of nitrate of soda found there, and which, when refined, yield iodine, and bromine also, in considerable quantities. The refining of the nitrate of soda has caused the establishment of numerous nitrate works, and in 1867 about 150,000 tons were exported. The population of the province was about 20,000, the greater part of whom were dependent directly or indirectly upon the traffic in nitrate of soda. The capital of the province, Iquique, from being a small fishing-village, had become, in 1866, a town of 5,000 inhabitants. Mr. Bollaert has given a very full and exhaustive account of the geology, physical geography, botany, and productions of the province, and the elevation of the principal points, and especially those of the route from Iquique to Noria, on which a railroad was being constructed for the transportation of the nitrate, and fuel and provisions for its refining. Iquique, as well as most of the towns of Southern Peru and Bolivia, was greatly injured, and indeed nearly ruined, by the terrible earthquakes of August 13-16, 1868, which destroyed so many towns, and probably over 50,000 lives, in Ecuador. It was also shaken by the earthquake of October 18, 1868, which, however, spent its greatest force on Atacama, and several of the cities of Chili, on the coast.

The earthquakes which wrought such desolation over a vast district of western South America are elsewhere described in this volume. It is only necessary to say here, as pertaining specially to geographical science, that there were three entirely distinct earthquakes proceeding from different centres, and each doing great injury in its sphere of action, and each lapping over on a portion of the territory visited by its predecessor. The earthquake of August 18th produced an upheaval of the whole coast from Callao, Peru, or perhaps a little north of that port, to Talcahuano in Chili, a distance of more than 1,900 miles. Callao, Arequipa, Moquegua, Arica, Chala, Tambo, Pisagua, Islay, Tilo, Mollendo, Iquique, Tacna, Pisco, Chíncha Buja, and Mejillones, in Peru and Bolivia, and Constitucion, Tomé, and Talcahuano in Chili, were laid in ruins either by the shock of the earthquake or the tidal wave which followed. The Chíncha Islands were swept over by the waves, and had previously been desolated by a hurricane and earthquake. The earthquake of August 16th spent its greatest fury on the republic of Ecuador, completely destroying the towns of Ibarra, San Pablo, Atrintagui, Imantad, Otovalo, and Cotacachi, with the greatest part of their inhabitants. Where Cotacachi stood, is now a lake. Quito and the cities and towns near it

were either partially or entirely in ruins, but the loss of life was less than in the cities of the province of Imbabura. This earthquake reached the northern borders of the preceding, but its great force was spent. The earthquake of October 18th, which it is to be remarked was the same which visited San Francisco and the northern Pacific coast, was accompanied with an eruption from the volcano Llullanaco, 80 leagues from Copiapo. It extended along the whole coast from Oregon to southern Chili, but its action was most severe in northern Chili, on the coast of Bolivia, and on the Pacific coast of North America. Iquique was visited by this and subsequent slighter shocks, but it suffered less than in the first. The destruction of life in this last earthquake was very small, although it extended over so vast a territory.

Mr. Thomas J. Hutchinson, a Fellow of the Royal Geographical Society of London, has, during the war which has existed for four years past in *Paraguay*, been a resident of that country, and has communicated to the *Illustrated Travels* a very interesting narrative of his sojourn there, with very full descriptions of the country, and the character and manners of its inhabitants. He regards the Paraguayans as possessing many fine traits of character, being brave, patriotic, and not bloodthirsty. They make excellent soldiers, and in this protracted struggle have won the sympathy and respect even of their foes.

Turning to the Continent of Europe, we must dispatch very briefly what geographical information has been collected concerning its generally well-known states, that we may devote more space to those countries which are less familiar to us.

The kingdom of *Italy* published, in the summer of 1868, its census, taken December 31, 1866. From this it appears that the kingdom is divided into 59 provinces and prefectures (aside from the Lombardo-Venetian provinces), and 198 districts. The population was 22,793,185, an increase of 1,090,000 since the census of 1864. The population of the Lombardo-Venetian provinces was at the same time 2,576,185, making a total for the kingdom of Italy of 25,369,320.

We have also very full census statistics of the *Scandinavian States* of Europe to the close of 1866 or the beginning of 1867. Those of *Sweden* are as follows:

The area of the twenty-five governments was 168,042 English square miles; the population 4,160,677, of whom 2,023,737 were males and 2,136,940 females. There were in the kingdom 428,169 horses, 821,635 oxen and steers, 1,185,556 cows, 417,163 young cattle, 1,589,000 sheep, 133,132 goats, 404,000 swine, and 139,400 reindeer.

The population of the principal towns was: Stockholm, 138,189; Gothenburg, 46,557 (a census of the city and suburbs in 1868 gives 58,164); Norköpping, 23,271; Malinöe, 22,538; Carls-

crona, 16,653; Gefle, 12,561; Upsala, 10,768; Lund, 10,052; Jönköping, 10,013; Kalmar, 9,200; Orebro, 9,007.
The population of the French colonies in 1866 has been recently announced in France,

but not, as yet, been published in any English collection of statistics. We have added to it the imports and exports of 1864, the latest published, and give the whole, with the capitals of each, as follows:

COLONIES.	Population, 1866.	Imports, 1864.	Exports, 1864.	Capitals.	Population of Capitals.
Martinique.....	139,109	\$5,419,555	\$3,768,980	St. Pierre.	20,424
Guadeloupe (including the smaller islands connected with it as a colony).....	132,013	3,783,475	2,815,835	Port Louis.	4,666
French Guiana.....	18,145	1,956,765	265,475	Cayenne.	3,000
Réunion.....	207,836	6,985,900	4,746,815	St. Denis.	12,140
The Senegal Colonies (St. Louis, Goree, and Bakel).....	159,598	2,065,830	2,702,070	St. Louis.	14,336
St. Pierre, Isle of Dogs, and Miquelon	2,907	726,555	1,527,665		
East Indian Colonies, embracing only those in India proper.....	227,063	1,169,410	4,155,830	Pondicherry.	40,000
Mayotte, Nossi Bé, and Sainte Marie, in Madagascar.....	26,827				
Algeria.....	2,999,124*	9,900,000	9,000,000	Algiers.	94,000
Tahiti and Moorea, Society Islands.....	32,897				
New Caledonia	25,000				
Saigon and its dependencies.....	450,000			Saigon.	180,000

The statistics of *Denmark* are not quite so full, nor to quite so late a date, being for January, 1866. In the nineteen Danish provinces the total area of land was 14,553 English square miles, and the population 1,717,802; a gain of 109,707 since 1860. In the towns, including Copenhagen, the number of inhabitants was 386,206, in the country 1,331,596, indicating the agricultural character of the population. Copenhagen had a population of 162,042; Odense, 15,705; Aarhus, 12,142; Aalborg, 11,104.

The principality of *Servia* also published, in 1868, its statistics to the close of 1866. Its area is, in round numbers, 12,600 square miles, and the population 1,192,086, of whom 20,000 were gypsies, about 2,000 Jews, and 2,500 German settlers. There were seventeen districts, exclusive of the city of Belgrade, the capital. Belgrade has 20,138 inhabitants.

Turning to the vast continent of *ASIA*, we find that the explorations in *Palestine*, and especially at Jerusalem and its vicinity, commenced by the Palestine Exploration Society, in continuation of those of Wilson and Andersen, under the superintendence of Lieutenant Warren, were continued through most of the year (they have now been suspended), and that they have resulted in an almost complete unsettling of former opinions in regard to the localities of the great events of the Scripture narratives. Lieutenant Warren has demonstrated that the Jerusalem of to-day is from thirty to a hundred feet above the Jerusalem of the commencement of the Christian era, and that, to ascertain with much accuracy the location of any of the buildings of the ancient Jerusalem, a vast and extensive excavation is necessary, too vast to be permitted by the present authorities, and involving expenses too great for private enterprise. His explorations and those of Wilson and Andersen, elsewhere in the Holy Land, were attended with more positive results. The sites of Capernaum and

Chorazin were ascertained with almost absolute certainty, and that of the ancient Gergesa, the city of the Gergesenes. The ruins at Tell-Hum, and Kerazah, were thoroughly excavated, and the capitals which crowned the columns of the ancient synagogues proved to contain devices which could only have had significance to the Jews of the period of the Christian era.

A new exploration under English auspices, of the *Sinaitic peninsula*, commenced by the earnest efforts of the late Rev. Pierce Butler, is now in course of prosecution by Rev. George Williams and Rev. F. W. Holland, and a party of officers and men of the Royal Engineers, who entered upon their work in October, 1868. Mr. Holland had previously made three journeys in Sinai, and explored much of its territory on foot. The explorers have found good reasons for doubting whether the mountain now known as Sinai is the Mount Sinai of Moses's time; they regard Jebel Um Alowee, another mountain a few miles northeast of the present Mount Sinai, as meeting much more satisfactorily the requirements of the Biblical narrative.

We have from Russian sources some statistics of Tashkend, the capital of Independent Turkestan. The population, according to a census taken in the winter of 1867-'68, by General Heinz, was 64,416, and there were 9,488 dwelling-houses. The following ranges of temperature were observed in the city in December, 1867, and January, February, March, and April, 1868, by Carl W. Struve:

	Mean Temperature.	Maximum.	Minimum.	Days of rain or snow.
December ...	44° F.	70°	25°	7
January	33°	52°	14°	13
February	37°	64°.2	9°	8
March.....	40°.1	75°	6°	14
April.....	53°	81°.5	25°	5

The summer is long, intensely hot, and dry. Ice is sold during the summer at ten copecks (seven and a half cents) per pound. It is, however, a place of great trade, merchants and

* Of these, 235,570 were Europeans.

caravans coming thither from all quarters to buy and sell. The goods sold in the eighteen caravansaries of the city, in 1867, amounted to 2,585,000 rubles (\$1,938,750). This was exclusive of the large quantities sent out from the city by the merchants and artisans.

The Russian Baron von Osten-Sacken, during the year 1867, accompanied by a scientific party, explored with great thoroughness the *Thian-Shan* chain of mountains, and in 1868, as a result of his labors, published a map of the chain between Naryn and the Chinese boundary, on a scale of five versts (about four miles) to the inch, and comprising a territory of about 12,000 square versts in extent; he also deposited in the museum at St. Petersburg a collection of the mammals and birds of the region, and about 500 plants, mostly belonging to the mountain flora, and full botanical descriptions of the *habitat* of these, and other plants of the Thian-Shan range.

M. A. Krapotkin, a Russian officer in Irkutsk, furnishes to Petermann's *Mittheilungen* full statistics of *Siberia*, mostly of 1862 and 1863, but these are so much later than any thing heretofore received that they are of great value. The area of Siberia, including Russian Turkestan, added to it in 1866, is 5,815,786 square miles. Without this, it was 5,031,916 square miles. The population in 1862 and 1863, of the three governments into which it was then divided, was: Irkutsk Government, 365,240, of whom 192,900 were males, and 172,340 females; Tobolsk Government, 1,105,647, of whom 544,876 were males, and 560,771 females; the Yakutsk Government, 227,907, of whom 116,671 were males, and 111,236 females. Total for the three governments, 1,698,794; of whom 858,447 were males, and 844,347 females. In the Irkutsk Government, 34,159 were inhabitants of towns, and 331,081 of the country; in Tobolsk, 82,923 were inhabitants of towns and cities, and 1,022,724 of the country; in Yakutsk, there were 6,891 only of the town population, and 221,016 of the country. The mass of the population are, at least nominally, connected with the Orthodox Greek Church, its adherents numbering 1,492,583, or about $\frac{3}{4}$ of the entire population; next in order are the dissenting sects of that church, of whom there are 44,179: of the Roman Catholics, there are 3,719; of Protestants, 3,189; of the Armenian Church, 13; of Jews, 871; of Mohammedans, 2,857; of Buddhists, 15,794; of the followers of Schaman, 77,904, and of the Karaim, 8. The number of births in 1863 was 73,080; of deaths the same year, 53,654; and of marriages, 13,632. In the Irkutsk Government, the crop of spring wheat and grain was 2,932,227 bushels; of fall-sown grain, 5,622,124; and of potatoes, 1,162,668 bushels. There were no returns of these crops from the Tobolsk Government, and that of Yakutsk yielded but about 150,000 bushels of grain, and a little more than 8,800 bushels of potatoes.

The manufactures of Siberia are mostly elementary and simple, consisting of tallow, candles, soap, coarse cloths, cheap paper, oils, brandy, tobacco and cigars, leather, iron, bells, coarse glass, porcelain and pottery, salt, lime, potash, chamois-leather, beer, molasses, meal, spirits of turpentine, etc. About 6,600 men are employed in these manufactures, and the annual product is a little more than five million dollars.

The nomadic tribes rear considerable herds of cattle. The number of horses reported in 1868 was 990,878; of neat-cattle, 1,168,944; of sheep, 1,055,529, besides 644 fine-wool sheep; of swine, 295,010; of goats, 101,508; of camels, 694 (evidently far below the truth); of reindeer, 259,659; of sledge-dogs, 2,675.

The Chinese are emigrating into that part of Siberia which borders on the Amoor River. In November, 1867, a census of them, taken by the Russian authorities, showed that there were 44 Chinese villages, having 1,274 houses, and 10,583 inhabitants. Many thousands of them have also emigrated into the provinces of Russian Turkestan, and the policy of the Russian Government is not now, as formerly, to drive them out.

The progress of Russia in *Central Asia* has attracted much attention during the last three or four years. In that period she has, partly by diplomacy and partly by conquest, annexed to her dominions the whole of Independent Turkestan, a tract of nearly 800,000 square miles in extent, and with a population of about 7,500,000 inhabitants, and she is still sweeping eastward, with the evident design of absorbing all the semi-independent chieftaincies of *Soongaria*, or, as it is now called, Chinese Turkestan. Her past victories include the country of the Kirghiz Tartars, the khanates of Khiva and Khokand, and lastly, in the spring of 1868, the khanate of Bokhara, and the cities of Bokhara and Samarcand. The Emir of Bokhara, a fierce and warlike chief, had been their most formidable enemy; but, in a pitched battle, in April, 1868, he was slain, and his entire khanate fell into their hands. The Russians have a genius for the government and control of these Tartar tribes, and their sway has always been popular with them. Russia's next step forward, whether it be southward, into Cabool, and to take possession of Herât, or southeastward, to Ladakh, or Leh, and thus to the Thibet frontier, will bring her into immediate contact with the British Government, in India; and her presence at either point must be a perpetual menace to the British Government, whose hold upon the affections of the tribes of Hindostan has never been strong, and is weaker now than in the past. Neither the Hindoo Coosh nor the Himalaya Mountains will prove an effectual barrier between nations whose views, policies, and purposes are so diverse from each other.

The Russian Government, not satisfied with its progress toward the Chinese empire, from the West, has also, by its diplomacy, acquired

an extensive territory, and two fine seaports on the eastern coast. This territory forms a part of the coast and eastern portion of Mantchooria, extending from N. latitude 58° to 42° , and their ports, Possiet Bay and Vladivostock, are open the entire year. The Oussoori River forms the western boundary of the territory, which is about 150 miles in width. *Mantchooria* proper, a region lying between 39° and 49° N. latitude, about 800 miles in length, from northeast to southwest, and about 500 in breadth, is a country of fine climate, though somewhat rigorous in winter, and, with a fertile soil, supporting a population of about 15,000,000. Rev. Alexander Williamson, an English clergyman, and an agent of the British and Foreign Bible Society, explored it very thoroughly in 1868, and has communicated to the Royal Geographical Society an extended account of its geography and people. There are considerable mountain-ranges which traverse the country from north to south, the highest being the Shan-Alin range, in the east, whose peaks rise to a height of 12,000 feet, and are covered with perpetual snow. The Mantchoos, the native inhabitants, are of the same race with the reigning family in China, but the tide of immigration from China is fast obliterating their language, habits, and manners, and, in a few years, they will become, to all intents and purposes, Chinese. The country is rich in minerals, the eastern range of mountains having extensive veins of gold-bearing quartz, which are now largely worked. Its soil produces in abundance all the crops of temperate climates, and the southern portion cotton, tobacco, indigo, and silk.

The *Himalayas*, *Thibet*, and the southern portion of *Chinese Turkestan*, have been made known to many of our people the past year through the admirable lectures of Robert von Schlagentweit, one of the heroic brothers who spent several years in the exploration of that forbidding region, and in which Adolph, another brother, lost his life. His graphic descriptions of this hitherto almost unknown region have excited great interest in it. During the past two years the attention of explorers has been turned in an increasing degree to this region. Captain Montgomerie, the Superintendent of the Surveys of the Himalaya Mountains for the British Government, dispatched two Hindoo pundits (one of whom, however, failed to make his way through) from the Nepaul frontier to Lhassa, the capital of Thibet, a distance of 800 miles. The narrative of his adventures is replete with interest. He managed to take observations, and to ascertain both the latitude and longitude and the height of most of the important points, though surrounded by a jealous and inquisitive people, and liable to be put to death if his real errand were discovered.

The routes over the Himalaya from India have risen to sudden importance from the great demand which has recently sprung up

in Chinese or Eastern Turkestan for British goods, which, owing to the war of the native chiefs with China, can no longer be procured from that country. The route by Peshawur and Cabool and Bokhara is safe, but very indirect and long; the recent conquest of Bokhara by the Russians may also create difficulties in this traffic. A route which is obtaining the preference of late is that from Ümrtsür to Leh in Ladakh, which is far more direct, though over a pass 15,000 feet high. From Leh there are routes to Ilchi, formerly called Khotan, northeast of Leh, and to Yarkand, northwest of that town. Both require the traders to cross the Karakorum Pass, 18,200 feet high. Another route from Leh to Ilchi, still farther east, crosses the Himalaya at an elevation of 19,000 feet above the sea-level. Two other routes are spoken of, but neither has been as yet traversed by Europeans, one from Leh round the end of the Kuen Lün Mountains, the other from Jellalabad up the Chitral Valley, and over the Hindoo Coosh into the valley of the Oxus. Both are said to be liable to incursions from fierce and hostile tribes.

The great *table-land of Pamir*, from which radiate the Hindoo Coosh, the Kuen Lün, and the Bieler Dag, the three great mountain-chains which trend northward from the Himalaya, and which in the expressive language of the Orientals is called the "Roof of the World," is now being explored by native surveyors under the direction of Colonel Walker, Chief of the Board of Survey in India.

In turning to China, we have not as yet the record of the interesting tour of exploration of our countryman, Professor Bickmore, whose communication to the Royal Geographical Society gives the only account of his journeyings in that country which has yet appeared, though it is understood that he is soon to publish a full description of his discoveries. Mr. Bickmore's travels in China were very extensive, and he probably saw more of the interior of that great empire than any other American, or perhaps European traveller. He ascended the Yang-tse and its affluent the Siang as far as the populous city of Kweilin, in latitude 25° N., and thence by interior routes went northward along the borders of the great plain to Moukden, the capital of Mantchooria, in latitude 43° N., a distance of fully 1,300 miles; thence he visited Japan, and reached Europe by way of Siberia.

Mr. T. T. Cooper, an enterprising and intelligent English gentleman, in the winter of 1867-'68, undertook to ascend the Yang-tse-kiang to the extreme western border of China, and explore thence a route for a railway or a practicable pass into Assam, with a view to open a route for trade in that direction. On the 26th of April, 1868, he had reached Tai-tsien-lü, on the extreme western border of China, and was in some peril, by whichever route, whether down the Salwen or through Thibet, he might attempt to reach British territory. He finally,

we believe, descended the Salwen and Irrawaddy, and reached British Burmah in safety; but was satisfied that a railroad in that direction was impracticable. But Mr. F. A. Goodenough, an old resident of British Burmah, thinks differently, and in a letter to Major-General Sir A. S. Waugh points out two routes, one from Hookong, the other from Bhamo, through which, by passes in the Sing-phoo country, the route is practicable.

Mr. Bickmore, as we have already said, spent some time in *Japan*, and while there found in the island of Yesso a tribe of aborigines, whom he described as the *Ainos*, or hairy men, and whom he believed the original inhabitants of that island, Saghalien, and the Kurile Islands. He describes them as stout and strong, but only averaging 5 feet 2 inches in height; but their great peculiarity consists in the extraordinary development of their hair, not only on the head and face but on the entire body. Their hair is coarse and jet black, and they wear it long, falling over the shoulders, and the men as long or longer than the women. These people evidently belong to the Aryan race; their eyelids are horizontal and open widely, not oblique and partially closed, as in the Mongolian family, and their cheekbones are not prominent. They are not Buddhists like the Japanese, but fire-worshippers, and all their social, domestic, and religious customs are entirely different from those of the Japanese, and their mental characteristics are equally distinct. The Japanese testimony concerning them is, that when they conquered Yesso, 660 years B. C., they found the Ainos there and subjugated them. The fact that they have maintained their existence, though a subjugated race, for 2,500 years, is a strong evidence of their vitality. Their language is peculiar, and unlike that of the Japanese or neighboring nations in the roots of its words, though they have adopted to some extent the Japanese forms of conjugation. It is not improbable that the ancient Japanese alphabet of fourteen letters, recently discovered by Rev. Mr. Goble, a missionary in Japan, and which is evidently Aryan in its origin, may be the alphabet of the Ainos.

The discovery of coal in large quantities and of excellent quality at Ivanei, about 150 miles from Hakodadi, on the island of Yesso, and at a distance of only four miles from the coast and from a good harbor, is an event which will prove of material advantage to the communication by steam between Japan and the ports of India and Western America.

The last scientific work of the late John Crawford, an eminent English geographer, who died May 11, 1868, was the preparation of a paper for the Royal Geographical Society on *British Burmah*. In this he demonstrated very conclusively the great advantages which had accrued to that country from the substitution of the wise and equable government of it by British officers for the tyrannical and op-

pressive native rule. The population of the country had risen, in the five years ending in 1867, from 1,897,807 to 2,820,458, or more than 28 per cent., and this increase was largely due to the immigration of the Burmese from the native kingdom of Burmah, which the Burmese king sought in vain to prevent.

The great and small islands which, with the peninsula of Malacca, form the vast *East Indian* or *Malay Archipelago*, have within the past few years been very thoroughly explored in the interests of science. Two works devoted to the description of these explorations have recently appeared in England, and both have been republished in this country. The first, in point of time of exploration, was "The Malay Archipelago; the Land of the Orang-Utan and the Bird of Paradise," by Alfred Russel Wallace, a well-known English naturalist, whose previous "Travels on the Amazon and Rio Negro," etc., had won him reputation as a careful and patient observer. His present work, republished here by Harper & Brothers, is a valuable and beautiful addition to our knowledge of the fauna and flora of the Malay Archipelago, and gives, in connection with these, considerable information concerning the geology, physical geography, philology, and ethnology of the different groups of islands. Mr. Wallace spent eight years (1854-'62) on these islands, mainly engaged in the collection of the birds, insects, and most remarkable mammals of the region, but his general geographical observations are of great value. The other work to which we have referred is "Travels in the East-Indian Archipelago," by Professor Albert S. Bickmore, published here by D. Appleton & Co. Professor Bickmore's expedition, like that of Mr. Wallace, was specially in the interests of natural science, his primary object being to collect the shells figured by Rumphius (in which he was more than successful), but he gave a large measure of attention also to general zoology, physical geography, and ethnology. His tour was performed in 1865 and 1866, and was replete with adventures. He succeeded in obtaining photographs of representative men of the different races of the islands that he visited, which comprised most of the larger and some of the smaller islands of the Archipelago. He says of his journeyings, very modestly:

From Batavia I went to Sourabaya, Macassar, the capital of Celebes, thence to Coupang in the Island of Timor, to Dilly and the Banda Islands, and Amboyna, where I remained two months collecting the shells I had come so far to seek. Fortune favored me in securing the rarest species. The governor of these islands takes much interest in geology. I went with him in his steam-yacht to various interesting places, otherwise inaccessible. From Amboyna I went to Booru and Ternate, thence to the northern end of Celebes, to study the hot springs and volcanoes with which that country abounds, thence by the eastern shore of Celebes to Macassar, and back to Batavia, thence to Padang, making a long journey among the mountains, until I passed some distance into a country inhabited by true cannibals.

Our review of Geographical Discoveries in *Africa* must necessarily be brief. The physical geography and ethnology of *Abyssinia* were fully developed in the reports and narrations of Mr. Clement Markham, and other scientific explorers, who accompanied the British Army in its invasion of that country, and many new facts ascertained. Mr. Gerhard Rohlfs penetrated into Western Abyssinia, and is now endeavoring to find an entrance through Darfur into Wadai. Lieutenant Prideaux, an English officer, who was one of Theodore's captors, has given, in *Illustrated Travels*, a very interesting account of his journeyings and explorations in the Abyssinian Soudan.

Dr. Livingstone has been heard from during the past year, and was exploring Lake Tanganyika and its vicinity at the close of 1867. A recent report represents him as on his way to Zanzibar, from whence he expected to reach the Nile by a route akin to that of Sir S. W. Baker; but this is of doubtful authenticity, and it is quite as probable, if he has not already fallen a victim to the ferocity of the *Mazitu* or the still more formidable Niam-Niams, that he is endeavoring to make his way westward in the vicinity of the 8th or 10th parallel of south latitude, and may at any time be heard from on the west coast. There is supposed to be another large lake northwest of Lake Tanganyika which may be, as Tanganyika probably is not, the ultimate source of the Nile, or quite as possibly, the source either of the Gabûn or of the Congo or Zaire.

The Niam-Niam country has been partially explored, and the existence of this lake ascertained, by three adventurous explorers, the brothers Poncet, Jesuit missionaries, who penetrated into that barbarous region in 1863, and remained there three years, one of them losing his life by the cruelties and tortures inflicted on them by the Niam-Niams; and by C. Piaggia, an Italian geographer, who in 1865 penetrated into the same country. We have as yet but brief notes of their adventures and discoveries, and await with some impatience more full details. The Niam-Niams are said to be cannibals, and there is unquestionably some truth in the statement that the *os coccygis* is in their case prolonged so as to produce a caudal appendage of two or three inches in length.

Galla-Land, the region west of Zanzibar, in which Baron von der Decken lost his life, has been explored during the past year by Richard Brenner, a German geographer, who has penetrated fearlessly among the savage and ferocious tribes of that region.

Passing southward, we come to the region lying between the Zambesi and the Limpopo Rivers, which during the past year has excited so much attention from the discovery there of extensive gold-fields, by the German geologist and geographer, Carl Mauch. In the *ANNUAL CYCLOPÆDIA* for 1867, some account was given of the previous exploring tours of Herr Mauch. The possibility of the existence of gold-veins in

the mountains forming the water-shed between the two rivers had occurred to him, and indeed he had been informed of the existence of abandoned diggings by his friend Hartley, the elephant-hunter. On a subsequent journey, he found, on the river Thuti, or Tuti, an affluent of the Limpopo, in S. lat. $20^{\circ} 40'$ and E. long. about $28^{\circ} 85'$, an extensive gold-field, extending over a considerable district, and giving evidence of having been formerly worked, and abandoned from the influx of water. Proceeding northward, he discovered a second tract, in which the precious metal was abundant, on this same elevated plateau, about 7,000 feet above the sea-level, and 120 miles or more from the southern field. Still farther north, on the Tete, an affluent of the Zambesi, about 40 miles south of the Kraal of Tete, was a third gold-field of still greater extent, and about 250 miles from the one first discovered. He returned to Potchefstroom, the capital of the Transvaal Republic, with his specimens, and subsequently went from thence to Natal and Cape Town, arriving at the latter place in March, 1868. His announcement of his discovery led to an immediate stampede for the new gold regions, which at the latest dates was still continuing. In July, 1868, Mr. St. Vincent Erskine, son of the Colonial Secretary of Natal, set out from Leydenberg in the Transvaal Republic, and marched for the junction of the Oliphant river with the Limpopo, and thence descended that river to its mouth, a feat which, though often attempted, had not before been accomplished in modern times. He reached the mouth of the river on the 5th of September, and found it coinciding with that laid down on the maps as the Inhampura, in about lat. $25^{\circ} 5'$ south. This was wholly unexpected, as it was generally believed to be at least 200 miles farther north. On the west coast, Mr. Josephat Hahn has continued his articles on the geography, geology, ethnology, etc., of Ova Herero Land, in the *Zeitschrift für Erdkunde*, and the description of this singular and interesting people derives an additional melancholy interest from the death of the traveller, Anderassen, which we have already noticed.

In AUSTRALIA there is little new or of special interest. Two or three large salt lakes in the interior basin, heretofore known to exist, have been more fully explored, and a grand expedition has been projected by Dr. Neumayer, from Port Denison, near the Burdekin (20° S. lat. and 148° E. long. from Greenwich), across the continent, a distance of 1,569 miles, to Swan River (lat. $81^{\circ} 30'$ S., and long. $116^{\circ} 45'$ E.).

The *Sandwich Islands* have been visited during the past year with earthquakes, and in March there was a terrific eruption of the great volcano Manna Loa, the floor of the crater Kelauea sinking some hundreds of feet, and a new crater opening, the lava from which has proved very destructive to the finest part of the island of East Maui. The shores of this island are said to be sinking slowly.

GEORGIA. The Constitutional Convention of Georgia, which had adjourned on the 23d of December, 1867, came together again on the 8th of January. On the following day, General Meade, who had recently been appointed to the command of the Third Military District, appeared in the hall, and made a brief address to the delegates. As a soldier, he said, his duty was plain, and he should not depart from the instructions contained in the reconstruction acts of Congress. He hoped the convention would be just and moderate in its deliberations; and that it would frame a constitution which everybody could indorse. He did not consider that any act of the convention was binding until it had been ratified by the people, but, under the anomalous state of affairs then existing, he might regard it as his duty to give force to such measures as should appear to him to be for the good of the people.

The pay difficulty, of which an account was given in the CYCLOPEDIA for 1867, was not entirely settled by the removal of the obnoxious officials. Captain Rockwell, whom the commanding general had appointed Treasurer of the State, found an empty treasury, and was unable to respond to the requisition of the convention. General Meade, however, offered to use his best endeavors to raise funds to pay the expenses of that body, and from time to time during the session he was able to place at the disposal of the disbursing agent sums sufficient for that purpose.

A large portion of several days was occupied in discussing a proposition to call upon the national authorities to give the convention power to organize a provisional government for the State. This subject was first introduced by George W. Ashburn, who strongly urged the adoption of such a measure. Mr. Ashburn's resolution asked that the convention be clothed with the same powers that were delegated to the district commander by the act of July 19, 1867. The following was offered as a substitute, and adopted by a considerable majority:

Whereas, The reconstruction acts recognize the existence of a government within the limits of Georgia, subject to the military commander of the district and the paramount authority of Congress, under which certain officials hold office;

And whereas, The time for which the said officials were elected, as set forth in the laws allowed to operate within said limits, has expired, and said officials hold only by reason of a failure to provide their successors;

And whereas, A great many of said officials are hostile to and are insidiously using their influence against the restoration of Georgia to the Union, and by so doing are not only seriously retarding the work of reconstruction, but also materially affecting the prosperity of the State: therefore,

Resolved, That the convention do hereby request the Legislative Department of the Government of the United States to authorize this body to declare vacant the Chief Executive office of the State, and to fill the same, as well as to provide for the removal, through the Chief Executive officer of the State thus selected, of all persons who are hostile to reconstruction, and the filling of such vacancies by said Executive.

Resolved, That the convention, in justice to the friends of reconstruction under the reconstruction acts, do hereby request the department aforesaid to relieve all such of existing disability, that they may be eligible to fill the vacancies thus created.

Resolved, That the convention do further request the modification of the test-oath so as to admit of all persons, who have aided or abetted the late war against the United States, holding office therein, provided such persons heartily reject the past, and are earnestly attached to and determined to labor for the reunion of the State on the basis of the reconstruction acts.

The subject of a modification of the test-oath had been already brought to the attention of Congress by the following telegram, which had been submitted to the House of Representatives and referred to the Committee on Reconstruction:

ATLANTA, GA., January 12, 1868.

GENERAL U. S. GRANT: Unless the pending bill in Congress, directing military commanders to fill all the offices in a State under their command, rescinds the test-oath and provides for selection from qualified voters, I am informed its execution in this district will be entirely impracticable.

GEORGE G. MEADE, Major-General.

A bill having been filed in the Supreme Court of the United States by ex-Governor Jenkins, which was intended to test the authority of the civil officers appointed in Georgia by General Meade, several attempts were made in the convention, by ordinance or resolution, directly to condemn these proceedings. No resolution of the kind, however, was adopted, but an ordinance was introduced, and referred to the Judiciary Committee, declaring all appointments to office in that State made by the military commander, to be legal, and all acts performed by officers so appointed to be valid, and not to be called in question in any court of the State on account of the manner in which such appointment had been made. Among other matters of less moment which occupied the attention of the convention, entirely outside of the main object for which it was called, was the removal of the capital of the State from Milledgeville to Atlanta, and the expulsion of one of the negro members. When the proposition to remove the capital was first introduced, the city of Atlanta promptly offered to furnish, for the space of ten years, if necessary, suitable buildings for the General Assembly and all the State officials, and to give the City Fair grounds, containing twenty-five acres, as a site for the erection of permanent capitol buildings. The negro member expelled was Aaron Alpeoria Bradley, who had made himself quite conspicuous in the convention by the advocacy of extreme measures, and a somewhat turbulent opposition to moderate counsels. The specific charges brought against him were, that his name had been stricken from the roll of attorneys in Massachusetts for contempt of court and malpractice, and that he had been convicted and sentenced to two years imprisonment in the State of New York for the crime of seduction.

The convention continued in session until

the 11th of March, when the completed constitution was ratified by a very large majority of the delegates.

The general declaration of principles with which the instrument is introduced contains the following sections of special interest:

SECTION 2. All persons born, or naturalized, in the United States, and resident in this State, are hereby declared citizens of this State, and no law shall be made or enforced which shall abridge the privileges or immunities of citizens of the United States, or of this State, or deny to any person within its jurisdiction the equal protection of its laws. And it shall be the duty of the General Assembly, by appropriate legislation, to protect every person in the due enjoyment of the rights, privileges, and immunities guaranteed in this section.

SEC. 4. There shall be within the State of Georgia neither slavery nor involuntary servitude, save as a punishment for crime after legal conviction thereof.

SEC. 33. The State of Georgia shall ever remain member of the American Union; the people thereof are a part of the American nation; every citizen thereof owes paramount allegiance to the Constitution and Government of the United States, and no law or ordinance of this State, in contravention or subversion thereof, shall ever have any binding force.

It is also declared that no lotteries shall be authorized in the State, and that there shall be no imprisonment for debt. The following military order has reference to this last mentioned declaration:

General Orders, No. 27.

HEADQUARTERS THIRD MILITARY DISTRICT,
DEPARTMENT OF GEORGIA, FLORIDA, AND ALABAMA, }
ATLANTA, GA., February 22, 1868.

1. The Constitutional Convention of the State of Georgia, now in session in the city of Atlanta, adopted on the 19th day of February, 1868, the following preamble and resolutions:

Whereas, The convention has determined that there shall be no imprisonment for debt in the State; and

Whereas, Creditors are oppressing debtors by the use of what is known as "bail process" and writ of *ca. sa.*: therefore,

Resolved, That, in the opinion of this convention, said proceedings are contrary to the wishes of the people of this State.

Resolved, That the general commanding this district is hereby requested to protect, by order, the people of this State from the evil above set forth, and that such order remain in force, until such time as the people have expressed their will in regard to the constitution.

2. Therefore, by virtue of the plenary powers vested by the reconstruction acts of Congress in the commanding general of the Third Military District, and for the purpose of giving effect to the wishes of the people of Georgia, as expressed by their delegates in convention—

It is ordered: That imprisonment for debt is prohibited in the State of Georgia, and hereafter no bail process in civil cases or writ of *ca. sa.* shall be issued out of any of the courts of this State.

3. Every person now in prison in this State, under any such process or writ, will be immediately discharged from prison.

4. This order to remain in force until the people of Georgia shall express their will in the manner provided by the acts of Congress in regard to the constitution to be submitted to them by the said Constitutional Convention, or until further orders from these headquarters.

By order of Major-General MEADE.

R. C. DRUM, Assistant Adjutant-General.

When the provisions of the constitution relating to the elective franchise were under discussion, an attempt was made to introduce an educational qualification, but it met with little countenance. Earnest opposition was made by Mr. Waddell to the indiscriminate enfranchisement of the blacks, on the ground that they were wholly unfit to exercise the privilege. He even went so far as to propose the following as one of the sections of the franchise article:

White men only shall be eligible to any office of honor, trust, profit, or emolument, whether municipal, judicial, or political, in this State; and white men only shall serve as jurors in the courts.

The section finally adopted on the qualifications of voters was in these words:

SECTION 2. Every male person, born in the United States, and every male person who has been naturalized, or who has legally declared his intention to become a citizen of the United States, twenty-one years old or upward, who shall have resided in this State six months next preceding the election, and shall have resided thirty days in the county in which he offers to vote, and shall have paid all taxes which may have been required of him, and which he may have had an opportunity of paying, agreeably to law, for the year next preceding the election (except as hereinafter provided), shall be deemed an elector; and every male citizen of the United States, of the age aforesaid (except as hereinafter provided), who may be a resident of the State at the time of the adoption of this constitution, shall be deemed an elector, as aforesaid: *Provided*, That no soldier, sailor, or marine in the military or naval service of the United States, shall acquire the rights of an elector by reason of being stationed on duty in this State; and no person shall vote who, if challenged, shall refuse to take the following oath: "I do swear that I have not given, or received, nor do I expect to give, or receive, any money, treat, or other thing of value, by which my vote, or any vote is affected, or expected to be affected, at this election, nor have I given or promised any reward, or made any threat, by which to prevent any person from voting at this election."

Criminals, idiots, and duellists are excepted from this provision; and the sale of intoxicating liquors on election-days is prohibited. The General Assembly is empowered to provide for the registration of voters, and is required to "enact laws giving adequate protection to electors before, during, and subsequent to elections."

The general State election, after the year 1868, is to be on the Tuesday following the first Monday of November, and the General Assembly is to meet on the second Wednesday in January, unless otherwise provided by law. The Senators hold office four years, and the Representatives two years. The Governor is to be chosen for a term of four years, and the powers and duties of the various officers of Government are much the same as those delegated to persons in similar positions in the other States. The Secretary of State, Comptroller-General, Treasurer, and Surveyor-General are to be elected by the General Assembly.

The judicial powers of the State are vested in a Supreme Court, Superior Courts, Courts of Ordinary, justices of the peace, commis-

sioned notaries public, and such other courts as may be established by law. The Supreme Court consists of three judges, and has jurisdiction only for the trial and correction of errors on appeal from lower courts. The judges are to be appointed, those of the Supreme Court for twelve years and those of the Superior Courts for eight years.

The constitution requires the General Assembly at its first session to "provide a thorough system of general education, to be forever free to all children of the State, the expense of which shall be provided for by taxation or otherwise." The sources of revenue to be exclusively devoted to the support of common schools are, a poll-tax not to exceed one dollar annually on each poll, any educational fund belonging to the State, not appropriated to the university, a special tax on shows and exhibitions, and on the sale of spirituous and malt liquors, and the proceeds of commutation for militia service. All able-bodied male persons between the ages of 18 and 45 are to be enrolled as militia, unless exempt by law or conscientiously opposed to bearing arms; in the latter case they are required to pay an equivalent in money, to be devoted to the school-fund. If these provisions for the support of schools at any time prove insufficient, the General Assembly has power to levy a general tax on property to make up the deficiency.

The financial embarrassments which weighed upon the people, in consequence of the great losses of property during the recent war, claimed the attention of the convention, and the whole matter was referred, after some debate, to a special committee on the subject of relief. The report of this committee, after reciting the causes of the existing distress, viz., the destruction of \$400,000,000 of taxable property, the loss of four years' labor, depreciation in the value of real estate, repudiation of the indebtedness of the State to her citizens, the low price of cotton, and the entire derangement of labor, recommended measures of relief, which, after debate and amendment, took the following form:

We, the People of Georgia in Convention assembled, do solemnly ordain, That, from and after the passage of this ordinance, no court in this State shall have jurisdiction to hear or determine any suit, or render judgment in any case against any resident of this State, upon any contract or agreement made or entered into, or upon any contract or agreement made in renewal of a debt existing prior to the first day of June, 1865, nor shall any court or ministerial officer of this State have jurisdiction or authority to enforce any such judgment, execution, or decree, rendered or issued upon any contract or agreement or renewal thereof, as aforesaid.

The substance of this ordinance was also referred to the Committee on the Judiciary, with instructions to embody it in that portion of the constitution which was intrusted to them. This was accordingly done, and the courts of the State deprived of power to entertain suits against any resident of the

State founded on contracts existing on the 15th of June, 1865. Several exceptions are, however, made to the operation of this clause, and the General Assembly is empowered in all cases to give the courts jurisdiction:

Provided, that no court or officers shall have, nor shall the General Assembly give, jurisdiction or authority to try, or give judgment on, or enforce, any debt, the consideration of which was a slave or slaves, or the hire thereof.

The following also forms a part of the article on the judiciary:

All contracts made and not executed during the late rebellion, with the intention and for the purpose of aiding and encouraging said rebellion, or where it was the purpose and intention of any one of the parties to such contract to aid or encourage such rebellion, and that fact was known to the other party, whether said contract was made by any person or corporation with the State or Confederate States, or by a corporation with a natural person, or between two or more natural persons, are hereby declared to have been, and to be illegal; and all bonds, deeds, promissory notes, bills, or other evidences of debt, made or executed by the parties to such contract, or either of them, in connection with such illegal contract, or as the consideration thereof, or in furtherance thereof, are hereby declared null and void, and shall be so held in all courts in this State when attempts shall be made to enforce any such contract, or give validity to any such obligation or evidence of debt. And in all cases where the defendant, or any one interested in the event of the suit, will make a plea, supported by his or her affidavit, that he or she has no reason to believe that the obligation or evidence of indebtedness upon which the suit is predicated, or some part thereof, has been given or used for the illegal purpose aforesaid, the burden of proof shall be upon the plaintiff to satisfy the court and the jury that the bond, deed, note, bill, or other evidence of indebtedness upon which said suit is brought, is, or are not, nor is any part thereof, founded upon, or in any way connected with, any such illegal contract, and has not been used in aid of the rebellion; and the date of such bond, deed, note, bill, or other evidence of indebtedness, shall not be evidence that it has, or has not, since its date, been issued, transferred, or used in aid of the rebellion.

It is furthermore provided in the constitution that every head of a family, or guardian or trustee of a family of minor children, shall be entitled to a homestead of the value of \$2,000, exempt from execution except for taxes, money borrowed and expended in the improvement of the homestead, or for the purchase money of the same. All property of a wife, in her possession at the time of her marriage or afterward acquired by her, is to remain her separate property, and not be liable for the debts of her husband.

On the last day of the session of the Constitutional Convention, after the members had ratified the instrument as a whole which had been framed by their various committees and already adopted in parts, a resolution was passed, transmitting to General Meade the provisions intended to afford relief to the people, and requesting him to require the courts to enforce them "until the State is fully restored to its regular relations to the United States, and the State organization is in full operation." This was accordingly done by a general order (No.

37) dated March 12th, which recited the resolution of the convention and the provisions of the constitution alluded to, and continued:

2. *Therefore*, by virtue of the plenary powers vested by the reconstruction acts of Congress in the commanding general of the Third Military District, and for the purpose of giving temporary effect to the wishes of the people of Georgia, as expressed by their delegates in convention:

It is ordered, That the foregoing sections of said constitution shall, from this date, be deemed to have taken effect and to be in full force in the State of Georgia, and shall continue in full force and validity, until further orders from these headquarters.

3. The courts and officers of the Provisional Government of said State, and all the municipal and other officers in the same, are hereby required to enforce and carry out the above provisions for the relief of the people of the State of Georgia.

One of the judges, having refused to comply with this order, was removed by the following edict from headquarters:

Special Order, No. 88.—Extract.

HEADQUARTERS THIRD MILITARY DISTRICT,
DEPARTMENT OF GEORGIA, FLORIDA, AND ALABAMA,
ATLANTA, GA., April —, 1868. }

1. John T. Clarke, Judge of the Superior Court, Pataula Circuit, State of Georgia, having published in the *Early County News* an order adjourning the Superior Court of Early County, from the second Monday in April until the second Monday in June next, assigning, as cause of such adjournment, the exercise, on the part of the major-general commanding, of illegal, unconstitutional, oppressive, and dangerous orders and measures, the said John T. Clarke, Judge as aforesaid, is hereby removed from office.

By order of Major-General MEADE.

R. C. DRUM, Assistant Adjutant-General.

Official: C. D. EMORY, A. D. C.

Almost the last act of the convention, before voting on the ratification of the constitution, was the adoption of the following resolutions, submitted by G. W. Ashburn, as a substitute for the report of a committee of seven which had been appointed to procure the names of persons desiring to be relieved from political disabilities:

Whereas, The strength of republican government is best promoted, and its principles maintained, by the broadest platform of enfranchisement; and

Whereas, A portion of Georgia's citizens are under political disabilities which debar them from exercising the highest privilege of American citizenship—that of the elective franchise: Be it, therefore,

Resolved, That this convention do request the Congress of the United States to enact or pass such laws as will remove the political disabilities from all the citizens of Georgia. And be it further

Resolved, That a copy of this preamble and resolution be furnished to the President of the Senate and Speaker of the House of Representatives.

The convention finally adjourned on the 11th of March, having been in actual session sixty-seven days.

On the 30th of March, Mr. George W. Ashburn, who had taken a very prominent part in the late convention, was assassinated in the city of Columbus. No efforts being made on the part of the civil authorities to bring the perpetrators of this crime to trial, General Meade speedily removed the mayor and aldermen of the city, together with the marshal and

his deputy, and appointed others in their places, putting Captain Mills, of the 16th Infantry, at the head of the administration as mayor. With the aid of the city government thus constituted he proceeded to arrest several citizens on suspicion, and to institute a trial by military commission. Finding it very difficult, however, to obtain any clear evidence against the persons arrested, they were released on bail, and a government detective was obtained and further arrests made. The commission was proceeding with the trial, but apparently attaining no satisfactory results, when the State acceded to the conditions of the act of Congress restoring her to her relations to the Union in July. General Meade, therefore, directed the military tribunal to proceed no further, and the prisoners were remanded to custody, to await the action of the civil authorities. They were afterward released on giving bail for their future appearance, in case they were called on to appear, and this seems to have been the end of the affair.

The Constitutional Convention had passed an ordinance before its adjournment, providing for an election, to take place on the 20th of April and following days, for the ratification of the constitution by the people and for the choice of Governor, members of the General Assembly, and Representatives to Congress. It is declared that the qualifications of voters for these offices shall be the same as those required by act of Congress of those voting on the ratification of the constitution; and General Meade was requested to give the necessary orders to carry these provisions into effect, and to cause due returns of the results of the election to be made. The ordinance further provides that the officers chosen at this election shall enter upon their duties "when authorized so to do by acts of Congress or by the order of the general commanding, and shall continue in office till the regular succession provided for after the year 1868." The following oath is prescribed for any person whose right to vote is challenged at the poll:

You do solemnly swear (or affirm) that you have been duly registered agreeably to the acts of Congress; that you have not prevented or endeavored to prevent any person from voting at this election; that, if the constitution upon which the vote is now being taken is ratified, you will truly and faithfully support it, so help you God.

General Meade's election order relating to the vote on the ratification of the constitution was issued on the 14th of March; and on the day following a second order was published applying the same regulations to the election of the officers provided to be chosen by the ordinance of the convention. After reciting the action of the convention, and the provisions of the acts of Congress relating to the holding of an election, he appoints the 20th of April and three succeeding days for the purpose, and lays down the regulations to be observed in the following terms:

5. It shall be the duty of the Boards of Registration in Georgia, in accordance with said acts, commencing fourteen days prior to the election herein ordered, and giving reasonable public notice of the time and place thereof, to revise, for a period of five days, the registration lists, and, upon being satisfied that any person not entitled thereto has been registered, to strike the name of such person from the list, and such person shall not be allowed to vote. And such Boards shall also, during the same period, add to such registry the names of all persons who, at that time, possess the qualifications required by said acts, who have not been already registered.

In deciding who are to be stricken from or added to the registration lists, the Boards will be guided by the acts of Congress relating to reconstruction, and their attention is especially called to the supplementary act which became a law July 19, 1867.

6. Said election shall be held in each county in the State under the superintendence of the Boards of Registration, as provided by law, and polls will be opened, after due and sufficient notice, at as many points in each county, not exceeding three, as, in the opinion of said Boards, may be required for the convenience of voters. And in any city, or other place, where there is a large number of voters, it is hereby made the duty of said Boards to open as many polls as may be necessary to enable the voters to cast their votes without unreasonable delay.

7. Any person, duly registered in the State as a voter, may vote in any county in the State where he offers to vote, when he has resided therein for ten days next preceding the election. When he offers to vote in the county where he was registered, and his name appears on the list of registered voters, he shall not be subject to question or challenge, except for the purpose of identification, or as to residence. And any person so registered, who may have removed from the county in which he was registered, shall be permitted to vote in any county in the State to which he has removed, when he has resided therein for ten days next preceding the election, upon presentation of his certificate of registration, or upon making affidavit before a member of the Board of Registration, or a judge or manager of the election, that he is registered as a voter, naming the county in which he is so registered; that he has resided in the county where he offers to vote for ten days next preceding the election, and that he has not voted at this election. Blanks for such affidavits will be supplied by the Boards of Registration, and the name of the voter making oath must be indorsed on his ballot, and all such affidavits must be forwarded with the returns of the election.

8. The polls shall be opened at each voting-place, during the days of the election, at 7 o'clock A. M., and close at 6 o'clock P. M., and shall be kept open, between those hours, without intermission or adjournment.

9. All public bar-rooms, saloons, and other places for the sale of liquor at retail, at the several county seats, and at other polling-places, shall be closed from 6 o'clock of the evening preceding the election until 6 o'clock of the morning after the last day of the election. Any person violating this order shall be subject to fine or imprisonment. Sheriffs and their deputies and municipal officers will be held responsible for the strict enforcement of this prohibition, by the arrest of all persons who may transgress the same.

10. The sheriff of each county is hereby required to be present at the county seat, and to appoint deputies to be present at each polling-place in his county, during the whole time that the polls are kept open, and until the election is completed, and is made responsible that no interference with the judges of election, or other interruption of good order, shall occur. And any sheriff, or deputy sheriff, or other civil officer, failing to perform with energy and good faith the duty required of him by this order, will,

upon report made by the judges of the election, be arrested and dealt with by military authority, and punished by fine or imprisonment.

11. The commanding officer of the District of Georgia will issue, through the superintendent of registration for this State, such detailed instructions as may be necessary to the conduct of said election in conformity with the act of Congress.

12. The returns required by law to be made of the results of said election, to the commanding general of this military district, will be rendered, by the persons appointed to superintend the same, through the commanding officer of the District of Georgia, and in accordance with the detailed instructions already referred to.

13. No person who is a candidate for office at said election shall act as a registrar, judge, inspector, manager, clerk, or in any official capacity connected with conducting the election.

14. Violence, or threats of violence, or any oppressive or fraudulent means employed to prevent every person from exercising the right of suffrage, is positively prohibited, and every person guilty of using the same shall, on conviction thereof before a military commission, be punished by fine or otherwise.

15. No contract or agreement with laborers made for the purpose of controlling their votes, or of restraining them from voting, will be permitted to be enforced against them in this district.

By order of Major-General MEADE.

R. C. DRUM, Assistant Adjutant-General.

The following order was issued on the 16th of March :

General Orders, No. 42.

All civil officers in this military district are hereby required to obey all the orders issued from these headquarters relating to the performance of their official duties; and any officer refusing to obey any such order shall, on conviction thereof before a military commission, be punished by fine or imprisonment, or both. By order of Major-General MEADE.

R. C. DRUM, Assistant Adjutant-General.

The great body of the native white citizens of Georgia were opposed to the action of the convention, and determined, so far as their own political influence extended, to prevent the adoption of the constitution. They had met in convention at Macon, in December, 1867, and organized under the name of the Conservative party of Georgia, and had appointed a committee to draw up an address to the people of the State, setting forth the principles of the organization. This address, which was signed by the committee—Herschel V. Johnson, Absalom H. Chappell, Benjamin H. Hill, Warren Akin, and T. L. Guerry—and published in the early part of January, took strong ground against the whole course of the national Government in its treatment of the Southern States since the close of the civil war. The reconstruction acts were characterized as cruel and unjust, and intended to lead to the supremacy in the South of the negro race under the guidance and control of adventurers from the Northern States. "In making this earnest protest against being placed, by force, under *negro dominion*," say the committee, "we disavow all feeling of resentment toward that unfortunate race. As we are destined to live together, we desire harmony and friendship between them and ourselves; as they are made

the dupes of unscrupulous partisans and designing adventurers, we pity them; as they are ignorant, dependent, and helpless, it is our purpose to protect them in the enjoyment of all the rights of person and property to which their freedom entitles them."

The address closes with an appeal to the Conservative men of Georgia, to "organize for self-protection and ceaseless opposition to the direful rule of *negro supremacy* which is sought to be enforced on us and our children, in defiance of the Constitution, and in contempt of the civilization of the age and the opinions of mankind;" and to their "fellow-citizens of the North" not to "stand aloof and calmly see us subjected to this damning wrong; and that, too, when it will imperil the Republic and spread baleful disaster over every interest."

The State Central Committee of the Conservative party met at Macon, on the 13th of February, and adopted the title of "The Central Executive Committee of the National Democratic Party of Georgia;" and recommended to all clubs and organizations throughout the State, which had been formed for the support of Conservative principles, to array themselves under the banners of the National Democratic party. Among the reasons given for this action were these, that that was "the only party at the North which maintains the Constitution of the United States as made and construed by the fathers and the Union of the States thereunder;" and that "close coöperation with that party is demanded by the instinct of self-preservation, the first law of nature, as the only rational mode of escape from the iron rule of military despotism, to be followed by the more humiliating condition of negro supremacy." The committee expresses its approval of the "fearless stand taken by Andrew Johnson for the rights of the whole people and the Constitution of our country," but gives no advice to the people with regard to their action on the constitution then being framed at Atlanta. A month later, however, on the 13th of March, the committee met again and adopted the following resolution:

Resolved, That the opinions and feelings of the National Democratic party of Georgia and of the United States, upon the unconstitutionality and injustice of the reconstruction acts of Congress, are too decided and well known to require reiteration here. Their opposition to the action of the several conventions called in pursuance of those acts, and to the effort to establish the supremacy of the negro race in the South, and to place the destinies of these States in the hands of adventurers and irresponsible persons, is equally decided and well known. Yet, warned by the fate of Alabama, and actuated by the instinct of self-preservation, we feel it to be our duty, to the extent of our power, to provide against every contingency, and therefore would urge upon our friends to participate in the elections which are to be held on the 20th April, proximo, to the end that the best and wisest men—permanently identified with Georgia, and who will administer her government in the interests of the people, and not for the purposes of plunder—be chosen to organize the government and frame the laws under which we and our posterity may have to live.

They recommended an active canvass for the coming election, and put Augustus Reese in nomination for the office of Governor; delegates were also appointed to the National Democratic Convention which was to meet at New York on the 4th of July. Judge Reese declined to be the candidate for Governor, and Judge Irwin's name was substituted; but that gentleman having taken an oath to support the Constitution of the United States, and afterward voted as a member of the electoral college of Georgia for Jefferson Davis as President of the Southern Confederacy, General Meade informed the committee that he was ineligible under the reconstruction acts, and could not be installed in office if he received a majority of the votes cast. Judge Irwin accordingly withdrew his name, and John B. Gordon was recommended to the voters of the party, by the committee, for Governor of the State. Mr. Gordon had been a major-general in the army of the Confederate States, and had received no pardon; but, having never held any office before the war for which he was required to swear to support the Constitution of the United States, he was pronounced eligible by General Meade.

The following orders issued by General Meade have direct reference to the approaching election:

General Orders, No. 54.

HEADQUARTERS THIRD MILITARY DISTRICT,
DEPARTMENT OF GEORGIA, ALABAMA, AND FLORIDA,
ATLANTA, GA., April 7, 1868.

The officer commanding sub-District of Georgia will proceed to distribute the troops under his command in such manner as will, in his judgment, best subserve the purpose of preserving order during the coming election.

The Quartermaster's Department will furnish the necessary transportation, and the troops sent to stations not now occupied will be furnished with camp equipage, in all cases where satisfactory information has not been obtained, before their departure, that suitable quarters can be procured.

By order of Major-General MEADE.
S. F. BARSTOW, Acting Assistant Adj't-General.

General Orders, No. 56.

HEADQUARTERS THIRD MILITARY DISTRICT,
DEPARTMENT OF GEORGIA, ALABAMA, AND FLORIDA,
ATLANTA, GA., April 9, 1868.

That fairness and impartiality may be secured in the coming elections in Georgia and Florida, it is ordered:

1. That the ballot-boxes shall not be opened, or the votes counted, nor shall any information be given of the progress of the election, till the polls are finally closed.

2. The polls being finally closed, the board of managers shall select two men of character and standing from the opposite party, who shall be permitted to be present at the opening of the ballot-boxes and the counting of the ballots, so as to witness and verify such counting.

By order of Major-General MEADE.
S. F. BARSTOW, Acting Assistant Adj't-General.

General Orders, No. 57.

HEADQUARTERS THIRD MILITARY DISTRICT,
DEPARTMENT OF GEORGIA, ALABAMA, AND FLORIDA,
ATLANTA, GA., April 10, 1868.

1. The numerous resignations of sheriffs of counties in the State of Georgia that have recently been

tendered at these headquarters, coming on the eve of an important election, and when there is not sufficient time to make new appointments, makes it proper and necessary for the commanding general to give notice, that such resignations will not be accepted, and that sheriffs who have been so long holding their offices at the sufferance of the commanding general will not be permitted to resign until after said election is over; and they are hereby required to continue in the faithful performance of their official duties until relieved from the same by orders from these headquarters. Any violation of this order will be punished in the manner prescribed in General Orders No. 42, for the punishment of civil officers for disobedience of orders.

2. Inasmuch as a numerous class of the electors of this State are, from necessity, at present dependent upon another class for employment by which they may earn daily bread for themselves and their families, and as numerous complaints have been made at these headquarters, that such laborers will be intimidated from voting at the approaching election by fear of the loss of employment, employers are hereby forbidden any attempts to control the action or will of their laborers as to voting, by threats of discharge from employment or by other oppressive means; and any person who shall, by such means, prevent a laborer from voting as he pleases, or shall discharge him from employment on account of his having exercised his privileges as a voter, will, on conviction of such offence before a military commission, be punished by fine or imprisonment, or both.

3. It is made the duty, as it is certainly the desire, of the commanding general, to secure to all the duly registered voters in the State of Georgia an opportunity to vote at the approaching election "freely and without restraint, fear, or the influence of fraud," and he calls upon all good citizens to co-operate with him in his efforts to have the election conducted fairly as required by law.

By order of Major-General MEADE.

R. C. DRUM, Assistant Adjutant-General.

General Orders, No. 58.

HEADQUARTERS THIRD MILITARY DISTRICT,
DEPARTMENT OF GEORGIA, ALABAMA, AND FLORIDA,
ATLANTA, GA., April 11, 1868.

1. The uncertainty which seems to exist in regard to holding municipal elections on the 20th instant, and the frequent inquiries addressed to these headquarters, render it necessary for the commanding general to announce that said elections are not authorized by any orders from these headquarters. Managers of elections are hereby prohibited from receiving any votes, for any offices except such offices as are provided for in the constitution to be submitted for ratification—the voting for which officers is authorized by General Orders Nos. 40 and 52.

2. Complaints having been made to these headquarters, by planters and others, that improper means are being used to compel laborers to leave their work to attend political meetings, and threats being made that, in case of refusal, penalties will be attached to said refusal, the major-general commanding announces that all such attempts to control the movements of laborers and interfere with the rights of employers are strictly forbidden, and will be considered, and on conviction will be punished, the same as any attempts to dissuade and prevent voters from going to the polls, as referred to in paragraph 2, General Orders No. 57.

3. The major-general commanding also makes known that, while he acknowledges and will require to be respected the rights of laborers to peaceably assemble at night to discuss political questions, yet he discountenances and forbids the assembling of armed bodies; and requires that all such assemblages shall notify either the military or civil authorities of these proposed meetings, and said military and civil authorities are enjoined to see that the right

of electors to peaceably assemble for legitimate purposes is not disturbed.

4. The wearing or carrying of arms, either concealed or otherwise, by persons not connected with the military service of the Government, or such civil officers whose duty under the laws and orders it is to preserve the public peace, at, or in the vicinity of the polling-places, on the days set apart for holding the election in the State of Georgia, is positively forbidden. Civil and military officers will see that this order, as well as all others relating to the preservation of the peace and quiet of the counties in which they are acting, is strictly observed.

5. The commanding officers of sub-Districts of Georgia and Florida will take prompt measures to give publicity to this order through the Superintendents of Registration and the officers of the Freedmen's Bureau, and will enjoin on the latter to instruct and advise the Freedmen in their rights and duties.

By order of Major-General MEADE.

R. C. DRUM, Assistant Adjutant-General.

General Orders, No. 59.

HEADQUARTERS THIRD MILITARY DISTRICT,
DEPARTMENT OF GEORGIA, ALABAMA, AND FLORIDA,
ATLANTA, GA., April 18, 1868.

Whereas, It has been reported to the commanding general, from several parts of the State of Georgia, that very many names have been stricken from the list of registered voters, without any cause being assigned for said striking off, or an opportunity given to voters, heretofore registered, to meet the objections received in their cases; and whereas, it is the determination of the commanding general that all candidates in the approaching election shall have every opportunity to show "from official data, whether said registration and election have been honestly and fairly conducted, and in accordance with law; it is hereby ordered,

That all managers of elections shall receive the votes, of all such persons as shall have been stricken from the registered list during the last five days, for revision; not counting said votes, but keeping them separate, with the names of the persons presenting them written on the back, and said votes shall be sent in a separate envelope with the returns made of the election, to be compared with the reasons required by law to be sent to these headquarters, whenever any Board of Registration shall deem it proper to strike names from the registration lists.

By order of Major-General MEADE.

R. C. DRUM, Assistant Adjutant-General.

The election passed off quietly, and the result, so far as it concerned the ratification of the new constitution, was announced in the following General Order:

General Orders, No. 76.

HEADQUARTERS THIRD MILITARY DISTRICT,
DEPARTMENT OF GEORGIA, ALABAMA, AND FLORIDA,
ATLANTA, GA., May 11, 1868.

Official returns of the recent election having been received from all the counties in the State of Georgia, in which the election on the ratification of the constitution was held; and it appearing from said returns that a majority of seventeen thousand six hundred and ninety-nine (17,699) votes had been cast "For the constitution," the same is hereby declared ratified in accordance with the provisions of the act of Congress which became a law March 12, 1868.

By order of Major-General MEADE.

R. C. DRUM, Assistant Adjutant-General.

Rufus B. Bullock, the Republican candidate for Governor, was elected by a majority of 7,047, the whole number of votes cast being 159,245, and Gordon having 76,099 to 83,146 for Bullock. This result, together with the names of all persons elected to the two branches

of the Assembly, was announced by a General Order dated June 25th.

By a military order, dated June 28th, the Governor-elect was appointed Provisional Governor of the State in place of General Ruger, to enter upon the duties of his office on the 4th of July, on which day the persons chosen for members of the Assembly had been already directed to convene at Atlanta by proclamation of the Governor-elect, under authority of the act of Congress "to admit the States of North Carolina, South Carolina, Georgia, Alabama, and Florida, to representation in Congress," which went into effect on the 25th of June. On the 3d of July, General Meade issued an order, directing the Provisional Governor to "proceed at 12 m., on the 4th instant, to effect such preliminary organization of both Houses of the Legislature as will enable the same to enter upon the discharge of the duties assigned them by law." Accordingly, on the next day, the members-elect of the Legislature assembled in the capitol furnished for the purpose by the city of Atlanta, in presence of General Meade, Governor Bullock, and Judge Erskine. The act of Congress admitting the State into the Union conditionally was read, as were the orders of the commanding general, announcing the result of the late election, and directing the Governor to organize the two Houses of Assembly. These preliminaries being over, the oath was administered to the Senators by Judge Erskine, and the officers of the Senate were chosen by ballot. The organization of the House of Representatives occupied two or three days, in consequence of the nearly equal division of the members between the two political parties. The whole number of Senators was 44, of whom 22 were Republicans and 22 Democrats. In the House of Representatives were 73 Republican and 102 Democratic members, 175 in all—3 Senators and 25 Representatives were negroes.

The question of the eligibility of several members who had been sent to the Assembly was considerably agitated both in and out of that body, and several seats were formally contested. On the 8th of July, in reply to the official announcement that the organization of the two Houses had been completed, General Meade wrote to the Governor, stating that, in his judgment, neither House could be legally organized "until they have complied with the requisitions of the reconstruction acts, and the act which became a law June 25, 1868, all of which prohibit any one from holding an office under the State, who is excluded by Section 3 of the amendment of the Constitution, known as Article 14," and declaring that he could not "recognize any act of the Legislature as valid, nor allow the same to be executed, until satisfactory evidence is produced, that all persons excluded by the 14th Article are deprived of their seats and offices in both Houses." The provision of the 14th Article referred to renders ineligible to office

all persons who had taken an official oath to support the Constitution, and afterward gave aid and comfort to the enemies of the United States. The Governor transmitted General Meade's letter to the two Houses of the Legislature, and recommended the appointment of committees to investigate the eligibility of each member. This course was accordingly taken, and each member was examined on oath with regard to the application in his case of the prohibition of the 14th Article. A majority of the committee in the House reported in favor of the exclusion of three members, but a minority report was submitted, in which it was argued that no act of any member had amounted to giving aid and comfort to the enemy according to the best interpretation of the law. The case of each of these members was debated in the House, and they were finally pronounced to have been legally eligible. In the Senate, likewise, the investigation resulted in favor of the eligibility of every member, though a minority of the committee reported in favor of excluding about one-fourth of the Senators from their seats. When the result of these investigations was communicated to General Meade, he declared that he had "no further opposition to make to their proceeding to the business for which they were called together," and that he considered them "legally organized for the 18th instant, the date of the action of the House."

One effect of the act of Congress of June 25th was, to abrogate the provision in the constitution of the State of Georgia which denied the jurisdiction of the courts in actions for debts contracted prior to the 1st of June, 1865, and the assent of the State to this abrogation by solemn public act, as well as the ratification of the 14th Article, was required as a condition precedent to her restoration to her full relations in the union of States. These conditions were both complied with by a joint resolution passed on the 21st of July, by a vote of 24 to 14 in the Senate, and 89 to 70 in the House of Representatives. On the following day Rufus B. Bullock was inaugurated Governor of the reconstructed State of Georgia for the term of four years, and on the 24th sent his first regular message to the Assembly.

On the 28th of July an order issued from the headquarters of the Army at Washington, in which it was declared that the Second and Third Military Districts had ceased to exist, and the States of North Carolina, South Carolina, Georgia, Alabama, and Florida, would constitute the Department of the South, Major-General George G. Meade to command, with his headquarters at Atlanta. Thereupon the following order was published:

General Orders, No. 108.

HEADQUARTERS THIRD MILITARY DISTRICT,)
DEPARTMENT OF GEORGIA, ALABAMA AND FLORIDA,)
ATLANTA, GA., July 30, 1868.)

The several States comprising this military district having, by solemn acts of their Assemblies, conformed to the requisitions of the act of Congress which became

a law June 25, 1868, and civil government having been inaugurated in each, the military power vested in the district commander by the reconstruction laws, by the provision of these laws, ceases to exist; and hereafter, all orders issued from these headquarters, and bearing upon the rights of persons and property, will have, in the several States of Georgia, Alabama, and Florida, only such force as may be given to them by the courts and legislators of the respective States.

To conform to the changed condition of affairs, the commanders of the several sub-districts, hereafter to be designated as districts, will, without delay, withdraw all detachments of troops, whether infantry or cavalry, and concentrate their command as herein-after directed.

In the District of Georgia, the following posts will be occupied:

Dahlonega—One company of infantry.

Savannah—Two companies of infantry.

Atlanta—Seven companies of infantry.

The above posts will be occupied by the 16th Regiment of Infantry, whose colonel will designate the companies, and also will assign the lieutenant-colonel to the post of Atlanta, and the major to Savannah.

During the period in which General Meade exercised the authority of civil government in the Third Military District, the whole number of persons tried by military commission in the three States of Georgia, Alabama, and Florida, was thirty-two. Of these fifteen were convicted, but the sentences of four were disapproved, and those of eight others remitted, while two were referred to the President of the United States—thus leaving but one in confinement for a civil offence, on conviction by the military tribunal.

The negro members of the Georgia Assembly were all legislated from their seats in the course of the session. In the first place Aaron A. Bradley, who had been elected to the Senate from the First District, and who it will be remembered was expelled from the Constitutional Convention, on the ground that he had been convicted of crime in another State, was induced to resign his place, to escape a similar fate in the Legislative Assembly. The theory in the Senate, however, was, that, as he was a convicted criminal, he had never been eligible to office, and therefore could not resign. A resolution was accordingly adopted, declaring that he was ineligible, and that R. O. Lester, who had received the next largest number of votes at the election, was, according to the laws of the State, duly elected in the First District. On the resignation of Bradley, the Governor had ordered a new election, and the right of Mr. Lester to occupy the vacant seat was likely to be contested; but, before the election occurred, the action of the Legislature took place which excluded all the colored members on account of ineligibility under the constitution and laws of the State. In order to see clearly the ground upon which this action was based, it will be necessary to take a glance at the course of the convention in relation to this very subject. While the constitution was under discussion, the following section was proposed, and, after some debate, rejected by a vote of 126 to 12:

SECTION 10. All qualified electors, and none others,

shall be eligible to any office in this State unless disqualified by the constitution of this State or by the Constitution of the United States.

Having rejected this, the convention made no provision which could be construed as expressly giving the negro a right to be elected to office, but, on the contrary, declared that "the code of Georgia, and all laws passed since the 19th day of January, 1861, are of full force," except as to slaves; and by these laws the right of persons of color to hold office is in terms denied. The matter was first brought up in the Senate on the 25th of July, by Mr. Candler, who offered the following resolution:

Whereas, ex-Governor Joseph E. Brown, one of the ablest lawyers in the Republican party of Georgia, as well as other persons, distinguished for their knowledge of constitutional law, held, during the late election canvass, that persons of color were not entitled to hold office under the existing constitution; and *whereas*, such persons hold seats as Senators on this floor; and *whereas*, there are laws of vital importance to the people of Georgia to be enacted by the General Assembly, the validity of which should not be made uncertain, because of a participation in their enactment by persons not entitled, under the constitution, so to participate: therefore, be it

Resolved, That the Committee on Privileges and Elections be directed to inquire into the eligibility of the several persons of color holding seats as Senators, and report at the earliest day practicable.

The subject was afterward introduced in the House of Representatives, and, after several weeks of animated discussion, the whole movement resulted in the expulsion from both Houses of all the negro members.

The resolution of the House of Representatives effecting the final expulsion was adopted on the 8d of September, and was in these words:

Whereas, Abram Smith, of the county of Muscogee, has been declared ineligible to a seat on this floor; and *whereas*, Thomas W. Grimes, Jr., of said county, received the next highest number of votes cast in said county at the late election for Representatives in the General Assembly of this State, be it

Resolved, That the said Thomas W. Grimes, Jr., be declared a member of this body, and that the proper officer proceed immediately to swear him in.—[Here follows a full list of the negro members.]

The above resolution was amended by Mr. Tumlin, of Randolph, as follows:

Free persons of color, heretofore occupying seats on the floor of this House, are, under the constitution of the State of Georgia, ineligible to seats on the floor of this House; and *whereas*, they have been so declared by said House, be it therefore

Resolved, That the persons in each of the counties aforesaid, having the next highest number of votes, who are free from constitutional ineligibility, are declared eligible and entitled to seats on the floor of this House.

When the Governor was informed, by a special committee, of the action of the House, he sent in a communication acknowledging the receipt of the resolution, but in a decided tone disapproving of the course which had been adopted. He argued at considerable length in favor of the right of colored persons to hold office under the Constitution and laws of the United States, and the State of Georgia. In

conclusion he says: "I most respectfully and earnestly call upon you, as lovers of our common country and well wishers of the peace and good order of the State, to pause in the suicidal course upon which you have entered, urged on as you are by bold, bad men outside your body, whose wicked counsels have once drenched our land in blood, and whose ambition now is to ruin that which they cannot rule."

This message served only to elicit the following:

Resolved, That that portion of the communication of his Excellency reflecting upon the action of this House, in deciding upon the eligibility of free persons of color under the constitution, be returned to his Excellency, with the following resolution:

Resolved, That said communication is not warranted by the resolution upon which his Excellency was requested to act, and that the constitution declares that the members of each House are the judges of the qualifications of its own members, and not the Governor; they are the keepers of their own consciences, and not his Excellency.

The excluded members entered a spirited protest against the outrage perpetrated upon their race by the action of the House, which was addressed to the Speaker and members of the House of Representatives, and accompanied by a request that it be entered upon the journal. This request was not granted. In their protest, they give "notice that they will appeal, at the proper time, to the Congress of the United States and the justice of the American people, to redress their grievances, to which they are subjected by the intolerant and oppressive conduct of the dominant party in this House, who, while part of their members were in danger of losing their seats on account of ineligibility under the Fourteenth Constitutional Amendment, were met by the colored members of this House in a spirit of conciliation and kindness during that investigation."

The action in the Senate with reference to the two remaining colored members of that Chamber, Messrs. T. G. Campbell and George Wallace, was precisely similar to that in the House, but took place about ten days later. The Governor sent a message expressing his disapproval of this course pursued by the Senators; but a resolution which was offered, to the effect that only that portion of this communication giving the names of the persons entitled to the vacant seats be entered on the journal, failed to pass, as being disrespectful to the Governor.

Senators to Congress were elected on the 29th of July. Benjamin H. Hill received a majority of votes for the long term, and H. V. M. Miller for the short term.

The Legislature continued in session until the 6th of October, and passed one hundred and fifty-five acts, a large portion of which were for the incorporation of railroad, manufacturing, and other companies, and for the revival and encouragement of the material interests of the Commonwealth. Provision was also made for

the organization of the courts and the regular exercise of the civil authority of the State. Among the other measures of general interest was an act for the relief of debtors, and an act to provide for setting apart homesteads, and securing them to the sole use and benefit of families. The former was intended to supply, in some degree, the place of the constitutional provision on the same subject which was rendered null by the act of Congress of the 25th of June. It provides that, in all suits brought to recover debts due on contracts made prior to June 1, 1865, it shall be lawful "to give in evidence, before the jury empanelled to try the same, the consideration of the debt or contract which may be the subject of the suit, the amount and value of the property owned by the debtor at the time the debt was contracted, or the contract entered into, to show upon the faith of what property credit was given to him, and what tender or tenders of payment he made to the creditors at any time, and that the non-payment of the debt or debts was owing to the refusal of the creditor to receive the money tendered, or offered to be tendered; the destruction or loss of the property upon the faith of which the credit was given, and the amount of loss by the creditor, and how and in what manner the property was destroyed or lost, and by whose default. And, in all such cases, the juries who try the same shall have power to reduce the amount of the debt or debts sued for, according to the equities of each case, and render such verdicts as to them shall appear just and equitable."

In suits against trustees, executors, etc., it is made lawful for the defendant to put in evidence the loss, destruction, or depreciation in value of the property in his hands.

Before the Legislature adjourned, the Committee of the House on the State of the Republic made a report, which was almost unanimously adopted. This report gives a brief review of the experience of the State under the process of reconstruction, implying, rather than expressing, the belief that the people had been treated with unnecessary severity, since they were disposed to return to their allegiance in good faith, and to do every thing in their power to secure the rights of all. The closing paragraphs of this document are expressed in the following terms:

As the representatives of the State, well acquainted with the views, opinions, and purposes of those whom we represent, we assert that the idea that any portion of our people entertain the purpose or desire of remanding the negro to a condition of slavery is too preposterous and false to need refutation.

We assert that it is the purpose of the white people of the State to faithfully protect the negro race in the enjoyment of all the rights, privileges, and immunities guaranteed to them by the Constitution and laws of the United States and the constitution and laws of this State.

We assert that there is no purpose, in any part of the State, to impair the constitutional right of the people peaceably to assemble for the consideration of any matter, or to obstruct any portion of the peo-

ple in the enjoyment of any other constitutional right or privilege.

In conclusion, we would state that we see no reason to apprehend that the State government, under the present constitution, in its legitimate operation, as directed and administered by the several departments, as now constituted, will be more restrictive of the rights of any class of our citizens than is absolutely necessary to harmonize it with and conform it to the requirements of the Constitution and laws of the United States; and we trust the State government will adhere to and make effective the first section in the declaration of fundamental principles embraced in our constitution: "Protection of person and property is the paramount duty of government, and shall be impartial and complete."

After the National Convention of the Democratic party in New York, on the 4th of July, its action was freely and publicly indorsed by the Democrats in Georgia; while the Radicals, including the great mass of the colored citizens, expressed their hearty approval of the nominations and principles put forth by the Republican party at Chicago. The Democrats held a convention in August, unanimously ratifying the New York nominations, and pledging their hearty support to the candidates. They also approved of the platform of principles, "not only for its soundness, but because it recognizes the equality of all the States of the Union." An electoral ticket was then nominated, and a Central Executive Committee appointed, with authority to call a convention, or to "take such other steps as may be necessary to carry out the principles and policy of the party."

It was reported, from time to time, that organizations of colored men were formed for the purpose of military drill, and that assemblages, gathered for political purposes, were wont to come together in arms. Constant apprehensions of violence and of collision between citizens of opposite political sentiments appear to have prevailed in some localities. The Governor and the Legislature received frequent communications from citizens in various quarters, informing them that certain misguided persons were continually endeavoring to stir up strife among the people, and that riot and bloodshed were likely to be the result at any moment, unless measures were taken to check this course of things. Finally the Assembly adopted the following resolution:

Whereas, It being the practice of a portion of the citizens of this State to assemble in large numbers, with arms, for the purpose of exercising in military tactics, and for other unlawful purposes, without authority of law, and to the terror of the good citizens thereof,

Resolved, therefore, by the Senate and House of Representatives, That his Excellency the Governor be, and he is hereby, respectfully requested to issue his proclamation prohibiting such armed and unlawful assemblages. But the right of the people to peaceably assemble for the consideration of matters shall not be impaired by any proclamation of the Governor.

The Governor accordingly issued a proclamation, on the 14th of September, "commanding all citizens to abstain from any acts of violence

against person or property, or from persuasions which will tend to excite to violence or unlawful combinations, and from all interference with the constitutional right of persons to assemble for political or other peaceful purposes; and to yield prompt and respectful obedience to the officers of the law under all circumstances; and also charging upon the said officers the exercise of great vigilance, that the majesty of the civil law may be vindicated, and great caution, that all their acts may be fully justified, and done in pursuance of our constitution and laws. And to make known that no authority has been granted by the Executive for the formation of armed or unarmed organizations of any kind or character; and that the drilling or exercising in military tactics, with arms, of any organized body of men within the State, except the army of the United States, is unauthorized, unlawful, and against the peace and good order of the State, and must be immediately suspended."

Notwithstanding this proclamation, a hostile collision took place between a body of negroes and whites and the citizens of the village of Camilla, in Mitchell County. The facts relating to this unfortunate affair are briefly these:

It appears that, a few days prior to the 19th of September, notices were circulated in Dougherty and Mitchell Counties that a great Republican mass meeting would be held at Camilla on that day, at which W. P. Pierce, the candidate for Congress from that district, John Murphy, a candidate for elector, and other prominent Republicans, would address the people. Whether the notice which was given to the negroes respecting the intended meeting contained any suggestion that they should repair to Camilla with arms is a disputed question; but, at all events, on the appointed day a procession of some three hundred, mostly negroes, with flags and music at their head, and one-half or two-thirds of them carrying guns or pistols, marched from Albany toward Camilla, under the lead of Pierce and Murphy. The inhabitants of the village, who, with women and children, scarcely outnumbered the approaching force, had been apprised several days before of the proposed meeting, and the sheriff of the county, learning that the negroes were coming together with arms, met them two or three miles from the town, and endeavored to persuade them to lay aside their weapons. Not succeeding in this attempt, he returned to the village, and called upon the people, as a *posse*, to aid him in keeping the peace. When the procession entered the village, it was confronted by a drunken man, with a gun, who ordered the band to stop playing. This peremptory command not being obeyed, the man fired his gun, or, as was claimed by the citizens, the piece was accidentally discharged, and, at this signal, the negroes fired upon the inhabitants, and a conflict ensued, in

which eight or nine of the blacks were killed and twenty or thirty wounded, and several of the inhabitants of the place more or less hurt. The negroes fled in consternation, and, of course, no meeting took place.

The Governor at once communicated to the Legislature, which was then in session, an account of the affair, based on the first exaggerated reports, and recommended that a call be made on the Federal Government for a military force to be stationed in Mitchell County to preserve order. The Governor's language is as follows :

In disregard of the proclamation issued on the 14th instant, the right of the people peacefully to assemble has been violently and barbarously impaired, and the civil officers are wholly unable to protect the rights of citizens or maintain the peace. It is earnestly recommended that the Legislature make immediate application to the President for sufficient military force to be stationed in Mitchell County to maintain the peace, protect the lives and property of citizens, and see that the guilty are punished after due process of law. The fact that this occurrence is the result of a determination, publicly expressed, by irresponsible persons of one political party that the other political party shall not hold meetings, is too well known. It is gratifying that this sentiment is confined to a lawless class, and not countenanced or supported by respectable citizens ; but the misfortune is that these outrages are not prevented, and, unless physical force is added to the honest efforts of the officers of the law, we shall be thrown into a state of anarchy, when neither life nor property will be regarded.

The subject was referred to a joint committee, who took the testimony of the sheriff, and of several reputable citizens of Camilla, and finally submitted the following report :

The undersigned, appointed, by a joint resolution of the Senate and House of Representatives, to take into consideration the message of the Governor in reference to the disturbance at Camilla, beg leave to make the following report :

They find that the evidence referred to by his Excellency is not sustained by the evidence produced before the committee, and which is herewith returned. They have come to the conclusion that the whole difficulty occurred and originated from a determination of the parties referred to in his Excellency's message, to wit, Pierce, Murphy, and Putney, to enter the town of Camilla at the head of an armed company of freedmen, which right was disputed by the sheriff of the county. The persistence of the one and the determination of the other caused the disturbance.

They find that the civil authorities have shown themselves able to execute the law, and there is no necessity for any military interference.

A. D. NUNNALLY, of the Senate.

C. C. DUNCAN, of the House.

W. H. HALL, of the House.

W. D. HAMILTON, of the House.

H. MORGAN, of the House.

I agree with the committee, but believe that other legislation is necessary to preserve order and protect persons and property.

W. C. SMITH, of the Senate.

General Marion Bethune, of the House, submitted a minority report, in which he earnestly recommends that the Legislature give the subject its careful attention, with a view to adopting efficient measures for keeping the peace

and preserving order. General Meade, in a report of this affair to the War Department, commended the action of the Assembly in refusing to call for military interference.

With regard to the use of troops in his department, General Meade had applied for instructions earlier in the season, and had been referred to a letter sent from headquarters at Washington to General Buchanan, at New Orleans, which declared that the military forces were to be entirely subordinate to the civil authority, and to be employed only in case of imperative necessity in keeping the peace.

The following proclamation by the Governor, which was published soon after the Camilla excitement had subsided, has appended to it the important portions of General Meade's order with reference to the disposition of the troops under his command, with a view to the approaching presidential election :

Whereas, Notwithstanding the Executive proclamation of September 14, 1868, many lawless acts have occurred in violation thereof, whereby the lives and property of citizens have been destroyed, the right of free speech impaired, the performance of the duties of the offices to which citizens have been elected denied, and the lives of citizens so threatened as to cause them to abandon their homes and property ;

And whereas, "The protection of persons and property is the paramount duty of government, and shall be impartial and complete ;"

And whereas, The sheriff of each county is, by law, charged with the preservation of life, property, and peace in each county :

Now, therefore, I, Rufus B. Bullock, Governor, and commander-in-chief of the army and navy of the State of Georgia, and of the militia thereof, do hereby issue this, my proclamation, charging and commanding the said sheriffs, and each and every other civil officer in every county in this State, to see to it that the lives and property of all citizens, and the peace of the community, are preserved, and that all persons are protected in the free exercise of their civil and political rights and privileges. And, further, to make known that, for failure in the performance of duty, the said sheriffs and other civil officers will be held to a strict accountability, under the law ; and to charge upon every person, resident in this State, that they render prompt and willing obedience to the said sheriffs, and other civil officers, *under all circumstances whatsoever* ; and that they demand from said officers protection when threatened or disturbed in their person or property, or with denial of political or civil rights ; and that, failing to receive such protection, they report facts to this department.

The following extract from General Orders No. 27, dated October 8, 1868, from headquarters, Department of the South, is published for the information of the civil officers and the general public, by which it will be seen that said civil officers will, in the performance of their duties, be sustained by the military power of the United States.

Given under my hand, and the great seal of the State, at the capitol, in the city of Atlanta, this 9th day of October, in the year of our Lord eighteen hundred and sixty-eight, and of the Independence of the United States the ninety-third.

RUFUS B. BULLOCK, Governor.

DAVID G. COTTING, Secretary of State.

General Orders, No. 27.

HEADQUARTERS, DEPARTMENT OF THE SOUTH, |
ATLANTA, GA., October 8, 1868. |

Whereas, By an act of the Congress of the United States, approved March 2, 1865, it is made the duty

of the military authority to preserve the peace at the polls at any election that may be held in any of the States ;

And *whereas*, This duty has become the more imperative from the existing political excitement in the public mind, from the recent organization of civil government, and from the fact that Congress has by statute prohibited the organization of military forces in the several States of this department : it is therefore

Ordered, That the several district commanders will, as soon as practicable, on the receipt of this order, distribute the troops under their commands as follows : * * * * *

In the District of Georgia :

- One company 16th Infantry, to Albany.
- One company 16th Infantry, to Columbus.
- One company 16th Infantry, to Macon.
- One company 16th Infantry, to Augusta.
- One company 16th Infantry, to Washington, Wilkes County.
- One company 16th Infantry, to Americus.
- One company 16th Infantry, to Thomasville.
- One company (C) 5th Cavalry, to Athens.

The company at Savannah to be reinforced, should occasion require, by such number of the men at Fort Pulaski as can be spared from the post. * *

Detachments, when necessary, may be made to points in the vicinity of each post ; but in no case, nor on any pretext whatever, will detachments be sent without a commissioned officer, who will be fully instructed by his post commander.

The troops will be considered as in the field, and supplied with the necessary camp equipage ; the men to be furnished with common tents, if practicable, and, if not practicable, with shelter tents. Commanding officers are permitted to hire quarters, temporarily, when it can be done for reasonable rates ; but this will not preclude the necessity of carrying tents, as the commands, in all cases, must be in readiness to move at the shortest notice, with all supplies required for their efficiency.

District commanders will instruct post commanders in their duties, and the relative position of the civil and military powers. They will impress on post commanders that they are to act in aid of and coöperation with, and in subordination to the civil authorities ; that they are to exercise discretion and judgment, unbiassed by political or other prejudices ; that their object should be exclusively to preserve the peace and uphold law and order, and they must be satisfied such is the object of the civil officer calling on them for aid ; that they must in all cases, where time will permit, apply for instruction to superior authority, but they must at all hazards preserve the peace, and not be restrained by technical points when, in their conscientious judgment under the rules above set forth, it is their duty to act. Post commanders, on being notified of the proposed holding of political meetings, may send an officer, and, if necessary, a detachment, to watch the proceedings and see that the peace is preserved.

To the people of the several States composing the department, the major-general commanding appeals that they will coöperate with him and the civil authorities in sustaining law and order, in preserving the peace and avoiding those scenes of riot and bloodshed, and the wanton destruction of property and life, which have already, in some instances, been enacted in the department. He urges abstinence from all inflammatory and incendiary appeals to the passions ; discountenancing the keeping open of liquor-shops on days of political meetings and of election ; the abstaining from carrying arms, and asserting the individual right of construing laws by force of arms. No just cause is ever advanced by resort to violence. Let there be charity and forbearance among political opponents, whatever may be the result ; let each good citizen determine that all who, under the law, have the right to the ballot shall

exercise it undisturbed. If there are disputed points of law, let them be referred to the courts, and let not mobs, or political clubs, or other irresponsible bodies, construe and undertake to execute the law. This appeal is made in the earnest hope that the major-general commanding can rely on the good sense and correct judgment of the mass of the people, and that he will not be compelled to resort to the exercise of the power with which he is intrusted, and which he will most reluctantly employ. But he thinks it his duty to make known that, so far as the power under his command will admit, he will not permit the peace to be broken, and that he will not be restrained in the conscientious discharge of his duty by technicalities of laws made when the present anomalous condition of affairs was neither anticipated nor provided for.

By order of Major-General MEADE.

R. C. DREW, Assistant Adjutant-General.

The Democratic Executive Committee issued an address, dated on the 26th of September, in which they disclaimed emphatically all intention of encouraging any but peaceable and lawful means of attaining the objects of the party, one of which was declared to be to test before the proper legal tribunal the constitutionality of the reconstruction acts. With regard to collision and conflict with the blacks, they employ the following emphatic language :

We counsel and exhort our people to forbear all acts of violence upon the colored race—even to endure provocations, which they would not tolerate under other circumstances. They are ignorant, and are led on by designing white men, to make threats, and commit acts of indiscretion, for the purpose of producing collisions between them and the white people—and to resist them by violence will be to enable their white leaders to accomplish their object. For this, and other reasons, we counsel the utmost forbearance which can be exercised.

We advise our people to accord to the freedmen all the rights and privileges which the present laws secure to them. Withhold from them no right to which they are entitled. Let them not be obstructed in the exercise of any privilege which the laws give them. Under our present laws, they are entitled to the right of suffrage. Let them enjoy it freely, voluntarily, and without molestation. On the day of the approaching election, to avoid conflicts, the polls should not be, and will not be, occupied by one race to the exclusion of the other ; but arrangements will be made whereby all who are legally entitled to vote shall exercise that privilege, and we believe that our people have the magnanimity to see to it that no freedman who is entitled to the right of suffrage shall be debarred from his free exercise of that right. This is our counsel and advice, and we trust and believe that it will be heeded.

The close of the address is in these words :

Equal and exact justice to all men, of whatever state or persuasion, religious or political—peace, commerce, and honest friendship with all nations, entangling alliances with none ; the support of the State governments in all their rights, as the most competent administration for our domestic concerns, and the surest bulwarks against anti-republican tendencies ; the preservation of the General Government in its whole constitutional vigor, as the sheet-anchor of our peace at home and safety abroad ; a zealous care of the rights of election by the people ; a mild and safe corrective of abuses, which are lopped by the sword of revolution, where peaceable remedies are unprovided ; absolute acquiescence in the decisions of the majority, the vital principle of republics, from which there is no appeal but to force, the vital principle and immediate parent of despotism ; a well-disciplined militia,

our best reliance in peace and for the first moments of war, till regulars may relieve them; the supremacy of the civil over the military authority; economy in the public expenses, that labor may be lightly burdened; the honest payment of our debts, and sacred preservation of the public faith; encouragement of agriculture, and of commerce, as its handmaid; the diffusion of information, and arraignment of all abuses at the bar of public reason; freedom of religion; freedom of the press; freedom of person under the protection of the *habeas corpus*; and trial by juries impartially selected.

Let the Federal Government be administered upon these principles, and, speaking for the people of Georgia, "we pledge our lives, our fortunes, and our sacred honor," to maintain the Union in its full vigor.

The negroes held a convention at Macon on the 6th of October, and published an address, in which they declared that the Democrats had been their enemies from the first. They reflect with considerable bitterness upon the course which was pursued to deprive them of the right of holding office in the State, and propose to memorialize Congress in their own behalf. The following are the closing paragraphs of the address:

Our rights, brethren and fellow-countrymen, have, in spite of our appeals to reason, justice, and patriotism, been set at naught, and even our calm and temperate protest against this nameless outrage was treated with unparalleled contempt. Thus the rights, even under that constitution which, without our help, could not have been framed, have been turned from us. The prejudice of caste, so dominant in the breasts of those who have usurped the power in the absence of those bayonets which had protected us before, will utterly crush and inhumanly oppress us unless we can obtain redress.

But how shall we obtain it? Far be it from us to recommend violence; rather let us suffer the outrage longer, and hope for deliverance through milder means. We still have that potent weapon the ballot, and, if allowed to wield it without molestation, which seems very doubtful, we can remedy all evils. We do not recommend you to be satisfied with being a mere pack-horse to ride white men into office, whether they are the exponents of our sentiments or not. No; it would be better that we did not have the ballot.

Such a worthless application of it as that would not pay for the paper to write it upon. But you need have no fears; there are loyal and sober men enough in this country yet to rule all the fools, traitors, and public disturbers in it, whether they are found in the murdering dens of the Ku-Klux Klan or in bogus Legislatures.

To this end, let us vote unanimously for Grant and Colfax; let us stand by the nominees of the Republican party; let us vote only for those who we know are true in our interest, and in the pending struggle a way of deliverance will be opened. It may cost us much to do so; hundreds of us will likely be killed and driven off to starve, for voting for Grant. But he that ended the war will, when elected, put an end to our troubles and outrages. While we, your representatives assembled in convention, deliberate and endeavor to forecast in our common distress, we shall at the same time address an earnest appeal to Congress to guarantee by adequate legislation the rights, privileges, and immunities provided for us in the Constitution and laws of the United States, and of the State of Georgia.

For you as well as ourselves we shall, in the name of Heaven, humanity, reason, justice, civilization, and Christianity, pray to be delivered from the persecutions of an oppressive, domineering, and unconscionable Democratic majority, the odious principles of which we invoke you, in the name of yourselves, your

wives, and your children, and the liberty and peace of our country, to spurn as you would the deadly fangs of a viper. For there is not a Democrat, living or dead, who is civilly and politically the friend of the negro. They say, however, they are our "best friends." So says the devil.

The election in November passed by without serious disturbance, and resulted in the choice of the Democratic electors, by a vote of 102,822 to 57,184 for the Republicans, the whole number being 159,954, and the majority 45,688.

At the time when the State officials were removed from office by General Meade in January, they refused to turn over to their successors the records and seals of the various departments, and these were not recovered until after the establishment of the regular civil authorities under the new constitution. Captain Rockwell found in the vaults of the Treasury on the 18th of January the sum of ten cents, and afterward found deposited in the Georgia National Bank of Atlanta the sum of \$5,222.89, which had been placed there by Mr. Jones, the former Treasurer. Captain Rockwell occupied the position of provisional Treasurer until the 10th of August, during which period the receipts of the department under his charge, from all sources, amounted to \$870,689.44. The expenditures of the government for the same time amounted to \$272,683.06, and he turned over to the new Treasurer \$103,179.37. Mr. Jones had in his hands, when removed from office, funds to the amount of \$405,870.63. These he disposed of in payment of interest on the State bonds and in advances to various officers, contractors, etc., with the exception of the \$5,222.89, deposited in the Georgia National Bank at Atlanta. A productive source of revenue to the State is the Western and Atlantic Railroad, which yielded to the Treasury, during the nine months ending with the 30th of June, \$241,895.44. The various institutions and material interests of the State are as yet at a low ebb, but signs of renewing life appear, and it is to be hoped that the chronicles of another year may record at least the first steps of returning prosperity.

GERMANY. 1. THE GERMAN NATIONALITY.*—No important change was produced in the course of the year 1868. The Government of Baden openly professed a desire to be admitted as soon as possible into the North-German Confederation, and concluded a special military convention with Prussia; but practically no advance was made toward the consummation of a union of all Germany.

The commercial and national unity of the North and South German States received, however, an important recognition in the meeting of the first Customs Union Parliament. (*See* CUSTOMS [ZOLL] PARLIAMENT.)

A census was taken in December, 1867, in all the North and South German States, show-

* *See* the ANNUAL AMERICAN CYCLOPEDIA for 1867, for a full statistical account of the extent of the German nationality.

II. THE NORTH-GERMAN CONFEDERATION.—
The area of the North-German Confederation is 160,207 square miles, and the population, according to the census of 1867, 29,910,377. (See the table of the North-German States above.)
According to an official report published at Berlin, the effective strength of the North-German army was, in 1868, as follows: 12,696 officers (7,455 infantry, 1,889 cavalry, 1,632 artillery, and the rest engineers, staff, etc.); 39,177 sub-officers; 249,543 non-commissioned officers and men; 2,180 hospital assistants; 9,100 artisans; 493 accountants; 533 veterinary surgeons; 440 armorers; and 76 saddlers—total, 314,238. There are also 73,313 horses (9,428 artillery, 56,436 cavalry, 3,369 infantry, 1,599 train, and 2,390 staff). The annual levy (which was postponed for three months) would have furnished a contingent of 81,204 men. The numbers above given are those of the army when on a peace footing, as at present; if placed on the war establishment, the battalions of the Guard and the Line, which now have each 686 and 534 men respectively, would be raised to their full strength of 1,000 men, making a total of about 977,000 men. The number of horses, too, on the war establishment is 150,000—more than double the present number.

The North-German fleet, in 1868, consisted of 53 ships and 86 gunboats, the former carrying 495 guns, and the latter 68. Among the steamers are three frigates (the King William, the Frederick Charles, and the Crown Prince) with 55 guns, and one iron-clad corvette (the Hansa) with 8 guns. Besides these there are two iron-clad boats (the Arminius and the Prince Adalbert) with 7 guns, five turreted corvettes with 140 guns, five smooth-decked corvettes with 68 guns, two avisos with 6 guns, eight gunboats of the first class with 24 guns, fourteen of the second class with 28 guns, and the royal yacht Grille with four boats attached. The sailing-ships are—three frigates (the Gefion, the Thetis, and the Niobe) with 112 guns, three brigs with 38 guns, the Barbarossa with 9 guns, and three harbor-vessels. There are also thirty-two sloops, to each of which are attached from two to four boats armed with guns.
On February 22d Mr. Bancroft, the American ambassador to the North-German Confederation and the South-German Governments, concluded at Berlin the following convention regulating nationality:
ARTICLE 1. Citizens of the North-German Confederation who [have become or shall] become naturalized citizens of the United States of America, and shall have resided uninterruptedly within the United States five years, shall be held by the North-German Confederation to be American citizens and shall be treated as such. Reciprocally: citizens of the United States of America who [have become or shall] become naturalized citizens of the North-German Confederation, and shall have resided uninterruptedly within North Germany five years, shall be held by the United States to be North-German citizens and shall be treated as such. The declaration of an intention to become a citizen of the one or the other country has not for either party the effect of naturalization.
ART. 2. A naturalized citizen of the one party, on return to the territory of the other party, remains liable to trial and punishment for an action punishable by the laws of his original country and committed before his emigration; saving always the limitation established by the laws of his original country.
ART. 3. The convention for the mutual delivery of criminals, fugitives from justice, in certain cases, concluded between the United States on the one part and Prussia and other States of Germany on the other part, the sixteenth day of June one thousand eight hundred and fifty-two, is hereby extended to all the States of the North-German Confederation.
ART. 4. If a German naturalized in America renews his residence in North Germany without the intent to return to America, he shall be held to have renounced his naturalization in the United States. Reciprocally: if an American naturalized in North Germany renews his residence in the United States without the intent to return to North Germany, he shall be held to have renounced his naturalization in North Germany. The intent not to return may be held to exist when the person naturalized in the one country resides more than two years in the other country.
ART. 5. The present convention shall go into effect immediately on the exchange of ratifications and shall continue in force for ten years. If neither party shall have given to the other six months' previous notice of its intention then to terminate the same, it shall further remain in force until the end

of twelve months after either of the contracting parties shall have given notice to the other of such intention.

ART. 6. The present convention shall be ratified by his Majesty the King of Prussia in the name of the North-German Confederation and by the President, by and with the advice and consent of the Senate of the United States, and the ratifications shall be exchanged at Berlin within six months from the date hereof.

Mr. Bancroft concluded similar treaties with the Governments of Bavaria (May 26th), Wurtemberg (July 27th), Baden and Hesse-Darmstadt (August 1st).

In the budget for 1869, the receipts were estimated at 72,552,211 thalers, the expenditures at 77,701,185 thalers, the deficit at 5,148,924 thalers. The deficit was to be covered by a Federal loan (law of November 9, 1867).

The Parliament of the North-German Confederation was opened by the King of Prussia on the 23d of March. The King, in the speech from the throne, announced the further developments of the domestic institutions which had recently been founded, and mentioned the modification of the postal arrangements with several countries, and the conclusion of the postal treaty with the United States of America. The King expressed his satisfaction at the manner in which the representatives of the North-German Confederation had been received at foreign courts, and in conclusion said he was convinced that the blessings of peace would rest upon the labors of the Parliament. The session, which for a short time was interrupted by the meeting of the Customs Union Parliament, was brought to a close on the 20th of June. In his closing speech the King of Prussia acknowledged the results of the parliamentary session, and especially alluded to the sanction of the loan for the development of the Federal navy, and for the completion of the coast defences under the control of Prussia. The speech further mentioned the laws (passed by the Parliament as a supplement to the laws upon the freedom of domicile) removing the police restrictions upon the right of contracting marriage; the laws abolishing imprisonment for debt, and closing gambling-houses; the sanction of the different postal treaties, and of the pensions granted to the soldiers of the former Schleswig-Holstein army; the regulation of weights and measures; the equalization of the taxes, and the passage of the treaty article for the entry of Mecklenburg and Lubeck into the Zollverein.

III. THE SOUTH-GERMAN STATES.—Of the Governments of the South-German States, only one, that of Baden, showed itself favorable to a complete union between North and South Germany. The Governments of Bavaria, Wurtemberg, and Hesse-Darmstadt declared a determination to adhere faithfully to the military and commercial treaties which had been concluded with the North-German Confederation, but were unwilling to go beyond them. A more determined opposition to the ascendancy

of Prussia was made by the radical "people's party" (*Volkspartei*) in the Southern States. On the 19th and 20th of September, a meeting of delegates of this party took place at Stuttgart. The meeting declared that the people's party acknowledge the three following principles:

1. The democratic principle of equality, and demands therefore the equal coöperation of all citizens in the forming and working of the constitution, the carrying out of the principle of the self-government of the people in the state.

2. In national as in international affairs, the people's party acknowledges the right of every clan (*Volkstamm*) as well as of every people to determine its own destiny. Only in this way does it strive after unity. Only a federal state founded in freedom, and inclusive of German Austria, corresponds with our principles.

3. The people's party acknowledges that the constitutional and social questions are inseparable, and in particular that the economical liberation of the working-classes and the realization of political liberty are in necessary coördination with each other.

The following resolutions fully define the position of the party with regard to the unity question:

1. The people's party is a party of peace. It sees in every war a condemnable injury to the interests of liberty, and does what lies in its power against the present peril of war.

2. To the South Germans it recommends opposition to the process of Prussianizing, and, with a view to the reunion of the whole fatherland, the foundation of a liberty-loving Southern Confederation, which should be kept up by a common popular representation, and executive, and be protected by a militia system on the Swiss pattern.

3. Within the North-German Confederation, it supports every tendency or effort which looks to a greater independence of provincial or little state political life. It presses upon the lands annexed by Prussia the duty of keeping alive and strengthening the peculiarities of their traditional local life which have a democratic character.

4. In German Austria, the development of internal liberty as a condition precedent and security for its reunion with Germany; the carrying through of a general reform in German Austria is as much a German as it is an Austrian interest. Only when German Austria takes a deep interest in the German national and liberal movement, only when a mutual action and reaction go on between German Austria and the rest of Germany, will Austria's reforming policy become firmly rooted in the soil.

5. In these endeavors the members of the people's party throughout all Germany have to lend each other support.

6. In the event of a war, the German people's party, mindful of its national duty, will take that side which offers security for the integrity of the soil of Germany. Even during war the people's party will not desist from working for the liberty and unity of the fatherland.

On the labor question the convention passed the following resolutions:

1. Permanent discussion of labor questions in the party organs and in the party clubs; promotion of the coöperative movement and trade-unions, and of the movement for procuring to the working-men a share in the net profits of their labor.

2. By means of the Legislature the following aims are to be striven for: The elevation of the common schools; establishment of technical schools, and gratuitous instruction thereat; complete freedom to manufacture; unlimited right of settlement and

movement; abolition of all restrictions on working-class marriages; abolition of monopolies; prohibition of child-labor in factories; limitation of the hours of labor; unlimited right of combination; reform of the law of partnership so as to render it favorable to the formation of coöperative associations; repeal of all indirect taxes, and the introduction of a single direct tax on a progressive scale; abolition of standing armies.

In July, Bavaria and Wurtemberg concluded a convention in reference to the future garrison of the South-German fortress of Ulm.

The following table shows the statistics of the universities of all Germany and of German Switzerland:

UNIVERSITIES.	Number of Students in Attendance.	Number of Professors and other Instructors.	Number of Students to each Instructor.

GERMANY, THE PRESS OF, IN 1868. The number of political newspapers published in the states of the North-German Confederation, in the German states south of the Maine line, and in the German provinces of Austria, on the 1st of July, 1868, was fifteen hundred and seventy-nine, of which three hundred and fifteen were dailies, and the remainder tri-weeklies, semi-weeklies, and weeklies. The kingdom of Saxony possessed the largest number of political jour-

VOL. VIII.—21 A

nals in proportion to its population, namely, one to every four thousand five hundred inhabitants; the aggregate circulation of the newspapers published there is nearly twice as large as in any other German state or province containing the same population. The smallest number of newspapers in proportion to the population was published in the grand-duchy of Mecklenburg-Schwerin, where there is but one political journal to every thirty-three thousand inhabitants. In Prussia, there is one political journal to every fifteen thousand inhabitants; in Bavaria, one to every seventeen thousand three hundred and fifty; in Wurtemberg, one to every thirteen thousand eight hundred; in Hesse-Darmstadt, one to every fourteen thousand nine hundred; in Oldenburg, one to every twenty-eight thousand; in the Thuringian duchies and principalities, one to about every twenty-two thousand inhabitants. The largest circulation obtained by any daily German paper in the year 1868 was twenty-nine thousand (that of the *Volkszeitung*); and the largest circulation of any German weekly was three hundred and twenty thousand copies (that of the Leipzig *Gartenlaube*). The aggregate circulation of the daily papers published in Berlin, on the 1st of October, 1868, was one hundred and twenty-four thousand seven hundred copies, the *Volkszeitung* and the *Vossische Zeitung* heading the list with respectively twenty-nine thousand and fourteen thousand five hundred copies, and the *Zukunft* closing it with less than one thousand two hundred copies. The aggregate circulation of the dailies published at Munich was sixty-four thousand copies; at Hamburg, nineteen thousand copies; at Stuttgart, thirty-one thousand copies; at Cologne, thirty-one thousand; at Leipzig, twenty-nine thousand; at Dresden, forty-one thousand one hundred; at Hanover, thirty-two thousand; at Frankfort-on-the-Maine, thirty-nine thousand; at Vienna, one hundred and seventy-nine thousand copies. The largest advertising patronage reported by any German daily was that of the *Hamburger Nachrichten* (Hamburg News), which, in the first nine months of the year 1868, paid taxes on 287,000 marks; next followed the Berlin *Vossische Zeitung*, with a little over a hundred thousand thalers, and the *Kölnische Zeitung* (Cologne Gazette), with ninety thousand thalers, in the same space of time. As regards both the circulation of the newspapers and their receipts for advertisements, there was a sensible falling off in nearly all parts of Germany, as compared to the results obtained in the year 1867, the absence of exciting and important political events and the general stagnation of business having injuriously affected the newspaper business. Only in Vienna, in consequence of the important political struggles which took place in Austria in the spring and summer of 1868, all the newspapers did a more profitable business than in the preceding year; their cir-

lation having risen considerably. The *Presse*, which in 1867 had only twelve thousand subscribers, never printed less than seventeen thousand copies in 1868, and on two occasions sold fifty thousand extra copies. The other Vienna dailies obtained a similar increase in their circulation.

One of the most important events in the history of the German press, during the year 1868, was the determined attempt made by a very large majority of the journeymen printers to put an end to type-setting and performing press-work on Sundays. A printers' congress held at Berlin in the latter part of the spring passed resolutions to this effect; and no sooner had the telegraph circulated the report of these resolutions in the various parts of the country than the journeymen printers and press-men, in the printing-offices of nearly every daily paper published in Germany, informed their employers that they would no longer work on Sundays. This step called forth the most strenuous resistance on the part of the newspaper publishers, inasmuch as most of them were issuing Monday editions, and their refusal to employ journeymen that refused to work on Sundays gave rise to an extensive strike among the compositors and press-men. In consequence of this strike, not a few of the most influential German newspapers were forced to suspend for several days, while others had to reduce their reading matter considerably. Appeals made to the authorities to intervene between the contending parties were unsuccessful. After a great deal of wrangling, an amicable arrangement was finally arrived at, and the result was that nearly all the German dailies discontinued their Monday editions.

The press laws in some of the German States underwent important alterations in the course of the year 1868. In the grand-duchy of Baden the adoption of a new and liberal law, in which the oppressive features of the former press law, that had been dictated by the reactionary spirit engendered by the revolutionary events of 1848 and 1849, were omitted, placed the newspaper press of Baden on a more independent footing than that of any other German State. The number of prosecutions instituted in this grand-duchy in the year 1868, against editors and publishers for offences against the press laws, was only nine; most of these prosecutions were directed against the editors of ultramontane journals, opposing in a spirit of intense bitterness and hostility the friendly course which the Government of Baden was pursuing toward Prussia in regard to the German question.

In the kingdom of Saxony, the adoption of the new criminal code led likewise to the repeal of the most rigorous paragraphs of the press laws of 1849. "Offences against his Majesty, and against the other members of the royal house," which play such an important rôle in the press codes of most of the German

States, are no longer to be found in that of Saxony. The number of journalists prosecuted in that kingdom in the year 1868 for violations of the press laws was trifling. Most of the editors who were prosecuted were arraigned on charges of no great importance, and the courts acquitted nearly all of them.

In Wurtemberg, where the press is comparatively free, no changes of importance were made in the press laws. If the number of prosecutions of journalists for infractions of these laws was rather large in 1868, it was owing to the intense excitement to which the elections for the German Zoll-Parliament gave rise at the beginning of the year, and to the fact that Stuttgart, the capital of the kingdom, is the headquarters of the extreme wing of the South-German Democracy, whose most influential organ, the *Beobachter*, edited by Charles Mayer, is published there. The defiant boldness with which this journal attacked Prussia and the Wurtemberg Government, in nearly every issue, involved it in a large number of prosecutions, most of which terminated in sentences imposing fines and imprisonment on the accused editor.

In Bavaria the administration of Prince Hohenlohe inaugurated a decidedly liberal system in its treatment of the political press. During the year 1868 the Bavarian Government had only five papers prosecuted for political offences; and all the articles designated were deemed objectionable, not because of the political principles they advocated, but on account of the personal attacks they contained. A commission, composed of several eminent jurists and statesmen, was organized in the autumn of 1868 for the purpose of subjecting the press laws of Bavaria to a thorough revision; but the results of their labors have not yet been submitted to the Bavarian Chambers.

In Prussia the changes made in regard to the taxes on newspapers, the reduction of the post-office tariff, and the measures adopted for adding to the efficiency of the mail service, were the only improvements by which the newspaper press of the kingdom profited in the year 1868. In every other respect its condition remained as unsatisfactory as ever. The appointment of Mr. Leonhard as Minister of Justice, in the place of Count Zur Lippe, who, during the whole of his administration, had pursued a proscriptive course toward the Liberal newspapers, had given rise to the hope that the number of press prosecutions, which in 1867 had been frightfully large, would considerably decrease in 1868; but this hope was only partially fulfilled. The public prosecutors pursued about the same course as before, and the number of press trials fell short but very little of that of 1867. In the newly-annexed provinces of the kingdom, Schleswig-Holstein, Hanover, Hesse-Cassel, and Nassau, where grievous blunders committed by the administration had created a great deal of dissatisfaction among the inhabitants, the press, naturally

reflecting as it did this disaffection, and teeming with bitter complaints about the mismanagement of certain royal functionaries, was treated with the utmost severity, so that the Schleswig-Holstein papers declared they had met with more lenity even during the most oppressive period of the Danish régime. Appeals made to the central Government in Berlin elicited only vague promises, to the effect that a more liberal course should be pursued in the future; and the earnest protests of the opposition members in the Prussian Parliament bore no immediate fruits. The whole number of prosecutions instituted for violations of the press laws in Prussia, from the 1st of January to the 1st of July, 1868, was ninety-seven. Owing to the heavy fines imposed by the courts upon their editors and printers, seven papers were compelled to suspend publication.

In Mecklenburg-Schwerin, where the condition of the political press was the effect of the oppressive laws adopted in the reactionary period succeeding the revolutionary events of 1848 and 1849, the editors and publishers of the daily papers called, in November, 1868, upon the grand-duke, and requested him to instruct his Minister of Justice to prepare a more liberal press code. They assured him that the press laws prevailing in the grand-duchy were even more oppressive than those of France, and hardly more liberal than those of Russia. No satisfactory response was made to this appeal.

In the German provinces of Austria, especially in Vienna, the press enjoys almost complete liberty, only four journals having been prosecuted for violations of the press laws in the course of 1868. In Bohemia, however, owing to the intense state of hostility prevailing between the Czechs and German Bohemians, the Austrian Government deemed it necessary to prosecute most of the extreme organs of the former with extraordinary vigor, and the courts, especially those of Prague, not only passed unusually severe sentences on a number of prominent Bohemian editors, but compelled several of the most influential Czech organs to suspend publication.

GIBSON, WILLIAM, M. D., LL. D., an eminent American surgeon and author, born in the city of Baltimore in 1788; died at Savannah, Ga., March 2, 1868. His classical education was obtained in St. John's College, Annapolis, and the college of New Jersey, at Princeton, and he graduated at the latter in 1806. He had already given some attention to the study of medicine, having entered the office of Dr. John Owen, of Baltimore. In 1806 he went abroad, and continued his medical and surgical studies in the University of Edinburgh, enjoying the special instruction of Sir Charles Bell. He received his medical diploma from the university in 1809, and soon after published the Latin thesis which he had defended on that occasion. On his return he settled in practice in Baltimore, and was one of the early professors of surgery in the University of

Maryland. In 1812 he took up the common iliac artery, and rendered essential service in the memorable Baltimore riots. He was fond of military surgery, and managed to be present at some very important battles in Europe, especially at Corunna and at Waterloo. At the latter he was slightly wounded. After his return from this second visit to Europe he was called to the chair of surgery in the University of Pennsylvania, and for more than thirty years filled that important post with great acceptance. He was a fine operator, and during his long practice in Philadelphia had the opportunity of performing repeatedly all, or nearly all, of the great operations of the profession. Among others of them he performed the Cæsarean section twice on the same woman, and both times with successful result to mother and children. He made frequent visits to Europe, and, having an ample fortune, indulged in his fondness for travel by visiting nearly every country of Europe, and considerable portions of Asia and Africa. After reaching the age of seventy he retired from practice, and removed to Newport, R. I., for a summer residence, usually spending his winters in Savannah or its vicinity. Dr. Gibson was the author of numerous works, mostly professional, of which his "Principles and Practice of Surgery" is the most widely known, having passed through many editions. He also published, in 1841, a volume of "Rambles in Europe in 1839," being sketches of prominent surgeons; and in 1841 a lecture, embracing a short account of eminent Belgian surgeons and physicians. He had kept a daily journal for over sixty years, and at the time of his death it included about one hundred and fifty volumes.

GILLESPIE, WILLIAM MITCHELL, LL. D., an American civil engineer, professor, and author, born in New York City in 1816; died there, January 1, 1868. He was a graduate of Columbia College, in the class of 1834, and after leaving college spent about ten years in Europe, partly in the further prosecution of his studies, and partly in extensive travel and observation. During his residence in Europe he was an occasional correspondent of some of the New York daily papers, and his letters were subsequently collected into a volume, with the title "Rome, as seen by a New-Yorker in 1848-'44." He returned to New York in 1845, an accomplished civil engineer, and his volume entitled "Roads and Railroads," published soon after his return, has become a work of standard authority, and has passed through numerous editions. He received and accepted the appointment, in 1845, of Professor of Civil Engineering in Union College, which he held till his death. He was very popular as a professor, and the care and research he bestowed in perfecting his lectures and instructions were never abated to the day of his death. In 1855 he published an admirable treatise on land-surveying, which passed through a half-dozen

editions in the next three years, and was pirated by another author, who subsequently, however, recanted the claims he had made to its authorship. In 1857 he published a translation of a portion of August Comte's writings, under the title of "Philosophy of Mathematics;" but it was less successful than his other books. An original, brilliant, and independent thinker, somewhat given to paradox, abhorring every thing like pretence, sham, or cant, he was sometimes a little too severe on those who did not possess his own intellectual vigor. His nature was, however, too genial and social to give his positive assertions an offensive tone. He died of disease of the lungs, from which he had been suffering for about a year. The last four months he had only been able to perform his college duties with great pain and difficulty; but, through the force of a powerful will, he had kept up, and on the day of his death deluded himself with the belief that he should return to his work in three or four days. In his department of science he has left behind him few equals and no superior.

GILMER, JOHN A., a Southern politician, born in Guilford County, N. C., November 4, 1805; died in Greensboro, N. C., May 14, 1868. He was of poor but respectable parentage, and of studious habits; and, having acquired a good English education at winter schools, he worked on a farm and in a shop during the summer seasons, and finally taught school till he obtained the means of taking a three years' course at the academy at Greensboro. Here he distinguished himself as a linguist and mathematician, and subsequently taught for three years in a grammar-school. Afterward he studied law, and was admitted to the bar in 1832. His practice and reputation slowly advanced, and in 1846 he was elected State Senator, and retained in the Senate by successive reelections till 1856, when he was elected to the Thirty-fifth Congress, and served on the Committee on Elections. He was also a candidate of the Whig party for Governor in 1856, but was defeated. He was reelected to the Thirty-sixth Congress, and made chairman of the Committee on Elections, but before the expiration of his term withdrew, North Carolina having been forced into secession. During the war he remained quietly at home, until 1864, when he was chosen a member of the last Confederate Congress. After the war, he was a delegate to the Philadelphia "National Union Convention" in the summer of 1866.

GORTCHAKOFF, Prince PETER DMITRIEVITCH, a Russian general and military governor of remarkable administrative ability, born at Moscow, in 1789; died in that city, in April, 1868. Having received a military education at Dresden, he entered the artillery of the Imperial Guard in 1807; was engaged in the war with the Finns in 1809, and in the Turkish war, in Moldavia, in 1810, taking an active part in the battles of Rustschuk and Shumla. In

1811 he was in St. Petersburg, assisting in the editing of the *Military Journal*; but in 1812-'14 he was again in the field, encountering all the vicissitudes of the war with Napoleon. After the restoration of peace in Western Europe, Prince Gortchakoff, now recognized as an officer of great courage and ability, was ordered to the Caucasus. Here, for some years, all was quiet; but, in 1820, Mingrelia, Imeritia, and Georgia rose simultaneously, and for a time it seemed as if the Russian power in that region would be blotted out forever. That it was not, was due largely to the skill and address, as well as the unflinching courage, of Prince Gortchakoff. He held the wavering tribes to their allegiance; by his rapid and skilful movements subjugated the district of Batchin, the principal seat of the insurrection, and adroitly secured the evidence of the plans of the insurgent leaders, and the complicity of several powerful chiefs who had professed to be friendly. For his great services he was rewarded with the rank of major-general and the governorship of Imeritia. For five years he governed this important province with remarkable ability, improving its communications, encouraging industry, but trampling out, with the iron heel, every attempt at revolt. In 1826, war again occurring between Russia and Turkey, he was appointed quartermaster general of the Second Army, and distinguished himself before Shumla, and in the campaign under Diebitsch in 1829. He subsequently returned to the Caucasus, but in 1836 was made Governor-General of Western Siberia, and for fifteen years managed the affairs of that vast region with wonderful success, transferring the seat of the government to Omsk, encouraging all the industries of the country, and largely developing its resources. His health failing under his manifold labors, he returned to Moscow in 1851; but, having nearly recovered in 1854, he was summoned to take part in the Crimean War, was conspicuous for his daring at the Alma, heading in person the Vladimir regiment of foot, and had command of the entire land forces in the retreat upon Sebastopol, and subsequently was appointed general of the Sixth Corps of Infantry. In 1855 the prince quitted the service, and became a member of the Imperial Council. In 1857, on the fiftieth anniversary of his entering the army, he was made commander of the Vladimir regiment which he had led so bravely at the Alma, and held this honorary appointment to the end of his life. In 1863 he returned to Moscow, and remained there till his death.

GRANGER, FRANCIS, an active and distinguished politician of New York, born in Suffield, Conn., in 1787; died in Canandaigua, New York, August 28, 1868. He was the son of Gideon Granger, Postmaster-General of the United States from 1801 to 1814, and enjoyed excellent advantages of early education. He did not, however, enter Yale College until his twentieth year, and graduated in the class of

1811. After his graduation he commenced the study of law, and in 1814, having been admitted to the bar, opened an office in Canandaigua, N. Y., to which place his father, on being removed from office by President Madison, because of his opposition to the war with Great Britain, had removed. Francis Granger soon engaged in politics, taking part with his father in favor of DeWitt Clinton and the policy of internal improvements. His first entry into public political life was in 1825, in which year he was elected a member of the lower House of the State Legislature as a representative from Ontario County. He was prominent in the anti-Masonic movement which created such excitement in this State, and was a confrère of William H. Seward, Thurlow Weed, Millard Fillmore, and other young men who at that time were aspirants for fame, and who joined the political crusade against the Masons after the alleged abduction of William Morgan. In 1826 Mr. Granger was reelected to the Legislature, and in 1828 was put in nomination by the anti-Masons as a candidate for Governor. In the same year the Adams Republicans nominated him for the office of Lieutenant-Governor, Judge Smith Thompson being their gubernatorial candidate, which candidacy he accepted. Martin Van Buren and Enos T. Throop were the candidates on the Jackson ticket for Governor and Lieutenant-Governor respectively, in that campaign, and were elected. In the following year Mr. Granger was again reelected to the Legislature, and in 1830 he became the anti-Masonic candidate for Governor, but was again defeated by Mr. Throop. The people of Ontario sent him to represent them in the Assembly for the fourth time, in 1831. When, in 1832, the Clay Republicans and the anti-Masons coalesced on the same electoral and State tickets in New York, Mr. Granger was again put in nomination for Governor on the ticket of the coalition, but was defeated by William L. Marcy, the candidate of the Democracy. In 1834 the Whig party, made up of anti-Jackson Democrats and Clay Republicans, came upon the political stage, and Mr. Granger was recognized as one of its ablest leaders. His name was, that year, before the State Convention in connection with the gubernatorial candidacy, but William H. Seward bore off the honor of the nomination. In the fall of that year, however, the Whigs of the Twenty-sixth congressional District made Mr. Granger their candidate for Congress, and elected him. In 1836 the anti-Masons held a National Convention in Philadelphia, and nominated Mr. Granger for the vice-presidency, on the ticket with General William H. Harrison, who was their presidential candidate. At that time the Whig party was not powerful enough to lay claim to being a national party; but they determined to oppose the election of Mr. Van Buren, who was the Democratic candidate. They were not united in the contest, having Harrison, Webster, and Judge H. L. White as

candidates. In the New-England States, except in Vermont, Mr. Granger was on the ticket, as vice-presidential nominee, with Mr. Webster, while in Vermont, New York, Pennsylvania, Ohio, Indiana, Illinois, and Michigan, he ran with General Harrison. John Tyler, of Virginia, was the Whig candidate in the residue of the States—Mr. Granger being particularly obnoxious to the Southern States, by reason of his supposed affiliation with the spirit of abolitionism, which was at that time rising into prominence. The election of a Vice-President that year became the duty of the Senate, in consequence of the failure of the electoral colleges to agree upon a nominee, and they selected Colonel Richard M. Johnson for that office. Mr. Granger still remained true to the Whig party, however, and when it came into power, in 1838, he was elected to Congress from the Ontario District, and in 1840 he was reelected. In 1841 General Harrison, having been elected President, sent Mr. Granger's name in to the Senate for confirmation as Postmaster-General. The President's selection did not meet with the cordial approval of that body, because of Mr. Granger's well-known Anti-slavery views, but at last his nomination was confirmed; not before he had voluntarily given his promise to President Harrison, however, that, in case he should thereafter act with the Abolition party, he should expect to be removed from his office as Postmaster-General; but he never gave any such cause for removal. He resigned his position in July, 1841, at the request of the New York delegation, in consequence of the rupture which took place between President Tyler (Harrison's successor) and the Cabinet, growing out of Tyler's action on the question of the United States Bank. Mr. Granger was subsequently elected to Congress in place of Mr. Greig, and served in the session of 1841-'42. The Whigs of the Twenty-sixth District tendered him a renomination at the following election; but he declined it, and never afterward held office. Mr. Granger was not inactive as a politician, however, for many years after his retirement from official life. He took a warm interest in the questions that agitated the country during the presidency of Millard Fillmore, and heartily approved the course of the Executive during that exciting period. He is said, also, to have been in sympathy with the Know-Nothing movement, and to have counselled the leaders of that party during the political campaigns from 1853 to 1856, but he never took any prominent part before the public as a member of that organization. During the pendency of the late war, Mr. Granger, although understood to be in sympathy with the Union cause, gave no public expression of his views concerning the momentous issues that were then involved. His health began to fail in 1868, and he lost all the relish he had previously exhibited for the excitement of politics. In person Mr. Granger was tall, of commanding figure,

courteous and affable, of a genial, hearty, and affectionate disposition, and was a man whose friendship was to be prized.

GRAYSON, WILLIAM, for many years a political leader of the Democratic party in Maryland, and Governor of the State for three years, born in Maryland, in 1786; died at his residence in Queen Anne County, Maryland, July 9, 1868. An intelligent and honorable member of the planter class in his native State, Mr. Grayson at an early period identified himself with the Democratic, or, as it was then called, the Republican party, and became one of its leading men. He served with distinction for several years in both Houses of the General Assembly, and took a prominent part in that exciting struggle to obtain a new and more liberal constitution for the State, which commenced in 1836, and terminated in 1838 in favor of the Republicans. Gratitude to Mr. Grayson, who had led in this protracted contest, induced them to nominate and elect him Governor. He served from 1838 to 1841 with great credit, and on the expiration of his term retired to private life.

GREAT BRITAIN, or the UNITED KINGDOM OF GREAT BRITAIN AND IRELAND. Area by the latest surveys, 120,879 English square miles. Population, according to the census of 1861, 29,321,288. *Government*.—Constitutional monarchy. Queen, Victoria I., born May 24, 1819; crowned, June 28, 1838. Heir-apparent, Prince Albert Edward, born November 9, 1841; married March 10, 1863, to Princess Alexandra, eldest daughter of the present King of Denmark, Christian IX. The power of the sovereign in the actual administration of the affairs of the nation, except in some particulars of minor importance, is but little more than nominal, the real administrators being the Cabinet, who remain in power so long as they have the confidence of a majority of the House of Commons. At the commencement of the year 1868, the administration was in the hands of a Conservative ministry, Earl Derby being the Premier, and First Lord of the Treasury. (See ANNUAL CYCLOPÆDIA for the year 1867.) On the 25th of February, 1868, Earl Derby, whose health had for some time been infirm, resigned the premiership, and the Right Hon. Benjamin Disraeli, who had been, during Earl Derby's administration in this and former Cabinets, Chancellor of the Exchequer, was called to the premiership. Two other changes were made in the Cabinet, which, however, still retained its conservative character; these were, Lord Cairns, Lord High Chancellor, in place of Lord Ohelmsford, and George Ward Hunt, Chancellor of the Exchequer, in place of Mr. Disraeli.

The Reform Bill, which had been the great measure of Earl Derby's administration, was not yet completed in all its details, and the bills regulating the suffrage in Scotland and Ireland were brought forward and passed after Mr. Disraeli became premier. The measure, in the form in which it finally passed, notwithstand-

ing some amendments offered by the Liberals and engrafted upon it, was essentially Mr. Disraeli's plan, and, as it was carried through Parliament mainly by his adroit management, and under a considerable show of opposition from many members of the party which supported him, he should have the honor of it.

Since the Reform Bills of 1832, which had bestowed the right of suffrage upon many thousands who had not previously been allowed its exercise, and had abolished the greater part of the rotten boroughs, there had been several attempts made to adopt further reforms and extend the suffrage to the working-classes. Reform bills were introduced in 1854, in 1859, and in 1860, but so little interest in the subject was manifested by those who would primarily be benefited by the measures, that they were withdrawn without being brought to the test of a vote. In 1864, Mr. Gladstone, in a public speech, gave the first impulse to a new agitation of the subject. The election of 1865 gave occasion for a somewhat general discussion of the principles on which such a measure should be based. When Lord Palmerston died, and Earl Russell became the Government leader in the House of Lords, and Mr. Gladstone, as Chancellor of the Exchequer, the representative of the Government in the Commons, they at once opened the way for a very full discussion of reform measures. Before the close of the session of Parliament in 1866, the Government introduced a very moderate Reform Bill, the leading provisions of which were the bestowal of the franchise upon occupiers of premises of the value of £7 in boroughs and of £14 in counties. With this was subsequently combined a bill for the redistribution of seats in Parliament (i. e. for taking one member from the small boroughs which had two, and giving to the cities and populous boroughs or the great counties an additional member). When this bill was introduced, it did not give satisfaction; most of the Conservatives and a considerable number of the Liberals were not in favor of any change in the franchise; another party desired a more radical measure, and Earl Russell and Mr. Gladstone found themselves deserted at a critical time by a portion of their followers, and on an important clause of the bill they were left in a minority of seven. Accepting this as tantamount to a declaration of want of confidence, the Russell-Gladstone ministry resigned, and a Conservative Cabinet was formed, of which Earl Derby and Mr. Disraeli were the leaders in the two Houses of Parliament. Though Conservative in its professions, this new ministry came into power pledged to bring forward a reform bill. The maturing of this was left to Mr. Disraeli, for Earl Derby was too strongly bound to the old Conservative party to be inclined to take any very active part in it. Mr. Disraeli moved boldly. A skillful strategist, he saw clearly that the only chance of his continuance in power, and the predominance of the Conservative party, lay

in offering to Parliament a measure which should be more decidedly liberal than that of the Liberal party. Some of the members of the Cabinet, wedded to their old party traditions, could not see the propriety of such a step, and, allowing them to resign, he procured the substitution of other ministers who would not thwart his views. On the 18th of March, 1867, Mr. Disraeli introduced his Reform Bill. Its provisions were decidedly more liberal than those of the Russell-Gladstone bill of the previous year, and, though encumbered with some features of doubtful policy, it was, on the whole, received with considerable favor by the House of Commons. It was, however, amended in many particulars, in some for the better, in others for the worse. The Ministry accepted many of these amendments, and when they were such as they could not yield to, brought the House to reason by a threat of dissolution of Parliament. At length, after a protracted contest, the Reform Bill passed the Commons on the 15th of July, 1867. It was further amended in the House of Lords, and passed as amended August 6, 1867, and returned to the Commons, where all the amendments except one (that for the representation of minorities) were rejected, the vote in the House of Commons standing 253 to 204. On the 12th of August the Lords agreed to the bill as finally passed by the Commons, and on the 15th of the month it received the royal assent and became a law. The most important provisions of this bill, which applied only to England and Wales, were the following:

“Occupation Franchise for Voters in Boroughs.—Every man shall, on and after 1868, be entitled to be registered as a voter, and when registered, to vote for a member or members to serve in Parliament for a borough, who is qualified as follows: He must be of full age, and have on the last day of July in any year, and during the whole of the preceding twelve calendar months, been an inhabitant occupier, as an owner or tenant, of any dwelling-house within the borough, and have during the time of such occupation been rated as an ordinary occupier in respect of the premises so occupied by him within the borough to all rates (if any) made for the relief of the poor in respect to such premises; and have on or before the 20th day of July in the same year paid an equal amount in the pound to that payable by other ordinary occupiers in respect to all poor-rates that have become payable by him in respect of the said premises up to the preceding 5th day of January. No man under this section to be entitled to be registered as a voter by reason of his being a joint occupier of any dwelling-house.

“Lodger Franchise in Boroughs.—Every man, in and after 1868, shall be entitled to be registered as a voter, and when registered, to vote for a member or members to serve in Parliament for a borough, who is qualified as follows: He must be of full age, and, as a lodger, have occupied in the same borough, separately and

as sole tenant for the twelve months preceding the last day of July, in any year, the same lodgings, such lodgings being part of one and the same dwelling-house, and of a clear yearly value, if let unfurnished, of ten pounds or upward, and have resided in such lodgings during the twelve months immediately preceding the last day of July, and have claimed to be registered as a voter at the next ensuing registration of voters.

“Property Franchise in Counties.—Every man, in and after 1868, shall be entitled to be registered as a voter, and when registered, to vote for a member or members to serve in Parliament for a county, who is qualified as follows: He must be of full age, and not subject to any legal incapacity; and be seized at law or in equity of any lands or tenements of freehold, copyhold, or any other tenure whatever, for his own life, or for the life of another, or for any lives whatsoever, or for any larger estate of the clear yearly value of not less than five pounds over and above all rents and charges payable out of or in respect of the same, or who is entitled, either as lessee or assignee, to any lands or tenements of freehold, or of any other tenure whatever, for the unexpired residue, whatever it may be, of any term originally created for a period of not less than sixty years, of the clear yearly value of not less than five pounds over and above all rents and charges payable out of or in respect of the same. No person to be registered as a voter under this section unless he shall have complied with the provisions of the twenty-sixth section of the act of the second year of the reign of his Majesty William IV., chapter 45. (This is the Reform Act of 1832.)

“Occupation Franchise in Counties, and Time for paying Rates.—Every man, in and after 1868, shall be entitled to be registered as a voter, and when registered, to vote for a member or members to serve in Parliament for a county, who is qualified as follows: He must be of full age, and have on the last day of July in any year, and during the twelve months preceding, been the occupier, as owner or tenant, of lands or tenements within the county, of the ratable value of twelve pounds or upward; and have during the time of such occupation been rated in respect to the premises so occupied by him to all rates (if any) made for the relief of the poor in respect of the said premises; and have on or before the 20th day of July in the same year paid all poor-rates that have become payable by him in respect of the said premises up to the preceding 5th day of January.”

It was also provided by the act that the occupier, and not the owner, of any tenement in boroughs, of the rental value specified in the act, should be rated to the poor-rates, and that where he had not previously been so rated, he might deduct these rates from the rental. Provision was also made in regard to composition of rates, the first registration of occupi-

ers, and other particulars in regard to registration and the polling of the votes. It was also provided that successive occupation of different premises in a borough, if continuous, and of sufficient rental value, should have the same effect in qualifying a voter as the continuous occupation of the same premises for a twelve-month; and that in counties, joint occupation of premises whose ratable value was sufficient to give a vote to each occupier, should not prevent two persons who were joint occupiers, or more if in partnership or connected by blood or marriage, from voting. The boroughs of Totness, Reigate, Great Yarmouth, and Lancaster, were disfranchised and prohibited from returning any member of Parliament hereafter, in consequence of having been guilty of corrupt practices, bribery, etc., etc. This gave seven members to be distributed among new boroughs; and the restriction of all boroughs of less than 10,000 inhabitants to one member, added 88 more for a new distribution, making 45 in all. Of these 25 were given to the larger counties, which were divided into two or more districts for this purpose: 19 were given to the boroughs, 11 of them to new boroughs, and 8 as additional members of large boroughs or cities, and one member was given to the University of London. Persons employed in any capacity for reward, in connection with any election, were prohibited from voting, and severe penalties were to be inflicted on those who were guilty of bribery, either directly or indirectly.

The amendments made by the House of Lords in regard to the representation of minorities were as follows: "At a contested election for any county or borough represented by three members, no person shall vote for more than two candidates." "At a contested election for the city of London, no person shall vote for more than three candidates."

It was further provided that the demise of the crown should not dissolve Parliament, and that members holding offices of profit from the crown should not be required to vacate their seats on acceptance of another office.

The Reform Acts for Scotland and Ireland, passed in the session of 1868, differed in some important respects from that of England. By the act for Scotland, the franchise in burghs was conferred upon every male person of full age, and subject to no legal incapacity, who had been for twelve months an occupier, as owner or tenant, of any dwelling, unless at any time during that period he shall have been exempted from the poor-rates on the ground of poverty, or shall have failed to pay his poor-rates, or shall have been in the receipt of parochial relief within twelve months. The lodger franchise in Scotland consists in the permission of any lodger to vote who has occupied, in the same burgh separately, and as sole tenant, for twelve months, a lodging of the clear annual value, if let unfurnished, of ten pounds or upward, and has claimed to be registered as a

voter. In Scottish counties the ownership franchise is five pounds, clear of any deduction in the shape of burdens, with a residential qualification of not less than six months. The Reform Act for Ireland, which was not passed until July, 1868, made no alteration in the county franchise, but reduced that of boroughs to a £4 rating occupation, with the same qualifications as in England.

The Reform Bill of 1867-'68 left in force all the old legal requirements for electors. Under these, aliens, persons under twenty-one years of age, or of unsound mind, or convicted of felony, and undergoing a term of imprisonment, were incapable of voting. No one could be a member of Parliament who had not attained to the age of twenty-one years; and no excise, custom, stamp, or other revenue officer, nor, since 1840, any judges, except the Master of the Rolls, were eligible to election. No English or Scotch peer can be elected to the House of Commons, but Irish peers are eligible. No foreigners, even when naturalized, unless the right be conceded in express terms, and no persons convicted of treason or felony, are eligible for seats in Parliament. The number of members of the House of Commons has been, since 1817, 658, and has varied very little from that number during the present century.

As, by the provisions of the Reform Act, a new Parliament was to be elected in the autumn of 1868, it was very naturally the desire of Mr. Disraeli to so conduct the Government as to secure from the new members, when they should be elected, a decided majority in his favor. He found this, however, a task beyond his powers. The passage of the Reform Act had alienated many of the older and more rigid Conservatives, but had perhaps given him a popular following of equal numbers from some of the quasi-Liberals; but in the new measures which came up in the session of 1868 he was destined to find the elements of his defeat. The war in Abyssinia had been conducted to a successful close, with the storming of Theodoros's capital and the death of the king of the kings of Ethiopia himself (*see* ABYSSINIA and THEODORUS), and the *éclat* arising from this seemed at first to be sufficient to carry the Disraeli ministry over the perils of a new election. But a new apple of discord was thrown into Parliament by the great Liberal leader, Mr. Gladstone, on the 30th of March, 1868, by the introduction of a resolution for the disestablishment of the Irish Church. The great bulk of the population of Ireland is Roman Catholic; 4,505,265 of the 5,764,543 inhabitants in 1861 belonging to that faith, while of the remainder, 691,872 were reckoned as belonging to the Established Church of Ireland (Episcopal), and the rest, almost 600,000, were Protestant dissenters. Yet the British Government has maintained the Established Church of Ireland, having less than one-eighth of the population among its adherents, and endowed it with revenues amounting to £580,-

418 = \$2,900,000 per annum, sustaining two archbishops and twelve bishops from the church rates and taxes paid largely by those of a different faith. This compulsory support of the Irish Established Church by Roman Catholics and the dissenting bodies has been, for many years, a constant source of complaint by the oppressed parties, and though Parliament has repeatedly attempted their pacification by the Maynooth College and other grants to the Catholics, and the *Regium Donum* and similar gifts for educational and religious purposes, to some of the dissenting bodies, yet it has held most tenaciously to the Establishment, which has afforded lucrative positions to so many of the English clergy and the younger sons of the nobility, that they were unwilling to have it abolished. It is just this relic of ancient wrong that Mr. Gladstone determined to assail. His attack brought down upon him a torrent of denunciation from the Conservatives, who, raising the cry of "No popery," attempted to create the impression that the Liberal leader was in the interest and pay of the Pope; others predicted that this was but the entering wedge to the entire subversion of the Establishment throughout the British empire. The House of Lords were, very naturally, indignant at what seemed to them a breach of privilege. But Mr. Gladstone persisted, and on the 30th of April, carried his resolution, "that the Irish Church, as an Establishment, should cease to exist," through the Commons, defeating the Government by a majority of 65. Disraeli, however, though fighting bitterly Mr. Gladstone's position, refused to resign, and, while protesting his desire for reform and improvement in the Established Church of Ireland, avowed his belief that the mass of voters in the United Kingdom would not sustain a measure so radical as Mr. Gladstone had proposed, and that the fact could only be determined by an appeal to the enlarged body of voters which would be made in the autumnal election. As it was evident that the House of Lords would only yield to the disestablishment of the Irish Church under a very strong pressure from the Commons, and as, moreover, he desired time to mature fully his plans, and to see how far he would be sustained by the new Parliament, Mr. Gladstone did not attempt to coerce the Disraeli ministry into resignation, but contented himself with bringing forward a bill to restrain the making of any new appointments to fill vacancies, and the building, rebuilding, or enlarging any church edifices or property in Ireland, during the year ending August 1, 1869. This bill passed; and early in July Parliament was prorogued, and the canvass for a new election commenced soon after in earnest. There had been no election so exciting or calling out so much feeling as this since the first after the passage of the previous Reform Bill in 1832. The excitement in some of the cities and larger boroughs culminated in violence and occasionally in bloodshed. Par-

liament was dissolved in October, and writs for the new election issued. The voting took place, with a few exceptions, on the 26th of November. The result was a majority for the Liberals of about 112. It had been customary for the ministry previously in power to retain their position till the assembling of the new Parliament, and thus enable their successors to organize their new Cabinet with less difficulty; but Mr. Disraeli chose to depart from this custom, and tendered his own resignation and that of his associates to her Majesty on the 2d of December, 1868, at the very moment when he knew it would put his successors to the most inconvenience. He accompanied this act by a manifesto which breathed a spirit of defiance.
